Twenty-fourth Year | Number 17 | Klemme, Iowa, Thursday, January 1, 1920 | $2.00 In Advance. $2.50 Outside of County

WEDDING IS ONE OF BEAUTY

Agnes Constance Baack And Mr. Alfred V. Josten Are Made One In Pretty Ceremony

On Wednesday, December 3, 1919, at the home of the bride's parents, Mr. and Mrs. Peter Baack, occurred the marriage of their daughter, Agnes Constance, and Mr. Alfred Josten, Rev. C. J. Pritz, pastor of the Grace Lutheran Church in the presence of the immediate relaives of the contracting parties, officiated.

At the hour of 7 o'clock to the strains of Lohengrin's wedding march played by Miss Dorothy Baack, sister of the bride, the bridal couple unattended took their place under a white wedding bell pendant from an arch of white and green.

Immediately after the ceremony was performed, a second ceremony followed, it being the christening of the seven-weeks-old nephew of the bride, and son of Mr. and Mrs. Chris Baack, of Garner, the bride and groom standing sponsor for the wee one, who was given the name of Gerald Gaylord.

After congratulations a sumptuous wedding dinner was served by Miss Rena Nelson, cousin of the bride, and Miss Mary Kirkpatrick.

The decorations in the dining room were in the bride's colors, pink and white.

The bride never looked lovlier than in her bridal garments of white georgette over satin with white net bridal veil. She carried a bouquet of white carnations. The groom wore the conventional black.

The bride, who is the second daughter of Mr. and Mrs. Peter Baack, was born and reared to young womanhood on the farm two miles south of town. A few years ago she left for Garner, where she spent the intervening time and met the young man of her choice.

She is a young lady who gains the love and respect of the people in what ever community she resides and is eminently fitted to make a splendid helpmate for her husband.

The groom is a stranger but in the short time he has spent here he has gained the respect of those with whom he has come in conact.

After a few weeks spent with relatives the happy pair will leave for Garner where they will reside on the farm belonging to Mr. Josten's father on which he young man has spent his entire life.

The best wishes of the entire community will follow them to their future home.—Blairstown Press.

GOOD PLAY HERE MONDAY NIGHT

"In the Heart of the Blue Ridge" is the four act comedy drama which is booked to appear at the Idle Hour Theare next Monday evening, Jan. 5th. It is a real play with real players who know how to act. Besides presenting the four act play the company carries a good line of vaudeville between the acts, there are no waits, action every minute of the ime. Don't miss seeing this. A magical balm for all care. Bring the family. adv.

"Elmo the Mighty"
also
2 reels Comic
Thursday, January 8th
"THE SPOILERS"
8½ reels of big special pictures and found to be good

SUURBALLE FOR TREASURER

We are pleased to announce that John Suurballe announces himself as candidate for the office of County Treasurer subject to the decision of the voters at the June, 1920, primaries. John needs little or no introducion o our readers as he is so well and favorably known in this county. For the past few years he has been cashier of the bank at Goodell and at one time was sheriff of this county. We are indeed glad to hear that he has again taken interest in county politics and aspires for the office of treasurer. We don't know of a better man who could fill that office, so let's all boost for John Suurballe.

FOR COUNTY TREASURER

I hereby announce myself a candidate for the office of County Treasurer, subject to the decision of the Republican Primaries to be held June 7th, 1920. Yours very truly,
1-1-20 JOHN SUURBALLE

NOTICE OF APPOINTMENT OF EXECUTOR

Notice is Hereby Given, That the undersigned has been duly appointed and qualified as Executor of the Estate of Jacob P. Mayer, deceased, late of Hancock County, State of Iowa, deceased. All persons indebted to the estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned, for allowance.

Dated December 16th, A. D. 1919.
P. M. Griesemer, Executor
By Ramsay & Blackstone,
His Attorneys

METHODIST EPISCOPAL CHURCH

Public worship with sermon at 10:30 a. m. and 7:30 p. m.

Morning sermon subject, "The Dream, the Duty and the Deed; a Message for the New Year." Happy, helpful evening service; cheery songs and orchestra; pointed, practical sermon. Come and welcome.

A. E. Buriff, Minister

WE HAD A FINE TIME

Ye Editor and wife returned Monday morning from our week's vacation which we spent in Kansas City, Missouri, and Lincoln, Nebraska. We had a very fine time and thoroughly enjoyed ourselves every minute we were away but, nevertheless, we were mighty glad to get back to Klemme again and we find that Klemme is about the best town we ever struck. There was no snow at Kansas City and only a small amount when we got to Lincoln. They are expecting a big wheat crop there this year as they had plenty of snow the early part of the winter.

During the rush of getting out our holiday edition we completely overlooked somet ype we had set up telling our readers about the business transaction between G. A. Pabst and Mr. Kahrs, who purchased the entire drug business of Mr. Pabst. By this time our readers are no doubt well acquainted with the new proprietor of the drug store. We find Mr. Kahrs a most pleasant man and a very fine fellow. He and Mrs. Kahrs are quite comfortably settled now and are rapidly getting acquainted with the people of Klemme. The Pabst family expect to leave for California as soon as Mr. Pabst can get his business here straightened up. We wish the new proprietor the best of good luck here and also extend the same good wishes to the Pabst family wherever they may locate.

See Mr. Teddy Rhea, the mail bag and hand cuff escape artist who defies locks and bars to hold him, at the Idle Hour Theatre Monday, January 5th. adv.

GET IN LINE NOW. ONLY A FEW DAYS LEFT TO SAVE MONEY

January 10th, is the last day we will take your subscription at the old price of $1.50. Better hustle up if you want to savet hat half dollar. One man asked us how we could do it when all the other papers are $2. Well we just naturally like to give away money, we told him. He got the spirit and gave us a dolar and a half. Fine, don't you think? Get in line now if you want to get the Times for $1.50. Remember it will be $2 after January 10th.

BAND BOYS ATTENTION

We hope to begin band rehearsals next Friday night, January 9th, at the rooms over the Idle Hour Theatre Mr. Crotty, the instructor, has promised us rehearsals for Fridays. We have ordered he beginning books and if they arrive by Friday we will start work. Come prepared to pay 25 cents for your book. It will also be necessary to charge each member fifty cents a week for a short time until we complete arrangements to finance the band. Bring the money with you. Every member come whether you have your instrument or not.

President

Mlle. Vrugia in characteristic and interprative dancing, at the Idle Hour Monday night. adv.

VACATIONS FOR EDITORS QUITE POPULAR

We took our vacation last week and issued no paper on the 25th. Editor Rankin, of the Belmond Independent, thinks the same and so is taking his vacation this week so that paper will not be issued until January 7th. Editors are entitled to a vacation just as well as any other class of people and quite a number are taking advantage of a vacation during the Holidays, after the rush is over.

Those indebted to me are kindly asked to settle at once. Send all remittances to me care of Baldwin Art Studio, Fariboult, Minnesota.
1w H. R. ALLABEN,

HAPPY NEW YEAR

We wish everybody a Happy and Prosprous New Year and also take this opportunity for thanking you for your patronage and support during the past year. We will make our New Year's resolution to be as good a booster and better for Klemme than ever, we'll do our best to put it all over the map. Hats off to 1920, he looks like a mighty fine year.

THE KLEMME TIMES

TED BUYS THE DEMOCRAT

The Garner Democrat which was owned and edited by W. M. Brackett for twenty-six years was recently sold to J. E. Tierney, who has been editing the paper for the past year. Mr. Brackett retired some time ago from the acive work of geting out the paper during which time he spent a couple of years in the west. Brother Tierney was at one time publisher of the Times and is an 'old head" in the newspaper game and was publishing in this county many years ago. 'Ted" knows hte game from start to finish and has made the Democrat one of the best weeklies in the county, and we might add that it is also one of the best weeklies in northern Iowa. We wish him all kinds of success with his new purchase.

GOODELL GLOBE SUSPENDS

Finis Letch, editor of the Goodell Globe, has decided to suspend publication of his paper until the town rebuilds again after it's recent experience with two fires. The last paper appeared the 18th which he publishes at Belmond with The Herald-Press equipment.

NEW POST OFFICE NOW OPEN

John Waterman moved the post office equipment into it's new home Tuesday morning and you can now get your stamps at the same old price in the new building. Klemme now has a fine, modern up to date post office building that is a credit to a much larger town. We expected that maybe John would make a raise on the price of stamps to pay for the building, but he says he will sell them at the same old price of 2 cents each or five for a dime.

Don't forget the big dance at the Idle Hour Theatre Friday evening. Music by the Harmony Concert Dance Orchestra.

Don't let anyone experiment on your eyes, but see Dr. Weber, the eye and ear doctor on Monday, Jan. 5th, forenoon, at Hotel Vicoria, in Garner. Consultation free.

Dance Friday evening. Idle Hour.

Max Willard returned from Omaha last Wednesday for a few days' visit with his folks at Meservey. Max has a job at Omaha and likes the city real well.

"In the Heart of he Blue Ridge" at Idle Hour Monday night.

Mr. and Mrs. Dewey Rice, who are now living at Clarion, Iowa, are the proud parents of a fine baby girl who came to make her home with them on Christmas day.

Mr. Irving Gold, at the Idle Hour Monday night. adv.

Local merchants report a very good Christmas trade this year, which was much heavier than ever before.

Lester Stille and Carl Suckow left Monday evening for various points in Tennessee, Alabama and Louisiana, where they went to look over land with the prospects of perhaps choosing a suitable location.

NOTICE TO PAY UP—All those who owe me on account will please call and settle same before Jan. 1st. W. F. Pavey. adv.

The Woman's Foreign Missionary Society of the First M. E. church will hold it's January meeting on the 7th. Mrs. Sam Harvey will be the hostess, and will entertain the meeting at the home of her mother, Mrs. Fred Ridder The program for this meeting deals greatly with reports on the Jubilee General Executive, held in Boston, and is very interesting. You are invited.

A perfectly adjusted spine cures a "lame back" and insures good nerves, freely circulating blood, and a perfect digestion. Treatment will be given in your home when necessary. Telephone message may be left at the Hotel to be delivered to Dr. R. W. Schultz. tf.

Little Miss Mae Moran, an English lass, with an American voice, at the Idle Hour Theatre, Monday, Jan. 5th.

Mrs. Lawrence Schaefer is reported to be able to sit up in a chair a little now every day. She is quite an elderly lady which makes it slow for her to recover from her accident of a few months ago when she slipped and fell and broke one of her limbs.

Rev. Hartke, of Garner, was calling at the Ernest Schuldt home last Friday.

FOR RENT—In Grimes Township, Cerro Gordo County, one section of pasture, as a whole or in quarters. Inquire C. W. Hines, Fairmont, Minnesota. 2w-p.

Geo. Ell of Belmond was a business caller in Klemme Tuesday between trains.

Bert Mathews, Ed. Jacobs and Marvin Weigmann all spent Christmas day at Garner with relatives and friends.

PAY UP at once if you owe me on account. F. H. Ridder. 2w-p.

Gerald and Mildred McCullough boths pent Christmas day with their parents at Garner.

Mr. Walter Schultz, wife and baby spent Christmas day with his mother and family at Garner.

Dr Shultz will be at tne Klemme hotel from 11:30 to 2:00 on Mondays, Wednesdays, and Fridays.

Mr. and Mrs. F. J. Wenck spent Christmas day with Mr. Wenck's parents at Garner.

Please Notice

We, Henry Lau & Son offer $25.00 for the return of a large mink stolen from us about two weeks ago, and $25 to the one who tells us who stole it. We can pretty tell who stole it and w will not be so hard on him if he returns it. The same thing happened last year but we did not soy anything about it; it is to bad that such boys are in Klemme. as stealing furs is as bad as stealing money.

Henry Lau & Son

The Misses Maude Wenck and Maude Blackstone of Garner, were visitors at the F. J. Wenck home here last Friday and Saturday. Miss Wenck is studying music at Northwestern at Chicago this year and is home spending her Christmas vacation.

Lart Tuesday evening the Choir of English M. E. Church had a surprise on Mrs Emma Gibbs. The evening was spent in playing games: at tee the oysters were served they party broke up All reported a fine time.

Mr. and Mrs. Clarence Waterman were Christmas visitors at the T. F. Mitchell home at Swea City.

Mr. and Mrs. Henry Lewis spent Christmas with the Holly Brooks family at Clear Lake.

Pay Up Notice

Pay up at once, Jan. 1st is at hand and we must have the money to straighten up our books. Keep up your credit by paying your account at once

Henry Lau & Son

A number of young people from here attended the dance given by the Garner Auto Company at Garner last Saturday evening in their new garage building.

Mr. and Mrs. M. O. Barr left last week Tuesday for various points in Ohio on a two week's vacation which they will spend visiting relatives and friends in his old home. During Mr. Barr's absence Fred Blank has charge of the depot as agent.

Miss Mamie Schwartz left Monday evening for Peoria, Illinois, where she will visit with relatives and friends.

Miss Lauritzen, who is working on the newspaper at Ringsted, Iowa, came home to spend the holidays with her parents here.

Olaf Brynteson left last week Wednesday for Odebolt, Iowa, where he is visiting wih relatives and friends during the holidays. Mr. Croner has charge of the lumber yard during his absence.

John Opsal was a Christmas day visitor at Waterloo, Iowa, with friends.

Chas. Busch returned Christmas morning from the wild and wooly west where he has been looking after his cattle and ranching interests at Cody, Nebraska. During his stay in the west Charlie has the fun of a coyote hunt with hounds which resulted in the running down and killing of wo coyotes. He said it was great sport and also that the ranch there is doing well.

Black Diamonds.

Genuine black diamonds, although considerably more valuable than the ordinary white diamond, are not used for ornament, having an appearance no more attractive than a bit of stone or fragment of coal. They are of dark gray, brownish, or black color, and opaque, without crystalline form. They are somewhat harder than the crystal or gem diamond, being, in fact, about the hardest substance known and are found in irregular pieces, ranging in size from one-half to 500 carats.

Musk Radioactive.

It has been recently determined that the penetrating quality of musk is due to certain radioactive properties which it possesses that cause odor of the perfume to be carried through the air in an extraordinary way, says the Indianapolis News. The radioactive property of musk affects strangely the natives who carry it to market. If a package of musk is held close to the body for any length of time it produces sores that are similar in character to those caused by pure radium.

Early Saws and Knives.

The saw appears to be the earliest tool that has been traced in Egyptian history. It was found first in the form of a notched bronze knife in the third dynasty, or about 5,000 years before the Christian era, and was followed in the fourth and fifth dynasties by larger-toothed saws, which were used by carpenters; but there are no dated specimens until the seventh century before the Christian era, when the Assyrians used iron saws. The first knives on record were made out of flint, and were, in fact, saws with minute teeth.

"Horns of Venus."

References are made in some cuneiform literature to the "horns of Venus," from which it is concluded by some that in the clear air of Mesopotamia the crescent form of the planet was detected in early times without optical aid. Since Venus, when at a sufficient angular distance from the sun, is hardly more than half a minute of arc in diameter at the utmost, such an observation seems quite out of the question, and Professor Campbell thinks the allusion to the horns was merely a lucky guess on the part of the ancient astronomers.

Candy Vies With Tobacco.

Now comes the report of a Massachusetts woman who is ninety-nine years old and has eaten candy all her life. This seems a genuine novelty. We have often wondered why some other trade did not get in few claims with these centenarians, instead of letting the tobacco people take all the honors.—Providence Journal.

Same Old Stuff.

A letter from a Babylonian master to his servant 2,200 years before Christ, has been translated at the University of Pennsylvania. An accurate report of its contents has not yet reached this office, but this is the tenor of it: "My Good Man: Owing to the present high prices in raw materials, and incidentally the consequent expenses of operation, it is impossible at present to give you the increase in salary you asked for. Do not despair, however. Good service never goes unrewarded.—The Boss."

THEIR GLORY GONE

Helgoland to Join Louisbourg as a Memory.

Famous French Fortress in Canada Has Long Been Demolished and Soon the German Stronghold Is to Be Razed.

Announcement that the German forts on the island of Helgoland are to be demolished recalls the similar fate of a glorious landmark on Canadian soil. This is Louisbourg, Nova Scotia, once the pride of New France, and now a pile of ruins, with but a faint echo of its original splendor.

Louisbourg was the remnant of French power on the Atlantic coast when the treaty of Utrecht was signed in 1713, reducing the fortunes of Louis XIV to a low ebb. From 1720 to 1760 it led a precarious but spectacular existence, its magnificence as a defense guaranteed by the expenditure of millions of dollars by the French government, though millions were stolen and wasted by dishonest officials and unhappy officers, whose only ambition was to get rich and go home.

The fortress was imposing, despite the thievery and mismanagement, and it required a seven weeks' siege by Colonel Pepperell and his New Englanders in 1745 to take it from the French.

By one of those diplomatic incidents too plentiful in the history of the new world, Louisbourg was handed back to France in 1748 by the treaty of Aix-la-Chapelle. The New Englanders were furious, but ten years later the British army and navy, with such rising strategists as Amherst and Wolfe taking part, again laid siege by land and sea, and in another campaign of seven weeks recaptured the stronghold.

The days of the great fortress were now numbered. The home of discontent, the abode of smugglers, the den of thieving officialdom received its death warrant in 1760 at the hand of George II and Pitt in London. So well was the warrant executed that for months sailors, sappers and miners worked until they laid Louisbourg level with the dust.

And there it remains. Memorials recording its history raise their modest heads above the chaos of stones and mortar. The site on a point three miles from the railway and the town of the same name is remote and forbidding. Should the visitor follow the shore road by the lonely Atlantic in summer he will hear tinkling sheep bells from the pasture where once stood the French town, now completely obliterated. The great area of the ruins of the fort gives some hint of the vain preparation to hold a last grip against the advancing British and Colonials.

What will be the thoughts of the tourist as he drops by airplane on Helgoland a century hence, witnesses its ruined forts, and contemplates the futile ambitions of a race that drew the sword and fought a losing battle for world domination?

Married by Order.

A document suggesting that the holders of certain lands in Scotland are bound under heavy monetary penalties to marry at the royal pleasure has been brought to light during a Scottish appeal case in the house of lords. The document is said to have been prepared by the king and queen of Scotland in 1559, and it refers to a tenure known as a "ward." The heir or possessors of land held in this manner cannot obtain possession until they are twenty-one years of age if males and fourteen years of age if females. If such heirs on taking possession are not married they are bound to marry at the pleasure and will of the king with persons of good reputation and similar rank. The penalty payable to the king for refusing such a proposed marriage is double the pecuniary benefit of the marriage. "Which marriage," adds the order, "is esteemed much too dear in this country and almost at the value of the lands."

Historic Tree Now Only a Memory.

The "tree in the road" a mile and a half west of Hartford, Mich., has been cut down to clear the way for a new concrete road. This maple tree, supposed to be more than a hundred years old, was the most famous and most cherished landmark of the region. Standing in the middle of the road on the crest of a hill, it had from the time of the oldest inhabitant been used as a point from which all distances were measured.

In giving directions a place was always said to be a certain distance "this side of the tree in the road" or a certain distance "beyond the tree in the road." With the advance of civilization, however, the natives have reluctantly concluded that the tree can be dispensed with, since the only distance people ask about now is the distance between gasoline tanks.—Exchange.

SEEK OIL LAND UNDER RED RIVER

Wichita Indians Now Set Up Ancient Title to River Channel.

HISTORY INVOLVED IN SUIT

Question Engrosses Attention of Lawyers, Oil Men, Land Owners and Federal and State Officials—Gives History of Wichita Claim.

Austin, Tex.—Seldom has a case been filed in American courts in which history has been involved to the extent that it is in the question of the ownership of the channel of the Red river, beneath the bed of which are valuable oil deposits.

This question has been engrossing the attention of lawyers, oil men, land owners and federal and state officials. The state of Texas claims ownership in the bed of the river to the center of the channel, while the federal government and the state of Oklahoma oppose the claim of Texas under the terms of the treaty of Spain in 1819, by which the northern boundary of the Spanish dominions in Texas was designated as the south bank of the Red river.

The federal authorities hold that the ownership of the Red river bed areas in dispute belong to the Indian tribes which owned the adjacent reservations, and the state of Oklahoma maintains that, as a meandering stream, the bed of the Red river is state property and should be leased for the benefit of the state school fund.

Another Claimant.

Joseph B. Thoburn, secretary of the Oklahoma Historical society, has advanced the suggestion that there is still another claimant to the ownership of the oil bearing area of the channel of the Red river, namely, the Wichita Indians. Mr. Thoburn in the course of an extended statement says:

"Older than any of the claims of ownership which are now being pressed for the possession of the oil bearing areas of the channel of the Red river—older than any claim of the State of Texas by rights derived from Mexico or Spain, and older than any claim of the State of Oklahoma or of the United States which may have been derived from France through the purchase of Louisiana—is the right of the aboriginal owners of the land on both sides of the river, and these are the people of the Wichita tribe of Indians.

"The ancestors of the Wichita Indians have lived in Oklahoma and adjacent states for a thousand years, and for approximately five hundred years past they have occupied the country on both sides of the Red river in that part of its course where it traverses the Burkburnett oil fields. In using the word 'occupied' in this connection, I do so advisedly, for these people have always been sedentary in their habits, living in fixed villages and depending largely upon the cultivation of the soil for their subsistence.

"The rights of the Wichita Indians to the ownership of these lands has never been extinguished by purchase, exchange or otherwise, though state and federal governments have seemingly proceeded on the theory that no such right ever existed. From the time of its foundation the federal government has always paid due regard, at least in form, to the extinguishment of title to lands which were claimed by the several Indian tribes under aboriginal occupancy. The one exception to this has been that of the Wichita Indians, who lived in the upper Red river country, between the Canadian and Brazos rivers.

Indians Cede Land.

"In 1818 certain chiefs and warriors of the Quapaw tribe of Indians, in council at St. Louis with William Clark and Auguste Chouteau, as commissioners representing the government of the United States, entered into a treaty by the terms of which they ceded all of the lands in Oklahoma and Texas between the Arkansas and Canadian rivers on the north and the Red river on the south to the government. The fact that the Quapaw Indians lived in eastern Arkansas, that they seldom went as far west as the eastern boundary of Oklahoma and that they never by occupancy or otherwise exercised any form of ownership or jurisdiction over any of the lands within 200 miles of the region where the Wichitas were living, do not seem to have entered into the consideration at all, if, indeed, the government commissioners had any knowledge of the existence of the Wichitas at that time. Yet, with this Quapaw transaction as a basis, the government of the United States executed a grant of these lands to the people later. More than thirty years later the Wichita people first learned that their country had been sold by the Quapaw and then granted to the Choctaws.

"If the government of the United States ever means to do the square and honorable thing by the Wichita Indians it will never have a better chance than it has at the present time. Their lands are gone—sold to strangers without recompense to them and without their consent—but they still have an equitable claim to the ownership of the Red River channel oil properties, and simple justice demands that they be given a chance to establish it."

SINGER SUFFERS TRIALS IN ITALY

Miss McVane Was Victim of Many Persecutions During the War.

SCOFFED AT IN STREET

American Ambassador Puts Wheels in Motion and Her Blackmailer Is Sent to Prison—Puccini Planned an Opera for Her.

New York.—"If there was lack of artistic temperament in the original composition of Miss Dorothea Alastair McVane, her experiences as a professional singer in Italy would have made good the defect, for she so impressed the great Puccini that, at his instance, she made her operatic debut as Mimi, in his "La Boheme," carrying through the part with success when she was in the first stages of typhoid fever; she fell under official suspicion as a spy in Taranto, where there is an Italian naval station; she underwent a siege of blackmail that resulted in sending two oppressors to prison, and she became the betrothed of a young noble, who was killed in the war.

In addition, her progress toward a career was hampered by the stern opposition of her father, Silas Marcus McVane, formerly professor of history and international law in Harvard, retiring as emeritus professor. Afterward the family became so proud of the young singer that they established a home in Rome, where Professor McVane died at about the beginning of the war.

Scoffed and Hissed.

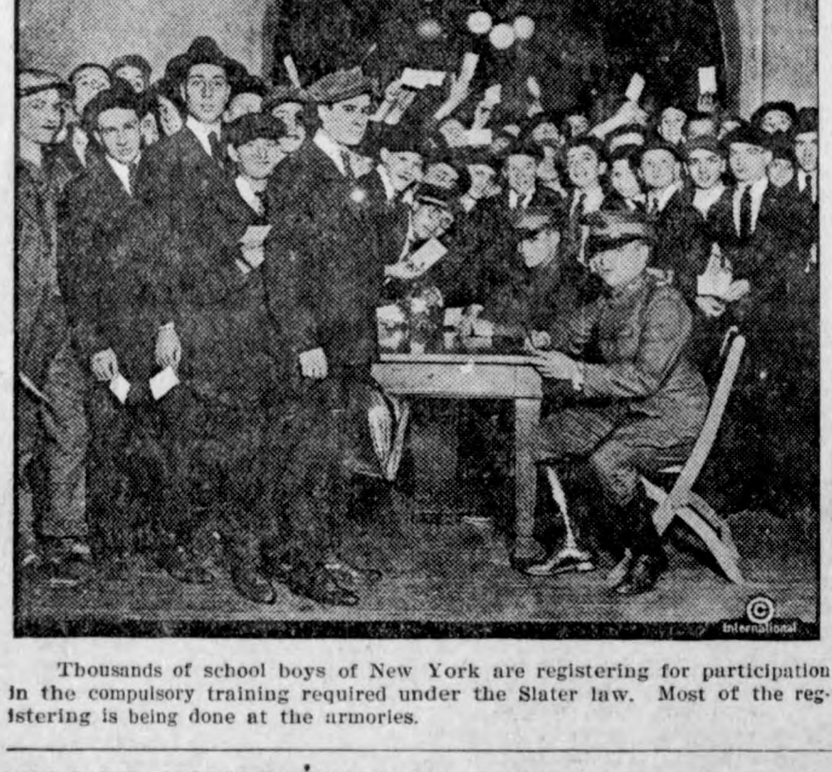
In connection with the spy and blackmail episodes it seems that Miss McVane unwittingly snapped her camera when the lens was pointed in the direction of masked batteries. Soon she became the object of scoffing in the street, she was hissed at the opera, she found herself unable to get letters to her friends or to hear from them. She became so nervous and dispirited that she wished to go away, regardless of her operatic contract, and was threatened with arrest if she tried to go. When, at last, men annoyed her with threats of publishing the spy story and thus ruining her career unless she paid money to them, she contrived to get word to the American ambassador in Rome, who put the wheels in motion for a blackmail trial, whereby Miss McVane was cleared and the men were punished.

She was led to adopt singing as a profession on the advice of artists and others who heard her voice in Paris, where she had gone merely to perfect her French. When her French instructors sent her to Milan, with letters to the composer Puccini, she knew the leading roles in 20 operas. It was reported that Puccini intended to write an opera for her, but the war absorbed him in other affairs.

Miss McVane is something of a psychic. The story is that both she and her titled lover believed firmly in the survival of personality after death and the ability of the disembodied spirit to communicate with the living; and that they exchanged vows that the one dying first would visit the survivor on earth. Ever since the lover died she is said to have been expecting such a visit.

Miss McVane's sisters are Miss Edith McVane, managing writer and novelist, and the Baroness Dodeman de Placy, whose husband is a French cavalry officer. The McVane home in Rome was long a favorite meeting place for social, literary and artistic celebrities.

BOYS REGISTER FOR MILITARY TRAINING



Thousands of school boys of New York are registering for participation in the compulsory training required under the Slater law. Most of the registering is being done at the armories.

Lightning's Pranks.

Marrietta, Pa.—During a heavy electrical storm a bolt struck the residence of Charles S. Spangler and knocked out a beam in the middle of his garret without tearing a hole in the roof. The outside was considerably damaged. Fire ensued, but the downpour of rain extinguished it. At the home of B. Renninga the house was struck and the kitchen "upset" without causing a fire.

KILLS CAT; TROUBLE RESULTS

Policeman Shot Woman at Same Time and Court Gives Her $1,150 Verdict.

Minneapolis.—A cat which more than a year ago perched on the back fence of Mrs. Carrie Miller's home, caused litigation which has been in the courts ever since and which resulted in a verdict of $1,150 in favor of Mrs. Miller.

The cat was alleged to be an invalid. Its peculiar actions had caused neighbors to summon the police and Sergt. William F. Mealey was dispatched from the North Side precinct station to shoot the animal.

He took a shotgun and fired while the cat was perched on the Miller fence. He killed the cat, but stray shots hit Mrs. Miller, whom Mealey could not see on account of the fence, inflicting painful though not serious wounds. Suit was brought against Mealey and the Hartford Accident and Indemnity Co., his bondsmen.

NOW TREAT SOLDIERS

Revel in Baths Once for Millionaire Huns.

Red Cross Refits Salsburg Watering Place for Rheumatic Roumanians.

Bucharest.—The famous salt baths of Salsburg, where the millionaires of Austria, Hungary and the Balkan states used to spend their summers, now are curing rheumatic Roumanian soldiers.

Stripped of all their luxurious furnishings during the war, the Salsburg baths have just been refitted with the aid of the American Red Cross for use as a military hospital for chronic rheumatism resulting from trench warfare. Five hundred soldiers are there, recovering from rheumatism and similar diseases contracted while undergoing the hardships of war.

In times of peace thousands of tourists visited Salsburg, high up in the Transylvanian Alps, southwest of Kronstadt. Many came for the dazzling social life. With its magnificent hotels and gay casino, it was perhaps the chief showplace of eastern Europe. When the Germans pushed the Roumanians out of this district early in the war General Mackensen and his staff took possession of the town and staged luxurious revelry there. When the Germans left they looted the place, stripped the hotels of tapestries, furniture and brass fittings. Even the equipment for the medicinal baths was wrecked.

Under the direction of Maj. George C. Treadwell of Albany, N. Y., and several American physicians, the baths were refitted sufficiently to care for the soldiers.

Neither Brussels sprouts nor Brussels carpets hail from the city whence they take their name.

NEST FOR RADICALS

MEXICO STAMPING GROUND FOR "RED" ELEMENT.

WASHINGTON IS CONCERNED

Consular Agent of Southern Republic in U. S. Known to Be Advocate of Soviet Rule.

Washington, D. C.—Disclosures of large orders for arms and ammunition placed by Mexico in Europe, were followed by revelations tending to show that the "reds' underground line" from soviet Russia to the United States runs by way of Mexico.

It became known that the immigration service and the Department of Justice both are concerned at the influx of Russian radicals and other aliens of "red" tendencies over the Mexican border. Furthermore, government agents have traced much red propaganda over the Mexican line.

A letter written October 23, by Raymon P. De Negri, Mexican consul general in New York, to Flavia Borquez, a Mexican senator, endorsing the principle of "nationalization," has come into the hands of the government and already has been called to the attention of the State department by at least two senators as showing De Negri's association with "radical socialists" in the United States.

In the opinion of officials here the publication of the letter may lead to an embarrassing situation. It is known that the senators who called the attention of Secretary Lansing to it recommended cancellation of the consul general's exequators.

Government investigators have reported that radicals seemed to have been first attracted to Mexico by certain so-called "ultra-modern" provisions of the new constitution. De Negri in his letter writes that "only Russia by nationalizing lands has gone further than we have."

Government agents also have gathered evidence showing distribution of red propaganda in the United States through Mexican sources and this is expected to be shown publicly soon.

STAND BY EX-KAISER.

Germans in Frenzy, Shout Hoch for Ruler and Empire.

Berlin.—Pan-German students refused to permit Field Marshal Hindenburg to enter the reichstag building to testify before a subcommittee which is investigating war responsibilities, and forced the field marshal's chauffeur to return with the former commander in chief to his home.

The demonstration occurred as the field marshal's automobile was being driven toward the reichstag building, the students surrounded it and declared their unwillingness to allow him to be questioned by the subcommittee. It was a nationalist demonstration and shouts of "Brothers we will not allow such a disgrace," "For us there is only one kaiser and one empire" and "We will not endure that our glorious kaiser be besmirched," were heard.

Along the route was a statue of the former emperor, the name on which was hidden under a canvas. The students tore off the canvas with cries of "Hoch for the one-time ruler and the empire."

In official quarters it was announced that the students had violated the conditions imposed by martial law and that troops would be ordered to suppress any similar demonstrations.

MAYNARD THE WINNER.

Awarded High Honors in Air Derby by War Department.

New York.—Lieut. Belvin W. Maynard, "the flying parson," won the recent army trans-continental airplane race with the shortest elapsed time—9 days, 4 hours, 26 minutes and 5 seconds—according to an official decision of the War department. On actual flying time, however, Maynard was fifth to Lieut. Alexander Pearson, who spent 48 hours, 57 minutes and 15 seconds in the air. The order of finish, allowing handicaps, was: Pearson, Maynard, Hartney, Smith, Worthington, Donaldson, Manzelman and Reynolds.

Plead Guilty of Arson.

Des Moines, Ia.—Signed confessions have been secured by Attorney General Havner from nearly all of the ten men arrested near New Sharon and at Des Moines the past few days charged with arson and conspiracy in connection with the burning of a school house, the Dutch Reformed church, and other buildings in the Dutch community of Mahaska county.

Urge Yanks Leave Russia.

Washington, D. C.—Petitions from the American Legion post, Seattle, urging withdrawal of the American expeditionary forces in Siberia, were presented to the senate.

Exchange Seat Sells High.

New York.—A new record price for a seat on the Stock exchange was made, when a place sold for $110,000. This is $10,000 above the previous record price paid less than a week ago.

Brewers See Loophole.

Milwaukee, Wis.—Wisconsin brewers will attack the "drys" from a new angle, seeking through the courts to obtain an interpretation of the rights of the federal government and of the states to define "intoxicating liquors."

VOTE LEAGUE RESERVATION

Senate Takes Action Which President Said Would Take Heart Out of Covenant.

Washington, D. C.—The senate, by a vote of 46 to 33, adopted a reservation qualifying the obligations of the United States under Article 10 of the league of nations covenant, and thus went on record as squarely joining the issue with President Wilson.

A solid republican lineup, reinforced by four democratic votes, put the reservation across exactly as it came from the foreign relations committee and in virtually the language which the president declared on his western tour would cut the heart out of the covenant and mean the rejection of the treaty.

The Article 10 reservation as adopted by the senate follows:

"The United States assumes no obligation to preserve the territorial integrity or political independence of any other country, or to interfere with controversies between nations—whether members of the league or not—under the provisions of Article 10, or to employ the military or naval forces of the United States under any article of the treaty for any purpose, unless in any particular case the congress, which, under the constitution, has the sole power to declare war or authorizes the employment of the military or naval forces of the United States, shall, by act or joint resolution, so provide."

In only two particulars does this language differ from the proposed reservation which the president declared at Cheyenne, Wyo., he would be obliged to regard as a rejection. As read by Mr. Wilson, the phrase "under the provisions of Article 10," occurred at a different place and the final word, "provide," was changed to "declare."

All of the negative votes were by democrats. Four democrats, Gore, Reed, Smith of Georgia and Walsh of Massachusetts, voted with the republicans for adoption.

CHOOSE D'OLIER HEAD.

American Legion Hold First Meeting—Nebraska Man Honored.

Minneapolis, Minn.—The first annual convention of the American Legion here last week elected Franklin D'Olier of Philadelphia as its national commander, and voted to have congress consider the advisability of approving further bonuses for service men. The Rev. F. A. Kelly of New York was elected national chaplain. Shortly before adjournment, five vice chairmen were elected. They are: Allen A. Tukey, Omaha; James O'Brien, San Diego; J. P. Lewis, Long Prairie, Minn.; A. R. Chambers, Winthrop, Mass.; and William B. Follett, Eugene, Ore. Twenty-five thousand delegates and alternates representing practically 1,000,000 former soldiers, sailors and marines in every state and territory of the United States attended the meeting.

ROUND UP I. W. W.'S IN WEST.

General Warfare Started on Reds Following Assassination.

Centralia, Wash.—Cities of western Washington have joined Centralia in arresting members of the industrial workers of the world and raiding their headquarters following the firing on an armistice day parade here which resulted in the death of four former American soldiers, serious injury to another and the wounding of twenty-two. Raids conducted in Seattle, Tacoma and Aberdeen on the industrial workers' headquarters have resulted in scores of radicals being landed in jail and the seizure of tons of red literature.

Shot By Jail Breakers.

Le Mars, Ia.—William Maxwell, son of Sheriff Maxwell, was probably fatally wounded when he was shot by escaping prisoners in the Plymouth county jail. His father, Hugh Maxwell, was also shot; his mother was stunned by a blow over the head, and his two sisters were locked in the jail. The men who escaped were: Lee Barrington, Harry Smith, W. Cullon and James O'Keefe, captured by Sioux City police after robbing the Westfield bank at Westfield, Ia., October 27, and William Convey, who was awaiting trial for attempting to shoot Sheriff Maxwell.

Crash May Reduce Prices.

Washington, D. C.—Approximately $800,000,000 will be released to help local enterprise throughout the United States as a result of the crash in the New York stock market last week, government officials said here. This vast sum, when it is no longer attracted by speculation, will be available to local business men in need of cash to increase production, build factory additions, buy new machinery and boost business generally, it is believed. This will tend to help reduce prices and living costs, officials hope.

Wilson Leaves Sick Bed.

Washington, D. C.—President Wilson left his bed Nov. 11 for the first time in more than a month. Swathed in blankets and propped in a pillowed invalid's chair, he was propelled about the White house for an hour.

Banks Make Big Showing.

Washington, D. C.—An increase of $3,571,000,000 in resources of the national banks since August, 1918, the greatest in any year since the inauguration of the national banking system was reported by Comptroller Williams.

OBEY COURT ORDER

HEADS OF MINERS' UNION CALL OFF COAL STRIKE.

BITTER TOWARD GOVERNMENT

Miners Reluctant to Return to Work, May Await Adjustment of All Grievances.

Indianapolis, Ind.—The strike order sent from the headquarters of the United Mine Workers of America here on October 15 to district presidents in bituminous fields in twenty states of the union, and which resulted in more than 400,000 miners laying down their tools, paralyzing coal production throughout the nation, was cancelled November 11 by heads of the union in obeyance to a mandate issued by United States District Judge A. B. Anderson.

The annullment of the strike order followed a meeting of international officers, district presidents and members of the executive board and scale committee, which lasted seventeen hours and at which, it is said, bitter resentment was shown against the government for its action against the miners.

John I. Lewis, acting president of the mine workers, in announcing the decision made the following statement:

"Gentlemen, we will comply with the mandate of the court. We do it under protest. We are Americans. We cannot fight our government. That is all."

Judge A. B. Anderson, in federal court, approved the order calling off the strike. The judge characterized the order as a "good faith effort" to comply with his mandate.

The meeting was probably the most momentous ever held by the miners' organization, if not the most weighty ever conducted by a labor organization in this country, for, in the view of labor leaders, it was to determine whether an organization would be forced by governmental pressure through the courts to discontinue a strike, when apparently all the members of the union were behind the walkout, which was being conducted without any form of violence or damage to property.

Labor in general, as represented by the executive committee of the American Federation of Labor, had offered its unqualified support to the miners in their strike, while obedience or disobedience of a federal court order hung in the balance, and this fact gave miners' representatives who favored holding out an argument which weighed heavily with some of their colleagues.

Reports from many states indicate that many of the miners will not resume work until an agreement has been reached between union officials and operators now in session at Washington.

"PUSSYFOOT" GIVEN RIDE.

American Prohibition Worker Handled Rough By Londoners.

London.—William E. Johnson, an American prohibition worker and Anti-Saloon league organizer, familiarly known here and elsewhere as "Pussyfoot," was dragged from a platform from which he was speaking, severely beaten and paraded through two miles of crowded West End streets on a plank.

His Career in Nebraska.

Lincoln, Neb.—William E. (Pussyfoot) Johnson was a student in the University of Nebraska thirty years ago. In the early nineties he became connected with the government as an agent for running down men accused of selling liquor to Indians. On account of the danger connected with the work, he adopted quiet but effective methods that gave him the name of "Pussyfoot" and put him well at the head of his branch of the service. He left the government service and became general agent and publicity man for the Anti-Saloon league.

BIG RAISE IMPOSSIBLE.

Secretary of Labor Offers Solution to Settle Mine Grievances.

Washington, D. C.—Demands of coal miners for a 30-hour week and a 60 per cent increase in wages and an unyielding position by the operators, alike were declared "impossible" by Secretary Wilson in opening the conference called to bring peace to the bituminous coal fields of the nation. To obtain this peace the secretary proposed three plans of procedure.

"First, negotiation through joint wage scale committees representing all districts; second, negotiation through concurrent sessions of committees from the various districts; and, third, negotiation first of an agreement in the central competitive field and then of agreements for other fields with that of the central district as a basis."

Kansas Corn Crop.

Topeka, Kans.—The Kansas corn crop this year will amount to 64,365,000 bushels, according to estimates released by Edward C. Paxton, for the bureau of crop estimates at Topeka.

Will Return All Mail.

Washington, D. C.—The house bill authorizing the return to senders of undelivered second, third and fourth class mail was passed by the senate and went to the president. Only letter mail is now returnable if undelivered.

Pneumonia often follows a **Neglected Cold**

KILL THE COLD!

HILL'S CASCARA QUININE BROMIDE

Standard cold remedy for 20 years—in tablet form—safe, sure, no opiates—breaks up a cold in 24 hours—relieves grip in 3 days. Money back if it fails. The genuine box has a Red top with Mr. Hill's picture.

Famous Roman Woman.

It has been said by a cynic that never can woman be the friend of woman. But she can be the friend of man, and absolutely disassociated from sex affinity. Paula, noble Roman lady, was the devoted life friend and helper of the great Jerome—St. Jerome. She was descended from the Scipios and the Gracchi. She was born A. D. 347 at Rome. Married at seventeen to Textius, she lived in splendor on Mount Aventine. Upon her conversion to Christianity she gave half her fortune to the poor and began the ascetic life. She came under the influence of the great Jerome, and the intercourse of these two minds was continued when Jerome went to the East to live in a cave at Bethlehem and to put forth his mighty literary works. Paula, with her friends, followed his footsteps, built a convent near the cave, and ministered to the saint amid his stupendous accomplishments. She died in her convent; her eyes were closed by St. Jerome. The poor of Palestine rose up to call her blessed.

The Right Way

in all cases of

DISTEMPER, PINKEYE INFLUENZA, COLDS, ETC.

of all horses, brood mares, colts and stallions is to

"SPOHN THEM"

on the tongue or in the feed with

SPOHN'S DISTEMPER COMPOUND

Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the germs. It wards off the trouble, no matter how they are "exposed." A few drops a day prevent those exposed from contracting disease. Contains nothing injurious. Sold by druggists, harness dealers or by the manufacturers. AGENTS WANTED.

SPOHN MEDICAL COMPANY, GOSHEN, IND.

VISITOR SHOULD HAVE TACT

Something of a Triumph When One Can Make Hostess Feel at Home in Her Own House.

Visiting is an art. To make people feel at home in their own house is the highest point of human conduct. "He was never any trouble," said a certain woman of her husband, who, though he had never supported her, nevertheless made her happy for 30 years. What an epitaph for a permanent visitor!

To visit properly requires supreme gifts. Silent visitors often get on one's nerves more than the parrot. Their staring eyes, their maddening acquiescence in everything done for them, their almost inexcusable lack of enthusiasm, leave one dead and cold and weary. In contrast, we all know the jumping guest who is always ready to meet your lightest suggestion with projectile-like activity, and who bounces about the place from morning till night jostling your sacred and inviolable ideas and tramping roughshod over your mental gardens, with sublime unconcern.—Exchange.

Process of Deduction.

Cecil Julian is a Hoosier boy scout who uses his wit quite as well as his hands. Recently while passing the window of a cleaning company he saw in the window the velvet dress of his former teacher. The next day he noticed that it was still there. In fact, for one whole week it hung in that window. And then the next Monday morning it was gone.

But lo and behold, he did see it that day and then it was being worn by its owner. He went up to her, smiled sweetly and said: "Oh, I see you are wearing —— the Cleaning company's advertisement."—Indianapolis News.

Her Class.

"Is a woman who drives her own machine a chauffeur?"

"No; she's a home-wrecker."

O-I-C.

"What is your profession?"

"What! You don't know that I am a man of letters?"

Cuticura Soap for the Complexion. Nothing better than Cuticura Soap daily and Ointment now and then as needed to make the complexion clear, scalp clean and hands soft and white. Add to this the fascinating, fragrant Cuticura Talcum and you have the Cuticura Toilet Trio.—Adv.

BOSTON'S OLD STATE HOUSE

Famous Building, Restored by Patriotic Society, Is Now Preserved as a Revolutionary Relic.

The old State house in Boston was erected in 1743. In early days the first floor was used as the Merchant's exchange, and the second story as the meeting place of the governors of the province and the royal council. A few feet from the eastern porch occurred the Boston massacre on March 5, 1776; in 1789 Washington reviewed from this building a procession in his honor, and in 1835 William Lloyd Garrison took refuge there to escape from the mob that had broken up an anti-slavery meeting and threatened his life. In later years the building was turned into business offices and was so much altered, inside and outside, as almost to destroy the original architectural effect. In 1881 it was restored by the city at the request of the public-spirited citizens, and is now in the custody of the Bostonian society, which occupies it. The rooms, including the old council chamber and hall of representatives, contain a collection of relics and paintings of revolutionary times.

Accurate Description.

"What is an Italian vendetta?"

"It is one of them new-fangled porches around the new cottages."

There's nothing truer than a sister's love for some other chap.

It's the wise housewife who serves

Postum Cereal

instead of coffee. For where coffee sometimes disagrees and leaves harmful after-effects, Postum is an absolutely healthful cereal drink. Made of roasted wheat blended with a wee bit of molasses.

The extraordinary flavor of this beverage resembles that of the finest coffee—pleasing to particular tastes.

Two sizes, usually sold at 15c and 25c.

Made by

Postum Cereal Company, Battle Creek, Michigan

Home Town Helps

WORK FOR "HOME BEAUTIFUL"

Government Demonstration Agents Give Advice Concerning Pretty and Convenient Dwellings.

(Prepared by the United States Department of Agriculture.)

It does not cost any more to build a house which will be pretty and convenient than it does to erect a homely and inconvenient dwelling, the home-demonstration agents are telling the people in their territories. The state agricultural colleges and the United States department of agriculture are backing up this "home beautiful" movement. In some states the work is yet in the lecture stage and in others demonstration homes are being erected which are to serve as good examples of architecture in that community.

Such a home was built last summer in Talladega county, Ala. Not only its plans, but its decoration and landscape setting as well, have been made according to the designs of the government experts. It is up-to-date in every detail, but strict economy has been used in the plans. Beauty of line and material are to be found in this dwelling. So much care has been put on the floor plans and so many labor-saving devices have been built in that housekeeping in it will be easy. The house is built of lumber cut on the farm and it is located on a main thoroughfare, where a comfortable, well-planned, and pretty farm home can be a source of inspiration.

BRICK HAS MANY ADVANTAGES

Material Declared by Eastern Journal to Be Best for Construction of Ideal Home.

"Convincing beauty" is not a matter of money. Perfect taste and the perfect material can be put into a $4,000 or $5,000 home as well as into the millionaire's palace. Is there anyone who has not been fortunate enough to see, at some time in his life, a little brick house that appealed to him as being all that it should be, an ideal companion for the trees and the grass and the hills around—a little house that cost no more than the most expensive mansion?

Brick is the material that succeeds, as none other can, in adapting itself to the wants of the man with good taste and a moderate income. In the house built on a proper plan, it suggests all the qualities that should be associated with the word home—permanency, hospitality, warmth, comfort, beauty. And brick has that rare and wonderful characteristic which is said to distinguish the elect among womankind—it grows old beautifully.

Time is powerless to mar the beauty or to sap the strength of brick. Generations may come and go, but the sturdy brick walls of the homestead stay on. Brick may reach a venerable old age—it never reaches the state of decrepitude.—New York Sun.

For Capital and Labor.

"In order to correct the apparently unfriendly relations between capital and labor, Community Service believes that it can perform a valuable work by reviving the neighborhood spirit," says a member of the organization. "This can be done by teaching the foreign-born lessons of Americanization, directing the leisure of the people along instructional and educational lines, finding a stimulating substitute for the disappearing saloon, furnishing a gathering place with a healthy atmosphere, organizing the social, educational and recreational resources of our communities on lines so broad and democratic as to win the support of all races, creeds and classes. In short, it is the aim of Community Service to develop community interest around community need, making of every neighborhood a good place in which to live."

No More Amateur Architects.

Beauty is officially approved by the state of Pennsylvania. The legislature has enacted a new law, under which no tyro can try his hand at architectural creation. In order to practice as an architect a man will have to pass an examination, quite after the fashion of lawyers and physicians.—From The Nation's Business.

City Needs Trees.

A city shorn of its leafage is bereft of all of its mellowness. It is left a gaunt, stark thing, its face deep-lined, with hard contours and angular outlines. It looks old and bold and unashamed, and it turns its face upon the world like a creature without ideals, without purpose.

His Ultimatum.

Henpeck—I'll have to get a new hat, Lucretia.

Mrs. Henpeck (warmly)—Are you poor, spineless men slaves to fashion?

Henpeck—No, sir—er, I mean, ma'am! But, I, for one, shall never wear a straw hat and an overcoat at the same time.—Buffalo Express.

Big Soda Deposit.

A single deposit of soda in British East Africa is estimated by geologists to contain more than 200,000,000 tons.

Eases Colds

At once! Relief with "Pape's Cold Compound"

The first dose eases your cold! Don't stay stuffed-up! Quit blowing and snuffling! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up a severe cold and ends all grippe misery.

Relief awaits you! Open your clogged-up nostrils and the air passages of your head; stop nose running; relieve the headache, dullness, feverishness, sneezing, soreness and stiffness.

"Pape's Cold Compound" is the quickest, surest relief known and costs only a few cents at drug stores. It acts without assistance. Tastes nice. Contains no quinine. Insist on Pape's!—Adv.

Quick Change Artist.

Our idea of an independent man is one who can pin up the baby's outfit as quick as he can change tires on his motorcar.—Dallas News.

"CAN I BE CURED?" SAYS THE SUFFERER

How often have you heard that sad cry from the victims of disease. Perhaps the disorder has gone too far for help, but oftener it is just in its first stages and the pains and aches are only nature's first cries for help. Do not despair. Find out the cause and give nature all the help you can and she will repay you with health. Look after the kidneys. The kidneys are the most overworked organs of the human body, and when they fail in their work of filtering and throwing off the poison that constantly accumulates in the system, everything goes wrong. GOLD MEDAL Haarlem Oil Capsules will give almost immediate relief from kidney and bladder troubles and their kindred ailments. They will free your body from pain in short order. But be sure to get GOLD MEDAL. Look for the name on every box. In three sizes, sealed packages. Money refunded if they do not help you. —Adv.

FARMERS FRIEND ON RESERVE BOARD

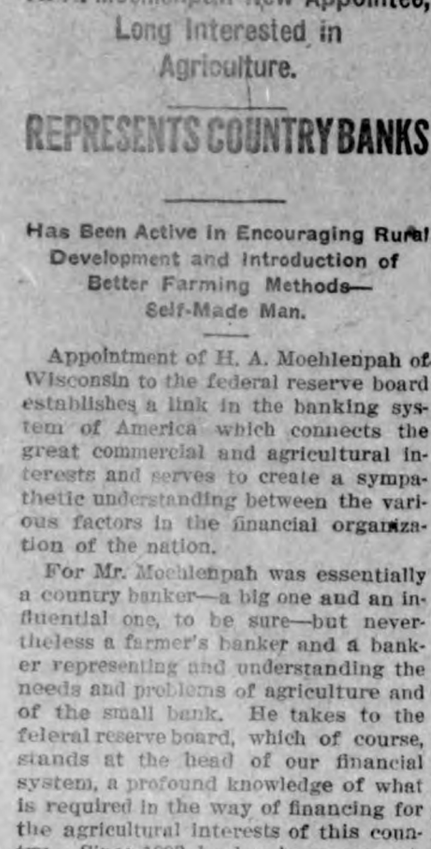
H. A. Moehlenpah New Appointee, Long Interested in Agriculture.

REPRESENTS COUNTRY BANKS

Has Been Active in Encouraging Rural Development and Introduction of Better Farming Methods—Self-Made Man.

Appointment of H. A. Moehlenpah of Wisconsin to the federal reserve board establishes a link in the banking system of America which connects the great commercial and agricultural interests and serves to create a sympathetic understanding between the various factors in the financial organization of the nation.

For Mr. Moehlenpah was essentially a country banker—a big one and an influential one, to be sure—but nevertheless a farmer's banker and a banker representing and understanding the needs and problems of agriculture and of the small bank. He takes to the federal reserve board, which of course, stands at the head of our financial system, a profound knowledge of what is required in the way of financing for the agricultural interests of this country. Since 1903 he has been connected, first as cashier and later as president, with the Citizen's Bank of Clinton, Wis., an institution of $50,000 capital. Within the last ten years he has organized and operated two large institutions for the handling of farm



H. A. Moehlenpah.

loans. The first of these is known as the Wisconsin Mortgage and Securities company and has a capital stock of $200,000. It was organized in 1914 and during the first five years of its existence it made loans to sixteen hundred farmers aggregating five millions of dollars. The second of these institutions is known as the Bankers' Joint Stock Land Bank of Milwaukee, organized in 1918 under the federal farm loan act, with a capital of $250,000. This institution now has about seven hundred loans in effect totalling $3,000,000.

Understands Farmer's Needs.

While these facts show the financial relation of Mr. Moehlenpah to agricultural interests, they barely hint at his great activity in behalf of the farmers for he was active in Wisconsin and at Washington, D. C., in behalf of the legislation which resulted in the passage of the farm loan act. His last work in Wisconsin before going to Washington was that of getting under way the organization of a cattle loan company for the purpose of financing the movement of pure bred stock from southern Wisconsin to northern districts of that state. He had been active for many years encouraging better farming and has been identified with many movements like grain contests, exhibitions in rural schools, formation of country development associations and educational excursions made for the purpose of introducing pure bred stock and pure bred seeds. Many times he has been chairman of the committee for such work in charge.

Knows Big Policies.

However, Mr. Moehlenpah is not merely a country banker. He is one who understands the larger aspects of finance and is able to think of financial problems in large units. He was a considerable factor in the discussions of the federal reserve act before it became a law and perhaps more than any single individual was responsible for the endorsement of this act by the American Bankers' association. When the federal reserve act was before congress, the American Bankers' association called a conference in Chicago of the bankers of the country for the purpose of securing suggestions for amendments it was felt would be needed.

Represents Country Bankers.

As a result of that conference, Mr. Moehlenpah was appointed a member of a committee of fifteen representing the bankers of the United States. He represented the country banks, all the other members being large city bankers: A. P. Hepburn, New York; W. A. Maddox, Atlanta, Ga.; J. B. Forgan and G. M. Reynolds, Chicago, and others.

M'ADOO SAYS FARM LOAN ACT HELPS FARMERS

Former Secretary of the Treasury Describes in Kansas City Court How Law Operates.

PART OF FINANCIAL SYSTEM

Sustains Constitutionality of Law Which Does for Agriculture What National Banks and Federal Reserve Act Do for Commerce and Industry.

POINTS FROM M'ADOO'S KANSAS CITY ARGUMENT.

Successful farming is basic to the general welfare. Conditions which denied to the farmer ample funds for operation and adequate credit facilities for the purchase of land and improvements were of grave national concern.

Therefore, a rural credits system was devised as a part of the financial system of the nation in order that the great industry of agriculture, the source of the nation's food supply, might have an equal chance with other lines of business and industry.

Federal land banks were created to provide credit and money for the borrowers of small means—plenty of money at low rates of interest and on long-time credit. These banks were formed by the government subscribing most of the capital stock.

Joint stock land banks were created to provide credit and money for farmer borrowers of larger means—in order that the large borrowers might not take all the money the farm land banks had to lend and thus leave the small borrower without funds. These banks are privately owned, but are operated under government supervision and are subject to all the essential restrictions placed upon the federal land banks.

To make farm loan bonds attractive to investors, and to make it possible for these bonds to compete with municipal bonds, the government made them exempt from all federal, state and local taxes. Without tax exemption, the whole farm loan system would have failed absolutely.

How the federal farm loan act came into existence as the result of a long-standing and nation-wide need was told in the United States court at Kansas City by former Secretary of the Treasury William G. McAdoo. The right and duty of the federal government to aid and encourage agriculture was told by former Justice Charles E. Hughes and former Attorney General of the United States George W. Wickersham.

Interest Rates Reduced.

As brought out by Mr. McAdoo, the farm loan act was passed by congress to provide ample funds for agricultural development and agricultural operations. Mr. McAdoo, who was secretary of the treasury at the time this law was passed, said that it was the intent of congress to provide:

1. Plenty of money for the farmers.
2. Low rates of interest.
3. Long and convenient terms of credit.

Mr. McAdoo showed how this act already had reduced rates of interest in many and extensive sections of the United States and had so stabilized interest that rates were now almost uniform throughout the United States.

He showed how the federal land banks were created in order that the farmer of small means might have credit and borrow money at as low rates and on as easy terms as the man of larger means.

Protects Small Borrower.

He told also how the joint stock land banks were created to protect the farmer of small means in his right to low rates and easy terms. He said that without the joint stock land banks there was grave danger that the heavy borrowers would absorb all the money which the federal land banks could assemble and thus leave the small borrower in much the same condition as before.

The farm loan act also has operated to make more generous everywhere the terms on which farm mortgage loans are made. The amortization plan makes it possible for the farmer to borrow the money he needs and to pay it back in small annual or semi-annual installments as he is able to take it out of the soil.

Tax Exemption Necessary.

"Now, of the farmer was to get the real benefits of this act," said Mr. McAdoo, "if he was to secure plenty of money and at a low rate, it was necessary that the quality and character of the securities issued by these land banks should appeal so strongly to capital, that they could sell on a parity with municipal bonds or other tax-exempt securities. Therefore tax exemption was granted to the bonds of these banks. Without tax exemption the entire plan fails."

Job for a Versatile Man.

According to a London paper, the Lady's Magazine for 1789 contained the following comprehensive advertisement: "Wanted, for a sober family, a man of light weight who fears the Lord and can drive a pair of horses. He must occasionally wait at table, join in household prayer, look after horses, and read a chapter in the Bible. He must rise at seven in the morning, obey his master and mistress in all lawful commands, and if he can dress hair, sing psalms, and play at cribbage, so much the better. Wages, fifteen guineas a year."

Longfellow and Tennyson.

Longfellow and Tennyson were not personal friends of long standing, but they became friends late in life. Longfellow was born February 27, 1807, and Tennyson August 6, 1809, but they never met until 1868, when Longfellow visited England. Writing from there to a friend in this country he said: "We came last night from Freshwater, where we had passed two happy days with Tennyson—not at his house, but mostly with him. He was very cordial and very amiable and gave up his whole time to us."

Saloniki's Old Churches.

The finest remains of the ancient city of Saloniki are its churches. How they ever survived the tempests of the Middle Ages is a miracle. Nevertheless they did, 22 of them. And they stand today, turned back into churches after their 500 years of use as mosques, illustrating the story of Byzantine ecclesiastical architecture even more beautifully, in certain ways, than those of Constantinople. Moreover, they make up among them a museum of the lost Byzantine art of mosaic, unrivaled save in Constantinople and Ravenna.

Women's Ways.

"I have nothing to say," says an indignant woman today, and then she talked her head off. These women!—Atchison Globe.

Ford

THE UNIVERSAL CAR

Don't Depend on Spring Deliveries

Spring deliveries of Ford cars have never been certain, and they should not be depended upo.. Demand has always been greater for Ford cars than then the supply or production. So, if you would be sure of having a Ford car, buy it now while deliveries are possible. Don't wait—even next month is an uncertainty.

Only a limited, specified number of cars has been allotted to this territory. That allotment cannot be sucreased, because the demand all over the country is grea er than the supply or production. Get your order in now, and you will be one of those who is sure of a Ford out of our allotment.

Its first come—first served. All ordesi filled in rotation. So if yon would be foreha ided if you would have a Ford car when you want it—the you will buy a For car now. A signed order with us is you protection. It is the result of the wisdom of looking ah ad.

If you buy a Ford car now don't think you have to "store" it. The Ford is a car made to servc its owner for business or pleasure the year round. Ford owners have long since come to reconize the fact. It is no longer popular to lay up your car for the winter. Buy a Ford and use it now.

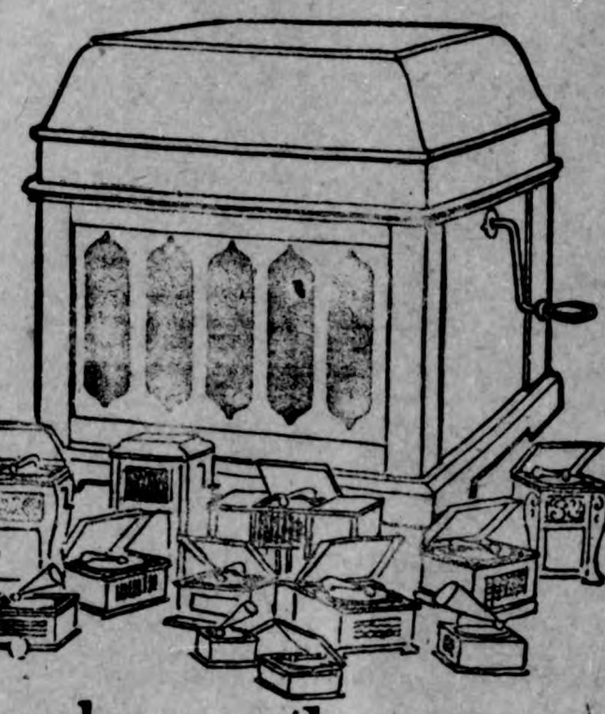
"The GREATEST of them all"



Head and shoulders above the crowd stands Thomas A. Edison!

"Head and shoulders" above the crowd of ordinary phonographs and "talking machines" stands Edison's great contribution to the world's enjoyment—

THE NEW DIAMOND AMBEROLA

No product can be bigger than the brain that evolves it. No other brain in the world today has the inventive ability of Edison's. That fact alone is sufficient proof of the absolute superiority of the Amberola.

But the Amberola can quickly and easily prove its own superiority. Its *tone*—oh, what a revelation, compared to metallic "talking machines" and shrill-sounding phonographs! None but Edison could work that miracle of tone.

Then the *Amberol Records*, made for the Amberola alone! They are practically *unbreakable* and *everlasting*—what a contrast to the costly fragileness of other phonograph records.

And for range of music—the widest in the world—all the best, all the greatest, all the latest. An endless feast of fascinating melody.

Yet the biggest surprise of all is the *price!* This wonder phonograph *costs less* than inferior competitors! There is not a single draw-back to your owning an Amberola *right now!*

Don't listen to the *claims* of other manufacturers—listen to their *machines*. Then come in and *compare* the matchless tone of the Amberola. Edison's wizardry will win you every time.

We'll expect you in *today*—now *don't* forget.

FREE Trial Offer

We will place an Amberola in your home for *3 Days' Trial*, which will not put you under the slightest obligation or expense. Come here, select an Amberola and a number of records and we'll send them to your home. At the end of 3 days, if you do not want the Amberola, we'll call and take it away. If you *do* want it, we'll arrange terms of payment to suit you.

KING OF ALL "RAINMAKERS"

Secret of Success of Solly Greencup, Who Is Well Remembered in the West, Was Simple.

Given an ingenious mind and an eye to business, a live man can make money out of almost any old thing.

Perhaps you remember the extraordinary success scored some years ago by Solly Greencup, the rainmaker. If not, you can read his record in a portfolio of newspaper clippings collected all the way from Nome to San Diego, from eastern Oregon to western Kansas.

Solly Greencup, indeed, occupied for a while a position unique in the annals of meteorology. Scientists might doubt and cynics might scoff, but whenever Solly went after the rain clouds he always got 'em. Moreover he didn't work on "the heads-I-win, tails-you-lose" principle of some other rainmakers. Solly Greencup, when he once decided he could produce rain in a given district, always backed his opinion with hard cash. If he asked the farmers to put up $1,000 for an inch of rain, he put up another $1,000 himself as a forfeit in case he failed. And he always won.

Greencup never explained his methods. All the farmers wanted was the rain. All Greencup wanted was the money. With the result both were satisfied. His apparatus consisted of a flag pole, an electric battery, a kite with a metal tail and an air balloon filled with a mysterious gas. If scientists demanded the reason for these contrivances, he shook his head and smiled.

Sometimes Greencup would have to stay a long time in a locality before he could find the exact combination necessary to coax the wet forces into action. Sometimes he had to confess that the drys were too strong for him. But as soon as he posted his forfeit and set up his apparatus the desired moisture followed in a few days.

Once in Elsinore valley he gave the ground a good soaking for a paltry $2,500, thus saving a $1,000,000 grain crop. Of course he made a tidy fortune, yet at the time no one considered his charges exorbitant. And everybody admitted he was a good sport. As he grew wealthy Greencup never gave himself frills nor assumed the title of "professor." These things were afterward remembered to his credit.

A few years ago Greencup went permanently out of the rainmaking business. In a street car accident he lost his left foot, which had to be amputated above the ankle. After that for love or money he refused to experiment with the weather.

When the secret of his success was finally revealed some carping moralists called him make-believe. He never claimed, like another famous personage, to be in partnership with the Almighty. But at least he had done something that nobody in the world had ever done before.

He had capitalized a corn.

Big Private Telephone Exchange.

The size of the private telephone exchange grows with the erection of every hotel or office building of any considerable proportions. The largest ever constructed is that of a New York hotel which has been recently opened to the public. It occupies 3,165 square feet of floor space, having an operating room 110 feet long by 15 feet wide, a terminal room 30 feet long and 25 feet wide, a restroom 23 feet by 15 feet and a locker and washroom 30 feet by 14 feet. The operating force consists of one chief operator, one assistant chief operator, eight supervisors and 110 attendants. The switchboard consists of twenty-three positions. Thirteen positions are equipped with telautographs used for paging and announcing only. The switchboard has a capacity of 3,340 extensions and 180 trunks. The hotel has telephone service in each of its 2,200 rooms, and there are forty public telephone booths served by four switchboards connected with the main switchboard. The following gives some idea of a few of the items which make up part of the telephone system: 630 fuses, 1,170 condensers, 2,400 relays, 5,350 lamps, 38,500 jacks, 750,000 soldered connections, 7,926,000 feet of wire.

Britons Build Biggest Plane.

The Tarrant Aircraft Construction company of Farnborough, England, has just finished building the biggest airplane in the world. It is a triplane, the middle plane of which is 131 feet wide. Above and below this are two planes, each 98 feet long. All these planes are 15 feet 2 inches deep. The body is 76 feet long (20 feet longer than the biggest biplane), and the height is 37 feet. The pilot's seat juts out 12 feet beyond the line of the planes. The body of the machine resembles a whale in length and girth, with a great blunt-ended nose. Between the planes are six Naper-Lion engines, each developing 500-horsepower. Four of them operate two-bladed tractor propellers; two of them four-bladed "pusher" propellers.

Jap Industry Hard Hit.

During the war the Japanese zinc industry was very prosperous and large profits were made on ore which was imported from Australia and the French Indies. The signing of the armistice, however, has dealt a hard blow to this industry, and it is reported that it costs $200 a ton to produce Japanese zinc, while the market price is only $187 a ton. It is expected that this will result in a request for subsidies and import protection, since the deposits of Japanese ore are of such inferior quality that competition with imported ore cannot be met successfully.

HUGHES SAYS AID TO FARMING LEGAL

Declares it Duty of Government to Protect Nation's Food Supply.

TAX EXEMPTION NECESSARY

Former Justice of U. S. Supreme Court Makes Powerful Argument Defending Constitutionality of Federal Farm Loan Act.

That the general welfare of the nation demands that the government shall encourage, aid and protect agriculture by whatever means and to whatever extent may be necessary to safeguard the nation's food supply, even though those means of aid and protection shall include the appropriation of government money and the extending of government credit, or even the lending of government moneys, was the contention of former Justice of the Supreme Court Charles Evans Hughes, when he appeared in the federal court at Kansas City as one of the attorneys to defend the constitutionality of the federal farm loan act.

Government's Duty to Aid Farming.

Mr. Hughes pointed out that from the earliest history of this nation there has been a continuous disbursement of public money in aid of agricultural development. He showed how, while congress had not attempted to operate farms and had not stepped into any state to legislate as to the use of farm lands, still congress had provided information, had dissemiated instructions, had distributed seeds, and had supported in every manner which was deemed wise, the great national interest of agriculture. He told how the government had sought to protect agriculture from great pests such as the gypsy moth, the brown-tail moth, the boll weevil, or even the grasshopper—all for the general welfare.

He showed how the government had provided for the distribution of seeds of new and useful varieties and how it had provided for the introduction and protection of insectivorous birds and how it had provided also for the establishment and maintenance of laboratories for experiments in agricultural chemistry. He told how later the bureau of animal husbandry was established to study and to disseminate information as to the proper breeding and as to the diseases of domestic animals. He told later of how the weather bureau was taken away from the army and put in charge of the department of agriculture so that the farmers and all interested in the production and distribution of food might have comprehensive information as to rainfall and weather prognostications.

Protecting Nation's Food Supply.

From all this he reasoned that the government recognized it as a proper function of government to encourage, aid and protect agriculture, and he held that it was the duty of the government to guard against any shortage in the food supply of the nation. Therefore, he said, when this great underlying industry stood in need of funds for operation or for development, it was clearly the duty of the government and clearly within its rightful powers to provide the means by which the necessary funds could be placed at the disposal of those engaged in the cultivation of the soil.

"Here is a great activity," he said, "which has received financial support from the foundation of the government.

"Our position is that the federal government was competent in the application of money and investment of moneys in the stock of the federal land banks, to organize these banks and to invest moneys in their stock, to borrow money, and to loan money for these purposes, and to provide for the issue of bonds for these purposes. Being competent to do this, the government could organize whatever agencies were necessary and convenient and could authorize them to borrow to do this thing for the government."

Bonds Had to Be Exempt.

Mr. Hughes contended that as congress could create the land banks as corporations and clothe them with power to lend money and to issue bonds, the government could, of course, protect these corporations and these bonds issued by them from discussion or impairment by any action. He said that "as the power to tax was the power to destroy," the government, of course, had the right to exempt these bonds from taxation. And this rule, he said, had particular force in this case, as the bonds of these banks had to be sold in competition with other tax-exempt securities, and that without their being tax exempt money could not be secured for the farmers at low rates of interest. To help the farmer the rate had to be low, and to get the low rate the bonds had to be exempt from taxes.

TO DESTROY POULTRY MITES

Crude Petroleum Found Quite Efficient in Tests of Large Series of Insecticides.

In tests of a large series of insecticides conducted by entomologists of the United States department of agriculture, it was found that a few thorough applications of crude petroleum to the interior of poultry houses will completely destroy mites.

MOSAIC DISEASE OF SUGAR CANE

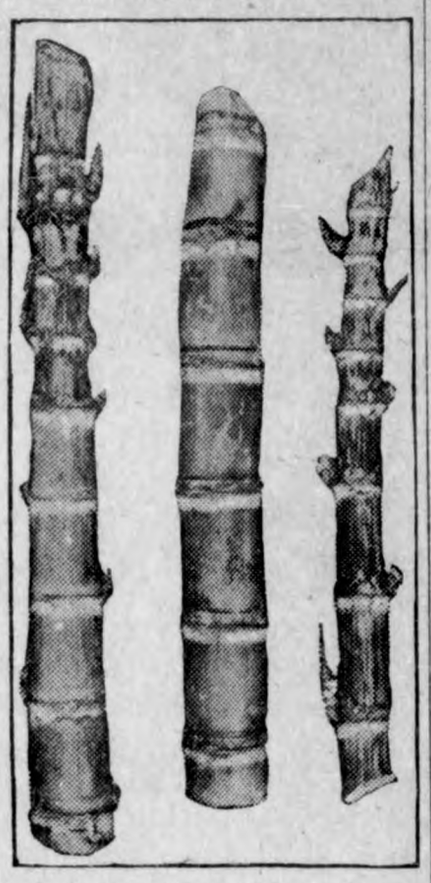
Federal Agricultural Department Taking Measures to Stamp It Out.

PLENTY OF HEALTHY STOCK

If Unchecked Disease May Do Incalculable Damage to Great Cane Growing Sections of the South —Must Use Pure Seed.

(Prepared by the United States Department of Agriculture.)

Washington.—The United States department of agriculture is issuing a bulletin containing several colored plates illustrating the mosaic disease



Late Canker Stage of Mosaic Disease on Canes of New Caledonia Variety. Cane in Center Is Healthy.

of sugar cane, which should enable those interested in this disease of cane to identify it. The mosaic disease of sugar cane which has been known for several years in a number of other cane countries has recently been found in the southern United States. While this disease is quite widespread in the states, there are many disease-free areas from which clean seed cane may be obtained.

The mosaic disease, which has done considerable damage to the cane crop in Porto Rico and some other cane countries, is one of the most serious maladies that has confronted cane growers in recent years, and if unchecked may do incalculable damage to the great cane-growing sections of the South.

To Eradicate Disease.

The measures of control now being taken by the federal authorities in cooperation with various local agencies were preceded by a complete survey of the Southern states undertaken to ascertain the extent of the infected areas.

In badly diseased fields the only remedy is to grind up all the stalks, say the representatives of the department of agriculture. This means, of course, that carefully selected seed cane must be brought in from other regions for replanting. There is still an abundance of healthy stock in Louisiana and the other cane states, so that the industry should not seriously suffer from these attempts at eradication. Where the disease has not obtained a strong foothold, roguing is recommended. This consists of pulling up infected plants, root, stem and branch, and throwing them down between the rows. As soon as the plants wilt they are no longer dangerous as a source of infection. In damp regions, however, care must be taken to gather up these plants and burn them or otherwise destroy them, lest while lying on the ground they sprout and so spread the disease.

Appearance of Mosaic Disease.

It is difficult to describe the appearance of sugar-cane mosaic verbally, and this is one of the reasons why the federal authorities are using a bulletin with colored illustrations. By means of this bulletin anyone can readily ascertain the exact appearance of infected plants. This disease is an infectious chlorosis, similar in many respects to the mosaic disease of tobacco, cucumber, bean, tomato and potato. Scientists have come to the conclusion that some virus is responsible for the appearance of all new cases, and that the only source of infection is some other infected plant. Experiments in Porto Rico and elsewhere have repeatedly demonstrated that cuttings from infected stalks will invariably give rise to infected plants. The shoots seem to be mottled as soon as they appear. Therefore, the use of diseased stalks for planting results in a wider distribution of the disease and insures the survival of the virus even in the absence of secondary infections.

MOST ELOQUENT SPEECH OF WAR

Credited by Baruch to Donlin, President of the Building Trades.

LITTLE TALK CLEARS THE WAY

Was Made in the Dark Days of the War When the Cry From France Was "Men, More Men"—Never Got Into Print.

Washington.—The most eloquent speech made during the war, according to Bernard M. Baruch, former chairman of the war industries board, never got into print. It was made in the dark days when the cry from France was "Men, more men," and the supply available in the draft was running low.

"General Crowder," says Mr. Baruch, "served notice on the board that he must have something like 300,000 men, and the question was where they were to come from. The draft had taken out everybody available, and the only way was to take men from industry. Hence the appeal to the war industries board.

"We put men to work on it, and in due time a plan for weeding men out was presented. Among other things it put the private chauffeur out of business, as well as salesmen and men in the white goods trade. This would not have been enough, and the placing of women in men's work in the trades had to be considered—a real dilution of labor.

Labor Called In.

"The scheme was all right, but when it came to us for approval we found that everybody except those most important had been consulted. I mean the representatives of labor. So they were called in and the scheme, as well as the necessity back of it, were explained to them.

"As might be expected, there was a lot of opposition to putting women in the men's trades and the putting of the men thus released into uniform. During it all one man sat still, giving not the slightest indication of what he thought of the thing. After about everybody else had had his say he took the floor.

"'Mr. Chairman,' he said, 'this thing is very simple. If I am going home Saturday night with my week's pay in my pocket and a guy steps up and tries to take it away from me, I am a fool if I keep my left hand on the wad and try to beat him off with my right. If I do that the chances are that he will get me and the wad and get away clean.

"'If I take my left hand off the wad and go after him with both hands, I'll save the wad and get him.

Use Both Hands.

"'Now, Mr. Chairman, that's the case here. This German guy is just around the corner. If we keep one hand on our wads he'll get us and our wads, too. If we use both our hands we'll save the wads and get him. Unless we get him, if he gets us, our wads or anything else won't be worth much. So I say, Mr. Chairman, let us take both our hands out of our pockets and get after him. So far as I'm concerned, you can have every man in the building trades that can pass the doctors, and the boys, I'm sure, will back me up.'

"John H. Donlin, president of the building trades department, was the chap that did the talking. His little speech settled the question, and all the way was left clear to us to weed all the men out of industry that might be needed.

"Fortunately, as it happened, we did not need to 'dilute' labor, but Donlin's little speech took us over what was one of the nastiest situations in the war. It was the most eloquent speech made during the war and one of the most effective."

Girl Saves Father.

Paris, Ky.—When John Howard, a tenant on the farm of Frederick Wallis, attempted to pick up one of a litter of pigs in the barnyard he was savagely attacked by the mother of the pigs and received a number of serious injuries. His daughter came to his rescue and lassoed the enraged animal and with the assistance of a laborer on the farm carried her father to a place of safety.

U. S. EFFORTS TO END STRIKE FAIL

Offer of 14 Per Cent Increase Flatly Rejected by the Miners.

PARLEY ADJOURNS SINE DIE

Operators Agree to Accept the Governments Proposal as a Basis for a Settlement—Lewis Claims Injustice Done the Miners.

Washington, Nov. 28.—The government's offer of a 14 per cent increase of wages was flatly rejected by the coal miners.

As a result the conference between the miners and operators adjourned sine die with the settlement of the wage controversy still "in the air." No provision was made for the resumption of the conference, the miners declaring "that they were going home and sit tight."

The miners' rejection came after the operators had accepted the government's proposal as a basis for a settlement although they declared that the increase without raising the price of coal to the public would mean the loss of profits to a large number of mines and would seriously interfere with production.

After the rejection the operators tendered a compromise offering to submit the entire dispute to a board of arbitration. This also was refused by the miners and the conference took an adjournment.

Statement by Lewis.

The following statement was dictated by Acting President John L. Lewis of the United Mine Workers:

"The miners and operators' joint conference adjourned sine die. The mine workers' representatives declined to recommend to the miners any acceptance of the 14 per cent increase offered.

"The operators pretended to be willing to grant this 14 per cent increase, but in the same breath stated that they would be unable to operate a large number of their mines unless they had an increase in the selling price of coal. It would be foolish for us to attempt to make any agreement with the operators unless their mines were to be operated.

"The position of the mine workers is unchanged. We hold that the United States government cannot break its word. The pledge given by Secretary of Labor Wilson to grant a 31.6 per cent increase in wages must be redeemed.

"In my judgment Doctor Garfield and the cabinet have committed the most colossal blunder in the industrial history of our nation. They are blindly following an academic theory without regard to justice to the mine workers or the effects of such theory upon the people of the country.

Says Justice Is Denied.

"The responsibility for the crisis now confronting the nation must lie upon those statesmen who are using the powers of the government to oppress and deny justice to the great element of citizenship directly concerned in the mining industry.

"I cannot believe that the people of our country will indorse a policy of opression and repression which means continued industrial chaos, and intense suffering on the part of the mine workers and our entire citizenship."

The letter sent to Doctor Garfield by the operators of the central competitive coal field, accepting the government's offer, reads:

"Recognizing the seriousness of the present crisis and the urgent need of the country for coal, we wish to advise you that, subject to your approval and conditioned upon the mines resuming operations immediately, the operators' scale committee of the central competitive coal field accept, as a basis for the settlement of the present wage controversy and termination of the strike, the figures submitted by you to the joint meeting of operators and miners held yesterday evening, namely, an average increase of 14 per cent to be granted to all classes of mine labor, such increase to be apportioned in accordance with the wage bases that are acceptable to the employees and employers, thus preserving present differentials. Otherwise than as above, modified in complete accordance with your proposal, the present contract in all its term and conditions to be continued in full force and effect until March 31, 1922.

"We have already notified the miners to this effect.

Says Profits Eliminated.

"At the same time we wish to call your attention to the fact that the acceptance of this increase in wages without any increase in selling prices entirely eliminates the profits of a large number of mines. Such a large number, in fact, we fear that the production of coal will be seriously affected. We understand that operating statistics for 1919 are not now in your possession, and we shall rely upon the government, when such statistics are properly assembled and presented, to make such adjustments in selling prices as will permit these mines to make such fair and reasonable profits as they are entitled to under the Lever law."

William Green, secretary of the United Mine Workers, said:

"Secretary of Labor Wilson states that the mine workers are entitled to an increase in wages amounting to 31.6 per cent. Mr. Garfield says 14 per cent. Obviously these two conclusions conflict with each other and, to say the least, are confusing. The mine workers know the figures of Secretary of Labor Wilson are approximately correct and the figures of Doctor Garfield are erroneous. The mine workers challenge the figures of Doctor Garfield and cannot and will not accept them. We will accept the figures of a responsible cabinet officer, Secretary Wilson.

Hits at Garfield.

"Doctor Garfield, because of the responsible position which he occupies, has done a great injustice to a million miners in America. His statement and decision has served to inject into the settlement of the miners' wage controversy an almost insurmountable obstacle. In that respect his action approaches the commission of a moral crime against the public.

"Mine workers cannot mine coal at the figures fixed by Doctor Garfield. The acceptance of his conclusion would mean untold sacrifice, suffering and deprivation on the part of the miners and their families. The problem of decent wages and a decent American standard of living, together with an adequate production of coal cannot be solved as a college professor would work out a problem in geometry, algebra or theoretical philosophy.

"The practical way to solve the present problem of coal production is to grant the miners an increase in wages sufficient to meet the increase in the cost of living and to guarantee them an American standard of living. They will then risk their lives in the mines, accept all the hazards of the industry and mine a steady stream of coal sufficient to meet every requirement."

Garfield's Ruling.

Acting under instructions from the cabinet, United States Fuel Administrator Garfield told the coal miners and the operators that the wage increase for the miners should be 14 per cent and that the price of coal to the public should not be raised.

This declaration, coming from the government as a basis for settling the wage controversy, was received with great dissatisfaction by both the miners and the operators.

Some of the miners' representatives declared that the offer of a 14 per cent increase, in the face of the fact that Secretary of Labor Wilson had offered them 31.6 per cent, was an insult. They declared that the miners would starve idle rather than go back to the mines at this wage increase.

The operators, who have been expecting that the government would see them through on any wage increase, declared that their margins would not permit them to give the miners the 14 per cent out of their own pockets. They said that it would break many of the weaker mines and that it meant ruin and sacrifice of years of earnings and savings.

Garfield Adamant.

The operators for the most part bore their disappointment in silence, but from the miners came denunciation after denunciation of the government's solution. Without reservation, and without mincing words, the miners questioned Doctor Garfield and, through him grilled the government for more than two hours.

Doctor Garfield stood adamant in the face of the questions and the criticism hurled at him from the miners' side of the hall. He answered all questions without betraying personal excitement and firmly but kindly told the miners that what he had laid before them was purely a series of facts.

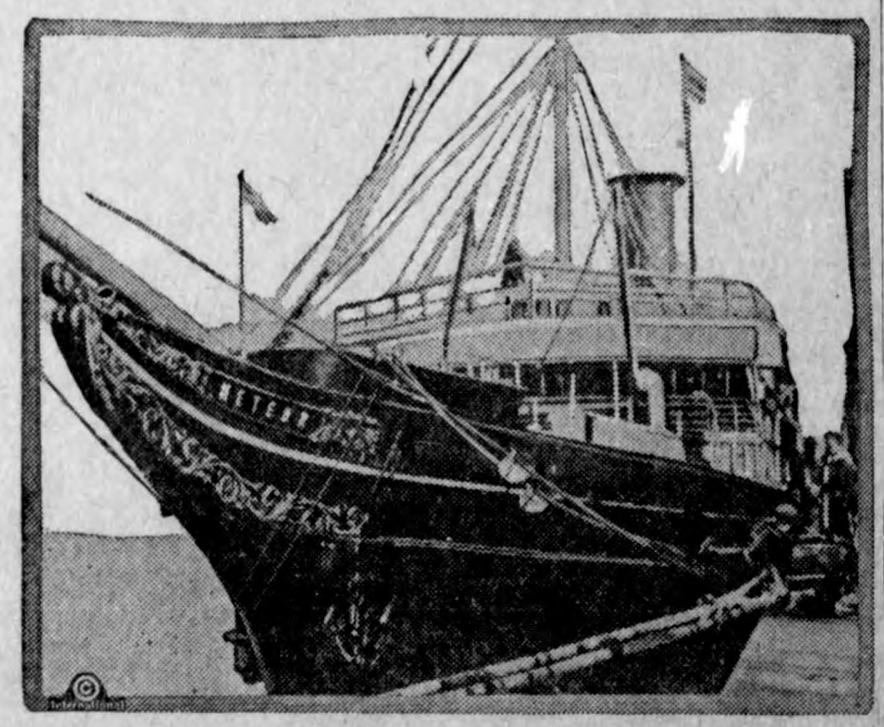
Doctor Garfield said his statement was made on the facts and the figures in the case as he had investigated it. He said that it was as if one looked up at the clock and there read the time.

"The clock tells you the hour, and that is what I have done. I tell you that per cent of increase which should be applied to the miners' wages, on the average to equalize wages with the rise in the cost of living is 14 per cent," said Doctor Garfield.

Shot From Other Barrel.

Dr. Garfield was equally insistent on his finding that the price of coal should not be raised at this time. This was a shot fired from the other barrel of his double-barreled statement to the conference. He made it clear that the facts, as he found them, meant that if the miners' wages were increased 14 per cent, as he said should be done, that the burden should be borne entirely by the operators and not by the public.

EX-KAISER'S YACHT FLYING BRITISH FLAG



The ex-kaiser's yacht Meteor, photographed at Buenos Aires, on her arrival from England carrying 170 passengers. The yacht was turned over to the British government after the armistice was signed and delivered to the Royal Mail line, which is using it for regular passenger service between England and Buenos Aires.

BABIES ARE H. C. L. SACRIFICE

Temporarily Disposed Of in Minnesota That Parents May Economize.

St. Paul, Minn.—Official statistics presented to Governor Burnquist indicate that the high cost of living has caused a number of families in Minnesota to temporarily dispose of their children, so that husband and wife may both obtain employment and live in one or two rooms.

High rents, coupled with the high cost of food, has compelled a number of women in distress to turn their children over to charitable institutions, according to S. W. Dickinson, superintendent of the Children's Home society of Minnesota, St. Paul.

A local children's home has been caring for 44 babies, and some of these are being loaned to the State Agriculture school for the economics department, where the young women students studying domestic science are taught to properly care for babies.

CRIME IS INCREASING

Armed Attacks Are Quite Common in France.

Bandits Use Auto to Get $28,000 Pay Roll From Disabled Soldiers.

Paris.—It was a foregone conclusion that the return of a state of peace would mean the end of a comparative freedom from burglaries and armed attacks on persons. Such crimes are now alarmingly on the increase.

The other day an armed attack was made in the holding up of a tramway on the outskirts of the city.

Then there was a robbery at Havre, recalling Bonnot-Garnier's methods. Two culprits are now in the hands of the police, and they have given the names of their two confederates. The affair was briefly as follows:

Two railway employees were walking down the line last Friday morning with $28,000 as pay for the engine-drivers and other categories. They were both disabled soldiers, one having lost a leg and the other an eye in the war. The robbers, who had evidently carefully prepared their coup, sprang upon the two pay messengers just as the latter reached a level crossing. To knock them down and seize the money bag was the work of an instant.

A gray motorcar was waiting by the level, and the robbers were far down the road before the victims could summon help. Information was brought that a gray torpedo-bodied car had stopped before a little public house in town, and that a man in uniform had left it carrying a case such as is used by railway pay officials.

Two new Portland cement factories are being built at Kawasaki and Hokkaido, Japan, at a cost of $2,000,000.

PERSHING TO INSPECT CAMPS

General to Leave Washington December 3 for a Three Months' Tour of Establishments.

Washington, Nov. 28.—General Pershing will leave Washington December 3 on a three months' tour of inspection of all the military establishments in the United States. Plans for General Pershing's trip were announced by the war department. At the same time it was officially denied that it had any relation to the situation in Mexico.

General Pershing's first stop will be at Camp Lee, Virginia. From there he will go to several camps in the South and thence on to Chicago, where he will arrive on December 20 for a two-day visit. He is planning to be in Lincoln, Neb., on Christmas eve, and will also spend Christmas day there with his son and two sisters.

General Pershing will resume his tour immediately after the holidays, starting at Camp Grant, Rockford, Ill., and continuing westward.

THE JOY OF MOTHERHOOD

Came to this Woman after Taking Lydia E. Pinkham's Vegetable Compound to Restore Her Health

Ellensburg, Wash.—"After I married I was not well for a long time and a good deal of the time was able to go about. Our greatest sorrow was to have no children in our home and one day my husband came back from town with a bottle of Lydia E. Pinkham's Vegetable Compound and wanted me to take it. It brought relief from my trouble and I improved in health so I could do housework; we now have a little girl of which I owe to Lydia E. Pinkham's Vegetable Compound."—Mrs. JOHNSON, R. No. 3, Ellensburg, Wash.

There are women everywhere who long for children in their homes but are denied this happiness on account of some functional disorder which in many cases would readily yield to Lydia E. Pinkham's Vegetable Compound.

Such women should not give up hope until they have given this woman's medicine a trial, and for special advice write Lydia E. Pinkham Medicine Co., Lynn, Mass. The result of 40 years' experience is at your service.

MILLIONS

Suffer from

Acid-Stomach

Millions of people suffer year after year from ailments affecting practically every part of the body, never dreaming that ill health can be traced directly to the stomach. Here is the reason: poor digestion means poor nourishment of the digestive organs and tissues of the body. The blood is impoverished—becomes weak, thin, sickly. Ailments of many kinds spring from these conditions. Biliousness, rheumatism, lumbago, sciatica, general weakness, loss of power and energy, headache, insomnia, nervousness, mental depression—even such serious ailments such as catarrh and ulcers of the stomach, intestinal ulcers, chronic ailments of the liver, heart trouble—all of these may often be traced directly to acid-stomach.

Keep a sharp lookout for the first symptoms of acid-stomach—indigestion, heartburn, belching, food repeating, that uncomfortable, painful bloat after eating, and sour, gassy stomach. EATONIC, the wonderful stomach remedy for acid-stomach, is guaranteed to bring quick relief from these stomach miseries. Thousands say they never dreamed that anything could bring such speedy relief—and make them feel so much better in every way. Try EATONIC and you, too, will be just as enthusiastic in its praise. Make your life worth living—no more gas pains—no blues or melancholy—no more of that tired, listless feeling. Be well and strong. Get back your physical and mental punch; your vim, vigor and vitality. Remember, you will always be weak and ailing as long as you have acid-stomach. So get rid of it today. Take EATONIC Tablets—they taste fine—and you eat them like a bit of candy. Your druggist has EATONIC—50 cents for a big box. Get a box from him today and if you are not satisfied he will refund your money.

HEADACHE

Often Caused by

Acid-Stomach

Is indeed, more often than you think. Release ACID-STOMACH, starting with indigestion, heartburn, belching, food-repeating, bloat and gas, if not checked, will eventually affect every vital organ of the body. Severe, blinding, splitting headaches are, therefore, of frequent occurrence as a result of this upset condition.

Take EATONIC. It quickly banishes acid-stomach with its sour bloat, pain and gas. It aids digestion—helps the stomach get its strength from every mouthful of food you eat. Millions of people are miserable, sick and ailing because of ACID-STOMACH. Poisons, created by partly digested food charged with acid, are absorbed into the blood and distributed throughout the entire system. This often causes rheumatism, biliousness, cirrhosis of the liver, kidney trouble, ulcers and even cancer of the stomach. It robs its victims of their vitality, undermines the strength of the whole organism.

If you want to get back your physical and mental strength—be full of vim and energy—enjoy life and be happy, you must get rid of your acid-stomach.

In EATONIC you will find the very help you need and it's guaranteed. So get a big 50c box from your druggist today. If it fails to please you, return it and he will refund your money.

A SPRAINED ANKLE

By BLANCHE D. STICKNEY.

Eleanor Hanson was joyfully looking forward to putting aside school duties for two months of "do-as-you-like" at one of New England's beaches.

Before going, she was to chaperon during the last week of June a group of girls from her "math" class at a camp at Pride's Brook. At nine o'clock on the Saturday morning after school closed, the merry group was at the station, each laden with a suitcase and a box of home-made goodies. She received the exhortations of anxious mothers to be watchful that Mary didn't catch cold and that Francena rubbed her arm three times a day with that green liniment which was in her suitcase.

As Miss Hanson got on the train, she began to wonder whether she had taken more on her shoulders than she had calculated. But this thought stayed only a moment, for the admiration of the girls for her was omnipresent.

"Oh, Miss Hanson," ejaculated Marjorie Thorpe, "you will sit here with Ethel and Mabel and me, won't you? Oh, we've got to tell you all about the junior prom last night."

"Well, Miss Hanson, if you do that, we're going to engage you right now to be with us coming back," called the spokesman for the other three.

After the suitcases were adjusted and everybody settled, Miss Hanson heard a most detailed account of the previous night's prom, together with schoolgirls' impressions of the faculty. It seemed such a short trip when the conductor called out, "Next station Pride's Brook. Pr-r-r-ride's Brook." As they alighted from the train, a gentle breeze came their way, bringing the odors of wild flowers and country air. They found an old democratic wagon at the station waiting to take them to Camp Breeze. For one of the girls it was her first visit to the country, and she looked with great wonderment at everything about her. When old Dobbin began to slow up, the girls noticed the little groups of cottages. They were greeted by a most cordial host and hostess, who had run the place for many summers.

One afternoon Miss Hanson decided to rest on the veranda and read while the girls went to the village. They didn't return at the time they said they would, but she knew girls and so did not worry. Soon, however, she was attracted by calls of: "Oh, Miss Hanson, come quick!" She rushed to the girls and found Ethel Stanton being caried by two young men.

"Oh, what has happened?" she cried. Before giving Ethel herself a chance to explain, Marjorie Thorpe said: "Oh, we were all running home, one trying to beat the other, and Ethel turned her ankle and fell. We didn't know what we were going to do, no autos or nothing came until finally Mr. Cross, who has a camp of young men up the road a little ways, came by and offered to help."

"I really don't think, Miss Hanson," he volunteered, "that you need have cause for worry. There are no bones broken, but as it was somewhat painful, it seemed advisable for her not to walk on it. If you do not object, I will be over after supper with something I have in my first-aid kit which I know will benefit her."

"May we not invite the young men, too, Miss Hanson, they have been so good to us?" asked the girls.

"Yes, indeed," she replied, "we should be glad to have you all come. I am more than grateful for your valuable help this afternoon. We will look for you all tonight."

There was such great excitement in preparation for the evening that supper and the lame ankle were but trivial matters. In an hour or so a group of five splendid young men came tramping up the piazza.

The ankle had first attention, and Mr. Cross, who was decidedly opposite to the idea his name conveyed, assured Ethel that her ankle would probably be all right to walk on the next day.

When Mr. Cross asked Miss Hanson if they were enjoying their stay, she replied: "We like it so much that already we had planned to come next year."

The little house was lively that night with everything from a Virginia reel to the latest one-step. Even Ethel, who thought that her time was spoiled, was the center of attraction at the close of each dance when she daintily served fruit punch to the merry party. For the few remaining days, needless to say, there were many visits to the cottage and canoeing parties.

The night before they were to leave the girls gave a farewell party. During the last dance Mr. Cross gradually directed Miss Hanson's steps to a remote corner of the piazza and said: "Miss Hanson, our friendship has meant so much to me these few days. Must I wait until a year from now before I hear from you or see you again?"

What she said was not heard, but a few days before the camping party started off the next year, her fellow teachers discovered a beautiful solitaire on Miss Hanson's hand.

Almost simultaneously Mabel Winsted came rushing down the corridor to a group of girls and said excitedly: "Say, whom do you suppose I saw out auroing yesterday? Mr. Cross and Miss Hanson."

All happiness is in the mind.

Thousands Have Kidney Trouble and Never Suspect It

Applicants for Insurance Often Rejected.

Judging from reports from druggists who are constantly in direct touch with the public, there is one preparation that has been very successful in overcoming these conditions. The mild and healing influence of Dr. Kilmer's Swamp-Root is soon realized. It stands the highest for its remarkable record of success.

An examining physician for one of the prominent Life Insurance Companies, in an interview on the subject, made the astonishing statement that one reason why so many applicants for insurance are rejected is because kidney trouble is so common to the American people, and the large majority of those whose applications are declined do not even suspect that they have the disease. It is on sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

The season for lemons never ends.

Nasty Colds

Get instant relief with "Pape's Cold Compound"

Don't stay stuffed-up! Quit blowing and snuffling! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up a cold and ends all grippe misery.

The very first dose opens your clogged-up nostrils and the air passages of the head; stops nose running; relieves the headache, dullness, feverishness, sneezing, soreness and stiffness.

"Pape's Cold Compound" is the quickest, surest relief known and costs only a few cents at drug stores. It acts without assistance. Tastes nice. Contains no quinine. Insist on Pape's! Ad.

The spider is an expert fly fisher.

Catarrhal Deafness Cannot Be Cured

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure Catarrhal Deafness, and that is by a constitutional remedy. HALL'S CATARRH MEDICINE acts through the Blood on the Mucous Surfaces of the System. Catarrhal Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result. Unless the inflammation can be reduced and this tube restored to its normal condition, hearing may be destroyed forever. Many cases of Deafness are caused by Catarrh, which is an inflamed condition of the Mucous Surfaces.

ONE HUNDRED DOLLARS for any case of Catarrhal Deafness that cannot be cured by HALL'S CATARRH MEDICINE.

Backache only a Symptom

"It Seems as Though my Back Would Break."

This is a common expression among women, yet they toil on day after day heedless of the significance of this distressing symptom.

Backache is often a warning of some inward trouble that requires attention, and which unless relieved will sooner or later declare itself in more serious ailments.

If it is caused by female derangement Lydia E. Pinkham's Vegetable Compound is what you need. It quickly asserts its curative powers in all those peculiar ailments of women.

For more than thirty years this good old fashioned root and herb medicine has been restoring American women to health.

The Splendid Recovery of Mrs. Coventry

Newark, N. J.—"The doctor said I had organic trouble and treated me for several weeks. At times I could not walk at all and I suffered with my back and legs so I often had to stay in bed. I suffered off and on for eight years. Finally I heard that Lydia E. Pinkham's Vegetable Compound was a good medicine, and I tried it with splendid effect. I can now do my housework and my washing. I have recommended your Vegetable Compound and Blood Medicine and three of my friends are taking it to their advantage. You may use my name for a testimonial."—Mrs. THERESA COVENTRY, 75 Burnett St., Newark, N. J.

Mrs. Hunt tells how it helped her

Detroit, Mich.—"I was in a general run-down condition, was very nervous and tired, had backache and other troubles. I suffered for several years, was not able to work at times and tried doctor's medicine with no results. I saw Lydia E. Pinkham's Vegetable Compound advertised, and after taking it a short time I was much better. I am still taking it myself and giving it to my daughter, and am glad to recommend Vegetable Compound at anytime."—Mrs. M. E. Hunt, 171 Davison Ave.

WORSE THAN DEADLY POISON GAS

Kidney disease is no respector of persons. It attacks young and old alike.

In most cases the victim is warned of the approaching dangen. Nature fights back. Headache, indigestion, insomnia, lame back, lumbago, sciatica, rheumatism, pain in the loins and lower abdomen, difficulty in urinating, all are indication of trouble brewing in your kidneys.

When such symptoms appear you will almost certainly find quick relief in GOLD MEDAL Haarlem Oil Capsules.

This famous old remedy has stood the test for two hundred years in helping mankind to fight off disease.

It is imported direct from the home laboratories in Holland, where it has helped to develop the Dutch into one of the sturdiest and healthiest races in the world, and it may be had at almost every drug store. Your money promptly refunded if it does not relieve you. Be sure to get the genuine GOLD MEDAL Brand. In sealed packages, three sizes.—Adv.

FARMERS TO OWN BIG LAND BANKS

George W. Wickersham Tells How Federal Institutions Will Be Taken Over.

TO BUY GOVERNMENT STOCK

Eventually the Borrowers Will Acquire Complete Ownership of Banks Established Under Federal Farm Loan Act.

That the federal land banks and the joint stock land banks are important supplements to the national bank system and the federal reserve system was emphasized by former Attorney General George W. Wickersham in the federal court at Kansas City, where he appeared with Charles E. Hughes and W. G. McAdoo to defend the constitutionality of the farm loan act.

Mr. Wickersham, who with Mr. McAdoo, appeared as attorneys for the joint stock land banks, made very clear the exact service which the federal land banks perform and their exact relation to the financial system of the country. He also made clear in what respects the joint stock land banks differ from the federal land banks.

Protecting Small Borrower's Rights.

Both types of banks (federal and joint stock) were created by the government to provide aid for the agricultural interests of the country. Mr. Wickersham said that the government with wisdom and singular comprehension, had reached out to take care of every element of borrowers. Therefore the federal land banks were created to provide credit for small borrowers, and the joint stock land banks were created to provide a similar agency through which the larger borrowers among farmers might secure ample funds, without having to rely upon the funds which had been assembled for the use of the small borrowers, and without danger of depriving the small borrower of the very money which had been assembled for his particular use.

He pointed out how in the case of the establishment of federal land banks the government had subscribed to the stock of these banks as a temporary aid to the particular class of borrowers it was intended these banks should accommodate. But, he said, this was only a temporary aid and that the government had provided that the stock which had been subscribed by the government should be taken up eventually by the borrowers so that in the end, in a very short time, the small borrowers will own their own banks. that is, that the federal land banks will be privately owned in the end even as the joint stock land banks are now privately owned.

Federal Banks for Associations.

"The federal land banks do not lend to individuals," said Mr. Wickersham, "they lend to organizations of borrowers, who together must desire at least $20,000, and who must organize themselves into a farm loan association, and they must subscribe to 5 per cent of the amount of the loan which they seek, in the stock of the federal land bank, as a condition to securing the loan.

"Provision is made that when these banks are set up, if within a limited time subscriptions are not made to the stock by others, the federal government, through the treasury department, shall take up the minimum amount of stock with which they are authorized to start business, to-wit, $750,000.00. Then, as they proceed in their operation, as they loan to these associations, and as these associations subscribe to their stock, by and by, by the operations of the system, the stock which the government has taken is retired, and ultimately those banks come into the control of their stockholders.

Farmers to Own Banks.

"The federal government, as a stockholder, will pass out, and if the system be successful, after a certain length of time, the land banks will be owned by the various loan associations which are borrowing through the land banks, and they will go ahead on the impetus of private ownership.

"Having thus provided a system whereby this great scheme shall be launched and become at once operative and money shall become available to the farmers desiring it, the act also provides that there be created a different class of banks, namely, the joint stock land banks.

"Following the analogy of the national banks, the act provides that from the outset, those banks shall be organized by private individuals. The stock shall be subscribed by private individuals, and when $250,000,00 is subscribed, then the bank may begin its operations.

Joint Stock Banks Controlled.

"Since the enactment of the law, 27 of such banks have been organized in different parts of the country, and they are set forth in the petition, and their aggregate capital is something more than $5,000,000.

"Now despite the fact that those banks are privately owned, from the beginning of their operations, they and their operations are subjected to control. They are invested with the same powers, they are made subject to the same liability as are given to and imposed upon the federal land banks.

Enough Said.

"What sort of a man is he?" "Well, he's the sort of a man who will have his stenographer call you on the telephone and keep you waiting three or four minutes for him to get around to ask a favor of you."—Detroit Free Press.

Wasted Apology.

"I want to apologize, Blakely, for my rudeness last evening. I assure you I didn't intend it." "Well, for the love of Mike, mean it next time! I hate to see a man's actions and his intentions harmonize so poorly."—Judge.

Canvas Tubing.

More or less inconvenience always has accompanied the use of the tin duct, in supplying ventilation to miners and other underground workers. Because of these facts, a manufacturer of canvas bags has set about making canvas tubing, which is meeting with favor where it has been tested. The canvas tube is easily mended when punctured, and is also easily moved.

KLEMME TIMES

Twenty-fourth Year Number 18 Klemme, Iowa, Thursday, January 8, 1920 $2.00 In Advance. $2.50 Outside of County

INCOME TAX COLLECTOR COMING

Collector of Internal Revenue, Lloyd Murphy, announces that, as usual, Income Tax deputy collectors will be sent into every county of the State during the period from January 15 to March 15, to assist individuals in making out their Income Tax returns. No charge for services will be made by these Government deputies, and no collections of taxes in cash will be made by them. The Collector urges all taxpayers to pay by draft, personal check, Post Office or Express Money Order, and to keep a record of their payments. He warns that any person representing himself to be a Government officer, who accepts cash for taxes, or makes any charge for his services, is a fraud and imposter. There will be no such rush this year in making returns as there was last year, because this year two months are allowed in which to make reports, whereas last year there were only two weeks in which this could be done.

The Collector urges that all taxpayers have complete records of their income and expenditures for the calendar year 1919, when they call on the Income Tax man. He further urges that they use the forms bearing their names, as sent to them from this office, when they hav received such forms.

The schedule of the Income Tax man provides that they should visit every county seat town in Iowa, and they will visit as many other towns as time is given them. The schedule as announced for County, showing the dates an Income Tax man will be here, is as follows:

Garner, February 11th to 21st.
Britt, February 23rd to 28th.

ALBERT ETCHEN AND LOUISE GREIMAN MARRIED

Two popular Klemme people were united in marriage Wednesday, December 31st. They are Mr. Albert Etchen and Miss Louise Greiman both living near Klemme. The wedding took place at the home of the Bride's parents, Mr. and Mrs. Wm. Greiman, Sr. Rev. Smith tied the matrimonial knots which made the happy young couple man and wife.

Both of the contracting parties are so well and favorably known here that we need to comment but little on the event. Mr. Etchen was recently discharged from the army after about fifteen months of service, the greater part of which time was spent in France. Miss Greiman is a popular and accomplished young lady who knows how to make a home comfortable. They have gone to housekeeping on the farm south of Klemme. The Times extends best wishes and congratulations.

MAY CHURCH MARRIED

The many friends of Miss May Church will be surprised to hear of her marriage which occurred some time last week to a young gentleman by the name of Harland Trees. We are unable to gather the particulars of the event at this time but nevertheless we extend congratulations.

HE THINKS PRINTERS ARE CRAZY

I know a Man
Who thinks Printers are Crazy
And just to prove They
Are Crazy
Whenever he needs Any Printing
He writes to
Half a Dozen Printers
And asks them to Quote
The other day he had a Job
And so as usual
He wrote for Bids.
The Lowest bid was
One Hundred and Sixty-five Cents
And the Highest Bid was
One dollar and Ninety cents.
He Spent Twelve cents for postage
In getting His Bids And
He spent Three Cents
For His Envelopes
And he Spent Four Cents
For his Writing Paper.
And he paid
Eighteen Dollars
A week to the
Clerk who wrote the letters
And Licked the Stamps
And So
He sent the Job
To the Lowest Bidder,
Who bid One-sixty-five,
But It Cost Him Two-fourteen.
I thank you.

—Albert M. Freeman in Imprint

JACOBS WILL COME OUT FOR AUDITOR

We will slip our readers a little advance news along political lines. We are indeed pleased to announce that Chris Jacobs has decided that he will cast his old derby in the county political ring for the office of county auditor once more. Chris is serving his first term as Auditor and has certainly made good in that office. Chris says he will officially announce a little later in the game.

MORNING EXERCISE FOR THE BUSY BUSINESS MAN

A friend of ours out of the generosity of his heart has given a bit of advice with the appeal that we "start early in the year and keep it up." Read the following trenchant remarks

Rise at 7:00 a. m. Stand in the middle of the room, raise arms slowly overhead, take a deep breath and say "Damm the League of Nations," lowering arms in attitude of despair. Ten times.

Extend body flat downward on the floor, cover eyes with hands, kick heels, think of H. C. of L. and weep 'till dry.

Kneel, wring hands, meditate upon labor unions and prohibition and groan. Twenty-five times.

Assume sitting position, hands on hips, sway gently to and fro, and concentrate on profiteering until a generous frothing at the mouth sets in, 'till exhausted.

Collapse on floor, grovel vigoruosly, think of the income tax and gnash teeth in anger.

Observe this simple regime every morning before breakfast, and you will reach your office with most of the cares and troubles of the day already out of your system.—Britt News-Tribune.

THE LITTLE OL' NEWSPAPER FROM YOUR OL' HOME TOWN

When you're feelin' kind o' lonesome
An' the atmosphere is blue,
When life's no bed of roses,
An' folks seem down on you,
I know what will make you happy,
An' chase away the frown—
Read the little ol' newspaper
From your ol' home town.
You won't laugh about the triflin' things
The paper has to say,
For every line's a message
From the ol' home far away.
Even Si's new chicken coop
Will not provide a smile,
An' the great city dailies
Lie unopened all the while.
Bill's girl has gone to college,
An' Jo's boy is home from France,
The Ladies' Aid will hold a social,
An' the Legion give a dance.
So you read the local happenings,
An' never miss a line,
An' 'cause they're all your neighbors,
You'll be glad that "crops are fine."
Then before you know it
You've read it thru and thru—
An' all the world seems brighter
An' life seems good to you.
So for a pill of pleasure
To chase away the frown,
Take the little ol' newspaper
From your ol' home town.

Cherry Wilson in Spokesman-Review.

FOR COUNTY TREASURER

I hereby announce myself a candidate for the office of County Treasurer, subject to the decision of the Republican Primaries to be held June 7th, 1920. Yours very truly,

1-1-20 JOHN SUURBALLE

NOTICE OF APPOINTMENT OF EXECUTOR

Notice is Hereby Given, That the undersigned has been duly appointed and qualified as Executor of the Estate of Jacob P. Mayer, deceased, late of Hancock County, State of Iowa, deceased. All persons indebted to the estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned, for allowance.

Dated December 16th, A. D. 1919.

P. M. Griesemer, Executor
By Ramsay & Blackstone,
His Attorneys

Was Looking for Easy Money.

"I asked for alimony of $50 a week. I see wimmen are getting that right along." "But, madam," expostulated the lawyer, "your husband is earning only $12." "What's that got to do with it? I thought the government provided the alimony."

PRINT PAPER VERY SCARCE

The shortage of news print paper is becoming more acute daily, and the House of Representatives is considering a bill to limit the size of all publications transmitted through the mail It was suggesed in the house that unless congress acs speedily scores of smaller papers will be forced to suspend publication altogether because of lack of paper. Newspapers in this section of the state are having considerable difficulty in getting any paper whatever.

It is said that the paper mills have contracted for fifty per cent more paper than they can manufacture in 1920. Hundreds of smaller papers have been unable to contract for paper at any price, although the cost to the publisher a pound, which was around 2 cents before the war, is now between 10 and 15 cents. The suggestion that newspaper publishers reduce consumption of news print paper 10 per cent below normal has caused practically every New York newspaper to advance the price of Sunday papers in the country districts to ten cents on or before January 4.

CITY COUNCIL PREPARES FREE DELIVERY

Forest City may have free mail delivery in the near future. Last month inspectors from the postoffice department were in the city canvassing the situation. The city council at their meeting Thursday evening took the preliminary steps to comply with the requirements of the postal department. City delivery has been a possibility for Forest City for some time but no active move has been made by the city to secure the service.—Winnebago Republican.

NEBRASKA SUPREME COURT OVERRULES APPEAL

Lincoln, Dec. 26—Constitutionality of the state law designated to curtail use of foreign languages in Nebraska state schools was upheld by the supreme court today. The law applies to all public, private, parochial and denominational schools in the state.

Its validity was attacked by the Nebraska district of the Evangelical Lutheran synod of Missouri, Ohio, and other states and by St. Francis Catholic church of South Omaha, whose attorneys charged that its operation would interfere with religious liberty.

METHODIST EPISCOPAL CHURCH

Public worship with sermon at 10:30 a. m. and 7:30 p. m.

Sunday School at 11:30 a. m.

Practical sermons dealing with the problems of every day life; good music, with orchestra in Sunday School and evening service; a home-like church with a welcome to all.

During the quarter ending December 31, the following were perfect in attendance at Sunday School:

Beginners department—Blanche Gimer.

Primary department—Reva Elder, Arline Ell, Lois Trafford.

"Class in the Corner"—Octave Church, Milvern Ell.

"Win One" class—Verner Nelson, Mildred Johnson, Bernice Gimer.

Busy Bee—Harl Gimer

A. E. Buriff, Minister

"BOOST"

Boost Your City, boost Your friend,
Boost the lodge that You attend,
Boost the street on which You're dwelling,
Boost the goods that You are selling,
Boost the people round about You,
But success will quickly find them
If you know that You're behind them.
Boost for every forward movement,
Boost for every new improvement,
Boost the man for whom you labor,
Boost the stranger and the neighbor,
Cease to be a chronic knocker,
Cease to be a progress blocker,
If you'd make Your city better
Boost it to the final letter.

—Detroit Free Press

Trees Used for Cisterns.

Among the most curious of trees is the gigantic baobab, which flourishes in central Africa, the trunk of which sometimes attains a diameter of 40 feet, according to the Los Angeles Times. This trunk serves as a natural cistern, retaining rain water in large quantities in a cavity formed at the top. The Arabs artificially hollow out the trunks of large baobabs and fill them with water during the prevalence of rain as a provision against the dry season. These cisterns are in many cases 20 feet in height and eight or ten feet in diameter.

GOODELL

Miss Wilma Trumbell of Belmond spent several days this week at the Jay Griggs home.

Ed. Hemingway and Mrs. M. Kearney were called to Mason City to see their mother who was very sick.

Mr. and Mrs. E. A. Strasburg and daughter Mae Elizabeth, of Meservey, spent Christmas at the home of Jay Griggs.

Cliffod Chase who is attending school in Mason City, spent Christmas day at home.

Mr. and Mrs. Ed. Rhodes and son Orick spent New Year's at the residence of O. D. Church.

Miss Wilma Trumbell of Belmond transacted business in Klemme Tuesday.

Note—The Editor of the Times will appreciate it if the writer of these locals will kindly send name that we may supply postage for the items.—Editor.

A perfectly adjusted spine cures a "lame back" and insures good nerves, freely circulating blood, and a perfect digestion. Treatment will be given in your home when necessary. Telephone message may be left at the Hotel to be delivered to Dr. R. W. Schultz. tf.

Mrs. Walter Schultz was a Garner caller Monday between trains.

Rev. Meyer was at Garner between trains Monday.

Dr. Zinn was a Garner caller between trains Monday.

G. W. Kluckhohn and wife were Mason City visitors from last Friday until Monday.

The Board of Directors of the State Savings Bank met at the banking rooms Tuesday.

Ernest Lewis left Monday afternoon for Mason City, where he has a job awaiting him.

The Misses Madge Peck and Mary Bailey, of Garner, were shopping in Klemme last Friday between trains.

Dr Shultz will be at the Klemme hotel from 11:30 to 2:00 on Mondays, Wednesdays, and Fridays

Miss Ethel Jacobs, of Garner, visited with Miss Mildred McCullough last Friday evening.

Mr. and Mrs. Harland Trees left Monday on their honeymoon trip. Mrs. Trees was formerly Miss May Church.

Miss Clella McCullough, of Garner, visited her sister, Mildred and brother Gerald here from last Thursday night until Monday morning.

The dance given at the Idle Hour Theatre last Friday evening was well enjoyed by the young people of this community.

G. P. McCullough enjoyed a visit from his brother, Hollis, of Garner, who came last Tuesday noon and returned Wednesday.

The students of the Klemme schools returned to their studies again Monday after enjoying two weeks of fun and frolic.

Miss Rose Schultz of Garner, visited at the home of her brother here, Walter Schultz and family, from last Thursday evening until Monday morning.

Klemme merchants are real busy this and the past week with their annual job of invoicing stocks. It is a tedious job and one which they welcome—when it is all finished.

FOR RENT—In Grimes Township, Cerro Gordo County, one section of pasture, as a whole or in quarters. Inquire C. W. Hines, Fairmont, Minnesota. 2w-p.

Ed. Jacobs and Bert Mathews drove Ed's "Lizzie" to Garner last Sunday. They claim they were the first to drive a car thru the snow to Garner. Up pops Sam Larsen and says he drove his truck thru first and that Ed was following him up in the rear. Now one is a liar and the other is a prevaricator, anyway they both got there and back.

An old fashioned dance was given at the Idle Hour Theatre New Year's Night which was immensely enjoyed by a large number of the married people of Klemme and vicinity. A Victrola furnished the music.

Prof. Collins returned Monday afternoon after spending his two weeks' vacation at his home at Eldora, Iowa. He expected to be here to start school in he morning but as his trains couldn't make connections he had to take a different route which brought him here at noon from the north.

Donald and Walter Nissen, who were here over the holidays visiting at the J. N. Day home and with other Klemme relatives and friends, have returned to school again. Donald left Friday for Sioux City where he is attending Morningsde College and Walter left Wednesday for Milford where he is attending school.

Last Sunday the entire force at the Wellemeyer Store put on big heavy fur overcoats, got into a bob sled and headed toward Garner. The Times reporter asked why all the joy ride on such a cold day and was told that they all had their pictures taken. No doubt the pictures will be good for they were all "looking pleasant" when they left here.

COAST OVER COBBLE STONES

Sport in Madeira Has Many Advantages Over That to Which Northerners Are Accustomed.

Cobble stones may not appeal to the uninitiated as ideal for coasting purposes, but they admirably serve the purpose. It all depends on how steep is the hill the cobbles pave. In other words, it isn't the material that makes the "slide," but the pitch of the slope.

Those of us who are accustomed to sliding down snow-clad hills, or tiny ascents made slippery by ice know little of the thrill a slide may possess. For some measure of the delight in the sport is frequently minimized by the frigid air that rushes past our tingling ears and some measure of the enjoyment is entirely lost by the chills that grip our shivering bodies.

Imagine—if you can—the thrill of coasting down a hill so steep that your "sled" flies over the cobbles much as is would speed over crusted snow or an ice glare. Instead of icy air that almost chills you to the marrow at the thought, picture yourself in springtime garments and fanned by summer breezes.

If you can imagine such a picture you will have enjoyed at least some part of the sport of coasting in an island where there is no snow or ice. Down the cobble-paved road the "sled" flies. For ten minutes you flash along in breath-taking rush, then you begin to grow accustomed to the speed and the novelty of the sport and you take time to look about you. But—like most other enjoyments—just as you're beginning really to enjoy it to the utmost your coasting ends.

Where is this extraordinary slide? On the island of Madeira, which belongs to Portugal, and lies in the Atlantic ocean, off the coast of Morocco.

How a Hero Died.

A dramatic incident in which a heroic young officer faced death in soldierly manner is the climax of a true story that recently appeared in Stars and Stripes, the official newspaper of the American expeditionary forces.

He was Francis M. Leahy of Lawrence, Massachusetts, and he had served in the ranks before he won his commission. He used to tell of the days when he was orderly to Captain Pershing in the Philippines. One day while he was resting with his men by the wayside a German shell came whizzing out of space just as the order arrived that the regiment fall in and move on.

The shell plowed up the earth and stretched on the ground several men who were just getting to their feet. It hit the tree against which Captain Leahy was leaning and snapped it off like a stalk of asparagus. A piece of shell struck him in the back and tore its way through his chest.

"Good-by, boys!" he said, and his head sagged forward.

Then it was as if, somewhere in the universe, an invisible commander had called, "Attention!" Captain Leahy raised his head. With clearing voice he called the name of the officer next in command.

"Lieutenant Hansen," he said, "the command is 'Forward!' See the boys through!"

Then he died.

Recipient of Old Honor.

Prince Ferdinand Radziwill, who recently presided at the opening of the new Polish parliament, is a distant relative of the Hohenzollerns and one of the pillars of the old Polish nobility. The honor accorded Prince Radziwill was declared to be absolutely without political significance, but entirely a matter of custom. The prince came into the temporary presidency by reason of seniority only. He is eighty-five years old and is the oldest member on the floor of parliament. By virtue of a similar custom the youngest two members of the house, a socialist and a Catholic priest, neither of them more than twenty-five years old, acted as vice presidents and sat to left and right of the old nobleman all through the first session, assisting him in the carrying on of his duties.

Ships and Their Names.

Peace has brought with it the incidental discussion in a section of the English press of the meaning of and reason for the names of certain ships in the British navy. Truly my lords of the admiralty, acting as sponsors, have gone to some strange sources for the nomenclature. Not merely countries and cities have been drawn upon, but many of the creatures figuring in a menagerie have been freely utilized. Then there are the vessels named after the public schools and institutions of England, such as Uppingham, Tonbridge, Westminster, Rugby, Cheltenham, Epsom and so on. If Eton should feel jealous over the matter of its neglect it can take a kind of reflected comfort in the fact that there is a destroyer called Windsor.

Weights a Locomotive Hauls.

"How much more weight does the average passenger locomotive have to haul than in the days before the advent of the steel car?" I asked an expert Philadelphia locomotive builder.

"The old wooden passenger car weighed 40,000 to 60,000 pounds," he answered.

"The steel suburban car weighs 90,000 pounds.

"The larger steel car weighs 110,000 pounds.

"A parlor car weighs 115,000 pounds and the sleeping car 140,000.

"As for the locomotive itself, the heavy Pacific type for passenger traffic weighs 280,000 to 300,000 pounds. The freight locomotives, of course, go far beyond this figure, to more than 500,000 pounds."—Philadelphia Ledger.

WONDERFUL ANIMAL, THE GNU

And Voice Would Seem to Be Not the Least of His Remarkable Qualities.

Few people know what a satisfactory animal is the gnu. Quite a number of hoofed animals, like the ibex and the sacred ox, are mere tiresome combinations of Burbankism, but the gnu has qualities all his own. His head is homely as an unpainted barn—flat nose and very broad-mouth and ears misshapen and uncouth. His body is that of an exceedingly powerful pony, with strong neck and rakish tail. His galvanic energy puts to shame the glorious abandon of a cat on a tin roof.

When I arrive before his inclosure he has usually retired to the shed in which he sleeps and stands in the doorway with far-away eyes. Efforts to entice him forth are futile. I turn at last as if to go, and as I move he bursts forth with the most heathenish cry that ever clattered from an animal throat. If it resembles anything, it is the trench klaxon that warns of an impending gas attack—a series of staccato shrieks which would shake the teeth from a band saw. I don't see how he can stand the noise he makes. Arm a rabbit with the voice of a gnu and lions will slink from his path.

Reaching the bars of his inclosure in three or four astounding leaps, the gnu halts, with head averted and feet wide apart, ignoring me literally. When I move to right or left he remains motionless until 15 feet are between us; then he closes the distance with a bound, shrieks terribly twice or thrice, and once more affects to be utterly oblivious of my presence. When finally I leave him the clatter of his fearful voice pursues me for hundreds of feet, drowning all other sounds.—Atlantic Monthly.

—Police Your Pocketbook; Save—

QUAKER ACROSTIC.

The man who saveth money
Hath his future guaranteed;
Remorse o'er substance wasted
Is unknown to him indeed.
Fortune smileth on him,
Things he hath as he may need.

The man who spendeth wisely,
Hath no idle, wasted hour;
Ruleth cities—even nations—
Interest for him doth flower,
For he learneth as he liveth
Thrift succeedeth—thrift is power

years ago the Dallas County fair which had been held at Adel was abandoned and until last year there has been no fair or live stock show since that time. Last year the horse and mule breeders of the county held a show at Waukee, and this year the Pure Bred Breeders' association joined them in staging a fair and show which promises to become an annual affair because of the number of exhibitors and the unusual interest shown.

APES HELP MEN TO OUTWIT AGE

Paris Doctor Says Grafting of Tissues Brings Back Youth.

EXPERIMENTS ARE SUCCESS

Interstitial Glands Are Taken From Apes for Use in Treating Human Beings—Operation Is Quite Simple.

Paris.—Restoration of youth is no longer an uncertainty, but by grafting of new interstitial glands is as sure as the rules of chemistry, Dr. L. H. Voronoff declared.

Dr. Voronoff, director of the physiological laboratory of the College of France, says the operations are simple.

The interstitial glands are taken from apes for use in treating human beings.

"A local anesthetic is all that is necessary," Dr. Voronoff said. "It is merely a task of opening the skin, inserting the new tissue, sewing up the slight wound, and nature does the rest."

"Seven months ago," continued Dr. Voronoff, "I operated on a well known Parisan man of affairs, who at the age of 66 was in a decrepit state. The experiment was a complete success. Though his hair remains white and his face is wrinkled, he walks erect, his mind is as active and his appetite is as good as that of a young man.

Defies Age With Another.

"Three months ago I performed a similar grafting operation on another aged man. Everything in his case indicates the result will be the same, but it is too early as yet to give a statement as to his renewed vitality.

"The secret of my method is based on the following general knowledge: In various parts of the body, nature has provided glands which secrete fluids having vital functions in human organism. For instance, if I remove the thyroid gland from a man's neck, he will become an idiot within six months. Also when the interstitial glands, which manufacture fluid which is absorbed by the blood, and thus gives to the whole body its vitality, become worn out or are removed, the whole body falls into decay.

"Foreign tissues, which have thus been introduced into a worn-out system are nourished by the blood circulation of the body which is the new home for the tissues. In turn the tissues manufacture a vital fluid, which circulating through the body, restores its youthful vigor.

"Some of my most productive experiments were carried out on an aged ram. The ram at 14 corresponded in age to a man at 78, in so far as the exhaustion of organisms is concerned.

"Taking the aged, decrepit ram in May, 1918, I put into his body interstitial glands taken from a young ram. Within two months he had regained his youthful vigor and activities.

"Then, in order to prove it was not merely a matter of good care that had caused the change, I removed the grafted glands. I found them in perfect state, as they had not been completely assimilated by the renewed organism.

Age Reclaims Victim.

"The ram immediately aged and became even more decrepit than before. I once more introduced the glands from a young goat, which again produced youth and vigor.

"There will not be the slightest danger to human beings because of the monkey tissues which I use in treating them. A monkey's blood very closely resembles that of man. Hence the tissues of the ape are perfectly adapted for grafting on human beings.

"There is no danger of thereby brutalizing human beings. So far, my experiments in this direction are confined largely to rejuvenating wornout organisms. I am convinced the idea is practicable. I do not guarantee I have found the solution for senile decay. My works are of an experimental nature, and I am continuing my investigations."

Posed as Girl 22 Years: Paid $100 for Deception

Harry Campbell, who said he had posed as a woman 22 years, was fined $100 by Justice J. J. Shapard, at Kansas City, for impersonating a woman.

Campbell, who went by the name of Henrietta Campbell, gave himself up to the police because a man threatened to reveal Campbell's impersonation. In court Campbell wore a woman's dress and hat and would have passed for a woman except for the two days' growth of beard on his face. He said he had been a rooming-house keeper in many cities, posing as a woman.

HELPS SOLDIERS TO SECURE JOBS

Bureau in Chicago Shows Good Record in Helping Discharged Men.

PLANNED BY GENERAL WOOD

Of the Men Seeking Employment 94.3 Per Cent Have Found It Through the Instrumentality of the Bureau.

Chicago.—From a report just issued by the bureau for returning soldiers and sailors and marines in this city, it is possible to get adequate information concerning what has been done in behalf of those of our returned defenders who have sought employment and other aid.

In the district of which Chicago is the headquarters, the plan of the bureau for giving assistance to discharged service men was formed by Maj. Gen. Leonard Wood, who acts as the chairman of the headquarters committee, and who from the first has taken personal interest in the work. The bureau was established last April and its records today show that 43,345 service men have registered at headquarters. Of this number 32,259 asked for assistance in obtaining employment. At the present time the files of the bureau show that only 2,250 men still remain on the "not hired" list. This means that 94.3 per cent of the men seeking employment have found it through the instrumentality of the bureau.

Rumors Are Refuted.

There have been rumors which some people have been busy in passing along to the effect that bureaus for aiding the soldiers and sailors to get re-established in civil life were not doing adequate work. To a considerable extent this sort of thing, it is said, has been propaganda for no good purpose. So far as the district which has Chicago for its headquarters is concerned, the attested records which show that 94.3 per cent of the applicants have found work, speak for themselves.

In the daily life of the bureau there is much to be found of human interest. Of the 43,345 men who registered about 8,000 asked for assistance along lines other than that of employment. They wanted to secure vocational training, to be given information concerning educational work, and in some cases there were requests for clothing and for temporary loans. Every case was met. Out of the great number of men who applied at the bureau only 438 actually needed food. Between 3,000 and 4,000 of the men did not know how to secure their bonuses from the government. Every man was told how to go at it and every man got his money. Of the applicants for assistance 3,500 have entered courses of vocational training.

Much of Interest.

The activities of the bureau as they have gone on day by day are interesting to watch. From the returned soldiers and sailors one gets the after-the-war viewpoint. The comments on the war and its aftermath and the conclusions which the men have drawn show almost invariably thoughtful consideration of the problems involved.

Col. Halstead Dorey, who served with the Third Division in France and who was four times wounded, is actively in charge of the Chicago bureau. With him are Maj. John S. Bonner, who formerly was a United States consul, and Lieut. W. E. Stanley, an aid de camp of Maj. Gen. Leonard Wood, and a son of former Governor Stanley of Kansas.

WAR MEMORIAL MADE FOR MONTREAL

David Edstrom of New York beside the impressive war memorial he has executed. The tablet is to be erected in honor of heroic dead at Montreal, Canada.

Lively Auto Mixup.

Coquille, Ore.—Clarence Clinton, lumberman, and family were driving on a precipitous road. Clinton passed another car rounding a curve. Riley Clinton, his brother, coming in the opposite direction, struck the Clarence Clinton car head on, throwing the machine over a thirty-foot embankment. The car turned turtle without any one being hurt. Then a third Clinton, also a brother, drove along and rescued the other two Clinton families.

COAL MINERS OF U.S. GO ON STRIKE

Summons of Workers' Organization Obeyed By Men In Twenty-Eight States

FEDERAL INJUNCTION ISSUED

Union Heads Protest Government's Action—Uncle Sam Moves to Protect Interests of the People In Grave Crisis.

Washington, D. C.—Bituminous coal miners in twenty-eight states of the union laid down their tools and quit work last Saturday in obeyance to a strike call issued by a convention of the United Mine Workers of America at Cleveland, Ohio, September 23.

The first alarm of the strike, which is expected to cause a general paralysis of the business of the nation and untold suffering if not brought to a speedy conclusion, was given at the Cleveland meeting when the declaration was made that the war time wage agreement, entered into between the government and the miners, would end November 1.

Executive officers charged with the duty of negotiating a new agreement were ordered to stand out for three demands, and if not granted, to issue a strike call for more than 400,000 soft coal miners in 28 states. These demands were:

A five-day working week, a six-hour day and a wage increase of 60 per cent.

At scale committee meetings in Buffalo and Philadelphia miners and operators threshed over their differences without settlement. Representatives of the miners contended that the demands were not arbitrary, that the 60 per cent wage increase was set as a basis for negotiation, that a six-hour day meant actual time the miners were to work underground.

Insist On Short Day.

The miners insisted on a five-day week, they said, because there were not four days' work a week the year around for each miner. They contended by limiting each miner to five days there would be a more equitable distribution of the work. The leaders denied that it was the beginning of a nationwide campaign for a shorter working schedule.

After failure of the two sides to get together the strike order was issued and Secretary of Labor Wilson, acting by direction of the president's cabinet, immediately called into conference the heads of the mining and operating associations. Subsequently the full scale committees of each were called in and various proposals were offered and rejected.

Put Up to Wilson.

The final proposal was made by President Wilson. It suggested negotiation without reservation, submission of questions still in dispute with the failure of negotiation to arbitration and continued operation of the mines pending final settlement.

The operators, as set forth in a statement by Secretary Wilson, accepted the offer in its entirety; the miners accepted the offer of negotiation "and held the other two for consideration later." This, as explained by Secretary Wilson, abruptly ended the conference.

The miners in the series of conferences charged that while the wartime agreement still bound them to work at the old wartime wage scale, it removed restrictions on the war price of coal and permitted operators to charge what they pleased. This, they declared, had led to profiteering.

An appeal to the miners by President Wilson and announcement by Attorney General Palmer that the strike would be considered "illegal," failed to bring about the rescinding of the strike order.

On the eve of the strike Judge A. B. Anderson of the federal court at Indianapolis, Ind., issued a restraining order to stop officials of the Mine Workers' union from engineering the strike.

The principal leaders in the miners' union met the court's action with denunciation as a "violation of constitutional rights," declarations that it came too late to reach their men with a countermanding order, and with predictions that it would be disregarded anyway.

President Gompers of the American Federation of Labor with Vice President Woll and Secretary Morrison, protested as a delegation to Attorney General Palmer, against the government's action in suing out the injunction, and predicted that it could "only result in creating new and more disturbing issues, which may not be confined solely to the miners."

Heads of the great railway brotherhoods also conferred with the attorney general, but disclaimed that they did more than offer their services to intervene.

Attorney General Palmer emphasized to the labor leaders that the government's injunction was in no wise an infringement of the workingman's right to strike, but that it was a lawful process against a calamity to the country. He pointed out that the injunction had been issued for the government, acting for all the people, and not for the employers, acting in conflict with their employes.

Plans Not Made Public.

The attorney general declined to predict what would be done if the miners failed to heed the federal court's order, pointing out that the court itself initiates means to deal with those who disregard its mandates.

The government's program to deal with the practical as well as the legal phase of the crisis is steadily being carried out.

President Wilson, by executive order, fixed maximum prices of soft coal.

Fuel Administrator Garfield restored the war orders which will give the railroad administration the power to seize coal in transit and divert it to consumption, in accordance with a preference list arranged with the idea of doing the greatest good for the greatest number.

The machinery of the railroad administration through which the acts of the fuel administration will be carried out was put ready for functioning.

Troops In Readiness.

United States troops began arriving in some of the mining districts, ready to take part in keeping order and protecting those miners who wished to continue at work.

The extent and full nature of troop movements were not disclosed, but it was apparent the war department was acting on a carefully worked out plan to be ready if the local or state authorities, reinforced by federal deputy marshals, were unequal to the situation.

Congress continued to show its temper, and the house, amid speeches of denunciation of an attempt to paralyze the country, unanimously passed the senate resolution pledging support to the administration in its measure to deal with the emergency.

NON-PARTISAN AGENT SUES.

Starts Action for Huge Damages For Alleged Mistreatment.

Lincoln, Neb.—Judgment in the sum of $250,000 is asked against wealthy and prominent Nebraska men, among others in a suit filed in federal court by Beryl A. Felver of North Dakota, formerly organizer in the National Nonpartisan league. In the petition for the plaintiff, Felver relates he was working in Merrick county, Nebraska, in May, 1918, when he was captured by a mob and maltreated, a rope placed about his neck, among other things, and threats made to hang him. Felver asserts his life was saved only through the intercession of newcomers on the scene.

Government Given O. K.

London.—The government was given a vote of confidence in the house of commons last Friday on its financial principles, by an overwhelming majority of 355.

Bond Sale Falls Through.

Bismarck, N. D.—Sale of $3,000,000 worth of state bonds, $2,000,000 of which were to be used as capital for the bank of North Dakota, is said to have fallen through, bonding houses of the east having refused to underwrite the issue.

PASSENGER STEAMER SINKS

Nearly Score Perish When Gale Smashes Ship to Pieces in Harbor of Michigan City.

Muskegon, Mich. — With eighteen known dead and six or more missing, only time can bring an accurate count of the toll of the great seas which bodily lifted the Crosby passenger steamer Muskegon, formerly the City of Holland, and smashed her to pieces on the piers at the entrance to Muskegon harbor.

The steamer, a side-wheeler, bound from Milwaukee after outriding a terrific gale, made for the harbor, but is said by Captain Edwin Miller to have struck the bar at the entrance. The wheel paddles jammed in the sand, checking headway and the great combers threw the ship about and hurled her onto the pier. There she hung, momentarily, pounding into wreckage and then slipped off into the deep channel, going down in fifty feet of water.

Graphic stories of terror, suffering and heroism were told by survivors and the bravery of Captain Miller and his officers and crew, who remained at their posts to the last, was recounted. Captain Miller, sensing disaster as the vessel was driven toward the pier, ordered all to leap for their lives, and the time hallowed set rule, "women first" was followed. Only four women, one of whom was employed on the boat, were known to have been lost.

Captain Miller, hard stricken by the disaster and loss of lives, declared the undertow swung his ship after she struck the bar. "I told the cabin boys to awaken the passengers and crew and order all over the rail," he said. "Those who moved quickly were saved. The ones who held back lost their lives."

FAMILY OF SIX KILLED.

U. P. Train Crashes Into Load Automobile Near Kearney.

Kearney, Neb.—Six people were killed at Odessa, nine miles west of this place, when the second section of train No. 6, on the Union Pacific, struck an enclosed Ford car. The dead are Charles Kimmerly, his wife, son, two daughters and infant child.

The Kimmerly family resided at Shurgon, Colo., and was en route home from the east. They traveled the Lincoln highway and for some reason when reaching Odessa, went south across the track. All curtains on the car were fastened down because of a heavy mist.

CALLS EXTRA SESSION.

North Dakota Legislature Summoned to Act on Suffrage.

Bismarck, N. D.—Governor Lynn J. Frazier issued a proclamation ordering an extra session of the North Dakota legislature to convene November 25. Ratification of the federal suffrage amendment, assistance for drouth-stricken farmers and enactment of legislation to carry out the state's industrial program, are mentioned in the call. The non-partisan league is in control of both houses of the legislature. It is expected that a further announcement will be made regarding industrial legislation.

FAMOUS POETESS DEAD.

Ella Wheeler Wilcox Passes Away at Home in Connecticut.

New Haven, Conn.—Mrs. Ella Wheeler Wilcox, author and poetess, died at her home, "The Bungalow," in Branford, October 30. Mrs. Wilcox had been ill for some months, having had a nervous collapse while engaged in war relief work in England. Mrs. Wilcox was in her sixty-fourth year and was a native of Johnstown Center, Wis. Her literary work embraced a large number of books, both prose and poetry, and she was a contributor to many publications.

Fatal Wreck in West.

Los Angeles.—Seven persons were killed and 60 injured when Southern Pacific train No. 50 southbound, was wrecked near Acton. The engine, two baggage cars and five coaches went into a ditch.

Police and Strikers Clash.

Utica, N. Y.—During a riot here between striking textile and clothing workers five persons were shot by the police. The strikers have been out nine weeks and their places in the plants have been filled.

Movie Actress Scout Captain.

New York.—Miss Marguerite Clark, popular motion picture star, is to become a Girl Scout captain and lead a troup of scouts. She offered her services at Scout headquarters and was immediately accepted.

Ten Below in North Dakota.

Bismarck, N. D.—The lowest October temperature ever recorded in the weather bureau here was made the morning of the 26th when the thermometer reached 10 degrees below zero, the bureau announced.

OPPOSE SHORT DAY

FARMERS ON RECORD AGAINST DEMANDS OF LABOR.

MINORITY LEAVE CONVENTION

Nebraskan Chosen Head of National Organization.—Say 44-Hour Week Cannot Feed World.

Hagerstown, Md.—The short work day and the "ever increasing wage" demanded by industrial labor" were declared to be "allies of the profiteer in keeping up the high cost of living" in a resolution adopted by the farmers' national congress at its concluding session here. The congress also went on record as opposed to "all strikes."

The resolution expressing opposition to organized labor's method was adopted over the protests of a small minority of wrought-up farmers, who withdrew from the congress after the vote on the resolution.

Speakers for this minority raised a furor throughout the convention hall during consideration of the resolution and declared that all organized labor was engaged in a struggle for its just rights and should have the full sympathy and support of the farmers of America.

"We know that the forty-four-hour week cannot feed the world and we proclaim that it cannot clothe it," the resolution further declared. Those who advocate the short day in industry, the resolution added, should not expect the farmer to work "six hours before dinner and six hours after, with before-breakfast and after supper chores thrown in."

While pledging a helping hand to "honest organized labor," the resolution condemned the "treason of false leaders who, for pay and price, would scuttle the ship of state and rear the red flag of bolshevism over the ranks of an outraged and fallen republic."

In declaring opposition "to all strikes," the congress went on record as favoring a federal board of arbitration that would give both capital and labor a "square deal." O. G. Smith, chairman of the Nebraska state board of agriculture, was elected president of the congress.

CUTS BARLEY'S BEARD

Professor Performs Feat of Benefit to Farmers.

University of Alberta Agronomists Remove the Barb From Whiskers of Grain.

Edmonton, Alberta.—Trimming the beard of barley is the accomplishment claimed by the agronomists at the University of Alberta this summer. Specifically what they did was to attempt to remove the beard altogether, succeeding only in taking the barb out of the beard. This, it was declared, is of immense potential agricultural benefit.

It is the barb in barley that makes all the trouble in handling and feeding the grain, it is said, and unsuccessful efforts have been made for years both in Canada and the United States, to remove the beard. But with the barb gone the experts say the beard doesn't particularly matter.

If the claims made for the improved barley are borne out authorities hold it may become a staple variety of western Canada. Two varieties of barley are grown in Alberta—the two-rowed and six-rowed. The former is used for beer-making, but six-rowed barley is the chief crop of central Alberta for feeding purposes. It is a sure crop, favored in mixed farming regions, and yields from 40 to 50 bushels to the acre.

Aged Woman Dances.

Marion, Ind.—One of the features of the annual reunion of the Octogenarian Club of Grant county held recently at Matter Park, was the dancing of old persons. Mrs. Sarah Jones, ninety-one years of age, one of the oldest women in the county, danced as an orchestra played tunes she had heard in her girlhood.

GERMANY SEEKS LOST TRADE

Would Regain Her Prewar Place in Commercial World—Cunning Is Shown.

Brussels.—Signs are not lacking here of the attempt being made by Germany to regain the place in the commercial world which she lost through the war.

Goods now in the market in Belgium are often typically German. They are supposed to have been introduced secretly into the country via neutrals such as Holland and the Scandinavian countries.

One outstanding feature of these goods, however, is the disappearance of the German trademark, but the German cunning does not halt at this. The imperial crowns are now replaced by American eagles in an attempt to make the goods pass off as American, while others bear British and French trademarks. The names of German firms are completely absent, but the manufacture is too typically German to go undetected.

DEFY TIME BY KEEPING FIT

Long Life and Health Offered to All Who Will Obey a Few Simple but Imperative Rules.

When one has been overworking, undersleeping, overdrinking, overeating, and underexercising, germs multiply rapidly because the "white wings" of the human system are too tired to clean them out.

A long illness follows.

Some day we will tell the truth in death certificates and reports will be made like this:

"Died after thirty years of overeating."

"Smothered himself to death. Worked and slept in unventilated rooms."

"Burned out. Slept only six hours a night."

Good health is a luxury we all can enjoy if we are willing to play the game on the long law of averages.

Eat lightly, drink lots of water, breathe fresh air every night and day, get plenty of sleep, keep clean inside and outside, and Father Time will pass you by.—The Fortuna Magazine.

Wouldn't Improve His Looks.

Mrs. Styles—Don't you hink this new hat improves my looks, dear?

Mr. Styles—I suppose so.

"But what makes you look so cross?"

"I'm thinking of the bill for that hat. You can't expect that to improve my looks."

When a mule climbs Mount Popocatapetl he takes over 5,000,000 steps, but we don't know how many over.

On Same Mission.

A Logansport minister was on his way to fill the pulpit of a church in Terre Haute a few weeks ago, and happened to overhear a prize fighter, occupying the seat in the train just in front of him, remark to his companion:

"I am going to Terre Haute to knock h—— out of ——"

The Presbyterian minister became interested, and said to the pugilist: "Why, that is just the very thing I am going for."

The young man looked at the minister aghast, and said:

"Why, you're not a prize fighter, are you?"

"No, I am a minister," was the reply, "but my business is to knock h—— out of people, and that is just what I am going to Terre Haute for."—Indianapolis News.

Make the Load Worth While.

Lionel Barrymore seems to inherit some of the skill in epigram that was possessed by his distinguished father. He was speaking of his desire to act in Shakespeare's plays when the interviewer remarked: "But it is such hard work."

"Everything is hard work," said Lionel, sadly, "and you may as well climb to the top of the mountain carrying a bag of diamonds as carrying a bag of coal."—Boston Transcript.

Ever notice what a hit a good listener makes with the women folk?

Some people spend their lives as wet nurse to a mortgage.

Sleepless Nights

and coffee-drinking are closely linked together with many people.

If your case is like that, try

MOVE TO SAVE COAL

DRASTIC ACTION INSTITUTED BY FEDERAL GOVERNMENT.

TRAIN SERVICE SUSPENDED

Bunkering of Foreign Owned Ships in U. S. Ports Stopped.—Many Districts Appeal for Fuel.

Chicago, Ill.—At the end of the first week of the strike of nearly half a million miners in the bituminous coal field of the country, many localities were making appeals for fuel and the government was perfecting regulations to safeguard the nation's meager supply of coal. In many districts orders put into effect are more drastic than during the war.

Appeals for coal to prevent distress in many towns of Kansas, Missouri, Montana and Alabama were sent to state and railroad officials. Some districts in Nebraska reported a shortage and appealed for assistance.

Realizing that the country is burning three times as much coal as the miners are turning out, bunkering of foreign owned vessels at American ports was ordered stopped by the central coal committee of the railroad administration at Washington.

The committee also authorized regional directors of railroads to suspend such train service as might be regarded absolutely necessary, but let it be known that no general curtailment was planned.

Sixty-six trains were annuled by the Chicago and Northwestern and the Chicago, Milwaukee and St. Paul railroads.

Indiana's public service commission took the most drastic action during the week in the domestic field. It decreed lightless streets, discontinuance of electric sign service, coal gas for heating and other advisable restrictions of service by public utilities with less than a two weeks' supply of coal.

The railroad administration's coal distribution system under fuel administration regulations has been put in full operation. In Chicago the coal committees of the northwestern and central western railroad regions announced removal of all restrictions on coal shipments for federal, state, county and municipal, public utility, daily newspapers and a few similar classifications throughout the country. The order applied to coal already taken charge of in transit and that to be mined, and was designed to meet pressing necessities, such as freeing coal cars for mines still in operation.

IRISH GIRLS MUST BEHAVE.

New "Republic" Forbids Colleens to Spoon With British Troopers.

Dublin.—Love-making by the girls of Ireland with members of the British government forces has been proscribed by the Irish republican army. Any girl keeping company with a government soldier or policeman will be penalized by having her hair cut off. One girl has already suffered the penalty, losing her tresses for walking out with a soldier.

The proclamation has been posted, signed by "the competent military authority," saying:

"Whereas, certain girls wanting in self-respect, have lamned themselves by keeping company with the army of occupation, it is deemed proper by competent authority, both to safeguard morality and to stop bad examples, to publish the names of these culprits and also to warn them that after the publication of this proclamation those who persist in the above-mentioned scandalous, unpatriotic company-keeping render themselves liable to the punishment of being branded by having their hair cut off."

All loyal subjects of the Irish republic also are requested to shun public houses which entertain members of the enemy army until such time as they make reparation by a complete change of conduct.

Convict Blacks in Record Time.

Helena, Ark.—Rapid progress marked the trials of cases growing out of the recent race disturbances south of this city, one negro being convicted of first degree murder after eight minutes' deliberation by a circuit court jury and five others receiving a verdict of guilty to a similar charge, all at the same time, after the jurymen had been out seven minutes. The verdict means electrocution for the six negroes. Indictments have been brought against 122 persons, mostly negroes, as a result of the disorders.

Spanish-American Exposition.

Madrid.—An application for a Spanish-American exposition at Seville in celebration of the 400th anniversary of the voyage of Magellan to the new world has been approved by the cabinet.

Suicide Bridge To Go.

Chicago—Park employes have begun razing suicide bridge, the high viaduct in Lincoln park, from which some 40 persons have leaped to death or injury in recent years.

Espionage Law to Stand.

Washington, D. C.—By unanimous vote the senate judiciary committee declined to recommend repeal of the espionage act. Repeal bills of Senators France of Maryland and Poindexter of Washington, republicans, were ordered reported adversely.

GIRLS! DRAW A MOIST CLOTH THROUGH HAIR

Let "Danderine" save your hair and double its beauty

Oh, girls, such an abundance of thick, heavy, invigorated hair; a perfect mass of wavy, silky hair, gloriously fluffy, bright and so easy to manage.

Just moisten a cloth with a little "Danderine" and carefully draw it through your hair, taking one small strand at a time; this magically removes all dirt, excess oil and grease, but your hair is not left brittle, dry, stringy or faded, but charmingly soft, with glossy, golden gleams and tender lights. The youthful glints, tints and color are again in your hair.

"Danderine" is a tonic-beautifier. Besides doubling the beauty of the hair at once, it checks dandruff and stops falling hair. Get delightful Danderine for a few cents at any drug or toilet counter and use it as a dressing and invigorator as told on bottle.—Adv.

Terrible Suspense.

"The suspense of this continued story is terrible," said Miss Pansy Pyetin. "There's a report at the post office that the magazine isn't coming out next month."

"CALIFORNIA FIG SYRUP" IS CHILD'S LAXATIVE

Look at tongue! Remove poisons from stomach, liver and bowels.

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless laxative or physic for the little stomach, liver and bowels. Children love its delicious fruity taste. Full directions for child's dose on each bottle. Give it without fear.

Mother! You must say "California."—Adv.

A friend in need clings to you for all you are worth.

Criticism and Citizenship

It is the plain, public duty of every citizen to criticize proposed government measures believed to be harmful.

Swift & Company is in a better position perhaps, than others, to understand the meat packing business in all its relations to public and private interests, even though the others may have been giving the subject a great deal of sincere attention.

Swift & Company is convinced that interference with its legitimate business function by governmental agencies, however well intentioned, would be an injury to every man, woman and child who wants meat to eat, as well as to the men who raise the meat and to those who dress and distribute it.

Maximum service that cannot monopolize because of keen competition and lack of control over sources of supply is furnished at a minimum of profit—a fraction of a cent per pound from all sources.

Therefore Swift & Company is taking every legitimate step of citizenship to prevent such interference.

These advertisements are intended to help you, and to help Congress decide what is best to be done. Mistakes are costly and apt to be harmful in these trying times.

Let us send you a Swift "Dollar."

Children Cry For Fletcher's CASTORIA

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

GENUINE CASTORIA ALWAYS
Bears the Signature of
Chas. H. Fletcher.

In Use For Over 30 Years
The Kind You Have Always Bought
THE CENTAUR COMPANY, NEW YORK CITY.

BIG FEED

The store force at Wellemeyer's held their Eighth Annual Christmas Banquet on Sunday evening, December 1st, in the basement of the new store.

The spacious funeral room was cleared and used as a banquet hall. Suitable decorations of evergreen, tinsel holly wreaths and Christmas festooning, gave to the room the sparkle and charm of a Christmas festival.

Pretty dinnerware and costly cut glass were appropriated from the store's stock to beautify the tables, and lovely crysanthemums and poinsettas fresh from the Hill City greenhouses, gave the tables a final touch of elegance.

Two roast geese with red apples on their feet, together with all the usual fixings of cranberry sauce, pies, cakes ice cream, etc., were a load which the two big tables could hardly carry.

The store people who partook of this feast were twenty-eight in number. There were present the Boss and his family, the clerks and their families, together with such ex-clerks as lived near enough to get here for the occasion.

After the feed, games were played, various stunts were pulled off for the merriment of all. And the store's best player-piano and a most excellent phonograph entertained with special Christmas music and song.

At a late hour the merry bunch adjourned after voting to meet again next year in a similar Christmas festive.—Contributed by one of the cooks.

FOOD FOR THE SQUIRRELS

A citizen of Klemme, in a moment of temporary mental aberration, composed this limerick, which he sent to a young lady correspondent:—

There dwelt a young man in Klemme,
Who wooed a maiden named Emmy;
He once snatched a kiss
From the lips of this Miss,—
Rude thing! Not to even say "lemme."

It elicited the following response from his correspondent:

It strikes me the young man from Klemme
Who had sense enough not to say "lemme,"
Understood the fair sex,
Knew the deed would not vex,
And will always succeed with "la femme."

"Coals to Newcastle."

"To carry coals to Newcastle" means to do something that is superfluous. Newcastle being a great coal field, carrying coals there would be a type of unnecessary action. The French have a saying "to carry water to the river" for the same thing, and there are several Latin equivalents.

OYSTER RAISING IN HOLLAND

Highly Scientific Methods Employed In That Country Have Been Remarkably Successful.

In the industry represented by oyster cultivation, Holland is the most systematic in its operations and employs more elaborate methods than any other country in the world. The numerous sounds that indent the coast of Holland, particularly in the region of the River Scheldt, afford excellent facilities for the propagation of the oyster and enable the country to conduct the most successful oyster industry in Europe. Public dredging is not permitted, as the result of that system was the threatened exhaustion of the fisheries, and the beds have been carefully surveyed and specific tracts are leased to individuals and companies, who are thus enabled to conduct the propagation of the oyster in a systematic manner that insures the best results from the territory available. Many growers lease several tracts in different localities, and adapted to different purposes, which facilitates the various operations, as the oysters can be shifted from one place to another, according to the season and the stage of development. A few of the oystermen plant shells on the banks, as is done in many places in this country, but the largest and most successful propagators are equipped with their own tanks and ponds, located in convenient shallow bays, in which they carry on the culture.

MEASURE HEAT OF STARS

Scientific Instrument Used at Washington Is Sensitive to an Almost Miraculous Degree.

One of the experts employed by the government bureau of standards in Washington has perfected an instrument which measures the heat of a star so far away that it can't be seen with the unaided eye. This same instrument is sensitive enough to be affected by the heat of a candle 100 miles away. "What is the practical value of such labor?" asks Thomas H. Uzzell in Everybody's. "Well, for one thing, these experiments by Doctor Coblentz have made a substantial contribution to the theory and technology of measuring high temperatures which will melt any known substance. Making use of this new knowledge, other bureau men have greatly improved the high-temperature thermometers which are used in the steel industry to measure the temperature of molten steel. One of the biggest improvements in the production of steel in recent years is the result.

"Formerly many millions of dollars' worth of steel products depended upon the trained eye of the foreman in estimating the temperature of steel from its color. But these new thermometers don't drink; they don't fail; and their accuracy means vast savings in money, better steel, a decided step forward in America's industrial sovereignty."

On Toads.

"Many stories are extant tending to show that toads have been found alive in rocks or in soil deep in the earth; yet so far as investigated by the writer in no case has the evidence been at all conclusive," says A. H. Kirkland in an article on "The Garden Toad" in Boys' Life. "On the other hand, experiments have shown that toads may be kept alive at least 18 months sealed up in plaster or limestone. There is little doubt that the toad may live to be 20 years old, or more.

"Though it lives alone in summer, toads often hibernate in colonies of half a dozen or more. In feeding, usually by night, the toad patrols a fairly well-defined beat; garden and flower beds are frequented, and particularly the ground under arc lights, where numerous insects fall fluttering from the lamps above. When food is abundant, as shown by experiments on toads in cages, the animal eats an equivalent of four square meals daily, consisting of caterpillars, cut-worms, beetles, ants, etc."

Shotguns and Rifles.

When a shotgun or rifle is cleaned a cork of proper size should be inserted in the end of the barrel. By preventing the entrance of damp this will preserve its value as well as its usefulness. This practice is not followed to the same extent as it should be even among those who take special pride in firearms. It is said that a bit of camphor inserted in the barrel will also aid in preventing the accumulation of rust.

Egyptian Philosophy.

If thou art successful and lovest the wife of thy bosom, then fill her stomach and clothe her back. . . . Make glad her heart during the time that thou hast. She is a field profitable to its owner.—Ptah Hotep.

To Keep Inkwells Clean.

The ink should be poured out of the wells once a week and the wells washed in hot water.

Ford

THE UNIVERSAL CAR

Buy Your Ford Car Now

To make sure of getting a Ford car, buy one now. Don't wait until Spring but buy now while deliveries are possible. Even next month is uncertain.

The number of cars allotted to this territory is limited and specified. Even to get our allotment, we must have real, bona-fide orders for cars. Just so many cars alloted us; just so many will get cars; will you be one of them? Those who order their cars now will be protecting themselves. If you would be forehanden, get name on an order today.

Don't think you cannot use it if you get it now, The four seasons are all alike to the Ford car. It is a necessity every month of the year. Besides, the Ford car is the lowest in upkeep cost and the easiest in operation. And the new Ford electric starting an lighting system makes driving more convenient. Your order for either open or inclosed cars will have our prompt attention.

TRIAL IN YOUR HOME

The World's Greatest Phonograph Value

EDISON'S NEW DIAMOND AMBEROLA

Quick! Read this through and grasp this extraordinary opportunity *today!* This remarkable offer is the result of Mr. Edison's expressed wish to see a phonograph in every home in the U. S. A.

He has given his consent to this *Free Trial* of the Amberola *in your home.* There are absolutely no "strings" to this offer. You do not have to pay or promise to pay one cent in connection with this Free Trial. You are not placed under the slightest obligation.

Come to our store today or tomorrow, pick out your Amberola and a dozen Amberol Records. We will deliver them promptly to your home. Let the Amberola entertain you for *three days*—ample time for careful judgment and comparison. At the end of the three days' Free Trial if you do not want the Amberola we will call for it—and *thank you* for giving the Amberola this trial. If you *do* want it, we will arrange terms of payment to suit you.

How can Amberola dealers *afford* to give these Free Trials? Because in the overwhelming majority of these Free Trials, people *never want to part with the Amberola!* Edison's great inventive brain has made the Amberola so *superior* to ordinary phonographs and "talking machines" that in those three days of Free Trial it sings its way into peoples' hearts and homes forever!

Numbers of people will instantly avail themselves of this Free Trial offer. If *you* do not act *at once* we may have to put you on a waiting list. So let us hear from *you right away!*

Accept This Offer To-day Without Fail

Yes YOU!

Y. W. C. A. CALLS BIG CONVENTION

2,000 Women Expected to Gather in Cleveland the Week of April 13-20, 1920, for National Convention.

MEETING POSTPONED TWO YEARS BY WAR

Delegates Will Discuss New Membership Basis for Students and Question of Future Support for Work. Many Other Things.

The Young Women's Christian Association of the United States of America will meet in national convention in Cleveland, O., the week of April 13 to 20, having postponed the convention from the spring of 1918 in order to comply with a government request that expense and travel be reduced to a minimum during the war.

The department on conventions and conferences of the National Y. W. C. A., of which Mrs. Harry Emerson Fosdick is chairman, estimates an attendance of 2,000 women, representing all departments of Y. W. C. A. work—board members, secretaries, students, club girls, Girl Reserves, girls from Industrial Service Centers, women from the International Institutes for foreign born women, members from city, town and country Associations.

Each Association in the United States will be entitled to one voting delegate for every one hundred voting members in the Association.

Two of the most important questions which will come up before the convention will be the membership basis and the question of support. Of old business to be considered the most important question will be the membership basis for student associations, the granting of charter membership privilege to the Chicago Young Women's Christian Association and a recommendation providing an increase in membership of the National Board of the Association will also be presented.

Rev. Charles W. Gilkey, pastor of Hyde Park Baptist Church, Chicago, will give a series of morning addresses during the convention week. Dr. Robert E. Speer, secretary to the Foreign Mission Board of the Presbyterian Church, North, will also give an address. Mrs. Speer is chairman of the National Board of the Y. W. C. A.

The convention will be in session morning and evening, the afternoon being given over to sectional meetings held in various churches. Attendance at these meetings will be determined by group membership and also by activities.

Mrs. W. P. Harford of Omaha, Neb., will preside at the opening session, having been elected as president at the last convention of the Young Women's Christian Association, held in Los Angeles in 1915.

The committee on business to come before the convention has for its chairwoman Mrs. John French and includes among its members Mrs. John D. Rockefeller, Jr., Miss Eliza Butler, sister of Nicholas Murray Butler, president of Columbia University; Miss Martha McCook, Miss Mabel Cratty, general secretary for the National Board of the Y. W. C. A., and Mrs. William Adams Brown, all of New York city.

TOWN GIRLS TO HAVE Y. W. C. A.

Association Maintains 52 Town Secretaries—Wants to Expand Work at Once.

"During the war girls all over the world had their first lesson in nation wide and world wide thinking," says Miss Mabel Head, director of Town and Country Work for the National Y. W. C. A.

"Girls learned something of the inspiration of working with hundreds and hundreds of other girls, unselfishly and unstintingly, through Red Cross work. Now the Y. W. C. A., through its world wide program of service for women, is planning to expand its work so that girls all over the world, and particularly in smaller communities, will not lose this experience.

"Citizenship forums are being organized for girls in small communities, where girls may come together to learn more about their country and their responsibility to it and as citizens of the world.

"Reading courses have been planned at National Headquarters in New York so that a girl in any community may carry on a course of study, either by herself or with other girls, on a wide variety of subjects.

"The Y. W. C. A. has at present thirty-nine secretaries doing county work. This means that they travel about from one community to another helping girls to plan out social, recreational, educational and religious activities for themselves and organizing them to carry on these activities. These secretaries work with the county agents of the Department of Agriculture in carrying on home economics work. They help plan pageants, arrange benefits, assist the girls in going to Y. W. C. A. summer conferences and help plan all sorts of social good times for the community."

Y. W. C. A. PLANS WORLD PROGRAM

Mrs. John D. Rockefeller, Jr., Heads Association's 1920 World Service Program.

$3,000,000 NEEDED FOR WORK.

Leader Calls Association a "Stabilizing Influence" in Outlining Post-War Program for Women—Federal Council of Churches to Announce "Y. W. C. A. Sunday."

Mrs. John D. Rockefeller, Jr., chairman of the National Educational Campaign Committee of the 1920 World Service Program of the Young Women's Christian Association, has made the following statement:

"Since the war we are more than ever aware of the economic, industrial, educational, social and religious difficulties which beset the lives of girls and women everywhere. In meeting the post-war needs of women the Young Women's Christian Association stands as an instrument of service, tested and proven by war, and organized to meet the manifold problems of peace.

MRS. JOHN D. ROCKEFELLER, JR.
Chairman of the Educational Campaign Committee of the Young Women's Christian Association.

"Because of its fifty odd years of experience in meeting fundamental problems affecting girls, the Young Women's Christian Association is an organization particularly fitted to exert a stabilizing influence upon the troubled times through a consistent program of service for girls and women.

"American women are asking how they may share in the world's reconstruction. They can do so by enlisting the support of their communities for this World Service Program, which will insure to the world a healthier and better womanhood.

"This campaign of the Y. W. C. A. to tell the people of the United States about its work and to raise $3,000,000 with which to carry on Y. W. C. A. work during 1920 in the United States, Europe, China, Japan, India, South America, Egypt, Siberia and Mexico will close the week of February 22 to 29, which will be known as Y. W. C. A. Week.

"The Federal Council of Churches will probably set one Sunday as a time for ministers throughout the country to address their congregations on general conditions affecting women and the Young Women's Christian Association as an instrument of service.

"The immediate task is to bring to the people of the United States a knowledge of conditions affecting the lives of women in all parts of the world. We can no longer ignore the character, the manner of life and the ideals of other peoples, whether we want to or not. A special call is now coming to the Association from China, Japan, India and South America, where work was held back during the war because of the necessity for special activity in France and the United States.

"The World Service Program calls for $4,500,000. Of this amount $1,500,000 has already been secured."

The educational campaign committee includes among its members Mrs. Robert E. Speer, president of the National Board of the Y. W. C. A.; Mrs. Henry P. Davison, Mrs. William Van V. Hayes, Mrs. Robert L. Dickinson, Mrs. William Adams Brown, Mrs. Van Sanford Merle-Smith, Mrs. Lewis H Lapham, Miss Ellen Hale Stevenson, Mrs. Frederic B. Pratt and Mrs. Herbert Lee Pratt.

SMALL Y. W. C. A. IS COMMUNITY CENTER

Recreation for Girls Is Important Feature of Work.

Fifty-two young women in the United States are known as Y. W. C. A. "town secretaries." All of which means that the fifty-two are organizing recreation work for girls and for the community at large in towns of less than 10,000 inhabitants.

The Y. W. C. A. may be in one rented room or more. It may be a whole building, but at any rate there is a recreation room and if possible a kitchen, reading and writing rooms. If the Y. W. C. A. has a building of its own it becomes a community center, where all women's organizations may meet.

One sure way to get Cotton is ts go to the store that advertises all Wool for $25.00.

It cannot be done today and intelligent people must know it.

Every year—every month we are making this store stand out as the store of real value—first class clothing only—the kind that always satisfies.

Then too you will always find the newest styles and extensive assortments.

If this weather prevents your coming a mail order will get prompt and intelligent attention.

"Where a dollar does it's duty"

Taking care of the Family

"I have everything fixed up so Mary is well taken care of, and the boy's will get their share," said a friend of ours just the other day. With evident satisfaction he spoke of making his Will in which he had provided for the family in a business like way. He felt that he had done "the square thing" by Mary and the boys.

Every man should make a Will. Provide for the distribution of property as you desire. Select an Executor who will preform his duties faithfully. There's satisfaction in knowing that your estate will be administered in accord with your wishes,

HER SMILE IS HER SAFEGUARD

American Red Cross Courier Is Not Molested by Bandits in Balkans.

FACES MANY DIFFICULTIES

Life of Balkan Courier Is Far From Simple—Travels Take Her to All Parts of the Intricate Balkans.

Bucharest.—A New York young woman, with a smile, a dog and a tan leather dispatch bag, is braving the floods, torn up railroads, broken bridges, snow-clad mountain passes and all the other hardships that make up the substance of present-day travel in the Balkans.

She is Mrs. Helen Grannis, formerly librarian in the New York Public library. The smile is the famous Grannis smile that carries her through all sorts of unexpected difficulties in a country where difficulties are real. That smile decided the American Red Cross authorities to give to her a position as courier. The dog is a Caucasian shepherd, half wolf, which was given to Mrs. Grannis by an admiring Roumanian peasant woman. And the dispatch bag contains valuable papers for the American army and the Red Cross which Mrs. Grannis delivers from headquarters in Bucharest all over the intricate Balkans.

Life Far From Simple.

The life of a Balkan courier is far from simple. Railroads have been destroyed everywhere. Bridges are lying in the beds of streams. Roads in many districts are morasses of mud. Through the mountain districts roam bands of comitadji who prey upon lone travelers.

Mrs. Grannis has braved her way through everything. When she cannot take a train she uses a donkey, a camionette, a cart drawn by a water buffalo. She is familiar with narrow-gauge railways that threaten to roll off the mountains into gorges. She knows the wheeze and strain of a one-lunged river steamboat, panting against a six-mile current. She can cross a bridgeless stream on horseback or with a rowboat.

And with the nonchalance of a subway straphanger she drops from one mountain top to another on the swinging aerial cables left behind by the enemy armies of occupation.

Smile Takes Her Through.

She has has met bandits but invariably, with her smile, with the "U. S." on her uniform and her talent for tight places, she has won through unmolested.

Mrs. Grannis' travels start at Bucharest. The cities she "makes" include Belgrade, Sarajevo, Ragusa, Cettinje, Podgoritza, Tirana, Scutari and Salonika. It does not matter to her. On her latest trip she carried a letter from the governor of Albania to Col. Henry W. Anderson of Richmond, Va., Balkan commissioner for the Red Cross, thanking the American people for the relief work done in his country.

Her first work for the Red Cross was with the bureau of personnel in Paris, where she labored nights, days and Sundays getting personnel off to the front. She left Paris January 1, 1919, to join the Balkan commission, and at length was permitted to take the courier position which she insisted on having.

Hen Decides Own Case in Court; Goes Home

Sharon, Pa.—Ownership of a hen worth $1, alleged by a Sharon man to have been stolen by a neighbor, was decided by the bird.

The neighbor, a woman, when arraigned before Justice Hugh Jones, declared the chicken belonged to her. Constable Harry Galvin was directed by Justice Jones to take the hen and release it some distance from the homes of the plaintiff and defendant, who agreed to abide by the decision of the bird.

The chicken strutted off to the plaintiff's yard. The defendant was compelled to pay $4.50 costs.

SHERLOCK HAD NAUGHT ON HIM

Clever Work of Detectives Solves "Great False Teeth Mystery."

THIEF GRABS POCKETBOOK

New York Sleuth Finds Jewels in Awning Repairer's Pocket and the Artificial Masticators in an Ash Can.

New York.—Clever work on the part of Detective Sergeants Joseph Leonard and Thomas Appel solved a robbery which might otherwise have remained on the record as the "great false teeth mystery."

James K. Andrews, a banker, discovered that a set of false teeth which he recently installed did not function with the celerity promised by his dentist. Mrs. Andrews started with them to the dentist for adjustment.

Mrs. Andrews had the teeth in her pocketbook along with $75 in bills. As she was leaving the apartment the bell rang. Mrs. Andrews placed the pocketbook on a nearby couch as a maid opened the door and admitted a stranger, who announced that he was there to repair an awning.

Mrs. Andrews went to an adjoining room, but when she returned the pocketbook with the $75 and the artificial masticators had disappeared. She telephoned for the detectives.

Telephones for Detectives.

They responded with alacrity and after listening to Mrs. Andrew's story of the vanishing of the false teeth, resorted to the old Sherlock Holmes system of deduction. Footprints on the Persian rugs of the Andrew's apartment revealed that the awning repairer had found it imperative to change the scene of his operations to another apartment in the house. There they went.

Drawing his highly polished nickel watch from his vest pocket, Detective Leonard placed it against the awning man's chest and, in a voice marked for the profundity of its tone, said—

"Aha! What have we here?"

"Where?" asked the awning man, assuming an air of nonchalance.

"There," replied the astute detective, as he shoved his hand in the awning man's coat pocket and drew forth a handful of glittering jewelry.

The unexpected jewelry deepened the mystery.

Oh, Where Are the Teeth?

"But where's the false teeth?" asked Detective Appel, who believes in following every trail to the end.

"Patience," replied Leonard, "let the magistrate find that out."

So the awning man, who later said he was Charles Langfelder of 69 Walton street, Brooklyn, was haled before Magistrate McQuade in the west side court, where he denied all.

"Your Honor, we have a clue to the false teeth," said the detectives in chorus. "Hold him for a few minutes, and we'll recover them."

They hurried back to the apartment house, where they found the pocketbook and the teeth in an ash barrel. Langfelder was then held in $1,500 bail to await the action of the grand jury.

The detectives are still trying to find the owner of the jewelry.

NEW GERMAN CAPITAL SEEN

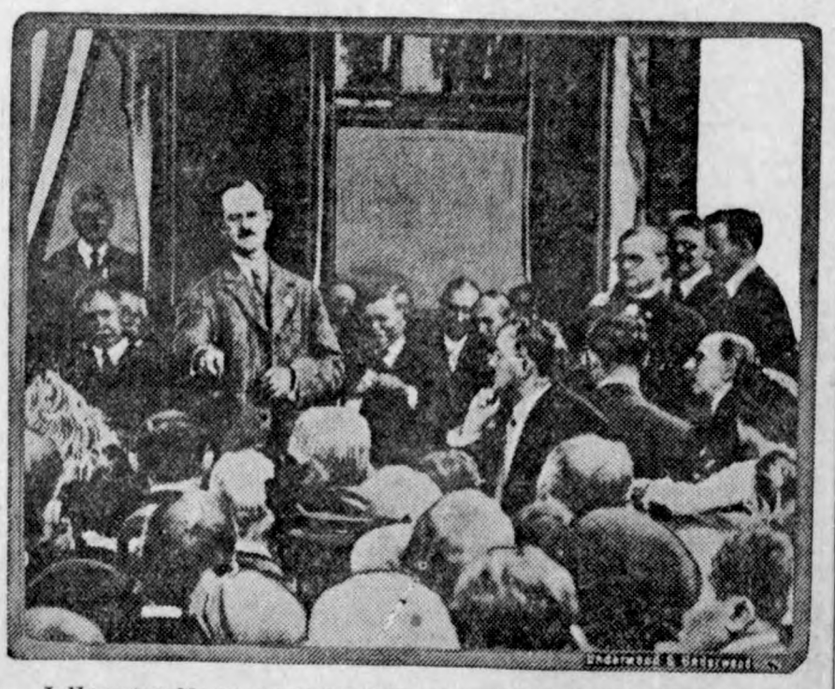
Berlin Worried Lest Seat of Government Be Shifted to the Rhine.

Berlin, Germany.—The Boersen Zeitung, one of the ablest German newspapers, says the fate of the city is in the balance and that it is, perhaps, too late to save it from becoming a city of the second class, with the removal of the capital and the activity in a business and political sense to some Rhineland city. It is a theory that has been gaining ground lately and is causing Berlin to lose sleep.

Strikes have followed one another in an endless succession. The uncertainty of the economic situation almost led to a boycotting of Berlin as the chief work center of Germany. Despite the huge expense, one industry after another left Berlin for quieter, steadier fields.

Merchants, politicians and industrial leaders have predicted that the transfer of the assembly or reichstag would inflict a severe blow on Berlin, especially if it should lead to the choice of another capital.

U. S. TAKES OVER BIG CANAL WITH CEREMONY



J. Hampton Moore, president of the Internal Waterway association, Philadelphia congressman and Republican nominee for mayor of Philadelphia, speaking during the ceremony at Delaware City, Del., with which the States took over the Chesapeake and Delaware canal.

EX-KAISER CASTS FEAR ASIDE

Will Dispense With Dutch State Police at His New House at Doorn.

Amerongen, Holland.—It is reported that the former German emperor has so far recovered from fears of molestation that when he moves into his new house at Doorn, the Dutch police, who have been constantly on guard about the Bentinck castle here since his arrival, will be relieved of duty. There are no walls or moats about the house of Doorn, which is visible and easy of access from the main highway.

T. B. CRUSADE IS ON

Accolades for Children Who Fight the Disease.

"Knighthood" Prize for Battle Against White Plague in the United States.

Washington.—Through the agency of Major B. J. Lloyd of the United States health service, accolades will be held in virtually every school in the country when the second annual tournament of the modern health crusade comes to an end this school year.

This was the statement made at the National Tuberculosis association offices, where the crusade was organized and where the new tournament was announced. The tournament held simultaneously all over the country for 15 weeks, begins with the opening of the term this fall.

Last year, the first in which the annual jousts with disease took place, found many "pages," "squires" and "knights" ready to be given their titles of knights banneret, the highest degree of honor to be received by the crusaders. In many cities and towns accolades were held and on the Western coast Major Lloyd personally gave the four "blows" to hundreds of "air knights," or boys and girls who had faithfully performed 11 health chores for the entire tournament and so became knights banneret.

At the capitol in Washington the largest accolade of the crusade was held, with Vice President Marshall acting as league master and conferring the honors on the candidates. The steps of the capitol building were filled with children who had fought a winning fight against disease.

There are 3,000,000 children in the crusade, and it is estimated that more than 75 per cent of them will win honors in the tournament. By completing the 11 health chores for the 15 weeks they will not only receive their titles, but will win badges and pins for the lesser ranks of page and squire, and gold and silver buttons for the ranks of knights and knights banneret. They will also win banners showing their class has been 100 per cent successful in the crusade.

This is one of the vital phases of the fight against the white plague, which will be directly affected by the success of the country-wide campaign of education now being conducted by the National Tuberculosis association.

War Lid Off Baccarat.

Paris.—Baccarat is again allowed in the clubs, since the ratification of the peace treaty. As soon as the ban was lifted a veritable frenzy of gambling set in all over Europe. It is estimated $1,000,000,000 was won and lost in the first night after the game was resumed.

Durable strings for lacing machine belts are sometimes made of eel skins.

ROUND UP RADICALS

WHOLESALE ARRESTS IN MANY EASTERN CITIES.

COUNTRY WIDE PLOT NIPPED

Conspiracy Existed to Defy U. S. Government, it is Believed.—Scores to Be Deported.

New York.—Hundreds of radicals, including many described as among the most dangerous anarchist agitators in the country, were arrested by Department of Justice agents in simultaneous raids upon radical headquarters in New York, Philadelphia, Detroit, Newark, Jackson, Mich., Waterbury, Conn., Chicago and other places.

In the raid here more than 200 radicals assembled in the headquarters of the Russian soviet republic were arrested. Fifty were held for deportation as undesirable citizens. A large quantity of radical literature was seized.

It was learned that thirty-six warrants had been issued by Commissioner General of Immigration Caminetti for radicals known to have been particularly active in the industrial unrest of the country. It was reported that these persons who were particularly sought, had been caught. They were taken to police headquarters.

The raids, taking place on the eve of widely advertised celebrations of the second anniversary of the establishment of the soviet government in Russia, were said to have nipped in the bud a country-wide plot openly to defy governmental authority. This has been advocated, it was said, for several weeks by combined radical elements, the I. W. W. anarchists and Russian agitators. Pamphlets and other literature to this effect are now in possession of the department of justice, it was stated. The raid was the third made upon the Manhattan headquarters this year.

UNITED ON PEACE PACT.

G. O. P. Members of Senate Show Solid Rank in Test Vote.

Washington.—The first affirmative step toward qualification of the peace treaty was taken last Friday by the senate after administration leaders, with the backing of President Wilson, had re-affirmed their intention of voting against ratification of the reservations drawn by the senate majority as adopted.

The initial test of strength on the reservation program of the foreign relations committee found the republicans almost solidly united behind it, the group of mild reservationists who helped kill the committee's amendments and the irreconcilable group of treaty foes standing together for the first time since the long treaty fight began.

By a vote of 48 to 40 the senate approved after all efforts to amend it had failed the committee's preamble to the reservation group, requiring that to make the treaty binding at least three of the four great powers must accept the senate qualifications.

The mild reservationists, it was declared, turned down a new democratic offer of compromise while the irreconcilable wing was devising a plan of action by which they hoped to defeat the treaty entirely. The best claim made by the administration forces was that the treaty would be wedged into a deadlock which in the end would make a compromise inevitable.

OFFER NO PROTECTION.

U. S. Not to Take Americans' Part Against Mexican Bandits.

Washington.—The policy of the United States regarding kidnaping of Americans in Mexico and attacks upon Americans and their property in that country was set forth in an official announcement that unless negligence on the part of the Mexican authorities can be shown there will be no claim for damages made by this government. The kidnaping of William O. Jenkins American consular agent at Puebla, and the payment by his attorney of $150,000 ransom for his liberty was discussed at length by a high official of the State department in outlining the policy of the United States. Jenkins will have to effect his own reimbursement of the money paid to Mexicans who kidnaped him, it was said, unless he can prove that the Mexican government was negligent in affording him protection.

Gompers for Eight-Hour Day.

Washington, D. C.—Making his first address before the international labor conference in which he sits as an unofficial representative of American labor, Samuel Gompers, president of the American Federation of Labor, declared for the straight eight-hour day as a maximum as compared with the 48-hour week and incidentally served notice that in the United States even the eight-hour day would be shortened if labor could accomplish its purpose.

No General Strike.

Chicago.—John Fitzpatrick, national chairman of the steel strikers' committee, at a meeting of the Chicago federation of labor said there would be no general strike in support of the steel strike.

But One Bank Failure.

Washington.—Establishing a record for immunity from failure, national banks of the United States have gone through the last 22 months with only one enforced closing, according to Comptroller of the Currency Williams.

NAMES THANKSGIVING DAY

President Wilson Calls Upon Nation to Observe Nov. 27.—Says Dawn of New Era Coming.

Washington, D. C.—President Wilson has set aside Thursday, November 27, as Thanksgiving day in the following proclamation:

"The season of the year has again come when the people of the United States are accustomed to unite in giving thanks to an Almighty God for the blessings which he has conferred upon our country during the twelve months that have passed. A year ago our people poured out their hearts in praise and thanksgiving that through divine aid the right was victorious and peace had come to the nations which had so courageously struggled in defense of human liberty and justice. Now that the stern task is ended and the fruits of achievement are ours, we look forward with confidence to the dawn of an era where the sacrifices of the nations will find recompense in a world at peace.

"But to attain the consummation of the great work which the American people devoted their manhood and the vast resources of their country they should, as they give thanks to God, reconsecrate themselves to these principles of right which triumphed through his merciful goodness. Our gratitude can find no more perfect expression than to bulwark with loyalty and patriotism those principles for which the free peoples of the earth fought and died.

"During the past year we have had much to make us grateful. In spite of the confusion in our economic life resulting from the war, we have prospered. Our harvests have been plentiful and of our abundance we have been able to render succor to less favored nations. Our democracy remains unshaken in a world torn with political and social unrest. Our traditional ideals are still our guides in the path of progress and civilization.

"These great blessings, vouchsafed to us, for which we devotedly give thanks, should arouse us to a fuller sense of our duty to ourselves and to mankind to see to it that nothing we may do shall mar the completeness of the victory which we helped win. No selfish purpose animated us in becoming participants in the world war, and with a like spirit of unselfishness we should strive to aid by our example and co-operation in realizing the enduring welfare of all peoples and in bringing into being a world ruled by friendship and good will."

The president calls upon the people of the nation to cease on that day from their ordinary tasks and to unite in their homes and in their several places of worship in ascribing praise and thanksgiving to God.

Vacation May Cost Jobs.

New York.—Perfection of a process to take the place of printing and engraving was predicted as a direct result of labor difficulties in the publishing business here, by Roger W. Allen, former president of the New York Business Publishers' association, while John Adams Thayer, secretary of the Periodical Publishers' association, predicted that new machinery soon would do away with all type composition. "The 'vacations' indulged in by the compositors have brought to light certain automatic typographic machines which do away with all type composition," said Mr. Thayer.

LEAGUE MEN LOSE.

Nebraskans Turn Down Non-Partisans in Constitutional Election.

Lincoln.—The result of the election to select delegates to the constitutional convention which will meet in Lincoln, December 2, shows that the Non-partisan league suffered a crushing defeat at the hands of the voters of Nebraska.

Of the 100 delegates selected, returns show that 73 are known to be opposed to outside influences, 10 had the support of the Nonpartisan league and the others were placed on the "unknown" list.

Americans Suffer Heavy Loss.

Washington.—Six employers were murdered and more than $71,895 in American gold stolen from oil companies operating the Tampico oil region during July, August and September, according to an official report just compiled, it has been learned. Six bandits implicated in two of the outrages were arrested and two of them publicly implicated in some of the outrages, the report stated, although in some of the camps of the region the federal soldiers were "behaving well."

Censure Church Dress.

Atlantic City, N. J.—Present-day styles of clothes worn by church women were censured at the national training conference of the Inter-church World Movement of North America.

California Ratifies Suffrage.

Sacramento, Cal.—Both branches of the state legislature, in special session, adopted without a dissenting vote a resolution ratifying the federal woman's suffrage amendment.

Pastor Battles Burglars.

Portland, Ore.—Rev. Father William Cronin, pastor of All Saints Catholic church here, was taken to a hospital suffering from serious injuries, following a half hour's fight with two armed burglars at his home.

Profit Without Booze.

Chicago Ill.—A Chicago hotel owner announced that the October receipts for a cafe and a grill room were $162,000 as compared to $147,000 for June, the last month before wartime prohibition went into effect.

FOGGY?

If Bilious, Constipated or Headachy take "Cascarets."

Tomorrow the sun will shine for you. Everything will seem clear, bright and bright. Your system is filled with liver and bowel poison which have your skin sallow, your stomach upset, your head foggy and aching. Your meals are turning into poison, gases and acids. You cannot feel right. Don't stay bilious or constipated. Feel splendid always by taking Cascarets occasionally. They act without griping or inconvenience. They never sicken you like Calomel, Salts, Oil or nasty harsh pills. They cost so little to use. Cascarets work while you sleep.—Adv.

The Preliminary.

She—"I wish you would buy me a silk dust cloak." He—"I would if I could first raise the dust."

Men flatter merely to protect themselves from women who flirt.

Tell All The World

"PAIN IN MY SIDE"

Davenport, Iowa.—"I wish I could tell all the world how much I owe to Pierce's Favorite Prescription. I was nearing middle life when my last child came and my health was miserable. I had continual pain in my right side. I took many bottles of 'Favorite Prescription' and can truly say that I suffered the least and my health afterwards was better than it had ever been before. Going thru the critical time of life, I depended solely upon 'Favorite Prescription' to help me well and strong, and it did not fail me. I had none of the distressing symptoms most women have at this period such as heat flashes and dizzy spells, but came thru in excellent health and am still just as strong and well as I was thirty years ago, thanks to this best of medicines, Dr. Pierce's Favorite Prescription."—Mrs. Alice Van Arnam, 1705 4th St.

FOR ALL AILING WOME

Foley, Minn.—"Some years ago Pierce's Favorite Prescription cured me of a case of woman's weakness, and since that time I have become the mother of seven healthy children. I have always taken the 'Prescription' and not one of my children was ever puny or sick. They have grown up strong, and I have been in the best of health these many years, due I am sure to the constant use of this medicine. I hardly know what I would have done without it. I feel safe in recommending it to all ailing women. There is nothing better.

"We also keep Dr. Pierce's 'Pleasant Pellets' in the house for immediate use."—Mrs. George Walbridge, Lock Box 318.

EASY NOW TO SAW LOGS AND CUT DOWN TREES

Only one man, or even a boy, with the improved Ottawa Engine Log Saw can easily cut twenty-five to forty cords a day, and at a cost of less than 2c per cord. This machine, which out does all others, has a heavy, cross cut saw driven by a powerful especially designed 4-cycle gasoline engine. It is a fast money-maker for those using it and does more than ten men could do either cutting down trees, sawing logs or buzzing branches *while you rest*. When not sawing, the engine can be used for other work requiring power.

Beware of Imitations.

The entire machine is mounted on truck wheels to make it easy to move to the trees or logs, and from cut to cut on a log *without stopping the engine*. For moving on the road, the truck wheels are placed parallel with the skids and the rig hauled straight ahead. The wheels turn on a two-way spindle. You do not have to take them off, but can change direction of wheel travel by merely taking out a pin.

The Ottawa can be fitted for sawing down trees. It cuts level with surface of ground, thereby getting all the timber and leaving no stumps sticking up. An automatic friction clutch stops the saw in case of undue resistance. Two men can fall forty to fifty trees a day in ordinary timber.

The whole outfit is compact, simple, durable against a lifetime of hard wear. It sells for a low price and is fully guaranteed for reliable operation in the hands of every one who has trees to cut down and logs to work up.

Full information and low factory price to you can be had simply by addressing the Ottawa Mfg. Company, 2724 Wood St., Ottawa, Kansas.

FOND OF GORGEOUS RAIMENT

Queen Elizabeth, in Full Regalia, Must Have Had Some Resemblance to a Rainbow.

The wardrobe of Queen Elizabeth, according to an inventory just handed down, rivaled that of any of the present-day movie stars. A list of her clothing at one time included 99 robes, 126 kirtles, 269 gowns, 136 foreports, 125 petticoats, 96 cloaks, 85 doublets, 33 safeguards and 18 lap mantles. Designers fashioned her gowns from the richest materials, including gold tissue, crimson satin, cloth of gold, cloth of silver, white velvet, drake-colored satin, dove-colored velvet, lady-blush satin and mantles of white plush striped with swan's down, it is recorded. She had all of these and many more.

A description of one of her characteristic dresses is: A forepart of white satin, embroidered very fair with borders of the sun, moon and other signs and planets of Venice; gold, silver and silk of sundry colors, with an embroidered border of beasts beneath. She carried a fan with white feathers and with a golden handle set with precious stones. Her slippers were made of cloth of silver embroidered with seed pearls. She wore a parasol of crimson velvet damask, striped with Venetian gold and silver lace, with a handle of mother of pearl.

An Englishman has invented apparatus to electrolyze water on shipboard to form a disinfectant.

ANCIENT CITY KNOWN TO FEW

Musan, in Korea, Visited Only by Occasional Stragglers From Western Civilization.

Few white men have been fortunate enough to wander inland, in Korea, as far as the ancient city of Musan. This city, with its grim old walls bearing five centuries of history, lies on the very edge of Korea. To enter it is like stepping backward to another world, into a story of the Arabian Nights.

During the Russo-Japanese war several Russians took refuge there, and since then half a dozen foreigners have discovered it, but, except for these stragglers, Musan lies unknown to the western world. The great central palace, or reception hall of the city, remains intact, and close by, in partial ruins, is the temple guesthouse. The smaller public buildings, the gates, the watch towers and even the walls themselves have their own particular story to tell of Musan's interesting past, but few people know it.

People who have hunted tigers in the vicinity of Musan say the animals are more beautiful than their relatives of India or the Malay peninsula. These beauties range among the bitterly cold mountains of China, Korea and Manchuria, and far into Siberia.

The Tie That Bound.

Lawyer—"On what grounds, madam, do you wish a divorce from your husband?" Client—"Why, I married him for his money, and he has lost everything."

YOUNG PIGS NEED ATTENTION

Special Care Should Be Given to Housing and Bedding—Keep Them Dry and Comfortable.

(Prepared by the United States Department of Agriculture.)

Ordinarily the fall crop of pigs is farrowed between the middle of August and the 10th of October. It is highly important that sows be well fed and carefully tended during this time, the care and management of the dams being practically the same as that followed when the spring litters are farrowed. Similarly, fall pigs, after they are weaned, should be treated the same as spring pigs, except that in many parts of the country fall pigs do not have access to green forage crops.

In the northern and colder locations, special attention should be devoted to housing and bedding the porkers, particularly the young pigs. These youngsters should never be allowed to sleep in sheds or pens where they are exposed to rain or snow, nor should they be allowed to lie on damp bedding. Supplying the fall pigs with

Where Possible Let the Pigs Wean Themselves After Ten to Twelve Weeks Old.

plenty of dry, bright, clean bedding frequently—once every two or three days if necessary—to keep the nests and beds dry and comfortable is a prerequisite of successful hog management. This point can not be overemphasized. The young pigs delight in a warm, dry nest, and the practical hog raiser who caters to this desire is the man who usually is able to make the statement, backed up with actual figures, that there is money in producing pork.

The great danger which results from allowing the pigs to sleep in damp bedding is that the next morning they go out into the cold air, often covered with steam, and consequently are likely to contract pneumonia or other serious ailments. Dry bedding, frequent changes of litter, well-built houses, and plenty of feed of the right character are essential where the producer seeks a 100 per cent pig-raising record. Where these conditions are realized, particularly where the fall pigs are kept dry, sheltered, and well fed, it is as profitable to raise autumn porkers as it is to produce spring pigs, despite the common belief to the contrary.

BREEDING FOR BETTER SHEEP

Experiment Being Conducted on Experiment Ranch in Idaho by Department of Agriculture.

(Prepared by the United States Department of Agriculture.)

Corriedale sheep developed in Australia mainly by a Lincoln-Merino cross, are being studied by the United States department of agriculture at the government 28,000-acre sheep-experiment ranch at Dubois, Idaho. There are at present about 1,500 sheep on the project divided into various classes. Australians claim for the Corriedales better mutton form than the Merino, more weight, and yet a good fleece of about three-eighths blood quality. It is expected that the tests now being conducted by the department will eventually result in a better average sheep, as to mutton carcass, than the breeds now on the market. The breed was introduced into this country by the federal department, but since that time many large private importations have been made. Part of the sheep on the Dubois range are being kept as straight Corriedales, while others are being crossed with American crossbreds.

LIVE STOCK NOTES

Don't neglect the salt box in the pasture.

* * *

A field of soy beans may be harvested successfully with lambs.

* * *

A young sow like other animals when young, should not be bred too young.

* * *

No one can state definitely the amount to feed a pig. The feeder himself must be the judge.

* * *

Silage furnishes a uniform quality of feed and puts bloom and good coats on live stock in winter.

DAIRY FACTS

SURE RETURNS FOR FARMERS

Bull Associations Now in Successful Operation in 21 States—More Milk Produced.

(Prepared by the United States Department of Agriculture.)

"A bull association would be a paying enterprise for our county, but the farmers here simply won't pull together on any proposition."

This is the usual answer a representative from the United States department of agriculture gets when he goes into a new community and asks the individual farmers about the feasibility of organizing a bull association. But 55 bull associations have been organized in 21 states and are successfully operating. A specialist from the dairy division recently returned from a two months' trip in Kansas, Oklahoma, Georgia, Louisiana, Tennessee and Mississippi. In those states he

Only Purebred Sires of Known Breeding Value Should Be Used in Bull Associations.

assisted in the initial steps for the organization of 14 more bull associations.

The first bull association was organized in Michigan in 1908. Since then 20 other states have taken up this work. Not a single farmer has ever lost a dollar by belonging. Better bulls are obtained for less money. Better dairy offspring results. More milk is produced for the same money. The investment for the individual farmer is small and the returns are sure.

FEEDING CORN OR MOLASSES

Both Are Rich in Heat-Producing Elements and Relatively Low in Protein.

Corn and molasses are about the same in composition. Both are rich in carbohydrates, or heat-producing elements and relatively low in protein. Molasses is not quite as valuable as a feed as corn, but when the price of corn is $35 or $40 per ton, as it is in some places, and molasses $25 or $30, the latter is cheaper feed. The dairy cow may be fed three to five pounds of molasses daily. More than this tends to lessen the digestibility of the other feeds in the ration. Molasses is very palatable to the animal and will always produce a sleek coat when fed. It can often be used to make unpalatable roughage most toothsome. There is difficulty always in feeding molasses. It may be put in the drinking water or diluted slightly with water and sprinkled on the roughage or the grain portion of the ration.

WATCH WINTER FEED OF COW

Very Easy to Have Grain Ration So High That It Won't Pay for Itself in Milk.

The feeding of cows for milk will need to be watched more closely than ever this winter. With cows such as they run, it is very easy to have the grain ration so high that it will not pay for itself in milk or cream. A very successful eastern dairyman feeds his cows only alfalfa hay and silage with a very little oilmeal, limiting the silage to 25 pounds a day to the cow and 20 pounds a day to the heifer, thus getting them to eat more alfalfa. He admits that dairymen feeding grain will beat him in amount of milk produced, but says that his business is turned at a greater profit. Doubtless true—and he is also putting all his cows into advanced registry.

BETTER BREEDING BIG HELP

Most Economical Way Furnished to Obtain Large-Producing Cows—Use Best Heifers.

(Prepared by the United States Department of Agriculture.)

In dairying large production and profit go hand in hand. Breeding furnishes the most economical way to obtain large-producing cows. The purebred bull, with generations of high-producing ancestors back of him, must be used for breeding, and only the best heifers from the best cows should be chosen to be the dams of the next generation.

DEAL ONLY WITH DAIRYMEN

Not Safe to Buy Dairy Animals at Stock Yards—Calves, Physically Unfit, May Result.

In buying dairy animals it is important to deal only with dairymen. Do not buy from men who purchase calves at stock yards to ship back to the farmers, because it is not always possible to determine the breeding of the calves; and calves that are physically unfit may be shipped.

YOUR COLD IS EASED AFTER THE FIRST DOSE

"Pape's Cold Compound" then breaks up a cold in a few hours

Relief comes instantly. A dose taken every two hours until three doses are taken usually breaks up a severe cold and ends all the grippe misery.

The very first dose opens your clogged-up nostrils and the air passages in the head, stops nose running, relieves the headache, dullness, feverishness, sneezing, soreness and stiffness.

Don't stay stuffed-up! Quit blowing and snuffling! Clear your congested head! Nothing else in the world gives such prompt relief as "Pape's Cold Compound," which costs only a few cents at any drug store. It acts without assistance, tastes nice, contains no quinine—Insist upon Pape's!—Adv.

Demonstration Essential.

"Why was it necessary for you to add anything to the voluminous and enlightening remarks already offered on this subject?"

"It wasn't positively necessary," answered Senator Sorghum, "except on my own account. I had to say something to keep the folks out home from thinking I was losing my influence."

A Lady of Distinction.

Is recognized by the delicate fascinating influence of the perfume she uses. A bath with Cuticura Soap and hot water to thoroughly cleanse the pores, followed by a dusting with Cuticura Talcum Powder usually means a clear, sweet, healthy skin.—Adv.

Past Power.

"I can give you a few wrinkles about keeping young." "That is just what wrinkles won't do."

Refused Insurance

Mr. Dunning Left Service in Bad Shape, But Doan's Soon Corrected His Trouble.

Geo. Dunning, ex-Chief Boatswain Mate of the U. S. Navy, 470 Medford St., Somerville, Mass., says: "Every bit of trouble I suffered from my kidneys was a result of exposure at sea. I was retired practically an invalid.

Mr. Dunning

My kidneys became more irregular all the time and some nights I was forced to get up every half hour. The kidney secretions burned like fire and were filled with brick-dust-like sediment. My joints swelled and were inflamed. I couldn't bend over to lace my shoes and had to be helped up and down. Right after my retirement from service I tried to get insured, but was turned down because of kidney trouble. I began taking *Doan's Kidney Pills* and used sixteen boxes. By that time every sign of kidney trouble left me and my back was like iron; not an ache or pain left. I tried for insurance again and was declared a good risk. I give *Doan's Kidney Pills* credit for putting me in perfect health."

Subscribed and sworn to before me.

GEORGE L. DOHERTY, Notary Public.

ANYTHING IN MUSIC

Can Be Delivered at Your Door, Transportation Charges Prepaid

Sixty years ago the music publishing house of G. SCHIRMER, INC. was founded. Today the name SCHIRMER means to music what Sterling means to silver. Its branches are in every large city and its music for sale in practically every music store in America. Schirmer can supply you with any musical number ever written. Not only does it publish music but it furnishes everything that a music teacher or anyone interested in any kind of music or musical accessories can want.

At an Expense of Over $1.00 Each, We Have Just Had Compiled a catalog, that we will be glad to send you free of charge. It is another bit of Schirmer personal service for the benefit of those who cannot easily visit a large music dealer or where the local music dealer cannot supply your musical wants.

Through this catalog you can not only review the old favorite pieces of past years but keep up to date in the new selections, songs and popular numbers. In it are listed hundreds of the best pieces of music of every kind, ever published. It is a complete catalog of everything good in music, whether for the singer, the pianist, the violinist or for those who take their musical pleasure from the Victrola, and someone in every home in America is interested in some phase of music.

Through this catalog you can pick out and have brought to your door:

Piano music. Solos, duets, marches, two steps, waltzes. Lists of the best compositions of Bach, Mendelssohn, Chopin, Grieg, Beethoven, Schubert.

Instrumental methods for self study. Children's song books. Ballads. Music for violin, guitar, cornet, ukulele, mandolin. Popular song hits of the day. Patriotic songs. Season's musical comedy hits, including those from "The Better 'Ole," "The Royal Vagabond," "Ziegfeld Follies 1919," or any of the tuneful musical comedies of past years.

Victor records. Victrolas. Metronomes, music cabinets, music satchels, music strings.

It is beautifully illustrated in colors and contains snatches of music from many selections.

Send for this Free Music Catalog Today.

CHINESE WOMEN STUDY HEALTH

Three Doctors Return From America to Begin Active Health Campaign Among Women.

ALL AGENCIES COMBINE.

American Y. W. C. A. Will Support Women's Part of Chinese Health Campaign as Part of World Service Program.

As a result of the Y. W. C. A. International Conference of Women Physicians, held during September and October, Chinese women are to have a far-reaching health program.

Dr. Ida Kahn, Dr. Li Bi-Cu and Dr. Dau, three of China's half hundred women physicians, who attended this

HIR IDA KAHN URGES CHINESE WOMEN TO WORK.

conference, are to take an active part in promoting this health program for women which will be the share of the Y. W. C. A. in the big health movement in China.

The funds for establishing thes health centers, for demonstrations of how to care for babies, for health lectures for the women, for babies' dispensaries and for a general educational campaign, will be raised by the American Y. W. C. A. as part of its program of world service for women and girls in 1920.

Dr. Ida Kahn, in a recent appeal to modern Chinese women said, "Let our women of education in Peking and elsewhere gather themselves together to work for the schools, Red Cross and Y. W. C. A., and everything else which bespeaks the betterment of the country, instead of staying at home to play poker and 'sparrow,' and going out to attend endless dinners, tea parties and dances.

"Let us rally our forces and help the ship of state to move safely. One person cannot accomplish much, but one or two hundred millions of women can work wonders. Let us go back to a more Spartan-like simplicity of living and let us build up social service until every city in China is sanitary, every section of the town has its proper schools, and every child, whether boy or girl, is sent to such schools. True social service brings democracy in its train, and we who are citizens of a new republic can help to make it truly great by preaching and living democracy all the time. Why not learn to do our household duties, deeming it effeminate to be waited upon by maids and slave girls all the time?

"The status of women in China, while leaving much to be desired, still is quite hopeful when we consider that she is just emerging into the sisterhood of the nations. Our men can depend upon us to bear the burdens of the day, for nowhere is there a more industrious, diligent and persevering womanhood than in China."

Dr. Kahn is lecturing in this country on the needs of her fellow country women, in the interests of the Y. W. C. A. Educational Campaign which plans to acquaint people with all phases of Y. W. C. A. work in the United States, South America, China, Japan, India and Europe. This educational campaign will be followed by an active effort to raise the $3,000,000 needed for service for women throughout the world.

CHINESE WOMEN HAVE FINANCIAL ABILITY.

They Carried Y. W. C. A. Campaign "Over the Top."

Much has been said about the honesty and skill of the Chinese business man. The world has neglected to mention the financial ability of Chinese women. They proved this ability in the last financial campaign of the Y. W. C. A. in Tientsin.

Ordinarily three weeks are allowed in which to raise the budget by subscription after the finance committee has decided upon the sum necessary to carry on the work of the coming year. The Tientsin campaign was carried on entirely by Chinese women and broke all records by going over the top in ten days with a large surplus over the budget.

For Whooping Cough.

The painful paroxysms which mark this disease can often be relieved by breathing the fumes of turpentine and carbolic acid.

Thought There Might Be More.

Twins had arrived at the home of little John one day. He had just come out in the yard to play when an old friend of the family came by. Seeing John in the yard he called to him: "Hello, there, sonny; I hear you have twins at your house," whereupon little John exclaimed: "Yes, there were two when I came out, but maybe there are free or four by now."

It Might Have Been A Serious Fire

GASOLINE STOVE CAUSES FIRE

Monday afternoon about one o'clock the fire alarm was sounded here and the M. E. parsonage reported to be on fire.

The gasoline stove used by Mrs. Buric had overflowed with gasoline while she was in another room and when she returned to the kitchen the entire room was filled with fire and smoke as the wall paper had caught from the stove. The alarm was turned in and quick work of men who were first to arrive stopped the fire from gaining headway. They threw out the stove and extinguished the flames in the room so that when the fire company had the hose hooked up the fire was out and no water was necessary. Everything in the kitchen was ruined by the flames but no other damage was done.

"BILL" ZIESEMER OUT FOR SHERIFF

Mr. W. C. Ziesemer, of Garner, was in Klemme Tuesday afternoon and while here stepped into the Times Office for a chat with the Editor. Mr. Ziesemer announced his intention of coming out for Sheriff of this county "subject to the decision of the Republican voters at the June primaries." Mr. Ziesemer is well known in the county as he has spent practically all of his life in the county. For the past six years or more he has been located at Garner, being the proprietor of the barber shop on the west side of the street. Mr. Ziesemer is a fine man and if elected will certainly make a good sheriff. His announcement will appear in this paper a little later.

FUNERAL SERVICE

Next Sunday evening, January 18, the funeral service of John Barleycorn will be held at the Methodist Episcopal church with funeral sermon by the pastor, Dr. A. E. Buriff.

Ol John has been a well known character for many, many years and some persons thought him immortal, but he comes to his end, so far as this country is concerned, next Saturday, January 17th. In announcing his funeral service Dr. Buriff adds, "No flowers. Any mourners should send their names to the minister in advance that seats may be reserved for them."

NOTICE, AUTO OWNERS

Automobile owners are hereby informed that the supply of license plates and the metal containers are exhausted, and delivery will be delayed until the supply comes from the factory. Should the delay be extended we will mail receipt to applicants for licenses that have not received the plates.

T. H. Thompson, County Treasurer

BERGGREN WRITES US

We received a letter from J. W. Berggren the other day. Walt enclosed a check to renew his subscription and at the same time wishes all his old friends and customers a Happy New Year. Mr. Berggren is running a restaurant at Traer, Iowa.

FOR COUNTY TREASURER

I hereby announce myself a candidate for the office of County Treasurer, subject to the decision of the Republican Primaries to be held June 7th, 1920. Yours very truly,

1-1-20 JOHN SUURBALLE

NOTICE OF APPOINTMENT OF EXECUTOR

Notice is Hereby Given, That the undersigned has been duly appointed and qualified as Executor of the Estate of Jacob P. Mayer, deceased, late of Hancock County, State of Iowa, deceased. All persons indebted to the estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned, for allowance.

Dated December 16th, A. D. 1919.

P. M. Griesemer, Executor

By Ramsay & Blackstone, His Attorneys

NOTED LAWYERS DEFEND FEDERAL FARM LOAN ACT

McAdoo, Hughes and Wickersham Appear in Kansas City Court as Champions of Land Banks, Which Have Given Farmers $300,000,000 at Low Interest Rates.

America's system of rural credits was upheld in the federal court in a suit which questioned the constitutionality of the law creating federal land banks and joint stock land banks. Charles E. Smith, a stockholder in the Kansas City Title and Trust company, brought suit to enjoin this corporation from purchasing the bonds of these banks, contending that because these securities are exempt from federal, state and local taxation, they were issued in violation of the Constitution of the United States and contending also that congress had no authority to create such banks. Judge Van Valkenburgh gave his decision immediately at the close of the arguments, holding that the law is constitutional. An appeal was taken and the case will now go to the United States Supreme court for final decision. The validity of the farm loan act being thus attacked, the government of the United States, the federal land banks and the joint stock land banks became parties to the suit. Mr. McAdoo represented the government as assistant to the attorney general and also, together with George W. Wickersham, attorney general under President Taft, represented the joint stock land banks of which there are now 27. Former Justice of the Supreme court Charles E. Hughes represented the federal land banks.

BIG SHIPMENT OF LIVE STOCK FROM KLEMME SATURDAY NIGHT

Saturday night there were nine car loads of live stock shipped out of the Klemme stock yards. The Farmers Shipping Association shipped out four car loads of hogs. Joe Johnson shipped out two car loads of hogs. Dick Mossell shipped out a car load of cattle. Vic Schoenwetter shipped a car of cattle. Clarence Arnold shipped out a car load of hogs. Five car loads of hogs and four car loads of cattle are not so bad for one week's shipment.

KLUCKHOHNS TNLARGE HARDWARE DEPARTMENT

That part of G. W. Kluckhohn & Sons store which was formerly occupied by the post office department, is now a part of their Hardware and Paint department.

When all arrangements have been completed the Kluckhohns will have a very fine general store. The hardware department has been divided into two sections by a partition so that the back part can be used for packing and unpacking purposes. It is also their plan to make some changes in the line of fixtures. The added room for the hardware department makes a very valuable addition to their fine store.

CRYSTAL CAFE MAKES IMPROVEMENTS

During the past week or ten days the Crystal Cafe has undergone many changes for the better appearance of the establishment in general. Mr. Tom Redding of Garner has been here refinishing the interior. The Cafe now has been painted thruout and new wall paper has been put on which gives a most pleasing result. Mr. Irwing, the proprietor, has also made several changes in the fixtures and taken all together Klemme has quite an up-to-date restaurant.

Was Looking for Easy Money.

"I asked for alimony of $50 a week. I see wimmen are getting that right along." "But, madam," expostulated the lawyer, "your husband is earning only $12." "What's that got to do with it? I thought the government provided the alimony."

SOME MOTOR BOB

Elmer Fuller and Chris Gram have rigged up something unusual in the Ford line. They have an old Ford from which they amputated both front legs and grafted in their place a set of cutter runners. With Mr. Ford thus disfigured they are able to go thru the biggest snow drift ever invented. The hind legs of the sunofagun are wrapped with chains so they can kick up the snow. We have been invied to ride in the thing but turned down the invitation. They say it will hit sixty, we took their word for it and stayed out.

Editor Seth Cairy of the Whittemore Champion is a pretty good natured fellow, but it was too much for him when a printing concern in the central part of the state sent him a statement for $16.00 recently, with a request for prompt remittance, as he had never purchased anything from that concern, and wrote them to that effect. However, they wrote back and explained hat a mistake had been made, that the bill should have been sent to a local firm who had bought printing from them. Cairy says, "Now it is allright to have printing done by the outside concern, should anyone care to do so, but by golly, when it comes to asking us to pay for it, that is too darned much and we have to draw the line."

There are approximately 11,000 one-room rural schools in the state of Iowa, according to P. E. McClenahan, superintendent of public instruction. These schools have an attendance of about 200,000 pupils. Mr. McClenahan also reports that there are 8,000 graded schools in the state more than one room capacity. These schools have an enrollment of approximately 200,000 pupils. It is said that there were half a million pupils enrolled at the beginning of the school year. There are 27,000 certified teachers listed in Iowa. Only 22,000 of them ar at present employed, only 2,600 are men teachers. About 5,000 have quit teaching to enter other channels of industry.

A visiting nurse will be employed in the Garner and Britt schools in the very near future. A choice for the position has not yet been made. The expense of the undertaking will be met by the Red Cross and she will work under the direction of the school board. In Garner this is a new departure, but in many other cities the experiment has been carried on with splendid success.—Garner Democrat.

It's Worth Trying For, Pupils

HIGH SCHOOL CONTEST FOR NAVY TEN INCH SHELL

The Navy Recruiting Station at Des Moines has just received a Ten Inch Shell from the Navy Department to be used as a Prize to be given the High School in the State of Iowa that submits he best essay on the "United States Navy as an educational and vocational Institution."

The object of this Contest is to invite the attention of the young people of this state to their Navy and to cause them to become familiar with the "First Line of Defense" of our country.

This shell weighs approximately 850 pounds, is ten inches in diameter and thirty inches in length. The explosive charge has been removed, otherwise it is in the same condition as those used in our Naval Guns aboard ship.

Honorable Menton will be given to the ten best essays submitted. The Judges of this Contest will be Judge Hubert Utterback, Judge of the Polk County District Court; A. M. M. Dornon, of Sabins Educational Exchange of Des Moines; and J. W. Studebaker Assistant Superintendent of the Des Moines Schools. The contest will close on March 15th and essays received by J. W. Studebaker after that date will not be considered.

Worse Than Ever

The coal situation has been worse in Garner the past week than at any time when the regulations were in effect. Several have complained the last few days that they were entirely out of coal and could not get any. In some cases coal has been taken from the churches to supply those who could not get it otherwise. The light plant got a car that was so poor that it was impossible to keep up steam The school board let them have a few loads of coal from the school house to mix with the coal they got in order that the light plant might keep running.—Garner Signal.

ONE-FOURTH WORLD'S WOMEN IN CHINA

Seventy Per Cent. Employees in Shanghai Cotton Mills Women and Children Working Twelve Hour Shifts.

One-fourth of the women in the world are Chinese—200,000,000 of them. They are going into industry in large numbers to work long hours and for little money.

In Shanghai, for instance, seventy per cent. of the employees in the cotton mills are women and children. Working hours for spinners are from six in the morning until six at night and from six at night until six in the morning. Weavers work from 5:30 in the morning until seven at night and the wages are from ten to twenty cents a day. Hundreds of women are employed in silk filature mills, standing hour after hour washing cocoons in basins of boiling water in the excessively hot rooms necessary for apartments where fine silk is spun. In Canton alone, there are 150,000 women in factories at a maximum wage of forty cents a day for women and of fifteen cents a day for girls.

As part of its program of world service for women the National Young Women's Christian Association is expecting to put on its staff of secretaries in China an expert on industrial conditions who will develop social work in factories, and work to improve conditions for women employees. This work will include the introduction of recreation and social life among the workers and of health lectures and educational classes.

Y. W. C. A. STUDENTS TEACHING IN CHINA

Physical Training School Maintained in Shanghai.

The vast majority of Chinese men remember their mothers as cripples. Many a girl wanders into a mission school who has not had her own feet bound, but has never seen a woman of her own class who could walk, and, therefore, she walks in a most ungainly fashion—scarcely conscious of her natural feet.

The Chinese Medical Association an Association composed only of Chinese physicians mostly graduates from American and English institutions—have asked the entire educated community of the country to co-operate in better health for the children of China. All the Mission Boards operating in China felt that one of the greatest contributions the Young Women's Christian Association could offer to the health of China would be to establish a normal school for the training of physical directors.

Accordingly, in Shanghai, which is the greatest port in China, the national committee established such a school in 1914. The school has won favor with all educationists, both missionary and government. There have already been nine graduates from this school. Miss Ying Mei Chun, a graduate of the Wellesley School of Physical Education, has been dean of the school. Graduates of the school are scattered from Canton to Peking, teaching with conspicuous success in twelve mission and government schools.

JAPANESE DOCTOR IS Y. W. C. A. OFFICIAL

Dr. Tomo Inouye of Tokyo, Japan, treasurer of the National Committee of the Young Women's Christian Association in Japan. Dr. Inouye has been

Dr. Tomo Inouye of Tokyo, Japan, a delegate to the six-week International Conference of Women Physicians called by the Y. W. C. A.

particularly interested in the public health and recreational plans of her city for some time and is medical inspector for girls in the public schools of Tokyo, as also in several private schools in the city. There are approximately 500 women physicians in Japan now, she says, and 400 women medical students. Dr. Inouye was the only delegate from Japan to the Y. W. C. A. International Conference of Women Physicians, in session during September and October.

Maritime Omelettes.

The "Pele Mele" (Paris) states in a recent issue that the eggs of the dog-fish possess all the nutritive qualities of ordinary farm eggs. Until lately, the dog-fish was quite neglected by fishermen and flung back into the sea as worthless, but today the fish is being actively sought by ships specially fitted for this class of fishing. The eggs of the dog-fish are frequently found as large as hens' eggs.

Tortoise eggs are considered a great delicacy, and make excellent omelettes. They are, however, understood to be not adapted for boiling; the white of the egg does not harden as in the ordinary breakfast-table egg.

Offended Dignity.

Gertrude was on the lawn in front of the house, playing with the baby, aged two. Gertrude herself, not more than three times the other's age, was acting the part of mother. Presently along came a young man, who thought he understood children. "Good morning!" he said, taking off his hat. "How are you ladies today?" Gertrude looked at him with dignity. "Good morning," she replied, and went on attending to the baby. The young man stooped down, "Ah," he said, "and which is which?" "I'm Gertrude," replied the older girl, "and that's which!"

The Source.

"Experts tell us that, roughly speaking, one marriage in three results in divorce," began the chap with the fund of useless irritation.

"Yes," the other chimed in, "and it's the roughly speaking part that causes most of the trouble."

Mayflower Is to Sail This Year

New One Will Cross Atlantic in the England-Holland-United States Celebration.

SHIP'S 300TH ANNIVERSARY

Plans Announced for Celebration in Honor of Pilgrim Fathers—Main American Events Will Be in Boston and Plymouth.

New York.—The three hundredth anniversary of the Pilgrim Fathers, tentative plans of which have just been announced here, will include celebrations in England, Holland and the United States, and will continue from May to December, 1920.

A four-day program in Leyden, Amsterdam and Rotterdam, whence the Pilgrims sailed three centuries ago to the American wilderness, where they might find "freedom to worship God," will start on August 30, when committees from the United States and England will be received at the University of Leyden.

Scholars Will Deliver Addresses.

Addresses commemorative of the occasion will be delivered by scholars from the three countries, including the rector of the university, Dr. Rendel Harris of Manchester, England; Viscount Bryce, and a famous American who has not yet been designated.

The next day, August 31, the birthday of the queen of the Netherlands, will include, besides a congress in the town hall, a religious memorial service in the Pieterskirk, in which Rev. John Robinson, who led the separationists from the Church of England (the Pilgrims) to Holland in 1609, was buried.

One of the features of the holiday at Amsterdam, September 1, will be a meeting in the Rijksmuseum, the unveiling of a memorial window in the Bagijnekerk and a reception. The next day there will be an aquatic pageant in Rotterdam, the visitors traveling in the morning from Leyden to Delftshaven if possible by boat along the way the Pilgrims went.

Then there will be trips to the religious havens of Rotterdam, a memorial service in the church at Delftshaven, and at 7 p. m. the English and American contingents will depart for Southampton.

The celebration in England will start in May, 1920, with meetings in Scrooby, the home of Robinson; Austerfield, Boston and Sheffield.

From August 4 to September 20 there will be cermonies in Cambridge, London, Southampton and other places, culminating in the sailing of the new Mayflower, which will carry the returning American committee and British delegations who are to participate in the program on this side of the Atlantic.

Main events of the American celebration will be in Plymouth, Mass., and Boston, where historical pageants will be held, followed by a big reception in New York. Vice President Marshall is honorary chairman of the committee having the local program in charge.

The foreign visitors will then be taken on a tour of the United States. On November 24, 1920, there will be a universal observance of Thanksgiving day in England, Holland and the United States.

Chimney Is Found Choked With Honey

Orland, Cal.—A chimney of the W. E. Spence residence here, idle during the summer months, was found to be choked with honey when an attempt was made to start the first winter fire. Bees had chosen the spot as their home and had completely sealed the chimney top after storing pounds of honey.

68,000 GIRLS MISSING IN YEAR

That United States Record Leads Travelers' Aid Society to Take Action.

New York.—Approximately 68,000 girls have disappeared or run away from their homes in the United States during the last year, according to a statement issued by the Travelers' Aid society.

A special meeting of the society has been called to devise plans to meet demands made by the great increase in runaways and helpless travelers. The meeting will be attended by officials of the transatlantic lines and representatives of Protestant, Catholic and Jewish social agencies.

Soap Bubbles Kept Intact Whole Year

Scientific Society Gives Information on Sir James Dewar's Test.

ALWAYS MYSTERY TO SCIENCE

When Bubble Becomes Very Old It Offers Only Possible Example of the Molecule Visible to the Naked Eye.

Philadelphia, Pa.—Facts about the prodigious strength of soap bubbles, proved by experiments in which bubbles were kept intact for more than a year and subjected to all sorts of weight strains, were made public here for the first time by the Franklin Institute, one of the oldest scientific societies in the United States.

Important to Chemists.

Coming on the heels of the announcement of Einstein's discoveries of the gravitational bending of light, the exploitation of the soap bubble is on the other end of the scale as to size, yet, according to scientists, is of tremendous importance to chemists, physicists and research workers in the strength of materials and essential elements. The man who made the experiment is universally recognized as one of the leading scientists in the world. He is Sir James Dewar, LL. D., D. Sc., F. R. S., Fullerian Professor of Chemistry, Royal Institution of Great Britain, and an honorary member of the Franklin Institute.

The soap bubble is a simple thing, yet it has always been more or less a mystery to scientists. They consider it perhaps the best phenomenon existing for the study of the habits and idiosyncrasies of the molecule.

Scientists now claim, on the strength of the experiment made by Sir James Dewar, that when a soap bubble becomes very old, say in three or four days, it offers the only possible example of the molecule visible to the naked eye. Most parts of the bubble are estimated to consist of about one hundred layers of molecules. But by various methods of treatment the bubble is induced to perform "stunts" until in black spots which appear it represents only a single layer of molecules.

Remarkable Strength.

This layer is so thin that Sir James estimates it would take one and one-third million like it, superimposed, to make an inch. Yet, when the soap bubble is permitted to mature in air that has been freed of its natural enemies, it is so strong that it will support drops of water many times its own weight before breaking. Sometimes a bubble is torn from its supporting ring by the weight before the molecules release their bulldog grip.

Old Letter Settles Case.

Wilmington, Del.—An age-worn, tattered letter and three words in the codicil of Jesse Chandler settled a long-pending case in the court of chancery recently when Chancellor Curtis issued an order that Samuel M. Harvey of West Chester, Pa., be paid $14,500 from the estate. Harvey's wife, one of the 38 legatees he was suing, lost the suit, but will have a half share in the money awarded. Harvey had agreed with Jesse Chandler to buy 166 acres of farmland in Christiana Hundred for $20,000. When Chandler died before the deal was completed he stipulated in his will that the farm should be sold for that amount to Harvey. Meanwhile the farm had been sold for $34,500, and while the legatees contended that the entire amount should be divided, Harvey claimed that only $20,000, or his agreed purchase price, should be divided. The court upheld his contention.

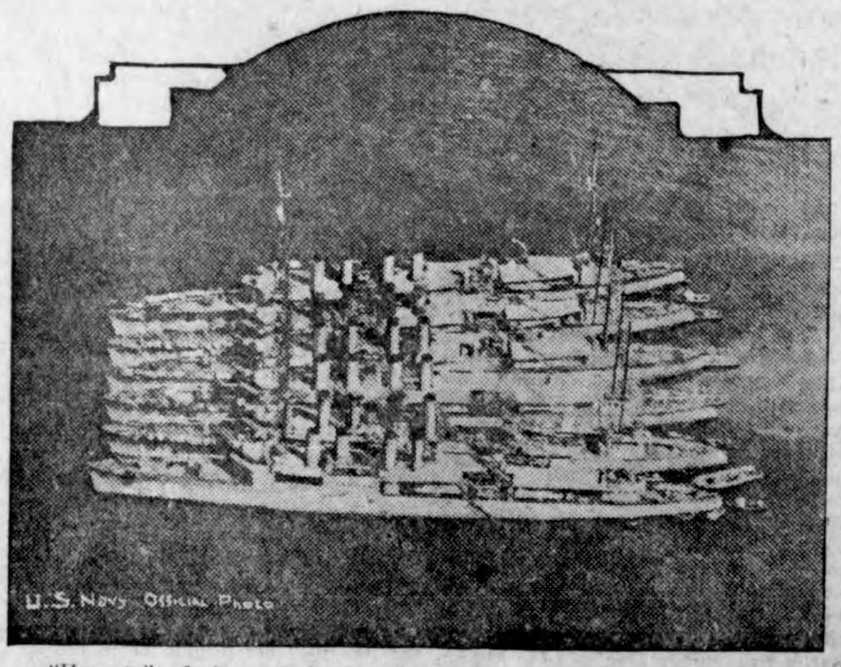
Shin Bone for Her Spine.

Watertown, N. Y.—With a portion of her shinbone replacing what had previously been a diseased section of her spine, Miss Irene Houghes, eighteen years old, of Alexandria Bay, is on the road to recovery in the Sisters' hospital here.

Sight Fails As Artist Paints Heroic Nurse

London.—While engaged on a large picture dealing with the fate of Edith X. Cavell, Mr. Van Ruith, a veteran painter, discovered that his eyesight was failing. Oculists predicted that the painter, who is eighty years of age, would lose his sight in a few months. Nevertheless he persevered and added the last touches to his work on the anniversary of the armistice.

DESTROYER NEST ON THE PACIFIC COAST



"Hornets" of the new Pacific fleet, the swift destroyers, photographed from an airplane flying over them at anchor in San Diego harbor.

INDIAN PAINTINGS ON CLIFFS

Owner Offers Them to State or National Authorities to Include in Park.

Austin, Tex.—The most remarkable Indian paintings or photographs in the Southwest have been offered to state or national authorities, provided the cliffs upon which they are drawn are inclosed in a park and adequately guarded, according to J. E. Pearce, associate professor of anthropology of the University of Texas.

These paintings, which are owned by E. D. Sims of Paint Rock are located along the banks of the Concho river near Paint Rock, upon every available surface for a half-mile. They are in deep red, with an occasional black figure or character.

All phases of the early tribes are represented. Mr. Pearce declares, and so much valuable historical material is included in these paintings that Mr. Pearce will have them copied in scale for a report to the Smithsonian institution, for which he is doing research work.

BIRDS SHOW INCREASE

Beneficial Effects of Migratory Act Being Felt.

Waterfowl Have Been Breeding Rapidly Under Protection, the Bureau Declares.

Washington.—The beneficial effects of the migratory bird treaty act are beginning to be felt. The United States department of agriculture, through its bureau of biological survey, has conducted investigations of the breeding areas of ducks in North Dakota and Nebraska. Compared with former years, a gratifying increase of breeding waterfowl, particularly in North Dakota, is evident. The fifth annual series of counts of birds of all species breeding on selected areas in various parts of the United States contained a large proportion of reports showing increases in bird population. The total number of reports received, however, was not large. Many of the persons who had formerly taken part in the annual bird counts were unable to find time for the work required by the fifth count.

"Many species of migratory birds," reports the chief of the bureau of biological survey, "have had a marked increase under the existing treaty act. Waterfowl formerly driven to the far North by spring shooting have remained in steadily increasing numbers to breed in localities where none had previously nested for many years."

Grasping Landlady Sentenced.

Budapest, Hungary.—Dr. Charlotte Szecsi, a physician, has been sentenced to two months' imprisonment because she refused to rent an apartment to a tenant unless he would buy her furniture for 100,000 crowns (nominally $20,000). The action of the court is in line with the effort to provide housing for the over-congested city.

DEMOS AT BANQUET

JACKSON DAY DELIBERATIONS A TREMENDOUS AFFAIR.

WILSON-BRYAN SPLIT A FACT

Disagree Over League of Nations as Party Issue.—San Francisco Chosen for Convention in June.

Washington, D. C.—The Jackson day banquet of the democratic party, attended by representatives from all parts of the country, was one of the largest and most important political pow pows ever held by either party. The host of democrats on hand for the dinner had swamped the available accommodations of any one hotel in town and the party was divided into two dinners at two separate hotels a block apart. National Chairman Cummings presided at one and Vice Chairman Kremer at the other. The dining rooms were packed, tickets were at a premium and there were many disappointed ones who had to content themselves with straining their ears at the doors.

The day was topped off by a split between President Wilson and William J. Bryan, over whether the league of nations should be made an issue at the coming election.

President Wilson, in his message read to the diners, declared that the "clear and single way out" was to submit the question to the voters as "a great and solemn referendum."

Mr. Bryan, showing all the old-time vigor with which he led the fight for the president's nomination at Baltimore in 1912, declared that the democratic party could not go before the country on the issue, because it involved a delay of fourteen months, and meant success only if the democrats captured a two-thirds majority of the senate. The party, Mr. Bryan declared, "must secure such compromises as may be possible."

The disagreement between the president and his former secretary of state, the first in public view since Mr. Bryan left the cabinet because he did not agree with the president's course in the diplomatic negotiations with Germany, was thus disclosed as a fact, although it has been rumored and reported in the underground currents of national politics.

In the opinion of the political leaders, it crystallized an issue.

President Wilson, in his message, said nothing whatever about a third term for himself and neither did he make any formal announcement of his intended retirement to private life as some had forecast he would.

Mr. Bryan in his prepared address said nothing bearing on any ambitions toward a fourth presidential nomination but before reading his manuscript he said he had nothing to ask and that therefore the diners would not listen to him with the thought that they were listening to a candidate.

There were a dozen or more other speakers at the dinners and their views on whether the league should be made a campaign issue were either divided in favor of the president's or Mr. Bryan's or else they did not touch on the subject at all.

San Francisco was chosen as the meeting place for the democratic national convention on June 28. The golden gate of the west won easily over Kansas City and Chicago, the only other competitors of consequence.

TROOPS FOR NEBRASKA.

Two Regiments of Ex-Service Men Formed to Handle Emergencies.

Lincoln, Neb.—The organization of two complete regiments of guards to be known as the "Nebraska Rifles," has been practically completed, under the direction of Adjutant General H. J. Paul, and at the order of Governor McKelvie.

Each regiment will be composed of 1,200 men, made up of twelve companies of 100 men each. The men comprising the Nebraska rifles are largely ex-service men, though its organization has no connection with the American Legion. The purpose of the organization of the "Nebraska rifles" is to take care of any emergencies that may arise before the national guard companies are organized, the latter organization being held up by reason of the appropriation bill for it being contingent upon the similar appropriation by the federal government. The calling out of the "rifles" is only in the hands of the governor.

Loop Record Established.

Paris.—Edmond Pillon, a French aviator "ace," estblished a new record for looping the loop when he made twenty-eight loops in five minutes here. The airplane was built for sport.

Wilson Rapidly Mending.

Washington, D. C.—President Wilson is rapidly regaining his stamina, and with the consent of Dr. Cary T. Grayson is plunging daily into the mass of work confronting him.

Sixty Years for Robbery.

Omaha, Nebr.—William Wolfe pleaded guilty before Judge Redick in the district court here to four charges of highway robbery and was given a maximum sentence of sixty years in the penitentiary.

Hotel for Women Only.

New York.—The largest hotel in America exclusively for women and designed for business women and those of moderate means will be erected at Fifty-seventh street and Lexington avenue.

MERELY SCRATCHED SURFACE

Round Up of Radicals Just a Starter, Says Probe Committee Head.—20,000 in N. Y. State Alone.

New York.—More than 20,000 alien enemies in the communist party of New York state alone are openly organized for violent overthrow of the government under the direction of bolshevist leaders in Russia, Senator Clyton B. Lusk, chairman of the legislative committee investigating seditious activities, declared here a few days ago. In addition there are the communist labor party and "other revolutionary" organizations working actively to accomplish the same ends as well as many other bodies which encourage their activities without participating openly in them, the senator said.

"The recent nation-wide raid, which netted nearly 5,000 radicals in forty-two cities, several hundred of whom were arrested in this state on the charge of criminal anarchy and for deportation, hardly scratched the surface of the situation," said the senator. "These organizations have been permitted to reach proportions that the only way they can be destroyed is for loyal citizens in each community to organize and co-operate with the federal and local authorities in uncovering and prosecuting these traitors."

TO FIGHT HIGH PRICES.

Nebraska Women Agree to Aid In State-Wide Campaign.

Lincoln, Neb.—Nebraska club women meeting here to discuss means of combating the high cost of living problem agreed to co-operate with the state in a thrift campaign under which useless buying would be eliminated.

The state's proposed campaign as outlined by Governor McKelvie contemplates the appointment of committees to determine but not fix fair prices in the various communities of the state. He told the women that increased production and elimination of uneconomic methods of distribution would go a long way toward solving existing economic evils. Everyone in the state is to be asked o join the campaign.

AFTER BOOZE DEALERS.

Government Prepares to Punish Violators of Volstead Act.

Washington, D. C.—Immediately after the supreme court upheld the constitutionality of provisions of the Volstead act prohibiting the manufacture and sale of liquors containing one-half of 1 per cent or more alcohol, the department of justice began preparations for the prosecution of all persons who have sold beer since the passage of the act last October 28.

Cases against those who manufactured 2.75 beer before the Volstead act was passed were dismissed but all manufacturers and retailers who have dealt in beer since the act was passed have been recorded by the department of justice and they will be made defendants in cases to be started soon.

MORE AMERICANS SLAIN.

Oil Men Killed Near Tampico, Mexico, Brings Total to Nineteen.

Washington, D. C.—Advices reaching the state department declares that two more American oil men, F. J. Roney and Earl Bowles, have been murdered in the Tampico district of Mexico. The department at once sent instructions to the American embassy in Mexico City to urge the Mexican government to take every step possible to bring about the capture and punishment of the murderers. Word of the killing of the two Americans which brought the total of Americans murdered in the Tampico district since April, 1917, up to nineteen, reached Washington through private sources.

Says Europe Needs Bread.

New York.—Herbert Hoover in a statement here asserted "European propagandists" are responsible for the contention that Europe's needs cannot be met by ordinary commercial credits. "With domestic taxes 600 per cent more than previous rates, there is no need of drawing on the United States treasury for further loans." Mr. Hoover admitted the need of breadstuffs in some cities in southern and central Europe to prevent starvation, and that the allies had asked grace in the payment of interest on loans.

Combination Sales Forbidden.

Washington, D. C.—The federal trade commission has ruled that the selling of sugar in combination with other goods to force purchasers to buy other things in order to obtain sugar was an unfair method of competition and ordered the Cole-Conrad company of Chicago to cease the practise.

The Chicago case was one of many similar complaints which had been lodged with the commission, it was stated.

War Criminal List But 300.

London.—The list of war criminals to be demanded by the allies for trial has been considerably revised and reduced from the originally proposed 1,200 to about 300, according to the Daily Mail.

Brand Dempsey Slacker.

Denver.—Leo Leyden post of the American Legion here adopted a resolution branding Jack Dempsey, the pugilist, as a "slacker," and declaring opposition to holding the proposed Dempsey-Carpentier fight in Colorado.

LET "DANDERINE" BEAUTIFY H

Girls! Have a mass of l thick, gleamy hair

Let "Danderine" save your ha double its beauty. You can ha of long, thick, strong, lustrou Don't let it stay lifeless, thin, s or fading. Bring back its color and vitality.

Get a 35-cent bottle of del "Danderine" at any drug or toile ter to freshen your scalp; check druff and falling hair. Your hair this stimulating tonic, then its color, brightness and abundance return—Hurry!—Adv.

So Subtle!

"Not all the poets," observed quenter of cosmopolitan "have the gift of uttering quick winged, magical nothings in soc

"I knew of one poet, grea vogue in Paris some years ago was not exactly a fluent dispen epigram. He was invited to the of a great lady of the Faubour Germain, and as soon as he ente became the center of a circle mirers, who waited vainly for subtle or poetic conceit. The remained silent, ill at ease, red face, and uneasy of feet.

"'Comé, my dear poet,' the h finally begged, say something to

"'Have you observed—duches faltered, desperately, 'that— year's pawn tickets are pink?'"

SWITCH OFF!

Put aside the Salts, Oi Calomel, or Pills and take "Cascarets."

Are you keeping your bowels, and stomach clean, pure and fresh Cascarets, or merely whipping into action every few days with Cathartic Pills, Oil, or Purgative ters?

Stop having a bowel wash-day. Cascarets gently cleanse and reg the stomach, remove the sour and menting food and foul gases, take excess bile from the liver and c out of the colon and bowels all constipated waste matter and poi so you can straighten up.

Cascarets tonight will make you great by morning. They work w you sleep—never gripe, sicken cause any inconvenience, and cos little too.—Adv.

Serbia to Build Long Canal.

According to a news item in Athens Progress the Serbian gov ment has decided to construct a c from the Danube to Saloniki. canal is to begin at the conflue of the Danube and the Morava, fol the course of the Morava in Ser then join the valley of the Vardar, lowing the river to the vicinity Salonika. The total length of canal will be 600 kilometers miles).

WOMEN NEED SWAMP-RO

Thousands of women have kidney bladder trouble and never suspect it.

Womens' complaints often prove to nothing else but kidney trouble, or result of kidney or bladder disease.

If the kidneys are not in a heal condition, they may cause the other gans to become diseased.

Pain in the back, headache, loss of bition, nervousness, are often times sy toms of kidney trouble.

Don't delay starting treatment. Kilmer's Swamp-Root, a physician's scription, obtained at any drug store, be just the remedy needed to overc such conditions.

Get a medium or large size bottle mediately from any drug store.

However, if you wish first to test great preparation send ten cents to Kilmer & Co., Binghamton, N. Y., fo sample bottle. When writing be sure mention this paper.—Adv.

Helpful Hint.

"I wonder, Mr. Gloom, if you can help us out?" said the gent wh countenance was elongated like t of a rare old fiddle. "The name have tentatively selected for our ganization—the League for the D semination of Appreciation for Beautiful Among the Masses—is clumsy, although—"

"Why not call it 'the Gimme Gang' interrupted J. Fuller Gloom. "That about all most of those flapdoo leagues amount to."—Kansas C Star.

BUCKWHEAT FINE FOR POOR SOILS

Profitable Yield May Be Secured Where Wheat, or Even Rye, Cannot Be Grown.

EXCELLENT AS COVER CROP

Can Be Grown on Land Where Spring-Sown Crops, Such as Corn, Have Failed to Make a Stand—Many Other Uses.

(Prepared by the United States Department of Agriculture.)

Buckwheat is in general the best grain crop for poor, thin land. Its natural and favorite environment is "back in the hills." On land where wheat or even rye cannot be grown with profit buckwheat is often able to produce a profitable yield. The climatic conditions, however, must be favorable.

On acid soils, which are quite common in the northern states, buckwheat does well. It does not require large supplies of lime in the soil, although lime is taken up largely by the plant.

Good Summer Cover Crop.

Low-grade fertilizers may be used to advantage in the growing of buckwheat, as it can make use of relatively insoluble materials to better advantage than the other grain crops. It may be used to render available insoluble phosphates, like rock phosphate, as these are taken up by the plant in larger quantities than by other small grains. To obtain the greatest benefit from such applications to follow crops, the buckwheat should be grown as a summer cover crop to be plowed under as green manure in preparation for fall seeding.

Buckwheat serves to make even very hard land mellow and friable. Consequently it is a good crop to use in preparation for such crops as potatoes.

As it has a short growing period, buckwheat can be grown on land where spring-sown crops, such as corn, have failed to make a stand. It can also be used where the land cannot be worked until late, or where other crops have been drowned out by late spring floods.

Enlarge Farm Activities.

Buckwheat can be used to enlarge farm activities. After other crops that must be sown early are all in there is often time to prepare land and sow buckwheat. On account of the short growing season it may be sown later than any other grain crop. Where it is so used it often may be advisable to sow it even on rich land which otherwise could be used more profitably for other crops.

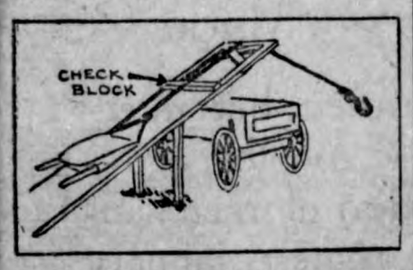
Buckwheat is a suitable crop for growing on new ground. Land just cleared of timber or drained marsh land containing much decaying vegetable matter will produce good yields of this grain.

Farmers' Bulletin No. 1062 contains full information on this crop. Copies may be had free on application to the department of agriculture, Washington, D. C.

SCRAPER FOR LOADING SOIL

Platform Arranged as Shown in Illustration Obviates Much Tiresome Labor.

Where dirt is to be taken out of an excavation and hauled away some distance, getting this dirt into a wagon bed is always a hard job. Where a



Loading Soil Made Easy.

scraper is used it is usually necessary to drag the dirt out of the hole and then shovel it into a farm wagon. By building a platform like the one shown here it is easy to load a wagon with a scraper and save a lot of hard work. The platform must be strong enough to stand up under the load of dirt and the extra pull that comes when the team drags the scraper up the incline. The check block stops the scraper and helps in dumping it into the wagon box.

PURE AIR QUITE NECESSARY

Drafts Should Be Carefully Avoided and Poultry House Kept at Even Temperature.

Filthy air is practically breathing poison. Pure air furnishes the oxygen which keeps the life processes going and when the air becomes stale or foul, the birds become weak and sickly. The problem for the poultryman, therefore, is to let in plenty of air without drafts and without making the hen house so cold as to be uncomfortable. On almost all sunny days the windows can be opened when the flock is exercising, scratching in litter for its food, and that gives a chance to air the house thoroughly. Even in the coldest night the windows may be lowered a little at the top (very little when it is very cold) and the birds will obtain fresh air. If the wind blows in, a piece of burlap can be hung over the open space through which the air can get in and by which the wind can be kept out.

IMPROVE QUALITY OF COUNTY LIVE STOCK

Unique and Successful Community Association in Virginia.

Specialists Believe There Is Fertile Field for Formation of Similar Clubs Throughout Country—Overhead Cost Saved.

(Prepared by the United States Department of Agriculture.)

One of the most unique and successful community breeders' associations of the country is located in Loudoun county, Va. It is unusual because instead of fostering the breeding and improvement of a single class of live stock, it sponsors the improvement of eight breeds and classes of live stock. The excellence of such a plan is that duplication in work and extra expense are eliminated, while the society is really standardizing the production of purebred live stock within Loudoun county.

Guernsey and Shorthorn cattle, Percheron horses, Berkshire and Duroc Jersey hogs, Shropshire sheep, and Rhode Island Red and Barred Plymouth Rock poultry have been select-

Purebred Guernsey Bull, the Type of Animal That Is Gaining Popularity Because of the Better-Sire-Better-Stock Campaign.

ed in public meeting by the farmers and stockmen of that section as the dominant breeds of the county.

The Loudoun County Breeders' association, organized in 1916 by joint efforts of the county agent, a progressive banker, and a few forward-looking farmers, has grown from an original strength of 60 to over 250 active members. Through its manager it purchases and sells live stock for its members and has been of marked influence in improving the character and quality of the county live stock.

Specialists of the department of agriculture believe that there is a fertile field for the formation of similar live stock breeding clubs throughout the United States. In some of the leading stock-producing areas four or five, or even more, individual breeders' clubs now exist, whereas one general organization saves an overhead cost and permits of the hiring of a paid business manager as in Loudoun county.

CREOSOTE FOR FENCE POSTS

Best Preservative Treatment Consists of Boiling Wood in Liquid for Short Period.

Five cents' worth of creosote applied to a fence post will prolong its life many years. Posts that will last ordinarily but four or five years in the ground can be made to last 20 by treating.

Woods like beech, birch, maple, ash, poplar and others that are not ordinarily used for fence posts, can be made as durable as locust or cedar by a preservative treatment with creosote. This treatment does not consist simply in painting the post with creosote or in dipping it in creosote. While these treatments do some good, they do not insure deep penetration of the creosote into the wood or the filling of the cracks and season checks.

The best preservative treatment consists in heating the posts in boiling hot creosote for 30 to 60 minutes, then leaving them in the tank until the liquid has cooled. The creosote will be forced deeply into the wood and thus fill all checks and cracks and form an exterior shell of treated wood that will prevent rotting. An old, discarded gasoline drum with the top cut out, set up so that a fire may be built beneath, makes an excellent treating tank at little expense.

USE SIRES OF GOOD QUALITY

Recipients of Department of Agriculture Emblems Represent Scattered Sections.

Widely scattered sections of the country are represented in the list of the first recipients of the official emblem bestowed upon live stock owners by the United States department of agriculture in connection with the "Better Sires—Better Stock" campaign now in progress. Possession of this emblem shows that the owner has agreed to keep and use only pure-bred sires of good quality, and will follow to the best of his ability breeding methods leading to live stock improvement.

LETTUCE FOR LOCAL MARKET

If Sold by Dozen It Often Pays to Dispose of It Before Maximum Weight Is Reached.

If lettuce is for a local market and sold by the dozen, it often pays to market before a maximum weight has been secured. It all depends upon the keenness of market and the need of bench for other crops.

HIGH STANDARDS OF CLEANLINESS ARE DEMANDED OF ALL PRODUCERS OF MILK

Where Cleanliness Is a Business Asset—People Like to Buy Milk That Comes From a Clean, Sanitary Milk House Like This.

(Prepared by the United States Department of Agriculture.)

To unnumbered city folk the bottle of milk they find on the porch each morning represents practically the sum of their daily contact with rural people. And this prominence of the milk bottle, or rather of its contents, has a financial significance not fully appreciated by the many farmers living within the zones from which the city's milk supply comes. The condition in which the milk arrives at the consumer's kitchen depends upon the carefulness of several agencies, but as dairy experts of the United States department of agriculture and others have repeatedly emphasized, the dairyman's position in this matter is particularly important, for laxness on his part may carry ill effects to the consumer despite all subsequent precautions by others who handle the milk. The public understands this pretty clearly and is placing increasing importance on the condition of dairies, large and small.

Consumers Demand Cleanliness.

If they display any tendency toward laxness, farmers who supply most big milk dealers are speedily required to correct their practices and conform to high sanitary standards. But there are a great many who do not have the advantage of such advice and regulation. Experience has proved that no milk dealer, small or large, can afford to jeopardize his market by insanitary practices. The day is almost sure to come, perhaps unexpectedly early, when some village or city inspector, or inquisitive, aggressive customer will start out to ascertain conditions at the source of his milk supply. When that time of reckoning arrives, experienced milk dealers point out, the farmer who has been alert to keep his daily equipment in approved fashion will profit in dollars and cents.

That milk must come from clean, healthy cows and be milked by clean, healthy persons into clean utensils cannot be emphasized too often, according to the United States department of agriculture specialists. As soon as the cows are milked the milk should be taken to the milk house. On a well-ordered farm this structure is conveniently near the barn, but so placed as to be free from dust and stable odors. Under some circumstances it is permissible to have the milk house in the same building as the stable, but in such a case it should be provided with a separate entrance, and the walls separating the two should have no openings.

A properly constructed milk house preferably is divided into two rooms, one where the utensils may be washed and the other where the milk is handled. A plentiful and convenient supply of water is a necessary feature, and its purity is an obvious requisite.

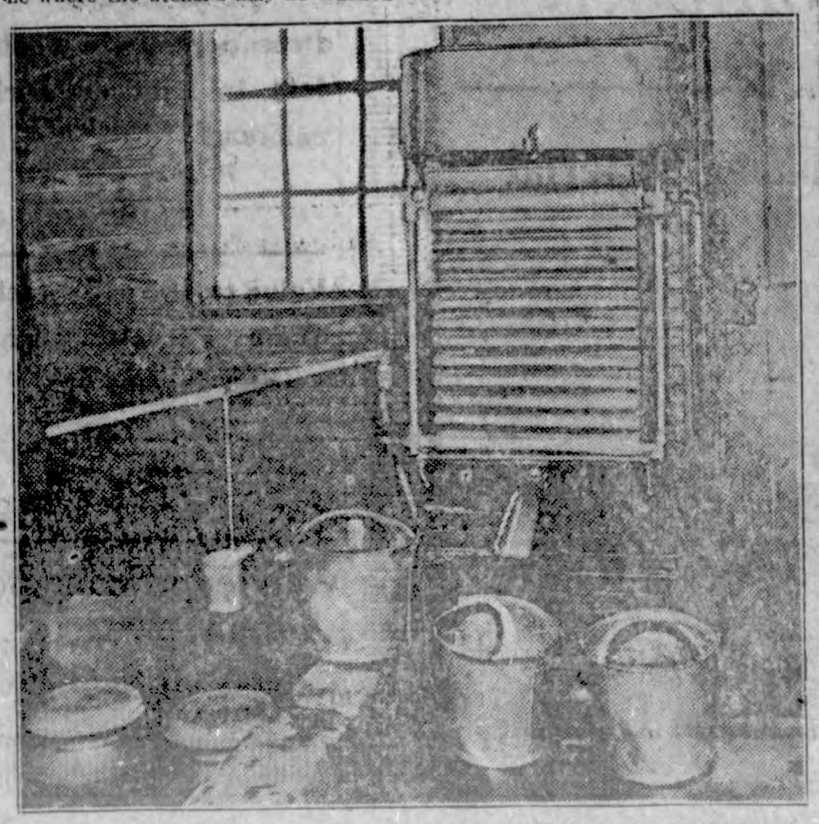
To make sure that utensils are properly washed, convenient arrangements for heating water should be provided. The sanitary dairyman rinses his utensils in cold water immediately after using them, and then washes them in hot water to which soda or some washing powder has been added. Brushes are preferable to cloths for washing as they are more easily kept clean and do better work. Utensils should then be sterilized by means of some form of steam sterilizer.

The milk should be weighed, strained, and cooled in the milk house shortly after it is brought from the stable. Straining is intended to remove the dirt that may have fallen into it, and is best done with a layer of sterilized absorbent cotton placed between two cloths, or by using filter cloth or similar material. Such cloths should be washed just as the utensils are, boiled five minutes, and then hung in a clean place to dry.

Cold Checks Bacteria.

Relatively high temperatures promote the multiplication of bacteria. Therefore, it is essential that the milk be cooled as soon as possible to 50 degrees F. or lower. Ordinary cooling can be done satisfactorily by placing the cans in a tank, preferably of concrete. If the farmer has a supply of ice the tanks can be filled with ice and water. If he has no ice fairly good results can be obtained from a well or spring of running water. In either case the cans should be immersed well up to the necks. Stirring with a clean stirrer will also hasten cooling. A more rapid method is to run milk over a cooler in the interior of which is cold, running water; but if the air is not pure the milk will be contaminated by this process.

The United States department of agriculture is glad to supply any farmer engaged in dairying with a variety of pamphlets relating to sanitary dairy methods, as well as other equally important questions, such as keeping the herd free from tuberculosis. While the observance of the suggestions offered relating to sanitary practices may involve some additional expense, experience has proved repeatedly that the direct benefits to the farmer in the greater demand for his product more than repay him for the outlay involved. Every farmer engaged in dairying will find it profitable to do his utmost to make the full milk bottle, so familiar to city folk, a symbol of purity.



Cooler Designed for Use on Farm—Bacteria Do Not Thrive in Cold Milk.

DAIRY

PUREBRED BULLS VS. SCRUBS

Early Rewards Clearly Indicated to Stock Raiser From Using Purebred Sires.

(Prepared by the United States Department of Agriculture.)

A few calculations in fractions indicate clearly the early rewards to the stock raiser from breeding with purebred sires instead of grade sires. The bureau of animal industry, which is sponsoring the nation-wide "better sires, better stock" campaign, calls attention to a series of diagrams issued in Wisconsin which show the progress of breeding native cows for five generations with purebred bulls, compared with five generations of breeding with grade three-fourths full-blood bulls.

After five or, in fact, any number of generations of such breeding, the calves are still less than three-quarters full blood, while if only purebred bulls are used, three-quarter bloods are produced in the second generation, and the calves of the fifth generation are thirty-one thirty-seconds full blood. The characteristics of the breed rapidly become fixed in a stock in which only purebred sires are used, while after any number of generations of breeding to three-quarter-blood sires the characteristics of scrub stock still frequently appear. A three-quarter-blood bull is much more likely to transmit unfortunate characteristics which are not visible in himself than

Booth at National Dairy Show at Chicago Devoted to the "Better Sires, Better Stock" Campaign.

a pure-blood bull. A single bull of this sort may undo the work of years of selection in building up a herd. The conclusion is that in grading up live stock, only purebred sires of good quality should be used.

GOSPEL OF BETTER FENCES

Novel "Drive" Inaugurated for Improvement of Farms, Both in Value and Appearance.

(Prepared by the United States Department of Agriculture.)

With a view to effecting a practical improvement in the value and the appearance of the farms, a five-day "buy-a-fence" campaign was recently conducted throughout the rural districts of Mississippi. This novel "drive" was joined in by local representatives of the United States department of agriculture and the state agricultural college, and other organizations and agencies. Elaborate plans for promoting the campaign were worked out in advance, including the organization in each county of committees whose duty it was to spread the gospel of better fences. The big saving to forage crops resulting from better fences was pointed out, likewise the labor saved in caring for live stock to prevent overfeeding. An appeal was also made for fields and homesteads that appear well cared for.

Good as were the immediate results of the campaign, it is believed that the permanent benefits will be equally large, in that it concentrated attention on the fence question and is expected to promote greater interest in this important feature of farm improvements.

FAVOR CALVES BORN IN FALL

In Spring They Are Sufficiently Grown to Take Care of Themselves—Make Good Growth.

Calves born in the fall can be grained and properly cared for and when grass is ready to be pastured in the spring they are sufficiently grown to take care of themselves. They thus have an opportunity to make a good growth the first year, which is very essential in rearing a high-producing dairy cow.

DAIRY BULLS VERY NERVOUS

Unlike Sluggish Beef Breeds They Are Active, Alert and Cannot Be Depended Upon.

Bulls belonging to the dairy breeds are usually more nervous than are the bulls belonging to the beef breeds. The latter are more sluggish. The dairy bull is active, alert and cannot be depended upon.

Was Going Down-Hill

Mrs. Bergman's Friends Were Worried, but Doan's Brought Remarkable Recovery From Kidney Complaint.

"I couldn't sit down without putting a pillow behind my back," says Mrs. Ole Bergman, 820 Pennsylvania St., Gary, Ind. "When I bent over it felt as though somebody had stuck a knife right into my back and I would often fall to the floor. The kidney secretions made me get up four and five times a night. There would be only a small amount, which would burn so that I would almost scream. Before long my body bloated and my feet were so swollen that I couldn't wear my shoes. My skin looked shiny and when I pressed it down it left a dent. I had chills and fever. Sometimes I would sweat so that I could fairly wring the water out of my clothes. Everybody said I was going down-hill fast. In two months I lost fifteen pounds and was discouraged. By the time I had finished three boxes of Doan's Kidney Pills I was entirely cured and I have enjoyed the best of health ever since."

Mrs. Bergman

Heavy Shipments From Seattle.

During the first half of 1919 Seattle, the American gateway to Siberia, shipped $15,785,769 worth of goods to this once obscure land, as compared with only $987,381 worth of goods in the same period last year.

"CALIFORNIA FIG SYRUP" IS CHILD'S LAXATIVE

Look at tongue! Remove poisons from stomach, liver and bowels.

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless laxative or physic for the little stomach, liver and bowels. Children love its delicious fruity taste. Full directions for child's dose on each bottle. Give it without fear.

Mother! You must say "California." —Adv.

Admired the Old Gentleman.

"Oh, George, dear," said the anxious girl, who had been waiting while her lover interviewed her father on matrimonial topics, "what did papa say?"

"Agnes, my love," replied George, diplomatically, "I don't think your father's friends half appreciate what a vigorous speaker he is, or what a wonderful command of language he possesses."

THE LAND BOOM

Iowa farmers in their mad rush to Missouri for cheaper land overlooked the most productive county. The cause was due to the fact that the farmers through Iowa knew the land adjoining is practically the same as Iowa land, therefore they naturally came to the conclusion that prices were as high, in which they were mistaken.

Scotland County is especially adapted for corn, blue grass and alfalfa, and until this year land prices have been rightly higher, but not having enjoyed the land boom, the land has had only a slight advance while other lands have gone higher and higher.

Fully two-thirds of the people in Scotland County came from the States of Iowa and Illinois within the past few years, and these people (while not offering a foot of land for sale), knowing that the Iowa farmers desire a good corn and stock county, cannot quite understand why Scotland County has been overlooked.

Railroad facilities are good; having both the Burlington road and the main line of the Santa Fe, naturally they are conveniently located to Chicago, St. Louis and Kansas City markets.

Memphis, the County Seat, is unquestionably the best town within a radius of 40 miles.

The writer having had the pleasure of visiting Scotland County during the growing season, feels the people of that county are fully justified in thinking they have been overlooked in the recent land boom. —Adv.

PISO'S

WOMEN EXCEED MEN IN JAPANESE FACTORIES

850,000 Japanese Women Work at Average Daily Wage of Ten to Twenty Cents for a Twelve Hour Day.

There are more women in industry in Japan than there are men, according to a statement recently made by the War Work Council of the Young Women's Christian Association.

The world war has brought 850,000 women and girls into the daily grind of industry, according to this statement; 30,000 of them little girls under fifteen years of age who work twelve hours at a wage of ten to twenty cents a day, that the world may have silk dresses and munitions.

In Tokyo alone, a city of two and one-half million people, there are 100,000 women employed in sixty-two industries and businesses varying from work as telephone operators, clerks, stenographers and bookkeepers to work in silk and other sorts of factories and domestic work.

Each year thousands of these women go back to their homes in the country, broken in health and victims of tuberculosis because of the poor conditions under which they work and live. They are housed in dormitories in the factory compound. These dormitories are frequently unsanitary. The girls work long hours, have no recreation and on finishing their long day go immediately to bed, oftentimes a bed which a girl who works at night has been sleeping in all day.

As part of its world service for women, the Young Women's Christian Association plans to build dormitories in manufacturing towns where girls may live cheaply under healthful physical and social conditions, to send out secretaries who can introduce recreation into the factory compound and direct games and social life.

This is done with the co-operation of the factories' managers and proprietors. One of the most influential of these is Mrs. Suzuki, the most prominent woman manufacturer in Japan, who is owner and manager of a firm which exported $11,000,000 worth of bean oil to America last year.

Recently Mrs. Suzuki decided to employ one thousand women in her offices. She could not find enough well trained ones so she established a permanent school where Japanese girls may be trained to enter the business world. The greatest danger ahead of Japan, she says, is in its growing materialism, and Japan's greatest need, the development of her women.

NATIONAL FRIENDSHIPS DEPEND UPON WOMANKIND

Japanese Diplomat Says Men Alone Cannot Create International Friendliness.

International friendship between nations depends largely upon the friendly feeling between the women of those nations, according to representatives of the Japanese embassy in Washington. Their theory is that there can be no firm friendship between two nations unless the women of those two countries know and like one another, as co-operation between nations, as in the state and in the family, is based on co-operation between men and women.

Therefore, if Japan and America are to have a real, lasting friendship, to really know and understand one another, the women of the two nations must learn to play together, to study together and to think together. The Y. W. C. A. is one of the best mediums for bringing about this friendship between the two nations, according to diplomatic representatives of Japan, as that organization is teaching Japanese women recreation, showing them how to enjoy out-of-door life and sports. It is particularly necessary that Japanese women learn to enjoy and appreciate recreation, they say, since the great influx of women into industry and business, as Japanese women, formerly so conservative, are going into business and doing many things which they had never thought of doing before the war.

The Y. W. C. A. has been assured the fullest possible co-operation of the Japanese embassy and the Japanese people in making its "World Service program" for three million dollars to be used for women and girls in the United States, India, China, Japan, South America, Egypt, Siberia, the Near East and Mexico a success.

Y. W. C. A. TRAINS WOMEN.

Young women students from forty-four states and nine countries—China, the Philippine Islands, France, Bulgaria, Holland, Russia, Armenia, Canada and Mexico — are registered in the National Training School of the Young Women's Christian Association in New York.

They are studying methods of Y. W. C. A. work with a view to taking up positions in Y. W. C. A. work either in this country or in other of the countries where the Y. W. C. A. is carrying on, opening and expanding its work.

FRANKLIN AT HEAD OF LIST

His Book, "Way of Wealth," Has Had More Reprints Than the Work of Any Other Author.

Greeley's advice, "Young man, go West," is changed by A. Edward Newton to this:

"Young man, get a hobby, preferably get two, one for indoors and one for out."

Riding a hobby differs from riding a horse, said the wise lunatic, in that you can get off the horse.

Anyhow, Mr. Newton takes his own medicine, and for some 30 years he has ridden a hobby all over the continents in search of rare books, Girard writes in Philadelphia Press.

He's a collector, he is, and his home contains an immense and highly valuable library.

"What is the prize book in the whole world?" I asked him.

"The Gutenberg Bible," said he, "for which Henry E. Huntington paid $50,000."

This son of the old Southern Pacific railroad builder has what Mr. Newton declares easily the greatest private library on earth.

You would hardly think it possible to write a book about book collecting which would interest the rank outsider who doesn't know a first folio from a side of sole leather, but Mr. Newton, whose style is delightfully whimsical, has succeeded in doing it.

A copy of Ben Franklin's "Cato Major" was found in a Chester county garret not long ago and was afterward sold for $300, so Mr. Newton reports.

Of all the books and pamphlets Franklin turned off his Philadelphia press, that one, said the famous printer, was his best job typographically.

Franklin did so many things first that folks rarely remember that he also printed the first translation of a Greek or Latin classic that was issued in America.

No one has yet matched the old sage in another respect—400 reprints of a single work. Franklin's "Way of Wealth" has passed that number. There have been 75 editions of it printed in England, 55 in France, 11 in Germany and 8 in Italy.

It has even been translated in Russian and Chinese.

All other best sellers have been backed off the map by that unique output of the Boston lad who some one wittily said "was born in Philadelphia at the age of seventeen."

The Airplane as a Decoy.

Ever since wars have been waged man has made use of decoys to outwit the foe. Even in the recent war a decoy proved to be useful once in a while. An instance occurred at a point on the western front where the British trenches faced a salient of the German trench system. At the time when the British staff determined to reduce the salient, the Daily Chronicle tells us, the Germans were expecting an ordinary attack with its primary bombardment. They promptly fell into the trap set for them.

Early in the morning a British airplane flew very low over the front-line trenches and passed parallel to the German line, but 500 or 600 yards behind it. The Germans thought the plane a target that could not be missed, and turned their backs on the British trenches to fire on the machine. While they were engaging the airplane, the British infantry suddenly went over the top and in a few minutes captured the position and took a number of prisoners.

The machine returned to its airdrome riddled with bullet holes, but both the pilot and the observer were uninjured.

Industry Overdone.

The development of the coconut oil industry in the Philippines has been very rapid, due to war conditions. The exports of oil in 1918 amounted to 115,000 tons, as compared with 45,000 tons in 1917 and 16,000 tons in 1916. There is a scarcity of shipping to take copra to Hull, England, and Marseilles, France, which are the great centers for oil crushing, hence it is found more profitable to ship the less bulky oil to the United States. A number of new oil mills have been constructed in the Philippines in order to fill the demand for oil, but it is a serious question whether the present crushing capacity of the Philippine mills is not in excess of the normal supply of copra.

Philippine Tobacco.

The Philippine Islands' tobacco exports increased greatly in 1918. In that year 25,700 tons of tobacco were exported, as compared with 6,890 tons in 1917. The bulk of this tobacco was shipped during the early months of 1918, and the later months showed a marked decrease. The exports of cigars, however, showed a steady increase during the entire year, the number shipped being 359,000,000, valued at $7,000,000, as against 284,000,000 valued at $4,500,000, in 1917. Most of this production was absorbed by the American market. The increase is largely due to government supervision in order to guarantee the quality of all shipments to the United States.

Real War Scrap Book.

To keep a scrapbook on the recent war sounds like a herculean task, but it was really done by a regular, everyday human being, a man from Seattle, Wash. He began in August, 1914, never realizing the enormity of the undertaking, but he stuck to the job and now owns a book containing thousands of columns of war reports and pictures clipped from his favorite papers. It weighs more than 100 pounds, is carefully indexed and promises to be a valuable addition to reference libraries.

Economy Can Be Carried Too Far.

It doesn't pay to save a penny at the expense of several pennies' worth of time and effort. All economy is not economy. Some of it costs more than it is worth.

Fit Punishment.

Recall the line in the Mikado about making the punishment fit the crime? Well, a Chicago girl has married the man who tried to kidnap her.—Toledo Blade.

Very Brave.

Percy William—"You need not fear tramps or rough men when you are with me, darling. I'm a champion runner, and if we were attacked I'd run off and bring help to you in no time."

To Keep Plants Fresh.

There is a simple way to water ferns and flowers which will be of interest to one who must leave them for a time without care. Take a washing tub and place three or four bricks in it and put about two inches of water in the tub. Place the flowers on these bricks and place the tub where they can get the morning sunshine.

Ford
THE UNIVERSAL CAR
Only a Limited Number of Ford Cars

There are mighty good reasons why you should buy your Ford car now. But the biggest one is that there are only so many Ford Cars—just a specified limited number—allotted to this territory. Those who buy their cars now will be wise. They will have them whenever they wish.

Don't put it off—next spring, even next month is an uncertainty. We cannot take orders for spring delivery. Even uow, we must have sigue bona fide orders before our manthly allotment is shipped us. So the only way for you to be sure of getting a Ford cas is to order it now. Get your name on an or er.

Again we tell you the allotment for this territory is limited and you must buy now while deliveries are possible. As ever the demand for Ford cars is way in the advance of the production. So, its fisrt come first served. Spring Summer, autumn and winter are all the same to the Ford car. It is a valuable servent every day of the year. Rain or shine it is ready for your demands. Buy now and get prompt delivery. You won't have to store it. You can use it. Buy now while the buying is possible.

Items of Interest Summarized for Busy Readers

Sheep-killing dogs cost taxpayers of Henry county $2,619.15 last year.

Fifty years in harness in the same job, is the record of Cy Roberts, veteran shoe repair man of Hampton.

Alfred W. Tredway, aged 68, for fifty years in active business in Dubuque, is dead at his home following an illness of a few months.

Matt Coughlin, a farmer living south of Pisgah, has a cow that gave birth to three calves New Year's day. We claim this is helping the census.

Implement dealers over Cass county report more bob-sleds sold this winter than in the past three years. Sleighing has been excellent for some weeks.

Five thousand pounds of honey from 60 colonies of bees is the record of Mr. Fahler of Eldora. Professor Atkins of Iowa State College was there recently helping house the bees for the winter.

The state auditor's report on municipalities in Iowa will be off the press in about ten days. The report will show the financial condition of village and city treasuries and contain other data of interest to state taxpayers.

Preliminary steps have been taken by the county board to pave seventeen miles of the Grant highway through Black Hawk county. This is Iowa federal aid project No. 62 and the cost is estimated at approximately $750,000.

Sixty or more farmers of Spaulding and Lincoln townships, just north of Creston have formed a co-operative club to assist one another in their shipping. They have incorporated for $25,000, and have a working capital of $7,000.

Practically every college in the country was represented in the Students' volunteer convention which held a four days session in Des Moines, and which ended Saturday, January 3. The estimated total of attendance is about 8,000.

Neighbors of Jess Nuzum to the number of about thirty engaged in an old fashioned husking bee at the Nuzum farm near Pisgah, when they husked and cribbed in one day about 800 bushels of corn and enjoyed a big dinner prepared by their wives and daughters.

"Hundreds of Iowa farmers are still waiting for the railroads to furnish them stock cars", says W. W. Latta, president of the Iowa Wool Fleece Growers' Association of Logan, "and there is no doubt that the movement to market since the first of the year will be much heavier than usual.

In order to demonstrate the value of limestone to Franklin county farmers a soil fertility demonstration field was arranged for at the Franklin county farm, near Geneva. The board of supervisors agreed to pay for the fertilizing materials and the men on the farm agreed to do the work.

Thru the donation to the town by Mrs. Ricknell, as a memorial to her husband, the late A. D. Bicknell, a well known pioneer of Humboldt county, Humboldt has come into possession of a beautiful natural park, bordering the Des Moines river, at the west edge of the business street, to be known as Bicknell's park.

Four poultry meetings were held in Louisa county recently on the following farms: W. McLaughlin, T. J. Callahan, Weaver Briggs and John Jenkins. The work done was applicable to the farm flock and orchard and a goodly crowd attended all meetings. The work was handled by Mr. Parkhurst and R. S. Herrick of Ames.

Following a get-together meeting of the Cherokee Community club and the purebred livestock breeders of the county recently an organization was perfected known as the Cherokee County Livestock Breeders' Association, with a membership of 66. There are 94 breeders of pedigreed live stock in the county. From one to three bred sales are being planned for spring.

Forty-seven cars of agricultural limestone ordered through the farm bureau some weeks ago, have failed to arrive in Centerville owing to congested railroad conditions. The stone was ordered from the Hawkeye Quarry Co. The company has asked each farmer who has ordered a car of limestone to certify that he will unload the car promptly when it arrives at the station. The railroad has refused to give the quarry the cars unless these written agreements accompany the orders.

A poultry show was held in Muscatine January 6-11. The junior poultry enthusiasts of the county exhibited and Prof. A. H. Ward of Iowa State College assisted the young people in arranging their exhibits.

A stream of Iowa hogs out—a flood of gold in. That's the way at almost every shipping station in Iowa. The Cudahy plant at Tama bought 1,000 hogs and paid out $50,000 to the farmers' who sold them. In two days 1,025 hogs went over the Cudahy scales for which more than $26,800 was paid.

The Federal Farm Loan association of Worth county is just about one year old and has been most successful during the past year. The secretary-treasurer, C. S. Rye, of Hanlontown, reports loans made aggregating something over $175,000 during the year. A short time ago a part of the county was transferred to the Winnebago county district, with headquarters at Lake Mills. The work of the association is looked on with favor by farmers and bankers of Worth county.

Preparations are being made by the Scott county engineering department to call for bids as soon as possible in the spring for the proposed road paving work to be started next summer. County Engineer John Malloy announced that the contractors would be notified just as soon as the plans for paving and grading are approved by the government road engineers. The plans include the paving of 20 miles of road next summer and extra grading on as many more miles for the 1921 paving projects.

Wright county and the United States government have made a nice gift to the citizens of Wright county in the shape of a gravel road to be built according to specifications, which will be, 14½ miles of permanent highway on the Clarion-Eagle Grove-Goldfield road and the Clarion-Belmond road next summer. The contract has been let by the board of supervisors for $44,600 worth of earth work and $11,000 worth of tile. It is on the tiling that County Engineer Hillon and his staff depend for the permanency of the road. The board has also contracted for 86,000 feet of tile and this will make the difference, says Mr. Hillon. With such drainage the gravel will not disappear as it has in the past.

G. W. Lemmon, residing a few miles from Sac City, has purchased the Hugh Mead place at $140 an acre. On this farm is a pond, about forty acres in extent, from which Mr. Lemmon expects great things. Some years ago this pond dried up unusually early, it being filled with water every year to a uniform depth of about two feet. The place was owned at that time by Thos. Burroughs. Mr. Burroughs disced the land and planted corn. The season was just right for such a procedure and he took 200 bushels to the acre from the piece. Mr. Lemmon is now planning to drain the pond and hopes to duplicate the effort of Mr. Burroughs, although it has been tried once or twice before without success.

Six dual orchard and poultry demonstrations were held in Jones county the past year. Poultry specialists gave talks on care, feed and management of the flocks, demonstrating with specimens culled from the flocks. Spraying and pruning was demonstrated by an orchard expert at the same meeting. In the poultry culling work from 10 to 75 per cent of the flocks examined were thrown out as culls. After each demonstration those in attendance were allowed to practice culling until the flock was cleaned up. Their judgment was checked up by the specialist and the county agent. Tuberculosis was found in four out of five flocks culled. Records from two flocks show double production after culling.

County Agent John C. Eldridge of Emmett county thinks the best way to handle a sick chicken is to kill her as soon as you notice that she is sick and do it in such a way that her blood is not scattered around the place, also to bury her as deep as possible. A sick Chicken is such a common sight, that very little attention is paid to them and they are allowed to run with the other chickens until they die. As a consequence, when any disease gets a foothold in the average flock, it is apt to spread until a large number of the flock are affected. Oftentimes the disease will not kill many hens at a time, so that no determined effort is made to rid the flock of diseased birds, with the result that the disease may drag along for a long time and ultimately a great many birds may be lost.

The old log cabin with its huge fireplace and heavy creaking door, its small window and curling clapboard roof, is almost forgotten. It is seldom one finds a survival in its true state, surrounded by the peaceful landscape that nature gave it. The landscape has changed. The cabin, abandoned, has fallen apart. The log cabin typified a tenantry of more than a half century ago. It was fit and convenient then, and it was suited to its surroundings; its construction and arrangements were adapted to the needs of its occupants of that age and time. But today we have the modern home to replace the log cabin. This modern farm home has all the conveniences of the city house and all the essentials of a real home, besides a location, which insures fresh air and quiet. Ten thousand dollar farm houses, equipped with every electrical convenience, french-windowed, oak floored and set in beautiful landscapes grounds are not uncommon today.

The years 1914-1918 will stand out to the end of time as a point of historic crisis. The World War will effect greater changes than any previous event, except the birth of Christ and the discovery of America.

During the season just closed Sac county has had a big labor problem to contend with, one farm alone of 11 sections requiring from 80 to 150 men to work it. When it is considered that in addition to this that the county plants 10,000 acres of pop corn the labor difficulties may well be imagined.

THE MISERY OF BACKACHE

Removed by Lydia E. Pinkham's Vegetable Compound.

Muskegon, Mich.—"For six years I was so weak in my back at times that I could hardly walk. Lydia E. Pinkham's Vegetable Compound was recommended to me and it made me good and strong again so that I am able to do all my work. I highly recommend your medicine and tell everyone I meet what it did for me."—Mrs. G. SCHOONFIELD, 240 Wood Ave, Muskegon, Mich.

Woman's Precious Gift

The one which she should most zealously guard is her health, but she often neglects to do so in season until some ailment peculiar to her sex has fastened itself upon her. When so affected women may rely upon Lydia E. Pinkham's Vegetable Compound, a remedy that has been wonderfully successful in restoring health to suffering women.

If you have the slightest doubt that Lydia E. Pinkham's Vegetable Compound will help you, write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass., for advice. Your letter will be opened, read and answered by a woman, and held in strict confidence.

CHAPTER XXII.

—15—

The Crew Decides.

Except that many of the men remained armed there was no suggestion of violence. But for the gleaming carronade trained on the main hatch, and the small group of gunners clustered about it, the scene was peaceable enough, resembling the deck of some merchant ship. LeVere stood motionless at the poop rail, staring down and his attitude and expression of face aroused within me a doubt of the man, a determination to put him to the test. Evidently he had held aloof and refrained from taking even the slightest part in our activities. The men themselves were mostly forward, grouped together and still excitedly discussing the situation.

"Stand by to reef topsails," I shouted. "We're all one watch now. Go at it lively, lads, and when the job is over we'll eat, and decide together what's our next move. Two of you will be enough to guard the hatch and one of you go into the cabin and relieve the girl there. Keep your eyes open. I'll be down presently. Aloft with you and see how quick a job you can make of it."

Watkins led the way up the mainmast ratlines, and Cole was first into the fore shrouds, the others following eagerly. I watched them lay out on the yards and was heartened to hear the fellows sing as they worked, the canvas melting away as if by magic. I climbed the ladder to where LeVere stood on the poop, but carefully ignored his presence, my gaze on the scene aloft. Twice I gave orders, changing the steering direction slightly, and commanding the lower sails reefed. The mulatto scowling, joined me at the rail.

"What's all this about?" he asked. 'That's no storm cloud yonder."

"There is always danger in fog," I answered coldly, "and besides there is no use carrying on until we know where we are bound. My purpose is to keep the men busy, and then talk the situation over with them. Have you any criticism of this plan, Senor LeVere?"

He hesitated, but his eyes were narrowed, and ugly.

"You'll do as you please, but you told me we sailed for Porto Grande. Was that a lie?"

"Not necessarily," and I smiled grimly. "Although I should not have hesitated to tell one under the circumstances. I mean to leave that decision to the men themselves. It is their lives that are in danger."

"That scum! half of them are English and French. All they want is to get away; they will never go back to Porto Grande without you make them."

"How make them?"

"By false observations; there is no navigator forward. It is a trick easy enough to play with a little nerve. I would never have taken part in this mutiny if I had supposed you meant to play into the hands of the men."

"It is very little part you took Senor LeVere, judging from what I saw. You seemed quite content to stand aft here and look on. However you are in it just as deeply as I am, and are going to play the game out with me to the end. Do you understand that?"

"What you mean, senor—play it out?"

"Go on with the rest of us; take your chance with the men and do your duty. I am captain here. The first sign of treachery on your part will send you below with those others. I don't trust you, and all I want is an excuse to put you out of the way—so be careful what you do."

I turned and walked away from him toward the forward rail. The men were still aloft but coming in from off the yards. Below me in the door of the companion, stood Dorothy, her eyes peering curiously about the deserted deck. She glanced up and saw me.

"May I come up there?" she asked.

"Certainly; let me help you. Stand here beside me, and you can see all that is being done. That's all, lads; breakfast is ready; lay down all except the lookout."

We watched while they streamed down the ratlines and gathered forward of the galley, squatting in groups on the deck. To all appearances the fellows had not a care in the world, or any thought of the stirring scenes just passed through. The girl's hand touched my sleeve, and I turned and looked into her face.

"Have you considered Captain Sanchez?" she asked.

"Why no," in surprise, "he is helpless below, badly wounded."

"Not so badly as you suppose," she said swiftly. "He is able to be up and about his stateroom. I heard him moving, and I believe the steward has told him what has occurred on board, and endeavored to bear a message from him to those men amidships. I held my pistol to his head and locked him in the pantry. He is there now, with the sailor you sent on guard. That is what I came on deck to tell you."

"He is a danger, of course, but not a serious one," I said confidently. "It is safe enough to leave him undisturbed at present. The first thing I need to do is to satisfy those men. I'll attend to that now, and then see to the proper securing of Sanchez. Remain here with LeVere while I go forward, and watch that he does not attempt to go below."

The fellows had not finished mess, but I felt the danger of further delay, and talked to them as they sat on deck, explaining briefly the entire situation, and the causes leading up to the mutiny. I dealt with the matter in plain terms, making no apparent effort to influence them, yet forcibly compelling each individual to realize what would be the result of our recapture. They listened earnestly, asking an occasional question, and passing comments back and forth freely among themselves.

I sent Watkins to the cabin for a roll of charts, and spreading these out, endeavored as well as I could, to make clear our probable position and the nearest point of land. When I had completed the explanation, and stood before them awaiting decision, it was Haines who acted as their spokesman.

"This yere is Cape Howarth?" he asked, a grimy thumb on the point indicated. "An' yer say it's 'bout a hundred and fifty miles west?"

"Yes, about that?"

"An' thar's no settlement?"

"Some colonists fifty miles north is all."

"That's 'bout right." He turned to the others. "Say mates, this is how I figure. We can't go on no long cruise with all those bloody rats in the hold. They're bound ter find some way out if we give 'em time 'nough. Fer as I'm concerned, I'm fer dividin' up whut we've got, and ter hell with piratin'. What 'er yer say, mates? Shall we run the ol' hooker ashore, an' leave her thar, while we tramp the coast? We're just a shipwrecked crew. What say yer?"

There was a chorus of approval sufficient in volume to satisfy me, and I accepted this as a decision.

"All right, lads," I said briefly. "In my judgment your choice is a wise

The Stricken Sailor Told the Whole Story.

one. I'll have an observation as soon as the fog clears and we'll head in for the Cape?"

"When do we divide the swag?"

"Fifty miles off the coast. That's fair enough, isn't it? And my share goes to you."

There was a straggling cheer, but I broke it up with a sharp order.

"Now stand by for work, all of you. Watkins and Carter, I want you aft."

CHAPTER XXIII.

The Prisoners Escape.

The two men followed me silently as far as the companion, where we paused a moment staring blindly about us into the fog. Even the guard at the main hatch was invisible.

"Carter, guard this after deck until Watkins and I come back. Under no circumstances permit LeVere to enter the cabin."

With the door closed, we were plunged into a darkness which rendered the interior invisible. I wondered dimly why the man on guard had not lighted the swinging lantern. I stumbled over something on the deck, as I groped forward, but did not pause until I had lighted the lantern. It blazed up brightly enough, its yellow flame illuminating the cabin and the first thing I saw was the outstretched figure of the sailor almost between my feet. We needed to ask no questions, imagine nothing—the overturned chair, the stricken sailor told the whole story. He had been treacherously stuck from behind, the blade driven home by a strong hand, and was dead before he fell to the deck. It had been silent, vengeful murder, and the assassin had left no trace. Who could it have been? Not Gunsaules surely—the steward lacked both nerve and strength for such a deed. Then there was but one to suspect—Sanchez!

I flung open the pantry door, but one glance inside told me that Gunsaules had vanished. On the deck lay the strands of rope with which he had been secured—they had been severed by a sharp knife, the ends discolored with blood stains. I held these out to Watkins.

"Cut since the murder," I said, "and by the same knife. What do you make of it, Tom?"

"Well, sir, the thing he'd most likely try fer wud be ter release them lads amidships. My idea is, sir, he thought he'd have time ter git the bulkhead door open, before anybody cum below—he an' the steward, who'd know whar the tools wus. That wus the scheme, only we busted in too quick. That's whar they both are—skulkin' back in them shadows."

He fitted the smoking lantern back onto the shelf to have his hands free for action, and drew a cutlass out of the arm rack, running one leatherly thumb along the blade to test its sharpness. His eyes sought mine questioningly.

"Probably your guess is the right one," I said soberly. "We'll give it a trial."

Murder had been committed for a purpose—it was the first step in an effort to retake the ship. If we were to retain our advantage there was no time to be lost; we were pitted now against Silva Sanchez, and he was a leader not to be despised or temporized with; no cowardly, brainless fool.

The passage leading forward was wide enough to permit of our advancing together and for a few steps the light dribbled in past us, quite sufficient for guidance. I had been down this tunnel once before, and knew the bulkhead was not far away, but the few steps necessary plunged us into profound blackness, through which we advanced cautiously with outstretched hands. No slightest sound warned of danger and I was already convinced in my own mind that the refugees were not hiding there, when it happened. Within an instant we were fighting for our lives, fronted not by two men, but by a score, who flung themselves cursing upon us. Their very numbers and the narrowness of the passage was our only salvation. At first our resistance was blind enough, guided only by the senses of touch and sound. We could see nothing of our antagonists, although their fierce rush hurled us backward. I fired into the mass, as Watkins slashed madly with his cutlass, both managing in some way to keep our feet. Hands gripped for us, a bedlam of oaths splitting the air; yet, even in that moment of pandemonium, I was quick to realize the fellows were weaponless, seeking only to reach and crush us with bare hands. The same discovery must have come to the mind of the sailor, for he yelled it out defiantly, every stroke of his blade drawing blood. I joined him, striking with the butt of the pistol. We killed and wounded, the curses of hate changed into sharp cries of agony, but those behind pressed the advance forward, and we were inevitably swept back into the light of the cabin lamp.

Then I saw faces, hideous in the glare, demoniacal in their expression of hatred—a mass of them, unrecognizable, largely of a wild, half-Indian type, with here and there a bearded white. Nor were they all bare-handed; in many a grip flashed a knife, and directly fronting me, with a meat cleaver uplifted to strike, Sanchez yelled his orders. Ignoring all others I leaped straight at him, crying to Watkins as I sprang.

"Back lad; dash out that light; I'll hold these devils here a minute!"

I did—God knows how! It was like no fighting ever I had done before, a mad, furious melee, amid which I lost all consciousness of action, all guidance of thought, struggling as a wild brute, with all the reckless strength of insanity. It is a dim, vague recollection; I am sure I felled Sanchez with one blow of my pistol butt; in some way that deadly cleaver came into my hands and I trod on his body, swinging the sharp blade with all my might into those scowling faces. They gave sullenly backward; they had to, yelping and snarling like a pack of wolves, hacking at me with their short knives. I was cut again and again. I stood on quivering flesh, crazed with blood, and seeking only to kill. I saw faces crushed in, arms severed, the sudden spurting of blood from ghastly wounds. Oaths mingled with cries of agony and shouts of hate. Then in an instant the light was dashed out and all was darkness.

(TO BE CONTINUED.)

Mends Granite Ware.

The government suggests we economize on kitchen utensils. To mend a hole in granite ware work a piece of putty until perfectly soft, then take a piece of the putty large enough to cover the hole and put one piece on either side of the metal, pressing together inside and out, smoothing down the edges. Place the vessel in a slow oven and bake until the putty is a deep brown. For containing water the vessel will be as good as new.

DYED CHILD'S COAT AND HER OLD SKIRT

"Diamond Dyes" Made Faded, Shabby Apparel So Fresh and New.

Don't worry about perfect results. Use "Diamond Dyes," guaranteed to give a new, rich, fadeless color to any fabric, whether it be wool, silk, linen, cotton or mixed goods,—dresses, blouses, stockings, skirts, children's coats, feathers, draperies, coverings—everything!

The Direction Book with each package tells how to diamond dye over any color.

To match any material, have dealer show you "Diamond Dye" Color Card. —Adv.

An Old Story.

"A rib is a very expensive luxury just now."

"Yes, my dear; it was as far back as Adam that a rib started the whole high cost of living."

BOSCHEE'S SYRUP.

A cold is probably the most common of all disorders and when neglected is apt to be most dangerous. Statistics show that more than three times as many people died from influenza last year, as were killed in the greatest war the world has ever known. For the last fifty-three years Boschee's Syrup has been used for coughs, bronchitis, colds, throat irritation and especially lung troubles. It gives the patient a good night's rest, free from coughing, with easy expectoration in the morning. Made in America and used in the homes of thousands of families all over the civilized world. Sold everywhere.—Adv.

Well, Well!

"I suppose," said the man who was buying a parrot, "that it will be easier for the bird to learn short words?"

"Oh, not at all!" the dealer responded cheerfully. "I've found that they take most naturally to polysyllables."

Cuticura Comforts Baby's Skin

When red, rough and itching with hot baths of Cuticura Soap and touches of Cuticura Ointment. Also make use now and then of that exquisitely scented dusting powder, Cuticura Talcum, one of the indispensable Cuticura Toilet Trio.—Adv.

GOT HOMES AT SMALL COST

Fortunate Purchasers Profited by the Dismantling of Government-Built Munition Plants.

To select a dwelling from a large stock of samples, buy it "over the counter" at a bargain price, and then pack it on a motortruck to be sent home, is a novel solution of the house-hunting problem, says Popular Mechanics Magazine. That is literally what has been happening recently, however, in a number of communities where munition-plant housing facilities are being dismantled by the government. All the purchaser needs is a vacant lot, of course, and a foundation for his new home.

Near Cincinnati more than 200 four-room houses were sold in two days at the remarkable price of $200 each, their original cost to the government having been over $1,500. Purchasers of these houses have been able to get concrete block foundations built for an average price of $223, and to secure truck and trailer delivery within five miles for $120, making a total cost of $553 for a well-built home.

A Preference.

Knicker—America is the melting pot.

Bocker—Fine, but we'd rather be the sugar bowl.

Spoken In Bitterness.

"I saw you coming out of a cafeteria." "You named it wrong. It's a profiteria."—Washington Star.

When Blood Is P

Granite Falls, Minn.—"During pectant period I had varicose veins were ex painful. A of bottles Pierce's Fa Prescription pletely cured this conditi my syste toned up an comparative suffering. lady recom Dr. Pierce's dies to me a of years before when one of my had a solid crust of sores on hi She told me that it was because m was in poor condition, so I to Pierce's Golden Medical Discov purify my blood, and at the sam gave the baby a few drops several a day. The effect was wonderful a very short time he was a healthy ing baby and had a fine head of —Mrs. John M. Thompson.

FROM GIRLHOOD U

Centerville, Iowa.—"I have suffered ribly at times since girlhood; I w run-down and weak. Was advised Dr. Pierce's Favorite Prescription when I took the first dose I began prove. I took only three bottles of was cured. Have had five children have been in good health since. I frequently recommended the 'Pre tion' to others. My sister has also good results from it."—Mrs. Frank E 727 E. Grant St.

WOMEN EVERYWHE

St. Paul, Minn.—"For several ye suffered with woman's trouble. I re advertisement in the newspapers th Dr. Pierce's Favorite Prescription decided to try a bottle. In all I took six bottles and it helped me right the start; it actually cured me of the flammation and pain in a very short t and I think it a very wonderful med for women."—Mrs. Harry Frederick 268 Fuller St.

HOW IS YOUR EXPRESSIO

Well to Remember Sometimes Th Man Is Apt to Be Judged by His Looks.

What kind of expression do you habitually? Is it sour, morose, re lent? Is it a mean, stingy, contem ble, uncharitable, intolerant exp sion? Do you wear the expressio a bulldog, a grasping, greedy, hun expression, which indicates an av cious nature? Do you go about am the members of your family wit thunder-cloud expression, with a m ancholy, despondent, hopeless look your face? Do you wear the sunsh expression which radiates good ch and hope, which indicates a feeling good will and of helpfulness? Th questions are asked by a keen stud of nature, writing in a recent publi tion.

Do you smile and look happ when you approach them, or do th shrink from you and feel a chi gooseflesh sensation come over th as they see you approach? It ma all the difference in the world to y and to those whom you influence, wh kind of expression you wear.—T Continent.

Was Leaving, Anyway.

Sentry—Halt, or I fire.

Recruit—Fire away. I was just go up to the captain to resign, anyhow.

A man's descriptive ability usua goes lame when he attempts to about a woman's hat.

ASPIRIN

Introduced by "Bayer" to Physicians in 1900

You want genuine Aspirin—the Aspirin prescribed by physicians for nineteen years. The name "Bayer" means the true, world-famous Aspirin, proved safe by millions of people.

Each unbroken package of "Bayer Tablets of Aspirin" contains proper directions for Colds, Headache, Toothache, Earache, Neuralgia, Lumbago, Rheumatism, Neuritis and for Pain generally

Always say "Bayer" when buying Aspirin. Then look for the safety "Bayer Cross" on the package and on the tablets.

Handy tin boxes of twelve tablets cost but a few cents. Druggists also sell larger packages.

Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid

YOU NEED NOT SUFFER FROM CATARRH

But You Must Drive It Out of Your Blood.

Catarrh is annoying enough when it chokes up your nostrils and air passages, causing difficult breathing and other discomforts. Real danger comes when it reaches down into your lungs.

This is why you should at once realize the importance of the proper treatment, and lose no time experimenting with worthless remedies which touch only the surface. To be rid of Catarrh, you must drive the disease germs out of your blood.

Splendid results have been reported from the use of S. S. S., which acts on the catarrh germs in the blood.

If you wish medical advice as to the treatment of your own individual case, write to Chief Medical Adviser, 42 Swift Specific Co., Atlanta, Ga.

Quite Justified.

"I know a man who delights in bringing a blush to people's cheeks."

"And do people allow it?"

"Of course, they do. They go to him to buy their rouge."

Important to Mothers

Examine carefully every bottle of CASTORIA, that famous old remedy for infants and children, and see that it

Bears the Signature of *Chas. H. Fletcher*

In Use for Over 30 Years.

Children Cry for Fletcher's Castoria

The Worst.

"The fellow who calls here has many short-comings."

"Yes, and his worst short-comings are his long-goings."

Speaking of crude taste, novietism is the big jazz that puts harmony out of business.

Catarrh Cannot Be Cured

by LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a local disease, greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE will cure catarrh. It is taken internally and acts through the Blood on the Mucous Surfaces of the System. HALL'S CATARRH MEDICINE is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in HALL'S CATARRH MEDICINE is what produces such wonderful results in catarrhal conditions.

Druggists 75c. Testimonials free.

The fact that he couldn't get people to listen to him has made many a man a writer.

How Competition Helps You

The competition that exists among the hundreds of meat distributors, large and small, means

Rivalry in Prices
Rivalry in Service
Rivalry in Economy
Rivalry in Quality

Swift & Company sells meat at the lowest possible price, consistent with quality and service. Our profit of only a fraction of a cent a pound on all products is evidence of keen competition.

Swift & Company must provide the best service to your dealer or he will buy from our competitors. This means a supply of fine fresh meat always on hand for you at your dealer's.

Swift & Company must keep down manufacturing and selling costs, and use all by-products to avoid waste, or else lose money meeting the prices of competitors who do.

Swift & Company must make its products of the highest quality, or see you turn to others. This means better meat for you and a greater variety of appetizing, wholesome food.

We are as glad for this competition as you should be. It helps to keep us on our mettle.

Swift & Company, U.S.A

SWIFT & COMPANY U.S.A.

Home Town Helps

GOOD WALKS FIRST REQUISITE

Those Built of Concrete Are Probably the Best That Have as Yet Been Devised.

Good walks between the buildings on farms add greatly to the ease and comfort with which farm work can be done. Good walks about suburban homes are a necessity. Concrete walks when properly made are permanent.

The New York state college of agriculture recommends excavating 8 to 10 inches, but what is worth doing, particularly in making walks with the expectation of having them permanent, is worth doing as well as it can be done. Therefore make the excavation 10 inches, or better 12 inches, and fill in with from 6 to 8 inches of cinders and similar material well tamped to make a good base. On top of this place 3½ inches of concrete tamped in place and a top coat of ½ inch of cement mixed in the proportions of one part cement to two of sand. The gravel for concrete should be well graded in sizes from ¼ inch to 1 inch, and for this material the proportions may well be one part cement, three of sand and six of gravel. Poorer materials should have a richer mixture. The top coat should be trowelled to drive it into the concrete base but not necessarily to make it smooth.

A rough surface walk may be advisable, in which case a little finer gravel may be used in the concrete and the full 4 inches made of this material.

COMPETITION IN GOOD WORK

Experiment Tried by Group of West Virginia Towns Has Proved of Advantage to All.

Cities at least have the stimulus to make improvement whether they do so or not. The village and rural community lack the stimulation that comes through contact with the outside world. It is not surprising to find them narrow and unprogressive. A unique experiment along the line of community betterment has been in progress for two years in 23 small West Virginia communities. A system of points is used to score community progress, 1,000 being a perfect score. Nine general headings are used to cover the field of community development — history, government, business, farms, clubs, homes, schools, churches and health. As examples of the way it works, the absence of gaudy and ugly advertising signs scored two points; increased use of school building for regular school work and as a social center, four points, and one point each for better housekeeping as the result of activities of the farm women's clubs, installation of bathrooms and running water in kitchens, and extension and improvement in the rural telephone system. The experiment has produced no Utopia, but has raised standards in the communities involved.—Leslie's.

Clubs in English Villages.

More than 350 English villages have organized branches of the Village Clubs association, a union of rural community societies through which it is planned to make country life more attractive.

In each of these communities, clubhouses have been constructed varying in size and appointment from a simple reading room, which may also be made to serve as a general meeting place, to Nettlebed's pretentious village hall, which offers men's and women's dressing rooms, library, reading and billiard rooms, a play shed, skittle alley, rifle range, kitchen and cookery school.

In the organization of these clubs, four points are given prime consideration—the eligibility of both women and men to membership, that the clubs shall be nonpolitical and nonsectarian and that they shall be administered by a committee elected by the members.

Before You Build.

Think twice before you build; don't let the present shortage of houses scare you into buying the first lot you come to and setting the contractor to work. Look around a bit; the house you build will stand there a long time—your home. Plan to make it beautiful and to give it a setting of beauty. It can be done; trees will do it. Nice houses are always made nicer by the company of trees. They look more like homes. They strike a note of comfort, of permanence, of stability, of peace. In Good Housekeeping Miss Alice Booth shows us with many beautiful photographs why the best of homes need trees.

Project for City Planning.

Ann Arbor, Mich., is to have a city planning body to control all general city improvements, such as building and traffic problems and city beautification. Members of the new commission will have longer terms than any of the present city officials, so that broad plans of improvement affecting the whole municipality will be uninterrupted by changes of administration.—Christian Science Monitor.

$5.00 Per Sack

Mail Coupon for Bigger Profits

Yes, Sir! For trial purposes only, the famous International Pig Meal is offered at $5 per 100-lb. sack. Order as many sacks as you need to test this unusual pork builder. This offer is made to give every pig raiser in America an opportunity to prove to himself how this fattening ration makes pigs ready for market in double quick time.

INTERNATIONAL PIG MEAL

Fattens Pigs, Shoats and Brood Sows

Hot Ice.

Professor Bridgman of Harvard has succeeded in making ice by squeezing water—and the ice is so hot that it will make alcohol boil.

Eases Colds

At once! Relief with "Pape's Cold Compound"

The first dose eases your cold! Don't stay stuffed-up! Quit blowing and snuffling! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up a severe cold and ends all grippe misery.

Relief awaits you! Open your clogged-up nostrils and the air passages of your head; stop nose running; relieve the headache, dullness, feverishness, sneezing, soreness and stiffness.

"Pape's Cold Compound" is the quickest, surest relief known and costs only a few cents at drug stores. It acts without assistance. Tastes nice Contains no quinine. Insist on Pape's!—Adv.

She Was a Peach.

Three-year-old Mary Ellen demands a reason for everything and some of the reasons are mother's sudden inspirations. Sometimes she passes them on to other children. The other afternoon a group of children was talking to the wee miss, all giving her that sort of confection known as "taffy." Mary Ellen ate it with relish. Suddenly she turned to the child nearest her, "Do you think I'm pretty? Don't you think I'm sweet?" she asked.

He answered in the affrmative. "Well," she smiled sweetly, "my mamma found me in a peach basket."

Two or three of the children giggled but twelve-year-old Arthur sprang gallantly to the rescue. "No wonder you're such a little peach," he returned.

English to the French.

Many soldiers brought home French brides and now are busy teaching them to talk English. One of the mothers is trying hard to help her daughter-in-law. Also she is trying to teach her little French daughter-in-law to cook American dishes.

The other evening she was showing her how to cook oatmeal and how to stir it with a spoon.

"You stir it, Josephine," she told her. "Remember—stir."

A few minutes later the family dog walked into the kitchen wagging his tail in a friendly manner. Josephine garded him a minute, and then said: Oh, zee-se dog stir wiz his tail."

Thousands of Happy Housewives in WESTERN CANADA

are helping their husbands to prosper—are glad they encouraged them to go where they could make a home of their own—save paying rent and reduce cost of living—where they could reach prosperity and independence by **buying on easy terms.**

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years has **yielded from 20 to 45 bushels of wheat to the acre.** Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. With such crops come prosperity, independence, good homes, and all the comforts and conveniences which make for happy living.

Farm Gardens—Poultry—Dairying

are sources of income second only to grain growing and stock raising. Good climate, good neighbors, churches, schools, rural telephone, etc., give you the opportunities of a new land with the conveniences of old settled districts.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, and Alberta, reduced railway rates, etc., write Department of Immigration, Ottawa, Can., or

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

ENJOYED WELL-WON HONORS

Some Men of Genius Who Lived Many Years After Their Fame Had Been Assured.

Sophocles, the famous Athenian dramatist, lived to be ninety. The author of "Ajax" is the oldest writer, and he is unique in his degree of longevity. The next in point of age is Thomas Carlyle, the author of "Sartor Resartus" and "The French Revolution," and other works of noble conception, undoubted brilliance, and lofty aspirations. He died at the age of eighty-six.

Jeremy Bentham, whose disciple was John Stuart Mill, and who is the author of works on government, "The Principles of Morals and Politics," and other lucid expositions of the utilitarian system, underlived Carlyle by one year; while Voltaire, whose "Philosophical Letters" and "Discourses of Man" make his name to live, died at the age of eighty-four.

Eager to Recite.

One day in school my teacher asked who was the backbone of the American Revolution. I was eager to recite and replied: "The backbone is the spinal cord." At this exclamation the class laughed, to my embarrassment.—Exchange.

Rumor is like butter: once it has been spread you can do nothing more with it.

Did His Best.

Sallie Slim—I saw Jack put his arm around you.

Addie Pose—You didn't either.

Sallie—Well, then, as far around as he could get it.—Boston Transcript.

After Three Physicians Failed

Dodd's Kidney Pills Give Prompt Relief

Here's one of the many unsolicited testimonials which reach us from every section of the United States. Thousands upon thousands have been relieved of their kidney complaints and there is no reason why Dodd's—standard for two generations—won't give you the same prompt benefit.

Mr. B. C. Birchler of Fulda, Ind., writes, "In the year 1905, I was very low with a severe attack of kidney trouble and three noted physicians had given me up expecting death at any moment, but death did not come and I lingered for several months until accidentally one day I found an old Dodd's Almanac in my house which described symptoms exactly as mine. I then procured a box of your pills and took a double dose and the second day actually felt relieved. After a week I felt so good that I was glad to be alive. I continued using them for a time and they cured me.

This was fourteen years ago and I can truthfully say I have never yet been laid up with the same disease. A severe attack of 'flu' last winter affected my kidneys to a certain extent so I bought three boxes of your pills and used them for my whole family with the same good results."

If your dealer can't supply you send 60c in stamps to the Dodd's Medicine Co., Buffalo, N. Y. Tell us the name of your druggist.

BELCHING Caused by Acid-Stomach

Let EATONIC, the wonderful modern stomach remedy, give you quick relief from disgusting belching, food-repeating, indigestion, bloated, gassy stomach, dyspepsia, heartburn and other stomach miseries. They are all caused by Acid-Stomach from which about nine people out of ten suffer in one way or another. One writes as follows: "Before I used EATONIC, I could not eat a bite without belching it right up, sour and bitter. I have not had a bit of trouble since the first tablet."

Millions are victims of Acid-Stomach without knowing it. They are weak and ailing, have poor digestion, bodies improperly nourished although they may eat heartily. Grave disorders are likely to follow if an acid-stomach is neglected. Cirrhosis of the liver, intestinal congestion, gastritis, catarrh of the stomach—these are only a few of the many ailments often caused by Acid-Stomach.

A sufferer from Catarrh of the Stomach of 11 years' standing writes: "I had catarrh of the stomach for 11 long years and I never found anything to do me any good—just temporary relief—until I used EATONIC. It is a wonderful remedy and I do not want to be without it."

If you are not feeling quite right—lack energy and enthusiasm and don't know just where to locate the trouble—try EATONIC and see how much better you will feel in every way.

At all drug stores—a big box for 50c and your money back if you are not satisfied.

"There's a Reason"

A Few Items Which Failed To Arrive in Time Last Week But Still of Some Interest To You.

Emil Lau and family left last week for a visit with relatives and friends in North Dakota.

Miss Hulda Johnson left Monday for Mason City where she is working in the Damon-Igou Store.

John Neuberger and son, Clarence, were business callers at Garner Tuesday between trains.

Chas. Lewis left last week for a visit at the Henry Yahnke home at Garden City, Minn.

C. W. Wiles and Dr. R. M. Thomas returned last Friday from a few days spent in Chicago.

Milton Schaper returned to Iowa Falls Monday to continue his course of study after enjoying his mid-winter vacation with Klemme folks.

W. H. Trafford retuned Tuesday moning from Burlington where he went to attend the furniture show and also to buy up a large stock of furniture for the Wellemeyer store.

Marvin Weigmann, who has been working in the First National Bank for the past month, left Saturday for Des Moines where he will continue his law course.

J. P. Larsen & Sons filled their ice house last week clean up to the shingles. The ice is good this year and it didn't take them long to fill the ice house. They secured the ice from the river west of town.

The G. A. Pabst family left last Thursday for Belmond, Rowan and other points along the Rick Island for a couple of weeks' visit with relatives and friends before leaving for California where they will make their future home.

Ben Schwichtenberg and Earl Kahler loaded their car of goods and shipped out of here last Saturday bound for Becker, Minn., where they will farm the coming year. Their farms are about five miles apart. Next spring will see quite a number of Klemme farmers pushing the plow in the Big Lake, Minn., district.

Barber "Zip" McCullough experienced a little excitement last Friday morning when his hot water tank blew up and nearly scared him out of a couple feet of growth. Evidently the tank had frozen up on New Year's Day and when "Zip" kindled a hot fire under it the next morning the water had to expand one way or the other so it chose to knock out the bottom of the ank. Little or no damage was done excep to give "Zip" a good scare. He has the tank fixed now and is mixing shaves and haircuts as lively as ever.

Protection Against Catarrh.

Any constitutional exercise which improves the circulation and makes the body resistant helps to protect one from catarrh. This is particularly true of all breathing exercises because the effects are beneficial locally as well as constitutionally, says one of the best-known physical culture teachers in New York. So let us teach our children the value of correct and deep breathing, and in doing so we improve our own health and thereby impart cheerfulness and happiness to our home.

The Orange in Spain.

It is considered a very healthful thing to eat an orange before breakfast. But who can eat an orange well? One must go to Spain to see that done. The senorita cuts off the rind with her silver knife; then, putting her fork into the peeled fruit, she detaches every morsel with her pearly teeth and continues to eat the orange without losing a drop of the juice and lays down the core with the fork still in it.—Exchange.

Defining the Heart.

The human heart, always a mystery, has become the subject of further speculation, since a Supreme court justice decided that "nobody can plumb its depths." It has been described as broad and hollow, and the jurist says, in effect, that it is bottomless. One is almost driven to the conclusion that, as was the world before the first heart began to beat, it is "without form and void."

Ordering Meals Electrically.

An electrical system of ordering for lunchrooms, clubs, restaurants and hotels has been devised. You simply press a button which operates an annunciator installed in the kitchen, telling the kitchen hands just what food you want.—Popular Science Monthly.

Local News Items Of Interest to Everybody.

Wallace Pavey was a business visitor at Mason City last Friday.

Mrs. L. H. Yost, of Donnelly, Minn. came Friday for a day's visit at the J. N. Day home.

A few from here attended the dance at Garner last Saturday evening and they report a good time.

Herb Bailey is enjoying a visit from his brother who comes from near Tulsa, Oklahoma.

Notice—All those who are indebted to us kindly call and see us. Gruetznacher Bros. 2w.

Dr Shultz will be at the Klemme hotel from 11:30 to 2:00 on Mondays, Wednesdays, and Fridays.

Mrs. R. A. Jorgenson was a Garner visitor between trains Monday afternoon.

FOR SALE—Some cows, some are fresh and others fresh soon. Chas. Ax. 1-w.

Jacobs & Son have part of a trainload of feed advertised in this issue. Look for the box car in this issue.

Hocum had in a car load of hard coal Monday. Needless to say it went like wild fire.

W. C. Zeisemer of Garner, was transacting business in Klemme on Tuesday.

Mrs. C. V. McCullough, of Garner, came Tuesday evening to pay her son Gerald, and daughter Mildred, a short visit.

Mr. Kahrs, the druggist, believes that Klemme hens should lay more eggs. Read his ad, he tells you there how it can be done.

E. Z. Zeidler is at present in Reno, Oklahoma, visiting with his folks, and is also taking treatments at Wichita, Kansas. He is expected to return to Klemme in about a month.

Mrs. Frank Kluckhohn and two children returned Monday evening from a visit of several days with relatives and friends at Thompson and Miller.

E. S. D. Kahrs is enjoying a visit from his sister, Mrs. Anna L. Johnson who came Monday evening from Pasadena, California, for a couple of weeks' visit with Mr. and Mrs. Kahrs.

Mr. G. H. Ludwig, a brother of Mrs. E. S. D. Kahrs, came last week from Nevada, Iowa, to assist in invoicing the stock of goods at the drug store.

A perfectly adjusted spine cures a "lame back" and insures good nerves, freely circulating blood, and a perfect digestion. Treatment will be given in your home when necessary. Telephone message may be left at the Hotel to be delivered to Dr. R. W. Schultz. tf.

Modern Girl No Hypocrite.

Tom—"When you proposed to her I suppose she said, 'This is so sudden!'" Dick—"No, she was honest and said, 'This suspense has been terrible.'"

Mrs. Wallace Pavey and Miss Lena Coobs were passengers to Forest City last Friday for a visit with friends at that place. We also observed that Verner Lewis bought a ticket for the same place that day.

Miss Mildred McCullough and brother, Gerald, have gone to housekeeping in the rooms over the Kirkwood boarding house. Evidently Mildred's cooking sure agrees with "Zip" for he is actually becoming fat.

Mr. Chas. Gibbs, of Big Lake, Minn., came Monday noon for a couple of days' visit with Klemme relatives and friends. Mr. Gibbs manages to get to Klemme every few months for a visit.

Mrs. E. Z. Zeidler and Mrs. Earl Kahler left last Friday for Big Lake, Minn. Mrs. Zeidler will remain there for a couple of weeks helping Mr. and Mrs. Kahler to get settled in their new home.

Mrs. Richard Baldwin, of Garner, and Mrs. Andrews of Sterling, Washington, who are both cousins of Mrs. George Gruetzmacher, came Monday noon and remained until Tuesday morning visiting with her.

Mrs. Paul Griesemer and Mrs. John Gruetzmacher went to Garner Monday for a visit with relatives. From Garner they went to Mason City Tuesday and returned back to Klemme Tuesday evening.

Fred Blank, assistant agent at the Rock Island, is acting as relief agent at Klemme while thee Klemme agent takes a two-week vacation. Joe White is taking Blank's place during the latter's absence.—Belmond Independent.

Mrs. S. Paul Figi, of Renwick, Iowa, and Mr. and Mrs. Chas. Mark, of Creston, Nebraska, came last Thursday for a short visit at the F. J. Wenck home. The first lady is a sister of Mrs. Menck and the other lady is a cousin.

Mrs. Heuer and two children arrived Tuesday noon from Wisconsin, where Mrs. Heuer has been visiting her folks during the Holidays, for a visit at the Rev. A. H. Meyer home. Mrs. Heuer and Mrs. Meyer are sisters They expect to remain in Klemme for several days.

Elmer Hartbeck is expected to return from Denver, Colorado, some time next week. He has been in the hospital there for the past four months and prior to that time spent six months in a hospital in France. He is one of the many victims of the flu and has not yet fully recovered. He writes that he is now feeling fine.

Miss Mavis Evohn Fuller, a fine ten pound baby girl came Sunday morning to make her home with Mr. and Mrs. Elmer Fuller of this city. According to proud "Daddy Fuller" she is the finest girl he ever saw and takes up a lot of valuable time telling about the wonderful girl From his description we will venture to say that she surely must be a dandy.

E. G. Ell was a business caller at Mason City the fore part of this week

John Etchen went to Garner Monday where he had business at the court house. John thought thee fine weather of the past week was a sure indication of spring and that it was time to get his car out again and he went there to get some new number plates.

Iowa has been honored by President Wilson in the naming of J. P. White as the representative of the miners on the price adjusting commission which grew out of the strike of the coal miners. Mr. White is a native of Lucas county, along with Nathan E. Kendall and others prominently before the public at this time.

It would be will if "Bobby Car" would offer the Ventura correspondent of the Garner Democrat a little hush money. Several times we have seen the following item in the Ventura news—"John Henschen of Klemme visied a lady friend in Ventura Wednesday evening." Of course "Bobby" will deny this, he always does.

E. S. D. Kahrs, the gentleman who bought out G. A. Pabst some time ago, has been busy invoicing for the past week or so, completing that job Tuesday morning of this week. While going over the stock he also arranged it systematically in it's proper order and thus has greatly increased the appearance of the store. Mr. Kahrs is conducting a very up-to-date drug business and we are glad to number him as one of our enterprising business men.

Lester Stille and Carl Suckow have returned from their trip to Louisiana and other southern states. Lester returned las Wednesday. While in the south he also went to Texas to see his bother Harvey. Carl returned a few days later as he took a different route on the way home. They said it was quite a change to step out of an Iowa snow drift and land up where it was so nice and warm that the kids were all going barefooted.

The preliminary work on the paved road program is going on nicely in Hancock county and the board of supervisors will be ready to let the contract about the first of March. It is probable that all the grading on the Norh Iowa Pike will be done the coming year and some of the cement work completed. The paving in Hancock county will run close to Forest City on the Wilson highway and there is some feeling that the local council should extend the paving to meet it. This could be done with a little over 200 yards of paving and would be a great improvement.—Forest City Summit.

Mr. W. A. Rhodes, of Goodell, was a business caller in Klemme Tuesday. While here Mr. Rhodes subscribed to the Klemme Times.

How "Rubbers" Were Produced.

"Rubbers," as Americans have named them, were the invention of Charles Goodyear, father of the man who helped produce the Goodyear welt machine. In 1833 it was found that India rubber, dissolved in turpentine and mixed with lampblack, would give a waterproof surface to leather. But the leather so treated was subject to atmosphere changes, heat causing it to melt and cold to crack. Mr. Goodyear mixed sulphur with the other combination and produced rubber.

"FLU" AT GALT

It is reported that Galt has thirty cases of "flu" in a light form, and during the absence of Dr. Patton, who is at Colfax for treatment, Drs. Jessup and Snug of Dows are caring for the patients. They all seem to be sick for two days and then improve rapidly.—Belmond Independent.

BIG STOCK SHIPMENTS AT KLEMME

Twenty-three car loads of live stock were shipped from the Klemme yards during the past week. Eight car loads were shipped last Wednesday night and Saturday evening almost double the number, or fifteen cars of live stock were shipped from here. Stock shipping the past two weeks has been heavy.

NOTICE, AUTO OWNERS

Automobile owners are hereby informed that the supply of license plates and the metal containers are exhausted, and delivery will be delayed until the supply comes from the factory. Should the delay be extended we will mail receipt to applicants for licenses that have not received the plates.

T. H. Thompson, County Treasurer

TO THE PEOPLE OF IOWA:

I am an active candidate for the Republican nomination for governor at the primaries next June. I base my candidacy upon certain definite principles which I expect to advocate during the campaign and to carry out during my administration, so far as I am able, if elected.

First among these is giving the people of Iowa a businesslike administration of their affairs. I am opposed to the trafficking of political offices to pay political debts, or the use of a public position to build up a personal political machine. Efficiency should be the basis of appointment to public office.—HON. H. M. HAVNER. adv.

Function of Manners.

Manners must adorn knowledge and smooth its way through the world.—Chesterfield.

Gone But Not Forgotten

OBITUARY JOHN B. JOHN BARLEYCORN'S FUNERAL

By Rev. A. E. Buriff

Notwithstanding the severe weather, a crowd that filled the church gathered Sunday night at the Methodist Episcopal church to attend the funeral service of John Barleycorn, as announced in hese columns last week. Instead of the usual draping of black the church was decorated in the national colors with a chart on the wall showing the dates of ratification of the eighteenth amendment by the several states.

There were no flowers, and if there were any mourners they restrained their gief. The only outward manifestation of emotion was an occasional ripple of laughter during the sermon and an outbreak of applause at its close. Music by the orchestra of the church and a well rendered anthem by the choir were pleasing features of the service.

In the course of his address Dr. Buriff called attention to the fact that the same day marked the beginning of the League of Nations and the end of the liquor traffic in the United States. "The adoption of the eighteenth amendment is not the work of a minority," he said, "unless forty-five is a minority of forty-eight. Equally unfounded is the plea that this was foisted upon us while our soldiers were in France. Most of the legislatures that ratified the amendment were elected before any great number of our men went to France."

Conditions twenty-five years ago were recalled and a sort of impromptu post mortem held on the remains to determine just what killed old John. "The fight is not over," the speaker declared. "It takes a man, a city, a state or a nation some time to sober up. We must see that the proper laws are enacted and that they are properly enforced. Then we must move forward to greater victories—to world-wide prohibition."

In conclusion, standing over the imagined casket of John Barleycorn, he addressed the corpse in these words:

"Good bye, John! You are gone but you will not soon be forgotten. The scars of your diabolism are too deep. The heart-strings which you have torn will need time to heal, and for a generation yet the soft and innocent childhood which you have twisted and misshapen will drag its distorted mind, its blackened soul and its crippled body before us.

"Not in vain have you filled our almshouses with 60 per cent of their inmates and our penal institutions with 80 per cent of their criminal inhabitants. You have been the most prolific source of poverty and the fostering father of crime. There is no law which you have not defied and no virtue which you have not besmirched Your crimes and misdemeanors are written on the records of every court. Your greedy fingers have clutched the patrimony of the rich and dragged the shoes off baby feet; you have fostered harlotry and aided and abetted the white slave traffic; you have made alliance with the foreign foe in time of war and in time of peace have battered down the domestic safeguards of our liberties.

"You have been the blood brother of beastiality, the ally of animalism, the purveyor of prostitution and the partner of panders. Associate of anarchy, companion of thieves, instigator of murder, wrecker of homes you have blackened every community which has harbored you, from city to hamlet.

"The sum of your villainies has at last recoiled upon your own head. The prayers and tears of womanhood affected you not; the moans of tortured childhood aroused no pity; the convulsive struggles of your victims only caused you to tighten your grip. At last your own feet have slipped over the edge of the pit that you have digged and your own carcass is about to drop into the abyss. Before the filming eyes of the dying king of France the priest held up the cross and said, 'Son of Saint Louis, ascend to heaven.' Before your eyes I hold not alone the scroll of the constitution of the United States, but the book of the law of God and say, 'Monstrous offspring of Mammon and Lust, son of Moloch, descend into hell!'"

Editor's Note: In Revelations 1:18 we find, "I am he that liveth, and was dead; and, behold, I am alive for evermore, Amen; and have the keys of hell and death."

WOULD PAVE ROAD AROUND WORLD

Iowa has some corn crop this year. The ears of this corn if laid side by side and end to end would pave a road 40 feet wide all the way around the world. The year's crop of 417,000,000 bushels makes quite a lot of corn, and no other state in the union came anywhere near Iowa's production. Illinois, which ranks second, had less than 275,000,000 bushels as compared with Iowa's bumper crop.

LAW SUIT

A preliminary hearing was held at Rowan Tuesday, wherein Henry Sporaa was bound over to the grand jury. The case started by A. Trager who says Sporaa's cattle had been running loose and getting into his fields. After shutting them up Trager waited for the owner to get them. Sporaa appeared and demanded his property, but being unable to obtain them, drew his gun, which is a criminal offense. Authorities were at once notified and an order issued for Sporaa's arrest. —Belmond Independent.

AERIAL EXPRESS DELIVERS EVANSVILLE DAILY PAPER

EVANSVILLE, IND.—The first Evansville newspaper to be delivered by aerial express was the Evansville Courier. At sunrise Sunday, January 11, an airplane left the Evansville aviation field with packages of the issue of the Courier for Oakland City, Petersburg, Washington, and other points along the Evansville & Indianapolis railroad. The air expressman was Roderick Wright, flying the Graham Brothers' Curtiss plane. The newspapers were marked "aerial express."

DO YOU WANT TO HELP THE BAND

Great Duroc Dead

THE GREAT "AVIATOR" HOG MYSTERIOUSLY BURNED TO DEATH AT ALGONA LAST WEEK

"Aviator," one of the best Duroc Jersey Boars in the world, is dead. Lloyd Wellendorf, the owner of the famous hog at Algona, brought the pig to town to show at the sale which was to be held Tuesday night at the sale barns. This was Monday evening. Mr. Wellendorf did not take the hog direct to the sale barn, but thought it best to house the pig over nigh in an old garage building or barn just across the street from the Ford Garage at Algona. Some time during the night the fire alarm was turned in and when men got to the barn it was all in flames, and the entire building was son burned to thee ground. Upon examination it was found that "Aviator" was burned and near his charred body was an empty kerosine can which explained the situation. Someone evidently had a grudge against the owner and took this low down means of seeking revenge. The hog was not for sale, but Mr. Wellendorf had turned down many large offers for the animal, the latest offer being $35,000.00. The loss will be felt not only by Mr. Wellendorf but also by all the Duroc Jersey men as they have ost an almost perfect animal.

FIRST METHODIST EPISCOPAL CHURCH

A. H. Meyer, Pastor

Preaching service Sunday morning at 10:00 o'clock.

Sunday School at the close of the preaching service at 11 o'clock. Epworth League service at 7:30. Preaching service at 8 o'clock. Midweek prayer meeting every Thursday evening at 7:30.

A Successful Sale

GEO. GRIEMAN SMEARED A LOT OF PRINTER'S INK AROUND AND MADE THE DOLLARS ROLL HIS WAY

One of the most successful sales held this fall was the one Geo. H. Grieman pulled off a short time ago. George was in the Times office last Saturday to settle his sale advertising and also to plank down a couple of "bucks" for a renewal subscription. Incidentally we asked him how his sale panned out. "Good" would be putting it mild, "big success" would better fit the result. George says he had three newspapers in the county daub up their sheets with his ad and he says it brought home the bacon. Not slamming the other paper any but George says the Klemme Times was the paper which brought him the best results for his best sales went to farmers from Klemme. He has been in the farming business something like nineteen long years and machinery he bought at that time sold wonderfully, in fact he says he got a good deal more for his machinery than he paid for it. The biggest price paid in Hancock county for a team of horses was paid at the Grieman sale, his big team of sorrels sold for $526. They are dandies and weigh about 1600 pounds each. The cattle also went at top prices as his fourteen head of cows sold for an average price of $111.00 each. George figures that his newspaper advertising netted him several hundred dollars more than he figured he would get. This is only one instance of what advertising will do for a farm sale. You yourself can notice that the well advertised sale goes far better than the one where only a few bills are stuck around.

POLITICIANS, DON'T ASK US FOR FREE ADVERTISING

We presume we are just like the other publishers in the state, getting lots of political advertising in every mail, that is "free" advertising which the candidat for office thinks he can slip by with. Nothing doing with us. If you are a candidate for office and want advertising, so called "editorial mention" and "give me a good send-off" stuff, we have rates to cover the same and gladly will accept your "advertising" on those terms. One man seeking a state office, who does not reside in this county or close by, had the nerve to send us an article which would cover about a column and asking us to please run it in our next issue. He enclosed a dollar for same —which would not even cover the cost of setting the article, let alone the ost of running it. His check adorns our waste paper basket, where it will rest undisturbed, as far as we are concerned.

A MERRY OLD TIME INDEED

Those who did not attend the third number of the lyceum course at the Idle Hour Monday evening missed out on a good thing. Louis Gerhardt and Company sure did know how to entertain and keep the audience laughing from start to finish. Mr. Gerhardt is especially good and is a master in the art of telling funny stories, singing songs, and giving character sketches. He gave us a little advance information in regard to the next number of the course. "Bob" Briggs will be the entertainer and is guaranteed to drive away the worst case of blues. Be sure to hear him tell funny stories and sing humerous songs.

HOP TO IT BAND BOYS

The Klemme band is making rapid strides under the instruction of Mr. Crotty, their leader. They have had two rehearsals now and the majority are also taking private instruction under Crotty, which helps them along in their work. A few of the boys are still waiting for their instruments to arrive before they can begin work. The band can still use a few more players. Those who still wish to join may do so by communicating with R. A. Jorgenson, the president of the band, or C. G. Waterman, the secretary. The Band Boys also wish to thank Mr. Art Wellemeyer for the interest he has taken in the band by raising the necessary funds to carry on the work, and they also thank the business men and others of Klemme who are subscribing to the band fund, without whose support the band could not exist.

The band will be in perfect trim by summer to give a concert once each week.

Wm. Werner Dead

WM. WERNER PASSES AWAY AT GARNER

The sad news of the death of Wm. Werner, former Klemme resident, reached us Monday morning.

Mr. Werner was a victim of the flu last winter which later developed tuberculosis. He was taken to the sanitarium at Fort Dodge in the hopes of checking the disease but it gradually sapped away his life until Saturday when he finally succumbed to the dreaded disease.

Burial was held at Garner Monday and a number of Klemme people attended. He leaves his wife and little child to muron his untimely death. Mrs. Werner has the sympathy of the community in her bereavement.

FRED SCHULDT PULLS DOWN THE BIG MONEY AT MINER SALE

F. H. Schuldt, one of our local thoroughbred hog raisers pulled down the highest price at Miner Bros. Sale which was held at Garner last week. "Marions Golden Lady" is the name of the pig which Mr. Schuldt had on the sale and was sold to E. J. Edwards of Alta, Iowa, for $465 which was the top price of the sale. Fred is one of those men who takes great interest in the Duroc Jersey business and who is making good. He intends to hold a sale of his own next winter and will then have to offer some of the best pigs in this part of the state.

CROTTY RETAINED AS BAND-MASTER

At a meeting of the band Monday evening E. C. Crotty was unanimously elected as band master for the coming year. Mr. Crotty is a high class musician and one who gives his earnest effort in keeping up the musical organization. It is no easy task to instruct and lead a band, especially when he players are made up of busy business men with numerous other obligations that take their time; of housewives, clerks and chattering schoolma'ams.

Britt band concerts have come to be one of the best factors in advertising the town of anything that has taken place in recent years.—Britt News-Tribune.

Lou Snyder was on the verge of marrying Susie Morris here when she up and eloped.

She went away wth a facinating food salesman.

Snyder lives at Shelby and he came over to Oakland in a perfectly customary manner, took his prospective bride's mother, where they secured the marriage license, returned and bought the girl an entire new wardrobe at the department store on Main street and slipped $20 in her purse.

Then the slick salesman appeared and it was all off with Snyder.

He has returned, broken hearted, to Shelby, where he lonely sits in the home he had furnished richly for his bride.

Meanwhile silence envelopes the eloping paid.

The salesman's name is not known sereabouts.—Dows Advocate.

A perfectly adjusted spine cures a "lame back" and insures good nerves, freely circulating blood, and a perfect digestion. Treatment will be given in your home when necessary. Telephone message may be left at the Hotel to be delivered to Dr. R. W. Schultz. tf.

NOTICE OF APPOINTMENT OF EXECUTOR

Putting It Formally.

The four-year-old had just been reproved at the table. He continued to talk cheerfully, though unanswered, to father. After some minutes of soliloquy he turned to mother and remarked: "Your husband doesn't talk very much this noon, does he, mother?" —Harper's Magazine.

Why That Backache?

Why be miserable with a bad back? You can't be happy if every day brings lameness; sharp, shooting pains and a dull, nagging ache. Likely the cause is weak kidneys. You may have headaches and dizzy spells, too, with a weak, tired feeling. Don't delay! Try *Doan's Kidney Pills*. They have done wonders in thousands of such cases. *Ask your neighbor!*

An Iowa Case

N. K. Root, 1103 N. 9th St., Burlington, Ia., says: "Doan's Kidney Pills are fine for pain and lameness across the back. I used them for lumbago and they did me more good than all the remedies I had ever taken. My kidneys were weak and caused me a great deal of trouble, breaking my rest at night. Mornings I was tired and listless. Doan's Kidney Pills removed all the trouble. Doan's strengthened my kidneys and I felt better in every way after using them."

Look for the name Gold Medal on every box and accept no imitation

Speaking of Spades.

"I believe in calling a spade a spade."

"I believe it is the best policy myself, I once tried to pass one off for a club. That's how I got these two fingers shot off."—Louisville Courier-Journal.

GREEN'S AUGUST FLOWER.

Constipation invites other troubles which come speedily unless quickly checked and overcome by Green's August Flower which is a gentle laxative, regulates digestion both in stomach and intestines, cleans and sweetens the stomach and alimentary canal, stimulates the liver to secrete the bile and impurities from the blood. It is a sovereign remedy used in many thousands of households all over the civilized world for more than half a century by those who have suffered with indigestion, nervous dyspepsia, sluggish liver, coming up of food, palpitation, constipation and other intestinal troubles. Sold by druggists and dealers everywhere. Try a bottle, take no substitute.—Adv.

Natural Result.

"A poor man is not in good odor in society." "No wonder, when his is a cent-less life."

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

An electric pen has been invented by a native of India that carbonizes paper over which it passes.

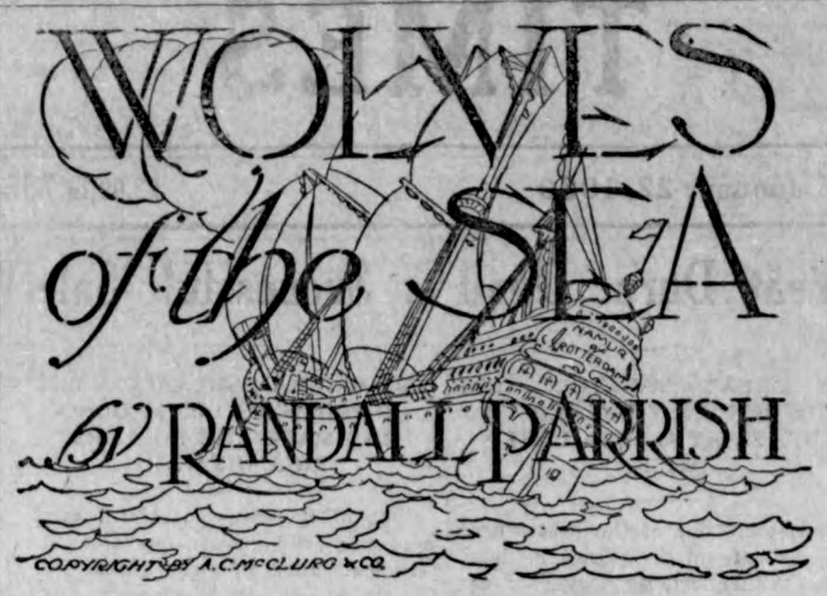
WOLVES of the SEA

By RANDALL PARRISH



COPYRIGHT BY A. C. McCLURG & CO.

CHAPTER XXIII—Continued.

—16—

It was as though my brain snapped back into ascendency. I was no longer a raging fury, mad with the desire to kill, but cool-headed, planning escape. Before a hand could reach me in restraint, I sprang backward and ran. I stumbled up the stairs leading to the companion. The vague glimmer of daylight showing through the glass, revealed the presence of Watkins. I heard him dash the door wide open, call to those on deck, and then saw him wheel about to again confront the devils plunging blindly forward toward us through the dark cabin. We could hold them for a time at least, yet I had the sense to know that this check would prove only temporary. They out-numbered us ten to one, and would arm themselves from the rack. Yet the greater danger lay in the possible disloyalty of my own men. A dozen of us might hold these stairs against assault, but treachery would leave us helpless. If one among them should steal below forward, and force open the door from the forecastle, we would be crushed between two waves of men, and left utterly helpless. I saw the whole situation vividly, and as quickly chose the one hope remaining.

"Watkins," I called sharply back over my shoulder. "Get the boats ready and be lively about it. We'll hold these fellows until you report. The two quarterboats will hold us all. Knock out the plugs in the others. See that Miss Fairfax is placed safely in the afterboat, and then stand by. Send me word the moment all is ready."

I had glimpse of the thick fog without as he pushed through the door, and of a scarcely distinguishable group of men on the deck. Those about me could only be located by their restless movements. I stepped down one stair conscious of increasing movement below, the meat cleaver still gripped in my hands.

"Any of you armed with cutlasses?"

"Oui, m'sieur, Ravel DeLasser."

"Stand here, to right of me, now another at my left. Who are you?"

"Jim Carter, sir."

"Good; now strike hard, lads, and you others be ready. The cabin is full of 'em, and it is your life and mine in the balance. If we can get away in this fog they'll never find us, but we've got to hold them here until the boats are ready. I killed their captain, Sanchez. That is where we've still got them, without a leader."

"But they've got arms?"

"Only hand weapons," broke in Carter. "There's ball in the bandoliers, but no powder. I wus goin' ter break open a cask, but Estada put me at another job."

"Then that leaves us on even footing, lads, we ought to be equal to them with the cold steel."

CHAPTER XXIV.

In Clasp of the Sea.

The sounds of voices and of moving bodies were plainly discernible, but the darkness was too dense below to permit the eye perceiving what was taking place. The rattle of steel told me some among them had reached the arm rack. There followed the crash of wood as though the butt of a gun had splintered a door panel. Then a voice pierced the babel. My mind gripped the meaning of it all; they had found a leader; they had released Manuel Estevan. Now the real fight was on! I could hear the fellow question those about him, seeking to learn the situation.

"Who have cutlasses? So many! a dozen form with me. Now bullies, they are on the stairs there, and that is the only way to the deck. Now then—to hell with 'em!"

We met them, point to point, our advantage the narrow staircase and the higher position; theirs the faint glimmer of light at our backs. The first rush was reckless and deadly, the infuriated devils not yet realizing what they faced, but counting on force of numbers to crush our defense. Manuel led them yelling encouragement, and sweeping his cutlass, gripped with both hands, in desperate effort to break through. DeLasser caught its point with his blade while my cleaver missing him with its sharp edge, nevertheless dealt the fellow a blow which hurled him back into the arms of the man behind. I saw nothing else in detail, the faint light barely revealing indistinct figures and gleam of steel. It was a pandemonium of blows and yells, strange faces appearing and disappearing, as men leaped desperately at us up the steps, and we beat them remorselessly back. I saw nothing more of Manuel in the fray, but his shrill voice urged on his fellows. It was strike and parry, cut and thrust. Twice I kicked my legs free from hands that gripped me and DeLasser fell, a pike thrust through him. Who took his place I never knew, but a stout fighter the lad was, wielding his cutlass viciously, so that we held them, with dead men littering every step to the cabin deck.

But they were of a breed trained to such fighting, and the lash of Manuel's tongue drove them into mad recklessness. And there seemed no end of them, sweeping up out of those black shadows, with bearded or lean brown savage faces, charging over the dead bodies, hacking and gouging in vain effort to break through. I struck until my arms ached, until my head reeled, scarcely conscious of physical action, yet aware of Manuel's shouts.

"Now you hell-hounds—now! once more, and you have them. Santa Maria! you've got to go through, bullies—there is no other way to the deck. Rush 'em! That's the way! Here you—go in outside the rail! Broth of hell! Now you have him, Pedro!"

For an instant I believed it true; I saw Jim Carter seized and hurled sideways, his cutlass clashing as it fell, while a dozen hands dragged him headlong into the ruck beneath. But it was only an instant. Before the charging devils could pass me, a huge figure filled the vacant space, and the butt of a gun crashed into the mass. It was the Dutchman, Schmitt, fighting like a demon, his strength that of an ox. They gave way in terror before him, and we went down battering our way, until the stairs were clear to the deck, except for the dead under foot. When we stopped, not a fighting man was left within the sweep of our arms. They scurried back into the darkness like so many rats, and we could only stare about blindly, cursing them, as we endeavored to recover breath. Schmitt roared like a wild bull, and would have rushed on, but for my grip on his shirt.

"Get back, men!" I ordered sharply. "There may be fifty of them yonder. Our only chance is the stairs."

We flung the bodies on one side, and formed again from rail to rail. Below us there was noise enough, a babel of angry voices, but no movement of assault. What they would do next was answered by a blaze of light, revealing the silhouette of a man, engaged in touching flame to a torch of hemp. It flung forth a dull yellow flare, and revealed a scene of horror. Our assailants were massed halfway back. Between us, even ten feet from the stairs, the deck was littered with bodies, ghastly faces staring up, with black stains of blood everywhere. It was Manuel's hand which had kindled the light, and the first croak of his voice told his purpose.

The First Rush Was Reckless and Deadly.

"Now you skulking cowards," he yelled pointing forward, "do you see what you are fighting? There are only five men between you and the deck. To hell with 'em! Come on! I'll show you the way!"

He leaped forward; but it was his last step. I sent the cleaver hurtling through the air. I know not how it struck him, but he went down, his last word a shriek, his arms flung out in vain effort to ward off the blow. Schmitt roared out a Dutch oath, and his gun, sent whirling above me, crashed into the uplifted torch. Again it was black night, through which the eye could perceive nothing. Even the noise ceased, but a hand gripped my shoulder.

"Who are you?"

"Watkins. The boats are ready. The one forward has pushed off loaded. The afterboat is alongside. There is such a fog, sir, yer can't see two fathoms from the ship. The girl is in the boat, but LeVere ain't. The mate slipped out o' sight in the fog. He somewhere aboard."

"Never mind him; the fellow can do no harm now. Move back slowly lads. Schmitt and I will be the last ones out."

We closed the companion door as silently as possible and for the moment there was no sound from within to show that our cautious withdrawal had been observed. I stared about, but was able to perceive little beyond the small group awaiting my orders. The fog clung thick and heavy on all sides, and it was impossible for the eye to penetrate to either rail. Fortunately there was no weight of sea running.

"There is nothing more to keep us aboard lads. Stow yourselves away and hang on; I'll wait here until you are all over."

They faded away into the mist, dim spectral figures, and I remained alone, listening anxiously for some hostile sound from below. Satisfied that the lads were safely over the rail and the decks clear, I turned toward the ship's side. As I did so a yell reached my ears from the blackness below—the hounds had found voice.

I ran through the fog in the direction the others had disappeared, and had taken scarcely three steps when I collided against the form of a man, whose presence was not even noticed until we came together. Yet he must have been there expectant and ready, for a quick knife thrust slashed the front of my jacket, bringing a spurt of blood as the blade was jerked back. Even as my fingers gripped the uplifted wrist, ere he could strike the second time, I knew my antagonist. I knew also this was a fight to the death, to be terminated before that unguarded crew below could attain the deck. It was LeVere's life or mine, and in the balance the fate of those others in the waiting boat alongside. The knowledge gave me the strength and the ferocity of a tiger. I ripped the knife from his fingers, and we closed with bare hands, his voice uttering one croaking cry for help as I bore in on his windpipe. He was a snake, a cat, slipping out of my grasp as by some magic. At last I had him against the rail, the weight of us both so hard upon it that the stout wood broke, and we both went over, grappling until we splashed into the water below. The shock loosened my hold; as I fought a way back to the surface I was alone. My strength began to fail, hope left me as I sank deeper and deeper into the remorseless grip of the ocean. I was not afraid; my lips uttered no cry, no prayer—I drifted out into total unconsciousness and went down.

CHAPTER XXV.

The Open Boat.

I came back to a consciousness of pain, unable at once to realize where I was, or feel any true sense of personality. Then slowly I comprehended that I rested in a boat, tossed about by a fairly heavy sea; that it was night and there were stars visible in the sky overhead. I stared at these, vacant of thought, when a figure seemed to lean over me, and I caught the outline of a face, gazing eagerly down into my own. Instantly memory came back in a flash—this was not death, but life; I was in a boat with her. I could not move my hands, and my voice was but a hoarse whisper.

"Mistress Fairfax—Dorothy!"

"Yes—yes," swiftly. "It is all right, but you must lie still. Watkins, Captain Carlyle is conscious. What shall I do?"

He must have been behind us at the steering oar, for his gruff, kindly voice sounded very close.

"Yer might lift him up, miss," he said soberly. "He'll breathe better. How's that, Captain?"

"Much easier," I managed to breathe. "I guess I am all right now. You fished me out?"

"Sam did. He got a boat hook in your collar. We cast off when yer went overboard, and cruised about in the fog hunting fer yer. Who was it yer was fightin' with, sir?"

"LeVere."

"That's what I told the lads. He's a gonner, I reckon?"

"I never saw him after we sank. Are all the men here?"

"All but those in the forward boat, sir. They got away furst, an' we ain't had no sight ov 'em since. Maybe we will when it gets daylight. Harwood's in charge. I give him a compass, an' told him ter steer west. Wus thet right?"

"All I could have told him. I haven't had an observation, and it is all guesswork. I know the American coast lies to that direction, but that is about all. I couldn't tell if it be a hundred, or a hundred and fifty miles away. I must have been in bad shape when you pulled me in?"

"We thought you was gone, sir. You was bleedin' some, too, but only from flesh wounds. The young lady she just wouldn't let yer die. She worked over yer for two or three hours, sir, afore I hed any hope."

Her eyes were downcast and her face turned away, but I reached out my hand and clasped her fingers. The mystery of the night and ocean was in her motionless posture. Only as her hand gently pressed mine did I gain courage, with a knowledge that she recognized and welcomed my presence.

"Watkins says I owe my life to you," I said, so low the words were scarcely audible above the dash of water alongside. "It will make that life more valuable than ever before."

(TO BE CONTINUED.)

French photographers have developed a process for treating negatives by which the effect of stereoscopic relief is produced in pictures.

FARM POULTRY

FINE POULTRY RECORD MADE

Satisfactory Results Reported From Number of Co-operative Shipments in Arkansas.

(Prepared by the United States Department of Agriculture.)

The Poinsett county (Ark.) agricultural agent and home-demonstration agent report satisfactory results from a number of co-operative shipments of chickens marketed by farm women during the early summer. Shippers listed their poultry in the same manner as is employed where hogs or cattle are shipped co-operatively, using Monday as shipping day. All the poultry was shipped by express from 60 to 280 miles to the Memphis and St. Louis markets.

A total of 1,573 pounds of poultry was loaded at the shipping point in July; the total weight at destination was 1,411 pounds, the aggregate shrinkage in transit amounting to 162 pounds, or an average of 10.3 per cent. The cost of marketing, including express, commissions, coop expenses, etc., but not inclusive of shrinkage, was 4.4 cents a pound, while the cost of marketing a pound, including the drift over the railroad was: Hens, 7.5 cents; cocks, 6.3 cents; and springers, 8.5 cents.

The total gross sales amounted to $421.07, which left a net return to the shippers of $352.36 after the shipping expenses of $68.71 were deducted. The market value of this entire shipment on the local market was only $268.89, so that the net gain through co-operative marketing aggregated $89.47, or a total of 34 per cent. Twenty-one shippers participated.

PAYS TO BANISH LOAFER HEN

In Recent Culling Campaign in Indiana 345 Out of 1,222 Fowls Were Discarded.

(Prepared by the United States Department of Agriculture.)

The Bartholomew county (Ind.) agricultural agent reports that a total of 1,222 hens were handled in a recent culling campaign and of this number 345, or 28 per cent, were discarded as poor layers. The entire number of hens, 1,222, laid 2,368 eggs the week before culling, while the week after they had been culled the 887 fowls left on the farms laid 2,292 eggs. This explains why it was expedient management to rid the flocks of the 345

County Agent Discarding "Boarder" Hens.

lazy loafers which laid only 34 eggs the week after they had been separated from their former mates, despite the fact that they received the same amount of feed as the profitable producers. The percentage of egg production the week before culling was 27.6, while the week after it was 36.8 per cent.

A POULTRY HOUSE

Should have sunshine.
Should be dry.
Should have ventilation.
Should have no drafts.
Should have plenty of floor space.

PREPARE CULLS FOR MARKET

Among Other Fowls to Be Disposed of Are the Old and Weak and All of the Scrubs.

(Prepared by the United States Department of Agriculture.)

Cull out and prepare for market all fowls, old or young, which appear weak, slow, or dull; fowls with drooping tails, rough plumage, or crow-shaped heads; all scrubs except those which have laying points; all hens which molt early, and all males except those strong, vigorous, and of a pure type desired for breeding.

Sure Relief

TOO WEAK TO DO ANYTHING

A Serious Feminine Illness Remedied By Lydia E. Pinkham's Vegetable Compound.

Casco, Wis.—"After the birth of each of my children I had displacement and was so weak I couldn't do anything I found a book about Lydia E. Pinkham's Vegetable Compound so thought I would try it, and after taking it I soon felt better. That was fifteen years ago and I have felt well ever since except that I had a slight attack of the trouble some time ago and took some more of your Compound and was soon all right again. I always recommend your medicine and you may publish my testimonial for the benefit of other women."—Mrs. JULES BERO, Jr., R. 1, Box 99, Casco, Wis.

Lydia E. Pinkham's Vegetable Compound, made from native roots and herbs, contains no narcotic or harmful drugs, and today holds the record of being the most successful remedy for female ills in this country, and thousands of voluntary testimonials prove this fact.

If you have the slightest doubt that Lydia E. Pinkham's Vegetable Compound will help you, write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass., for advice. Your letter will be opened, read and answered by a woman, and held in strict confidence.

What Is Rheumatism? Why Suffer from It?

Sufferers Should Realize That It Is a Blood Infection.

Doubtless like other sufferers, you have often asked yourself this question, which continues to remain unanswered.

Science has proven that Rheumatism is caused by a germ in your blood, and the only way to reach it is by a remedy which eliminates and removes these little pain demons.

S. S. S. has been successfully used for Rheumatism for more than fifty years and many voluntary testimonials are on file from those whom it has benefitted. Try it to-day, and you will find yourself at last on the right track to get rid of your Rheumatism. For treatment of your individual case, address Chief Medical Adviser, Swift Specific Co., Dept. 43, Atlanta, Ga.

PENNIES GROW INTO NOTES

Interesting Connection Between the Extremes of Currency in Commonwealth of Australia.

Toward the end of each year pennies and halfpennies go by the hundred thousand into Australian children's money boxes and are held back by big business firms in anticipation of the coming inflow of customers. To cope with the demand, the Sydney and Melbourne mints have been steadily at work since June last year. In four months 1,600,000 new pennies and 300,000 new halfpennies were sent into circulation in Victoria alone. It is equally interesting to note that half the total commonwealth note issue consists of £1,000 notes, of which there are more than 25,000 notes in circulation, as against the 13,000 odd £100 notes. There are about 13,500,000 £1 notes, and the total commonwealth note issue is stated as £55,269,719. In a vigorous young commonwealth the connection between the £1,000 note and the newly minted copper in the child's money box is not difficult to imagine.

Question of Etiquette.

Jimmy had been reprimanded severely for striking his little playmate, his mother trying to explain to him that it wasn't ever polite to treat a guest that way. After the playmate had gone home Jimmy said: "Is there a politeful way of fighting when any one calls you names?"

"Did he make any important discoveries?"

"Well, he says he found a race of people so uncivilized that they had never even heard of moving pictures."

OIL ROMANCE NEARS ITS END

Production, of Course, Will Go On, But It Will Be Prosaic in the Extreme.

There are vast deposits of shale in a number of our Western states. Colorado, it is calculated, can be made to produce 200,000 barrels of oil a day for 800 years. The significance of that statement may best be appreciated by reflecting that such a rate of production, if maintained for a single year, would surpass the tidal performance of even the great Cushing field.

And who will presume to limit the future source of oil to shale? In one form or another prospecting goes on ceaselessly.

No oilless age awaits us; but the passing of the drills and derricks may occasion a sigh. The "excitements" which conscript the soldiers of fortune, where foregather the clans of varied circumstance, the multi-colored obligations with their clamor of sudden affluence and their silences of the baffled—all this will have vanished completely as the luck of a thousand roaring camps. We shall have oil, produced as per schedule, its records preserved in prim, respectable ledgers, but the romance of oil, even now, swings to finis.

Her Specialty.

"That quiet little woman over there is a wonder."

"What's she done?"

"That's it; she's quiet."

THE BUTTERFLY

By JACK LAWTON.

(Copyright, 1920, Western Newspaper Union)

The sun room of the great hotel was filled with guests upon a certain fall morning.

When the black-haired girl in daring but becoming crimson entered the room, there was, for a moment, a lull of expectancy in the murmured voices.

"Who," asked a certain fine-looking man, "is that?" He leaned forward alertly as the crimson-clad figure passed the couch upon which he and a fair companion were seated.

The girl questioned raised supercilious eyebrows. "That," she replied, "is the grand dowager's new companion-secretary. Rather dashing for her position, don't you think? And at present the sensation of the hotel. Mrs. Mills-Forbes, it seems, accepted hastily this unknown young woman's services. Marietta May—charmingly unusual name, you see—presented herself in answer to Mrs. Forbes' advertisement with but one recommendation—that of the daughter of a former family of unquestioned standing. This formerly well-known young woman has been, since the death of her father and the unfortunate ending of his business career, in humble circumstances. In fact, no one knows, or perhaps no one has troubled themselves to ascertain, just what has become of Celia Sanders. But her word still imbues confidence. So—Mrs. Mills-Forbes engaged Marietta May upon the strength of that recommendation, which may have been, for all we know, a forged letter. However, the companion-secretary is at present under suspicion of having stolen—not only a valuable necklace of her employer's but a wonderful string of pearls as well, belonging to another habitue of this hotel. The jewelry was found missing from the guest's room one evening, having been taken during a ballroom affair when Miss May was the only person remaining upon that floor of the building. A plainly marked handkerchief of hers, crumpled and lying in the very secret drawer from which the pearl necklace was taken, was the first clue to the culprit. As there was no actual proof as to the beautiful Marietta's guilt, it was decided not to put her upon her guard with an accusation, but to have her secretly watched.

His eyes followed the dark-eyed, attractive face of the girl suspected, regretfully as his chatty informant left him with a nodded, "Good morning." Beneath all the bravery of the companion's attire, her eyes seemed to gaze wistfully from her white face. "A pity!" John Calvert muttered, while for the first time he became aware of a small, brown-clad figure, seated upon a wide-cushioned hassock almost directly at his feet.

"You are sorry for Miss May?" she asked in a swift, soft tone. "You doubt the evidence of her guilt?"

"I am inclined to doubt it," Calvert replied. "Her face seems to express patient suffering, a sort of resigned martyrdom to misunderstanding."

Impulsively the little figure before him arose, the girl held out her hand. "It is true," she said breathlessly, "Marietta May is misunderstood, misrepresented. All her life has been that way. She is good. She tries to do her best, even that scarlet dress which she wears and which attracts so much unkind criticism, is worn to gratify old Mme. Forbes' whim. She likes gay colors about and cannot wear them herself, but do you think that she troubles to explain this? No."

When he returned from business that evening the hotel was in commotion.

"What is it?" he asked of the girl who had ben his former informant, and she told him.

"Such a surprising document," she began. "You remember about the lost jewels and the companion-secretary under suspicion? Well, she has been proven innocent and the culprit—whom do you think? No less a person than the great Mme. Forbes herself. She possessed an insane desire, it appears, for the pearl necklace of her friend, and after having taken it, decided to allow the blame to fall upon Miss May. For this reason she gave the hue and cry about her necklace also, and left a handkerchief belonging to her companion lying in plain view in the drawer where her friend's necklace had reposed. Isn't it scandalous?"

"Shameful!" Calvert emphatically agreed.

"But who," he asked, "discovered the real culprit?"

The girl pointed across the room to where a small creature sat at work upon a golden butterfly.

"This is the climax of the sensation," she said. "When Celia Sanderson heard of the accusation of her friend, she came here and begged to be allowed secretly to unravel the mystery. So she has sat among us, listening, waiting, absorbed apparently in her embroidery, yet ever alert for a clue. She found it yesterday when Mrs. Mills-Forbes boastfully exposed her knowledge of pearls and her passion for them. When madame was absent from her room it was searched and the pearls found, concealed in a hidden pocket. The discovery was unbelievably simple, but it took little Golden Butterfly to catch the clue."

"Thanks," said John Calvert briskly.

He walked across the room to where the small girl sat weaving her golden threads.

"Come," he said gently, "I want to talk to you."

And with her swift, responsive smile Celia Saunders obeyed.

WAS BAD OMEN

Presence of Thirteenth Ship Now Mystery of the Sea.

Its Appearance Under the Circumstances Always Unaccountable and Death Twice Claimed the First Man to Sight It.

The "thirteenth ship" remains among the mysteries of the war. I have never heard any one try to explain it, says "Jackstaff" in the London Daily Mail. Even the most matter-of-fact people appear content to state facts as they are known and leave it at that.

When the Norwegian convoy that was attacked by an enemy raiding force in November, 1917, left port it consisted of 12 ships. Later a thirteenth ship was added—or added itself. No one actually saw it join, no one in the end saw it leave.

Just before the fight Lieutenant Commander Fox of the Mary Rose, counted and reported 13 ships where there should have been only 12. Thirteen there were at the beginning of the fray and only 12 when it ended. The stranger vanished as mysteriously as she appeared. At least that is what eyewitnesses say.

It will be within every one's recollection that the raid resulted disastrously for us. Among our losses was the Mary Rose, the vessel that first sighted and reported the thirteenth ship.

Can any one suggest an explanation of the occurrence? I have no theory to put forward. But here is a somewhat similar war happening within my own personal experience:

One evening in the bay of Biscay four of us were standing on the bridge of a small warship watching the other vessels of the squadron.

"Look, there are three trawlers over there now," said one of my companions pointing to starboard.

"Impossible," declared the skipper through the chart house window. "All ships are in station and there are only two there. You can't see straight!"

"But there are three!" persisted the first speaker, and we others corroborated him, the signalman adding, "I can't make her out, sir; she doesn't seem to belong to our crowd."

Out from the chart house came the skipper and joined the little group who were watching the stranger. Whoever she might be or wherever she might have come from, the one undoubted fact was that there she lay, rolling steadily along between the "double-ender" and the tubby old trawler that had been our familiar companions during many days.

While we were speculating as to the stranger's identity our "snottie" gasped out an astonished "Why, she's gone!"

And gone she had! We looked carefully to see whether she had become hidden behind one of her companions. But no; the stranger disappeared as eerily as she came, and we could not understand how. Most of us attached little importance to the occurrence. The skipper took a different view of it.

"It wasn't a ship at all," he declared gravely, "but a warning that before the year is out the sea will claim one of us."

We laughed at his prophecy. Yet it is a fact that before the year was out the sea had claimed the man who first sighted the mysterious ship!

Is there any explanation?

"Sergeant-Majorism."

The war has been responsible for many new words, and the term "sergeant-majorism" conveys a meaning which is well understood not only in the British army but by the average civilian, though not always by this title. A good sergeant major is invaluable in the army, and it is the ambition of nearly every soldier to rise some day to the dizzy heights of a warrant officer. The sergeant major has a certain amount of power, and sometimes tries to make things uncomfortable for those who do not "bow down" before him. Unfortunately, the type of person who flaunts his petty powers in one's face is not confined to the army, and because there are today few people who have not met with this type, the term "sergeant-majorism" has, not unnaturally, come into more or less general usage.—Christian Science Monitor.

Glass Houses.

The Filipino delegate, Dr. Juan Gomez, said at a Washington tea:

"I overheard two ladies talking about us Filipinos the other day.

"'Those Filipino delegates are lovely,' the first lady said, 'but as a class the Filipinos are horrid. Do you know, my dear, the Tagalogs actually buy their wives?'

"'Fancy! How awful!' said the second lady. 'By the way, love, your beautiful daughter's marriage to Mr. Gobsa has been postponed to when?'

"'Till Gobsa is up and about again,' the first lady answered. 'The dear old thing, you know, has had his second stroke.'"

Sad Case.

Mrs. White—Why, what is the matter?

Mrs. Green—My husband did not return home last night and I'm afraid he's starved to death because he had only $100 with him.—Judge.

Worse.

"There are no more plain drunks now."

"So much the better."

"So much the worse. They're all victims of fancy recipes."

PISO'S

INDIGESTION
Caused by
Acid-Stomach

Millions of people—in fact about 9 out of 10—suffer more or less from indigestion, acute or chronic. Nearly every case is caused by Acid-Stomach.

There are other stomach disorders which also are sure signs of Acid-Stomach—belching, heartburn, bloat after eating, food repeating, sour, gassy stomach. There are many ailments which, while they do not cause much distress in the stomach itself, are, nevertheless, traceable to an acid-stomach. Among these are nervousness, biliousness, cirrhosis of the liver, rheumatism, impoverished blood, weakness, insomnia, melancholia and a long train of physical and mental miseries that keep the victims in miserable health year after year.

The right thing to do is to attack these ailments at their source—get rid of the acid-stomach. A wonderful modern remedy called EATONIC now makes it easy to do this.

One of hundreds of thousands of grateful users of EATONIC writes: "I have been troubled with intestinal indigestion for about nine years and have spent quite a sum for medicine, but without relief. After using EATONIC for a few days the gas and pains in my bowels disappeared. EATONIC is just the remedy I needed."

We have thousands of letters telling of these marvelous benefits. Try EATONIC and you, too, will be just as enthusiastic in its praise.

Your druggist has EATONIC. Get a big 50c box from him today. He will refund your money if you are not satisfied.

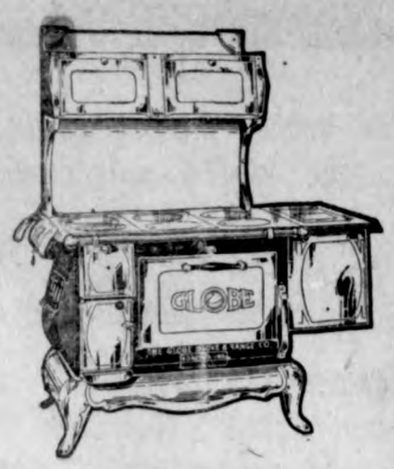
The Supreme Globe

The most Beautiful Cast Range in America



"Less Fuel - More Heat"

Even if the Supreme Globe were not the most beautiful range in America, it would still be the best range for you or any housewife. For it cuts your coal bill--cuts it to a surprising extent--and gives you more good, wholesome meals with less fuel.

The secret is in the fire box. It is so constructed that every bit of smoke and gas is consumed, The heat does not go up the chimney as black smoke, but is turned into heat *right in the fire box.*

Of course this keeps the stove clean. Soot and dirt does not accumulate and clog the flues. The top of the range is not smudged, but always remains clean and bright.

The Klemme Times

IOWA PRESS ASSOCIATION

R. A. JORGENSON, Publisher

Local News Items Of Interest to Everybody.

Frank and Charlotte Miller left last Friday for a week's visit with Owatonna, Minn., relatives and friends.

Fred Blank returned to Belmond Monday. He has been the acting agent here during Mr. Barr's vacation

Barney Miner, of Garner, was transacting business in Klemme Monday between trains.

Mr. and Mrs. Oscar Musfelt, of Clarion, came last Friday for a visit at the Fred Musfelt home here.

W. C. Gast, of Garner, was a business caller in Klemme last Saturday between trains.

Mr. and Mrs. W. J. Hampell returned Saturday from a week's visit with relatives and friends at Cedar Rapids.

Idle Hour, next week, three days beginning Wednesday, Jan. 28, good comedy dramas, not picture shows. ad

Alvin Freie returned to Rockwell City, Iowa, last week, where he will continue work on the dredging machine.

Martin Jensen, John Bachman, Herman Beeke and Tom Nelson were among those who shipped their cattle Saturday thru the Shipping Association.

Coming—"The Soldier and the Spy," a four act military play by a good company. This is not a picture show. adv.

Mrs. Heuer and children, who have been visiting at the Rev. Meyer home, left last Thursday for their home at Dows.

Mr. Geo. Ludwig, who has been assisting at the E. S. D. Kahrs drug store for the past two weeks, while they were invoicing, returned to his home at Nevada, Iowa, last Thursday.

Louie Streiby and family have been at Garner for the past week or so where Louie is assisting at the Larsen Meat Market while the manager, Matt Edmundson, is taking a vacation

Clarence Neuberger made a trip to Mason City and Waterloo yesterday and told us that he would not be back for a week. We did not learn the young lady's name who he is undoubtedly going to visit.

Olaf Brynteson left Tuesday noon for Minneapolis where he will take in a Lumbermen's Convention which is in session there this week. During Ole's absence the yard is being run by Marlin Croner.

Mr. and Mrs. M. O. Barr returned to Klemme last Wednesday after about three weeks' visit with relatives and friends in Ohio. They took their dog, "Nigger" with them and coming back he was shipped by express, but did not get here until two days later. "Nigger" had a real appetite when he got here and looked as tho he didn't enjoy his vacation very well.

A few evenings ago a couple of young men near Klemme and their sweethearts took in a basket social. On the way home the horses hitched to the cutter became frightened at a rapid succession of smacks, ran away, overturned the cutter and hit for home. The two couples enjoyed a nice quiet walk by moonlight the rest of the way home.

Mr. and Mrs. Will Johnson and family of Klemme, were over Sunday visitors at the Hoffman home. The two families are old friends, having lived neighbors in Illinois where Mesdames Johnson and Hoffman went to school together.—Kanawha Reporter.

Chris Schaefer and two sons, Emery and Alvin, left Tuesday for Des Moines, where the boys will enter the Methodist hospital to undergo an operation for hernia. Elmer Schaefer also went with them to the same place where he will have his appendix removed.

Two hundred and forty dollars were raised in Hancock county by the sale of the Red Cross Christmas seals. Half of this was sent to the State Tuberculosis Society and half has been deposited in a local bank and may be drawn upon for help in any cases of tubercular trouble in the county.—Garner Democrat.

One man from Goodell was especially unfortunate in their recent fire. He lost his teeth, and was in Garner Friday to get some new ones. He didn't say, but we suppose the ones he lost were false.—Garner Signal.

Mr. and Mrs. Jay Griggs returned from Fort Dodge last Friday where Mrs. Griggs had been called several days before by the death of her youngest sister, Mrs. McCall. Acute pneumonia was the cause of Mrs. McCall's sudden and untimely death.

Joe Johnson, Philip Bock, Hod Lawhorn and George Albers and son intended t leave Tuesday evening for Winfield, Kansas, but before they started they received word that the excursion of land-seekers would be postponed until Saturday as Kansas and Oklahoma were being visited by a heavy rain storm which would prevent the party from going out into the country.

The writer had business at Spencer last Thursday, and we were surprised to find that there was much less snow to the west of us. From Algona west cars were running everywhere, and at Emmetsburg a liveryman told us that he had done livery driving every day this winter. All the roads are passable for cars, while here it is almost impossible to get through even on the main roads.—Garner Signal.

Ed. Schaefer, Chris Schaefer, Mrs. John Gruetzmacher and Mrs. P. M. Griesemer left last Friday afternoon for Charles City where they attended the funeral of Mrs. Eli Schaefer held there the following day. Mrs. Eli Schaefer is a sister-in-law of the first three parties mentioned. She is well known here in Klemme for a number of years ago Mr. Eli Schaefer was running a general sore in the building now occupied by the Kirkwood family The party returned to Klemme Monday evening.

Iowa News

Items of Interest Summarized for Busy Readers .:.

Every part of Fayette county was represented at the annual meeting of the Farm Bureau held in Fayette recently.

During the recent Farm Bureau drive in Lucas county more than 70 farmers signed up for a life membership in the Farm Bureau.

A total of 60,000 Red Cross stamps were sold in Burlington and Des Moines county during the holiday season. The amount sold was larger than the average year.

The city of Des Moines completed and paid for $1,000,000 worth of construction in the fiscal year 1919, according to a report prepared by Karl C. Kastberg, city engineer.

Large quantities of grass seed sold to Poweshiek county farmers last year were found to be full of foul weed seed. County Agent C. F. Fawcett discovered this and had the seed analyzed at Iowa State College.

The new sales pavillion by the Breeders' Association of Benton county is proving a popular idea with the men who have cattle for sale. A series of combination sales are now being planned for the winter.

Tuberculosis is fast giving away before attacks made upon it by state and madical authorities, according to Dr. A. E. Kepford of the state bureau for the prevention of tuberculosis. Tuberculosis is a scotched snake," said Dr. Kepford. We believe that we have it on the down grade in Iowa.

According to present plans of the Iowa highway commission 1,536 miles of roads, about one-fourth of the entire road system in the state, will be improved in 1920. The plans were made public in the annual report of the commission filed with Governor W. L. Harding, and published recently.

At the recent farm institute held at Walker, Miss Mae Baxter, school nurse, said that out of the 1450 school children in Linn county whom she has examined in the course of her work, she found 1000 of them defective in some way. Miss Baxter addressed the institute on "Health of Our Children."

The Des Moines Union Stock Yards Co., recently organized, has taken over the old Talbot Stock Yards at East 20th and Maury streets Des Moines. It is their intention to erect a thoroly up-to-date stock yards similar to those in large packing centers, enabling efficient handling of large shipments of cattle, hogs sheep, horses and mules.

County Agent Maakestad says Kossuth county farmers who pooled their wool have shown what can be done by cooperation. Thirty-three men shipped 9000 pounds from Swea City last summer and word received recently states that it was sold at an average of 62c per pound. Commissions and freight taken from this leaves a net price of 59c.

Fifteen boys finished the calf club work in Poweshiek county last year and kept accurate records. Their calves sold recently at a sale held in the county for an average of $214 each. Fourteen of these calves were exhibited at the state fair and 13 of them won prizes, including three championships. About the same number of boys are being entered in the calf club for 1920.

W. F. Lindsey, of Leon, says that W. A. Allbaugh sold a wagon load of pop corn that Walter Dunham had raised on the Cale Browning farm east of Leon. This is probably the first wagon load of pop corn ever sold in Leon. The load weighed 1660 pounds and it brought Mr. Dunham $66.40. The corn is of exceptionally fine quality and Mr. Dunham finds that it pays to raise it.

Plymouth county has an energetic and up-to-date breeders association. The association early saw the need of a sales pavilion and accordingly a company was formed, captalized at $20,000. The pavilion is of hollow tile construction, with pebble dash finish, 50 feet in diameter, with an 18-foot wall. It has a seating capacity able to take care of any sale which will be held there.

In co-operation with the Iowa state department of education and the Iowa State Teachers' College the Bureau of education has called a national conference on rural school consolidation to be held at the Iowa State Teachers' College, Cedar Falls, Feb. 17 to 19, inclusive. It is desired to make the proceedings of this conference the last word on rural school consolidation up to that time.

The Minerva Valley Creamery Association, a co-operative farmers' organization of Clemmons, did a business estimated at $150,000 last year. This creamery has been operating for more than fifteen years and deals in butter, poultry, eggs and hogs. Expenses were kept within the six mills on the dollar limit. Possibly no co-operative association in the state has been built on a firmer foundation than the Minerva Valley concern, and absolute confidence marks the attitude of the farmers who are served by the institution.

Can you picture Friend Farmer uning up his airplane and flying into town to market a dozen eggs and a couple of pounds of butter. Don't try. When the Iowa farmer markets he markets by parcel post or by truck. That don't prevent him, of course, from owning an airplane as a pleasure car. There is R. S. McWhorter, farmer, swine-breeder, and aviator. Also former Ames graduate and now a resident of Kossuth county.

Philip Cushman, a young stock farmer and cattle feeder of Louisa county, recently purchased 76 head of choice steers averaging 1080 pounds. When questioned as to how he expected to handle them he said: "I will carry them thru the winter on rough feed and then turn them into pasture next spring. They will then be fed a strong ration of corn on the grass, with the hogs following them until late in the summer. This is a cheap and practical way to fatten cattle."

County Agent Fred Overley of Warren county is enthusiastic over the orcharding prospects for Warren county for the coming year. Mr. Overley says: "Just as soon as the weather becomes suitable to again work in the orchard, why not get busy and get it pruned and cleaned up? The prospects now look good for an apple crop next season. Everyone knows just what the result will be if the orchard does not receive some care.

Lincoln Harbold, perhaps the greatest feeder of hogs in the country, and who has fed more than 20,000 hogs the past year, says that vaccination has made his hogs immune; at least this system seems to work in his case as only 2 per cent loss is shown in Mr. Harbold's herds. This loss is not due to Hog cholera, but to various other causes. All animals bought by Mr. Harbold are first vaccinated and then shipped to his extensive feeding lots in Appanoose county.

The farm bureau movement has developed into the greatest and most popular method of organizing the farmers this state has ever seen. Today there are not less than 500,000 actual farmers connected with the organization and the membership is growing at a marvelous rate. Thirty-five states sent delegates to the meeting held in Chicago November 12-14 to participate in the organization of the American Farm Bureau Federation. Of 3,000 counties in the United States more than 2,500 have farm bureaus, or similar organizations, in active operation under the management of County Agents.

Geo. E. Roberts, an Iowan who has gained international prominence as an authority on business and industrial finance, is coming back to Iowa to talk to its farmers about the business outlook for agriculture. Dean C. F. Curtiss has secured him, for an address at one of the big evening mass meetings of the Farm and Home Short course at Iowa State College, Feb. 9-14. He will have an audience of several thousand farm men and women. Mr. Roberts was for years editor and publisher of the Daily Messenger at Ft. Dodge, later director of the mint and now prominently identified with the National City Bank of New York.

Fodder put in the silo makes better feed than dry fodder. Many farmers have followed the practice of filling their silos with dry fodder after the silo has been emptied or nearly so. In almost every case the fodder will need addition of considerable water to make good silage. The water may be put in the fan-box of the ensilage cutter. Many farmers, however, pump the water directly into the silo. Silage made in this manner is not so good as that made from green corn. Cattle like it and do well on it. It is reported that last year farmers filled their silos as many as three times with dry fodder. The fodder was cut at the same time as the corn for ordinary silage and was left standing until needed in the field.

Winter dairying has been found by most farmers to have decided advantages, according to C. L. Blackman, agent in dairying, United States Department of Agriculture. When the cows freshen from September to February the bulk of the milk is produced before the heavy spring's work begins. Winter dairying furnishes employment during the winter months, when more reliable help can be secured than during the rush season. More time is available and better care can be given the cows during the winter. Cows freshening in the fall remain on uniform feed during their lactation period and are not subject to the flies and extreme heat of summer. Prices in winter are always considerable better than in the summer. At present many farmers are receiving 25 cents per pound more for butterfat than during July. In one city that paid $3.25 per hundred weight for milk in July the price is now $3.75 per hundredweight.

During the past year the Cass County Farm Bureau, through County Agent H. P. Kelley, has organized four farmers' co-operative associations in the county. They are located in Pymosa, Washington, Grove, and Cumberland townships. The association at Cumberland has a membership of 75 and is carrying on an extensive business. Livestock shipping will be started at once. The Smith Lake association shipped recently and each shipper received more for his stock than though he had sold at home.

If you had been standing in our store one cold day last week at about 3 in the afternoon you would have seen;

—a middle aged man of sandy complection trying on a dark brown storm coat of heather mixture.

—a motherly looking woman buying carhmere hose for her son, who is a bachelor.

—a young man in his teens waiting for his father to help him pick out a heavy sweater.

—a little girl with hair in a braid waiting for a pair of woolen union suits that her Uncle had called us up about.

All seeking this store for good warm protection against the weather and all receving courteous treatment and satisfactory merchandise no matter whether they spend a dollar or a dazen.

France Hopeful for New Year

Begins 1920 With Greater Confidence Than It Did the Last.

DUE TO DEFEAT OF RADICALS

Elections Stabilize Internal Conditions, Though Fall of Franc Is Still Serious Problem—Study Financial Policy.

Paris.—France began the new year with far greater confidence than the last. This is in spite of formidable handicaps, such as the balance of trade running against her at the rate of about 1,500,000,000 francs a month, about 50 per cent depreciation of the exchange value of the franc and the consequent difficulty of procuring raw materials and machines urgently needed for reconstruction.

France's renewed confidence is derived directly from the result of the recent elections. These are regarded here as having definitely stabilized internal politics, ended all danger of revolutionary agitation for some time to come and brought about a better attitude by capital and labor toward the immense effort before France.

Money is forthcoming for investments in anything that promises stability. While the investments in short-term treasury bonds are continuing at the rate of nearly 2,000,000,000 francs a month, there is plenty of money for industrial and commercial enterprises and long-term loans. The 4,000,000,000 franc loan to provide immediate resources for indemnifying victims of the invasion was oversubscribed before the official opening of the subscriptions. Important banks and industrial companies have lately increased their capital to an aggregate of nearly 500,000,000,000 francs.

Big Trade on Bourse.

Transactions on the Paris bourse, which still are confined to cash deals, have exceeded on certain days records of pre-war trading, when futures entered largely into the totals. The upward movement of all industrials which began before the signature of the treaty at Versailles, has been unchecked by successive liquidations. This is regarded by keen observers here as a sure sign of economic recovery.

Employers say the labor situation is improved and that the last strikes developed signs that the workers themselves were becoming weary of long continued disturbances of business, industry and transportation. They see a tendency against frivolous strikes and an indication that only real grievances will induce the wage earners to quit work hereafter.

Decentralization of capital and industry is seen in the establishing in Normandy of textile industries to replace those in the occupied territory destroyed by the war. This movement has been greatly extended by development of water power in the region of the Alps and the center and south of France. Industrial leaders say that no particular region of France hereafter will monopolize any industry, and declare that this scattering will prove beneficial and result in a more equable recovery of all parts of the country.

To Transfer Industries.

Powerful financial groups are at the head of the movement to transfer important industries from the coal region to southwestern France, where water power soon will be available. Other groups are being formed to develop manufacturing centers near the coast so as to reduce the cost of transporting raw materials. Industrial leaders say that this activity on the part of capital, supported by the recovery of labor from what has been characterized as a wave of "laziness," gives a healthy tone to the situation.

Instability of the exchange value of the franc is regarded as one of the weakest points in French conditions. It is pointed out that France cannot pay twice over at present high prices for supplies she needs, and that is what the present low value of the franc means. The French government is now studying a complete renovation of the financial policy with a view to making such provisions to meet obligations as will give greatest stability, both at home and abroad. Details of the new financial policy are as yet not disclosed, but it is understood that it comprises a large interior loan to take up all short-term bonds and floating debt, and important increases in all taxes to bring the revenues up to the annual budget, estimated to require 20,000,000,000 to 25,000,000,000 francs. It is not expected that any internal financial arrangement can exert more than a moral influence on the value of the franc abroad, and this may be said to be the object of the greatest anxiety in official circles.

Germany Accused of Taking 26,000 Dogs

Paris.—The French ministry of agriculture has lodged with the commission of war damages a claim for 26,000 dogs alleged to have been stolen by the Germans during the war. The ministry specifies some of the thefts, naming specially six valuable setters taken by the German crown prince and a prize pointer taken by General Von Kluck.

GERMANS CROWD TO COLLEGE

Universities' Enrollment This Year Is 41,000 Greater Than in 1914.

German newspapers say 41,000 more students enrolled in the universities of Germany than in 1914. In the year of the beginning of the war there were 50,000 students enrolled, while in 1919 there are approximately 91,000. This represents an increase of nearly 2,000 each for each of the 23 national universities. In 11 technical schools more than 16,500 have enrolled as compared to 10,000 in 1914.

Meet Ethyl and Methyl Alcohol

Two Most Prominent and Interesting Members of the Family.

MANY OFFSPRINGS ARE KNOWN

Difference Between Grain and Wood Alcohol Clearly Described—Fatalities Due to Amateur Attempts to Make Grain Alcohol.

Chicago.—While there are seventeen or more alcoholic products known in chemistry, there are two of general commercial use in the country—ethyl alcohol, or ordinary alcohol, the kind we used to be able to buy "for medicinal purposes," and methylated spirit, or industrial alcohol, which is popularly called "wood alcohol," and which does contain an amount of that fluid.

Ethyl or ordinary alcohol is formed by the spirituous or alcoholic fermentation of saccharine juices. The fermentation must be completed before it is distilled. It is made from grain, either corn, wheat, or barley. This is also known as grain alcohol. The formula is $C_2 H_5 OH$.

Methylated spirit, or industrial alcohol, is made of ninety parts of ordinary alcohol and ten parts of wood alcohol—methyl alcohol.

Source of Wood Alcohol.

Wood alcohol is obtained by the dry distillation of wood. The common method of obtaining this is to take cordwood which has been seasoned for about two years—beech, maple, and birch are best—place it in iron or steel retorts over a slow fire. The intensity of the fire is gradually increased as the distillation progresses, until at the end of from twelve to eighteen hours nothing remains in the retort but charcoal.

The distillate is passed through a condenser, and the liquid thus gathered is allowed to set in tanks until the greater part of the tarry matter in it has subsided. The lighter part is then drawn off and saturated with slaked lime to fix the acetic acid. It is then distilled a second time and the distillate sent to the refineries as wood alcohol. Sawdust or any woody fiber or cellulose can be used in place of cordwood.

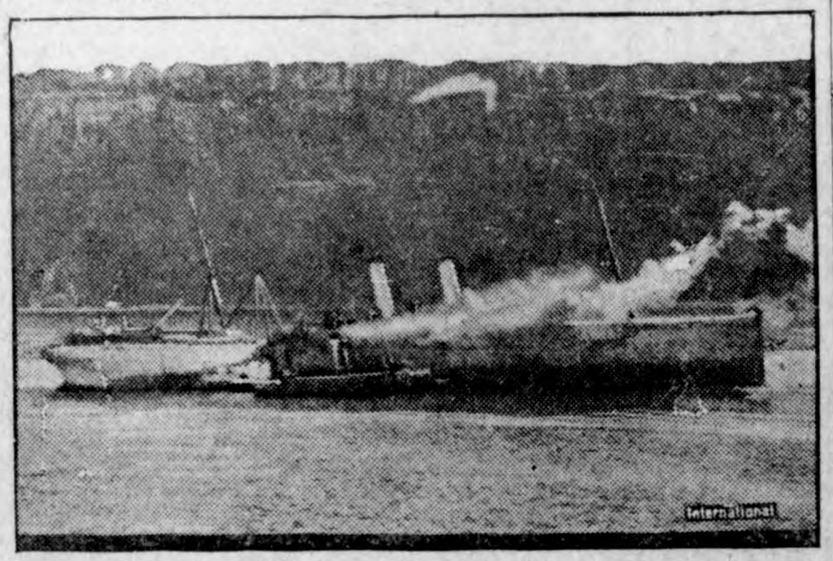
Wood alcohol, either in its pure form or as an ingredient of industrial alcohol, is a poison, and has a selective action upon the optic nerve, in which it often induces a condition of permanent atrophy which results in total blindness.

Denatured Alcohol.

For some purposes "completely denatured alcohol" is made by adding to industrial alcohol a little benzine or pyridine to spoil the taste and render it offensive. Denatured alcohol may be made more cheaply than ordinary alcohol by using cheaper materials, such as any starchy vegetable substance, or a waste byproduct, as the poorest grade of molasses or the waste of a canning factory.

"It is probable that a good deal of the wood alcohol that is being distributed as a beverage is the result of the attempts of amateurs to make ordinary alcohol. In their ignorance they use vegetable substances such as potato peelings, and, by using too intense a fire and making the distillation without having first allowed fermentation to take place, produce methyl or wood alcohol instead," said J. H. Nusbaum, a chemist.

AMERICAN TROOPSHIP DEKALB ON FIRE



The battleship of the United States troopship DeKalb, formerly the German raider Prince Eitel Friedrich, on fire in the Hudson river near Spuyten Duyvil. All of the members of the skeleton crew of 300 escaped uninjured.

Owl, Protected by Law, Disturbs Law

Chelsea, Mass.—Residents in the vicinity of Chelsea have been disturbed nights by an active but elusive screech owl. The little marauder starts in his disturbance between 9 and 10 o'clock. The police have been asked to capture the bird. During the day the owl flits from one chimney to another in an effort to escape capture. The police have given an alibi that it is against the game laws to shoot the owl.

Foot Caught in Rail, Woman Dies.

Pittsburgh.—Her foot wedged tightly between the rail and a plank, at a railroad crossing, Mrs. John Forbes, sixty-five, of this city, was struck and instantly killed by a fast train.

Has Ludendorff's War Car

Chicago Man Now Has Machine in Daily Use.

Limousine Was Seized for General While Owner Was Touring Germany.

Chicago, Ill.—Gen. Ludendorff's general headquarters motor car, with the same black body and sloping duck nose, that carried the military head of the German armies over Belgian and French roads while its occupant was seeking to annihilate the allies, can be seen almost any day on Chicago's streets and boulevards.

Bullet-scarred and battered after traveling more than 60,000 miles as the equipage of the German commander, the limousine has returned to peaceful pursuits and civilian service.

In the summer of 1914 C. L. Willey, a Chicago lumber merchant, with his wife, was touring Germany in the motor car. The war flamed up and the automobile was seized by German officials, despite its owner's protests, becoming the official property of Gen. Ludendorff.

Somewhere in its war activity the limousine was the target of well-aimed machine-gun fire from the allied airmen and its roof was perforated in many places.

Through an American consul Willey brought about the return of the automobile. C. L. Willey died in 1916 and the car is now used daily by his son, C. B. Willey.

Fall Into Hydrangea Bush Fatal.

New York.—Phoenix Miller, eleven years old, fell into a hydrangea bush. A broken stem of the plant went through a nostril and penetrated the brain, killing the boy instantly.

U. S. A DRY NATION

HALF CENTURY DREAM REALIZED BY PROHIBITIONISTS.

MUCH BOOZE LEFT ON HAND

Distillers Unable to Dispose of Stocks Because of Short Tonnage.—Task Falls to Revenue Officers.

Washington, D. C.—Nation-wide prohibition by constitutional amendment—the dream for years of those opposed to the sale of liquor—became effective at midnight, January 16, and was celebrated in scores of cities throughout the nation by dry workers.

Thousands of gallons of whisky still remain in bonded warehouses with no chance to be sold at prevailing high prices. The liquor can be taken out only for medicinal and scientific uses with the bureau of internal revenue exerting extreme precautions to see that none of it is used in violation of the law.

During the last two months many owners of alcoholic liquors, foreseeing no opportunity for sale in this country, have endeavored to rush the surplus to other countries. Lack of shipping space prevented more than a fraction being exported. Cuba and the Bahamas have received most of what was sent abroad. There were 70,000,000 gallons on hand when wartime prohibition went into effect. The amount exported is not known, but is probably less than 20,000,000 gallons.

Attacks on constitutional prohibition, begun in several states, apparently are not viewed with alarm by the reform forces. Enforcement of the act was lodged by congress with the bureau of internal revenue, which for years has been in close touch with distilling and brewing interests in the collection of excise taxes and active in running down "moonshiners." Evidence collected by the bureau will be used in prosecutions by the Department of Justice.

Prohibition Commissioner John F. Kramer has a staff of nearly 1,500 men and a fund of $2,000,000 for the work.

FLU OUTBREAK UNLIKELY.

U. S. Public Health Service Not Alarmed Over Chicago Flare-up.

Washington, D. C.—The outbreak of influenza in Chicago should not be the occasion for any alarm, the public health service said in announcing that steps had been taken to localize the disease. Admitting that so little is known about influenza that it was impossible to make a forecast with any degree of certainty, the health service expressed confidence that there would not be a serious recurrence of the disease because the malady ran its course last year, leaving millions immune, movement of large bodies of troops has ceased, doctors and nurses have returned to civilian work, there are no reports of serious outbreaks in foreign countries and because of the few cases in the United States, there being only 7,689 reported from September 1, 1919, to January 10, 1920, in comparison with 5,000,000 during the same period a year ago.

First League Meeting.

Paris.—Representatives of France, Great Britain, Italy, Greece, Belgium, Spain, Japan, Portugal and Brazil, members of the council of the league of nations, met in the "clock room" of the French foreign office last Friday for the first meeting in the history of the league. The council elected Leon Bourgeois chairman and confirmed the choice of Sir Eric Drummond of Great Britain as general secretary.

The first official act of the council was the appointment of a commission to trace upon the spot the frontiers of the territory of the Sarre basin. All the members of the council called for by the covenant of the league, with the exception of the representatives of the United States were present.

Reports On Strange Malady.

Lincoln, Neb.—Chief I. H. Dillon of the Nebraska bureau of health, who has made a study of the supposed intestinal epidemic now raging in Kansas, believes the illness to be the result of contaminated water supply or contaminated food. He made this report on his return from Kansas City and Topeka. Thus far no cases have been reported in Nebraska. It is estimated that there are 2,000 cases in Topeka alone. Kansas City authorities claim to have traced the disease to partially decomposed oysters.

Rosewater Leaves Omaha Bee.

Omaha, Neb. — Victor Rosewater, editor and controlling stock holder of the Omaha Bee, one of Nebraskas oldest republican newspapers, has disposed of his interests in the publication to Nelson B. Updike, prominent grain man of this city, and will retire from the business in a few weeks. While the price paid for Mr. Rosewater's interest in the paper was not announced it is believed the total reached between $250,000 and $300,000.

Fruit Juice and Cider Illegal.

Washington, D. C.—In one of the broadest constructions yet placed on provisions of the act for enforcement of constitutional prohibition, Prohibition Commissioner Kremer has ruled that fruit juices and ciders come within the dry ban if they contain more than one-half of 1 per cent alcohol.

The drastic regulation went into effect with constitutional prohibition, January 16. Violation of it carries the same penalty as for the manufacture or sale of stronger liquors.

WORLD CONFERENCE CALLED

Supreme Effort to Be Made to Remedy Financial and Commercial Chaos In All Nations.

New York.—A call for one of the greatest international conferences of commercial and financial figures ever assembled in an effort to find a remedy for the financial and commercial chaos in which the world has been left by the war was issued here following the meeting of a coterie of nationally known financiers.

The appeal was issued simultaneously with similar proclamation put forth in Great Britain, France, Holland, Switzerland, Denmark, Sweden and Norway.

While Germany and Austria were not included in the original call, it was anounced that delegates from these countries would be invited to attend the conference. "To sum up the document," says the official announcement of the conference, "it is a call to the people to return to pre-war standards of reason," an appeal to the reparation commission for wise moderation as to the best business policy for all concerned; an appeal to governments to arrest inflation and meet inevitable burdens by increasing their revenue rather than by increasing their debts; an appeal to the people to work and save; an appeal to leaders of commerce and finance to get together in order to study the problem dispassionately and take it up as a business proposition, relying on independent action rather than government intervention."

TWO OFFICERS SLAIN.

Mexicans Shoot Down Policemen at North Platte, Neb.

North Platte, Neb.—Chief of Police S. C. McComber and Night Police Officer George W. Rodgers were killed by two Mexicans whom they attempted to arrest. The officers had been informed that two suspicious Mexicans had been loitering around the streets and followed them to the Chiros pool hall. The strangers were sitting on a pool table when the officers entered the room and started to search them.

They refused to be searched, resisted the police, and before any of the occupants of the room were aware of trouble the Mexicans had shot both officers instantly killing Chief McComber. Policeman Rodgers lived about ten minutes.

After the shooting the murderers ran from the building. One was captured but the other succeeded in making his escape.

SERVICES FOR "BOOZE."

"Billy" Sunday Officiates at Funera Before 10,000 Virginians.

Norfolk, Va.—"Billy" Sunday preached John Barleycorn's funeral services last Friday before an audience of more than 10,000 persons, which attended mock obsequies.

The ceremony began at the railway station where the "corpse," in a casket twenty feet long, arrived on a special train from Milwaukee. Twenty pallbearers placed the casket on a carriage and marched beside it through the streets to Sunday's tabernacle, while his satanic majesty trailed behind in deep mourning and anguish.

"Good-bye, John," said the evangelist, in the conclusion of his sermon. "You were God's worst enemy; you were hell's best friend. I hate you with a perfect hatred; I love to hate you."

New Found Guilty By Jury.

Los Angeles, Cal.—Harry New was found guilty of second degree murder in connection with the shooting and killiong of his fiancee, Freda Lesser, in Topango canon, near here on the night of July 4, last. A jury in superior Judge Cavin W. Craig's court returned a verdict after it had been deadlocked for almost 44 hours and after both sides virtually had given up hope of an agreement. The jury recommended that New be placed in an institution for a "reasonable length of time for observation as to his mental condition."

Stecher Wins Over Pesek.

Omaha, Neb.—Joe Stecher of Dodge, Neb., won the undisputed right to meet Earl Caddock, world's champion wrestler, when he defeated John Pesek of Shelton, Neb., two falls in three, here. Stecher won the first fall in 2 hours and 3 minutes, Pesek the second in 13 minutes and Stecher the third in 8 minutes.

Held for Killing Own Child.

Alliance, Neb.—Lawrence H. Lackey, 29 years old, was ordered held to district court for trial on the charge of murdering his 7-year-old daughter, Pauline, by giving her poisoned candy, December 11, following a two-day preliminary hearing before County Judge I. E. Tash. The hearing has been one of the most sensational in court annals of Box Butte county.

Says Prices Must Drop.

Chicago, Ill.—Members of the National Association of Retail Clothiers were told by Howard Figg, special assistant to Attorney General Palmer, in fighting the high cost of living, that prices would have to come down. The present level and any increases could not be absorbed by the public, he said. He predicted a decrease of 25 per cent in the cost of clothing if all business agencies from sheep and cotton raiser to retailer would co-operate with the government.

YOUTHS STILL LIVE

GRAMMER AND COLE NOT EXECUTED AS SCHEDULED.

APPEAL GRANTED BY COURT

Governor Intervenes When One Man Secures Stay.—300 Women March to State House at Lincoln.

Lincoln, Neb.—Governor McKelvie has granted a stay of execution to Allen V. Grammer and Alson B. Cole until January 30. The youths were to have been electrocuted at the state prison here January 16 for the murder of Mrs. Lulu Vogt, Grammer's mother-in-law, in Howard county in 1917. This action was taken after the federal court here had granted an appeal to the United States circuit court filed by attorneys for Cole. The governor announced that due to the similarity of the cases he would halt the electrocution of both men.

Attorney Priest, representing Cole, stated that in case their appeal was acted upon favorably by the circuit court he would take it up to the United States supreme court. He said that the law provides that they shall be given 60 days to file their papers in the present appeal and that in case an appeal to the highest tribunal in the country is necessary a final decision cannot be obtained in less than six months.

Previous to the court ruling Governor McKelvie refused to grant the request of 300 women, who marched in a body to the state house, to stop the electrocution. He stated that he believed from the evidence both were guilty and that the only action he would take would be subsequent to court orders.

The claims on which the court action is now sought are those presented in the hearing held by Governor McKelvie, prior to his denial of executive clemency. They include alleged intimidation of the jury by the crowd in the courtroom, alleged incapacity of one jury and other irregularities in the trial.

Cole's appeal automatically acts as a stay of execution. When he will now be electrocuted, if at all, is problematical. But his attorney said that decision in the case may not come possibly for several months.

U. S. DEFRAUDED.

Immense Graft in Ship Building Is Charge Made.

San Francisco, Cal.—Frauds involving many millions of dollars in connection with the building of ships for the government in Oregon, Washington and California have been unearthed by government investigators, it becomes known when William H. Tidwell, special agent of the Treasury department, was appointed assistant to Special Assistant United States Attorney General Bert Schlesinger here. It is understod that Attorney General Palmer, on the strength of the scope of the alleged discoveries of graft in Pacific coast shipyards, has ordered the United States shipping board to hold up claims approximating $37,000,000 to await the outcome of the investigation.

War Clouds Loom.

London.—Before peace with Germany is two weeks old, the British public has been brought up sharply against the possibility of another war.

Several high government officials have been summoned to Paris for a consultation with Premier Lloyd George and other British officials there on important military and naval matters.

This summons is inevitably connected in the public mind with the semi-official statement calling attention to the threatening situation in the middle east as a result of bolshevik military successes, which have given the soviets virtually mastery of the whole of European Russia.

Nebraska Bank Closed.

Lincoln, Neb.—The Valparaiso State bank, Valparaiso, Neb., has been closed by the state banking bureau. Over drafts and notes of Texas oil companies and other southern concerns are declared by state authorities to constitute a large share of between $125,000 and $150,000 of doubtful paper which has been discovered.

A. D. Touzalin, state bank examiner, declared it impossible to catalog the bank's doubtful paper definitely, without an examination.

Quake Loss Appalling.

Mexico City.—Reports slowly coming in from eastern sections of the state of Puebla tell of terrible loss of life in that region as a result of the earthquake on January 3. Further east, in the state of Vera Cruz, the death toll seems to be growing, reports from Couztlan stating that the number of dead there and in surrounding villages is more than 3,000. The lake which inundated the village of Barranca Grande ws caused by a mountain collapsing and damming a river.

Influenza at Chicago.

Chicago, Ill.—A total of four deaths from influenza and 16 from pneumonia and 390 influenza and 115 pneumonia cases were reported to the health department in a single day last week. At the Great Lakes naval training station 475 cases of influenza were reported but only one death had occurred. An order issued at Camp Grant, Rockfords, calls for the immediate preparation of 1,000 masks for use in the base hospital where 150 cases are receiving treatment.

MANUFACTURE OF ICE BY NATURE

Freezing Is Done Just as Cheaply at Present Time as It Was Before War.

FARM FAMILY NEEDS SUPPLY

Thousands of People Neglect Opportunities to Provide Themselves With Abundance of It at No Cost of Making.

(Prepared by the United States Department of Agriculture.)

SQUARE FEET OF ICE SURFACE REQUIRED PER TON OF ICE.

Thickness of ice.	Number of cakes required per ton.	Cutting space required per ton.
Inches.		Square feet.
4	31.3	105.4
6	20.9	70.2
8	15.6	52.6
10	12.5	41.1
12	10.4	35.1
14	8.9	30.1
16	7.8	26.3
18	6.9	23.4
20	6.3	21.1
22	5.7	19.1

Is there any man who would not avail himself of any necessary commodity he could find that has not increased in cost?

Well, here is one thing that has not: Nature is freezing ice just as cheaply as it was before the war.

And yet, there are thousands of people—people who need ice—neglecting opportunities to provide themselves with an abundance of it at no cost of manufacture whatever. Where no extra labor is hired the cost of cutting and hauling is no more than it used to be, and the actual manufacturing cost is as it always has been—nothing.

Every farm family needs ice. With ice in the farm ice-house, a hundred comforts are possible all through hot weather. They could not be had if the ice-house were empty. And, with few exceptions, farmers who produce milk or butter for sale, as the United States department of agriculture has frequently pointed out, simply can not have a full measure of success without ice. The absence of ice generally means a big money loss, but it means more than that. Sour milk makes a bitter man. The dairy farmer who has to haul back home a lot of sour milk or cream every few days simply is not in a frame of mind to enjoy any of the good things of life.

A great many men honestly mean to harvest a crop of ice, but never do it. The pond freezes. They think, perhaps, that the ice is not quite thick enough. Or else they simply procrastinate, waiting, like Nicodemus, for a more convenient season. It does not always come. The pond does not always freeze a second time. Boreas may be the most rigorous of the gods, but he is also one of the most unreliable. It is not safe, therefore, to defer harvesting a house full of ice.

This Sort of Thing May Be Made a Picnic as Well as a Profits Promoter.

Many Kinds of Ice-Houses.

The house may be any one of many kinds. An ideal ice-house is one thing. A house that will keep ice is quite another thing. Farmers' Bulletin 623 of the United States department of agriculture gives full information concerning them.

The ice-harvesting season fortunately comes at a time when there is the least work on the farm for men and horses, and consequently the actual money cost is usually not very great. The quantity of ice needed depends upon the location of the farm—whether in the North or in the South, the number of cows milked, and the method of handling the product. In the northern states it has been found that, with a moderately good ice-house, one-half of a ton of ice per cow is sufficient to cool cream and hold it at a low temperature for delivery two or three times a week. One and one-half or two tons per cow should be provided where milk is to be cooled.

Capacity of Ice-Houses.

A cubic foot of ice weighs about 57 pounds, so in storing ice it is customary to allow from 40 to 50 cubic feet per ton for the mass of ice. At least 12 inches must be left between the ice and the wall of the building for insulation, unless the ice-house has permanently insulated walls and an unusually large space for insulation beneath and above the ice. From these figures it is possible to calculate readily the quantity of ice that any given ice-house will hold.

Where a lake, pond, or stream of clear water is not available, some preliminary work in preparing the ice field will be required before freezing weather sets in. It is therefore advisable to make all plans for the work as soon as possible. Water for the ice supply should be entirely free from contamination or pollution. Ponds and sluggish streams usually have grass and weeds growing in them, so that the ice harvest is likely to contain decayed vegetable matter, which is always objectionable. They should therefore be thoroughly cleared of such growths before the ice has formed.

In some sections it is necessary to impound the water for producing ice. This may be done either by excavating and diverting a stream into the excavation, or by constructing dams across low areas. In localities where very low temperatures prevail for several weeks at a time and the supply of pure water is limited, blocks of ice may be frozen in metal cans or in special fiber containers.

Size of the Ice Field.

In harvesting ice it is desirable to have a field of sufficient size to fill the ice-house at a single cutting, as the thickness and quality of the ice will be more nearly uniform, and the necessary preparation for cutting and harvesting need be made but once. In many instances, however, the size of the pond or stream is such that it is necessary to wait for a second crop in order to fill the ice-house. The average farmer requires only a comparatively small quantity of ice, so that even a small harvesting surface will usually prove large enough, especially if ice is cut the second time. The square feet of surface required per ton is shown in the accompanying table. Size of cake, 22 by 22 inches.

Few Tools Required.

When a small quantity of ice is to be harvested, but few tools are required. The following list contains those actually needed for harvesting ice on a small scale: Two ice saws, one hand marker, one pulley and rope, two pairs of ice tongs, two ice hooks, one pointed bar and one straight edge. While these tools are all that are necessary, additional ones, such as the horse plow and marker, horse scraper and marker, and a calking bar, are convenient, and will help to expedite the work of ice harvesting.

LITTLE BUTTER IS EXPORTED

Product Manufactured in the United States Is Small Factor in International Trade.

Butter made in the United States is a very small factor in the international butter trade, according to compilations made by dairy experts of the United States department of agriculture. More than 99 per cent of our butter business has been entirely domestic, except in the last three years. Even small exports and imports, however, have a considerable effect on prices. That condition is especially true in countries where butter production and consumption are nearly equal. The United Kingdom and Germany were the principal butter-importing nations, and Europe in the last decade has been unable to supply its own butter needs. Shortly before the war Siberia, Australia and New Zealand supplied most of the butter which Europe imported.

GET PROFIT FROM POTATOES

Badly Cut, Mashed, Frosted and Damaged Tubers Not Wanted by Dealers or Consumers.

(Prepared by the United States Department of Agriculture.)

Shippers of potatoes will profit by heeding market demands and preferences. Dealers and consumers do not desire badly cut, mashed, frosted, and decayed potatoes or those damaged by sunburn, blight, dry rot, or an excess of scab or second growth. Markets frequently are overloaded, prices seriously affected, and unnecessary losses sustained by growers because of the shipment of such unsatisfactory stock.

GENERAL FARM NOTES

The farmer is the only man who can live at home and succeed at it.

* * *

Watch the squash and cabbage stored in the cellar. Both are apt to decay at this time of year.

* * *

Lots of land and big muscles will pay, but less land and plenty of active brains may pay better.

* * *

"Cut only dead and dying timber," is a good rule to go by in thinning the standing trees for fuel.

* * *

Burn all rubbish from the garden. Its value as compost will not offset the damage from the insects and disease found in this trash.

* * *

Farmers who keep cows, feed hogs and raise sheep usually save enough manure to keep up a portion of their land so large crops can be grown.

* * *

Pocket gophers may be poisoned by putting strychnine crystals in raw carrots or potatoes and putting the pieces in the pocket-gopher runs, preferably the branch runs.

BEST SOIL FOR GROWING TUBERS

Sandy or Gravelly Loams Are Best Adapted for Success With Potatoes.

PLANT FOOD IS IMPORTANT

Never Advisable to Turn Up More Than One Inch of Raw Subsoil at One Plowing—Land Should Be Pulverized.

(Prepared by the United States Department of Agriculture.)

The types of soil in which the potato plant thrives best are those designated as sandy or gravelly loam soils. It may be grown with a fair degree of success on any type of soil except loose sand and a heavy, sticky clay soil, provided the land is well drained and contains the necessary plant food.

Successful potato production is dependent to a large extent on the thoroughness with which the land is prepared before planting the crop. Where a horse can be used, the land should be plowed from 8 to 10 inches deep, provided the surface soil is of a sufficent depth to permit it. It is never advisable to turn up more than one inch of raw subsoil at any one plowing, so if previous plowings have not been over 6 inches the maximum depth at which it should be plowed is 7 inches.

Thoroughly Pulverized.

Whether the land is plowed or spaded, it should be thoroughly pulverized immediately afterwards. It is a bad practice to allow the freshly turned soil to bake in the sun and wind, and thereby become cloddy.

Where horse labor can be used, the land after plowing should be thoroughly disked first, then spring-toothed, and finally finished with a

A Good Example of Digging Potatoes In Old Way.

smoothing harrow. Where land must be prepared by hand, it is good practice to pulverize the soil as much as possible when spading it up, after which it can be put in a fine condition of mellowness with a steel garden rake. The importance of thoroughly fining the soil cannot be overemphasized, for it increases the water-holding capacity of the soil, renders more plant food available, and reduces the number of weeds.

When to Plant Potatoes.

The date of planting necessarily must be governed by climatic conditions. In attempting to produce as early a crop as possible, some risk must always be incurred of the plants being injured by late spring frosts. As a general proposition, it is best to plant potatoes as soon as there is little likelihood of killing frosts after the plants are up and the ground is in condition to work.

Depth to Plant.

Plant the small eye cuttings from 1½ to 3 inches deep, depending upon the character of the soil—the lighter the soil the greater the depth of planting. Larger sets may be planted 4 inches deep.

Spacing.

If an early variety is planted, and the work is to be done by hand, the rows may be spaced as close as 26 inches, whereas if cultivation is to be done with a horse, 30 to 34 inches usually is allowed. In order to give the gardener some idea of the number of sets required to plant a plot of ground 50 by 100 feet at different spacings, the following table is submitted.

If a late variety is planted, the spacing should be greater, say 34 to 36 inches between the rows and 12 to 13 inches between the plants in the row.

To Plant a Plot 50 by 100 Feet.

Space between rows.	Space in row between plants.	Sets required.
26 inches	10 inches	2,769
26 inches	12 inches	2,487
28 inches	10 inches	2,678
28 inches	12 inches	2,231
30 inches	10 inches	2,400
30 inches	12 inches	2,000
32 inches	12 inches	1,874
24 inches	12 inches	1,765

UNPROFITABLE METHOD

Hogging down rye is an unprofitable practice, according to tests made in pork production at the Ohio experiment station. The tests show that it is generally more profitable to harvest the grain and sell it as a cash crop, or to feed the grain to hogs after threshing, rather than to allow the hogs to harvest the grain themselves.

MUNICIPAL ABATTOIR LOWERS MEAT PRICES

Animals Are Slaughtered at All Times of Year.

Meat Is Chilled in One Room and Will Keep for Long Period in Good Condition — Meats Inspected by Veterinarian.

(Prepared by the United States Department of Agriculture.)

The city of Paris, Tex., operates a municipal abattoir which serves the entire locality at cost, according to the United States department of agriculture, which has recently procured data regarding its operation. Hogs are killed in this establishment at all times of the year, and at a cost to the owners of $1.50 a head, which covers killing, dressing and cooling the meat. The meat is chilled for 24 hours in one room, put in the cooler the next day, and kept at 32 degrees, and will keep in good condition for a long period. The first four days it is kept in this cooler without additional cost to the owner and after that it is kept at a charge of ten cents a day for each carcass.

Hogs are killed and salted down at $2.50 a head, no extra charge being made for the salt, and they are kept in cold-storage rooms after being salted down for four days without additional cost, and at five cents a day thereafter. This curing room is separate from the regular cooler where fresh meats are kept, and is not quite so cold, but no meat has been known to be lost in it. Calves up to 350 pounds are killed for $1.50 a head and the hide is left on them, though they are dressed and the hide is thoroughly washed. When cattle are skinned there is an additional charge of one dollar, the hide remaining the property of the owner of the carcass. Sheep are killed at $1.50 a head and are skinned without extra charge.

Hogs, cattle and sheep are killed throughout the year. A city ordinance compels every butcher or other individual who sells meat in Paris to have his slaughtering done at the municipal abattoir, which is operated at cost. All the meats are inspected by the city veterinarian, who stamps each carcass. The plant pays its own expenses and has been making enough in addition to cover cost of depreciation. The abattoir cost between $15,000 and $20,000. About ten years ago, when the abattoir was built, the department has a record of original cost of $10,000 and the daily capacity then was 30 cattle, 30 hogs and 30 sheep and calves.

Meat in Paris has been selling from ten to twelve cents a pound cheaper than in some neighboring localities. Competition is assured because it is easy for the hotels, restaurants and others using much meat to buy live stock and have it killed and stored in this municipal abattoir until they are ready to consume it. This results in prices being kept at relatively low levels.

WAR ON WHEAT SMUT WIDENS

Sales of Formaldehyde Demonstrate Desire of Farmers to Drive Out Insidious Disease.

That farmers are tremendously in earnest in their desire to drive out wheat smut is shown by the big increase in the sales of formaldehyde which have been made in four states where the United States department of agriculture, in co-operation with the extension departments of the state agricultural colleges, has been carrying on campaigns of education

Illustration of Improvement Which May Result From Treating Seed With Formaldehyde as Smut Often Stunts the Plants.

to demonstrate the proper use of formaldehyde in treating wheat for this disease. Reports from these states show that the increase in the sales of formaldehyde for the current year varies from 150 to 325 per cent, as compared with the sales of 1917, the last year before the present campaign was inaugurated. The four states in which this record has been made are Minnesota, North Dakota, South Dakota, and Montana. There is every reason to believe that practically all of this increase represents supplies used in fighting smut.

FARM STOCK

SCRUBS BEING CLEANED OUT

West Virginia Stockmen Making Vigorous Effort to Drive Out All Scrub Bulls.

(Prepared by the United States Department of Agriculture.)

West Virginia—largely regarded as a mineral-producing state—is on the war-path to increase beef cattle production and its output of dairy products by eradicating scrub bulls, which are primary offenders against profitable and progressive live stock husbandry. Within a few months parts of West Virginia where the campaign is most active expect to round out a clean-up which will eliminate the scrub bulls and leave the purebreds as monarchs of all they survey. The case of Roane county, W. Va., is an example of what West Virginia stockmen accomplish when they go over the top. The live stock specialists of the State agricultural college, the county agent and officers of the Roane county farm bureau have solidly backed up the scrub sire clean-up.

"Not a single man turned us down," remarked the live stock specialist in telling how the campaign to oust the scrubs was conducted.

"The first of the year our local stockmen made a declaration of independence against scrub bulls, and work was begun promptly in taking a thorough bull census. This investigation of sire ancestry showed that there were 200 bulls in the county, of which 102 were misfit grades and scrubs, while 98 were registered pure-breds. There were 57 registered Herefords, 28 registered Angus, and 13 registered Shorthorns. Fortunately, the army of 102 grades and scrubs was not as formidable as it looked on the paper, because 60 of these low grade sires were yearlings. Furthermore, the census showed that there were only 30 men who actually made a practice of keeping a scrub bull."

By correspondence and personal contact with farmers the state live stock agent and the county agent waged the battle. These men toured the county day after day visiting the scrub bull owners, holding meetings, and requesting influential farmers to assist in relegating the scrub sires into the live-stock scrap heap. In the main the scrub bull owners, once they learned the purpose of the campaign, and once

A Typical "Native" Scrub Bull, an Obstacle to Progress in Live Stock Improvement.

they appreciated the benefits which would result if they substituted pure-bred sires for the mongrels, were glad to dispose of their inferior herd-headers. Detailed figures showing the increased value of calves sired by pure-breds over calves of scrub parentage were particularly convincing in gaining converts. Most of the scrub bull owners were prompt in admitting the error of their live-stock raising ways.

The Roane county banks have aided the movement to replace poor bulls with good ones. Every bank in the county has offered to lend money at 5 per cent to farmers for the purpose of purchasing pure-bred sires as substitutes for their scrubs.

HANDLE SHEEP WITH PROFIT

Good Drainage, Pasture, Some Shelter and an Interested Attendant Are Important.

The requirements of a farm where sheep can be handled with profit are good drainage, plenty of fresh pasture, land that will produce clover, alfalfa, cowpeas, or soy beans; a good water supply, fences that will keep sheep out of growing crops and furnish two or three fields for frequent change of pasture, a shelter that will protect the flock from cold rains, winds and storms, and an attendant who can give the flock interested and intelligent care.

SWINE CONSUMED MUCH FEED

Devoured More Grain Than Cattle Last Year, Being Fed 50.3 Per Cent of Corn.

Swine consumed more grain than cattle last year in the United States, being fed 50.3 per cent of the corn, 10.8 per cent of the oats, 60 per cent of the barley, 29.1 per cent of the wheat and 41.5 per cent of the mill feeds fed to all farm animals.

ASPIRIN INTRODUCED BY "BAYER" IN 1900

Look for name "Bayer" on the tablets, then you need never worry.

If you want the true, world-famous Aspirin, as prescribed by physicians for over eighteen years, you must ask for "Bayer Tablets of Aspirin."

The "Bayer Cross" is stamped on each tablet and appears on each package for your protection against imitations.

In each package of "Bayer Tablets of Aspirin" are safe and proper directions for Colds, Headache, Neuralgia, Toothache, Earache, Rheumatism, Lumbago, Neuritis, and for Pain in general.

Handy tin boxes containing 12 tablets cost but a few cents. Druggists also sell larger "Bayer" packages. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.—Adv.

The Hired Help.

The man of the house went out Sunday to greet city ash collectors who were carrying ashes out of the alley.

"Good morning, gentlemen," he said kindly.

"You've got us all wrong," said one of the drivers, a little disturbed about the Sunday work. "All of the gentlemen are loafing in the city stables. We're only the hired help."

A Feeling of Security

You naturally feel secure when you know that the medicine you are about to take is absolutely pure and contains no harmful or habit producing drugs.

Such a medicine is Dr. Kilmer's Swamp-Root, kidney, liver and bladder remedy.

The same standard of purity, strength and excellence is maintained in every bottle of Swamp-Root.

It is scientifically compounded from vegetable herbs.

It is not a stimulant and is taken in teaspoonful doses.

It is not recommended for everything.

It is nature's great helper in relieving and overcoming kidney, liver and bladder troubles.

A sworn statement of purity is with every bottle of Dr. Kilmer's Swamp-Root.

If you need a medicine, you should have the best. On sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to try this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

For a Practical Purpose.

"I see you have a 'blue sky' law in this state," remarked the facetious visitor.

"Yes."

"Does it regulate the altitude to which an aviator may go?"

"No; it is merely designed to regulate the operations of gentlemen who wear fancy vests and talk in terms of millions."—Birmingham Age-Herald.

Taking Garfield Tea keeps the system clean, the blood pure and the general health good. Buy from your druggist.—Adv.

Big Profits in Pigs.

Tonbridge Co-operative Pig-Breeding (Limited), an organization started when the submarine menace became acute, has been wound up, the shareholders having received back their capital, with 47½ per cent.—London Mail.

Cuticura Soothes Itching Scalp

On retiring gently rub spots of dandruff and itching with Cuticura Ointment. Next morning shampoo with Cuticura Soap and hot water. Make them your every-day toilet preparations and have a clear skin and soft, white hands.—Adv.

Wife—I think that chauffeur was under the influence of liquor.

Husband—I know that he was. He gave me back the right change.—Recall.

YOUR COLD IS EASED AFTER THE FIRST DOSE

"Pape's Cold Compound" then breaks up a cold in a few hours

Relief comes instantly. A dose taken every two hours until three doses are taken usually breaks up a severe cold and ends all the grippe misery.

The very first dose opens your clogged-up nostrils and the air passages in the head, stops nose running, relieves the headache, dullness, feverishness, sneezing, soreness and stiffness.

Don't stay stuffed-up! Quit blowing and snuffling! Clear your congested head! Nothing else in the world gives such prompt relief as "Pape's Cold Compound," which costs only a few cents at any drug store. It acts without assistance, tastes nice, contains no quinine—Insist upon Pape's!—Adv.

A Dangerous Mission.

Jack—Have my photograph taken before I see your father? What's the idea?

Madge—You may never look yourself again.

"The eternal misfit of things" would often be more appropriate.

Ed. Jacobs and "Zip" McCullough received invitations to attend the Leap Year Dance and party at Garner Monday evening and so made the journey in a cutter, "Zip" doing the driving stunt. We have not yet learned how many young ladies proposed to them, but, at any rate they report that the Garner young ladies were good enertainers. After the dance the ladies served a fine feed. Now this may put the boys in bad with the Klemme girls, but they can get even with the Garner girls by also giving a Leap Year dance and feed.

Klemme coal dealers are wide awake men and if there is any coal in the world they are there with both feet to get some. Garner has been short of coal nearly all winter while our Klemme dealers have managed to keep their patrons quite well supplied with the black rock. We understand tha our Klemme dealers have even been so kind as to allow parties in Garner to have a little to help them out. This is also true in other lines of business. Klemme merchants always carry a full line of goods at all times and we quite often see people from Garner, Goodell, Belmond and other near by towns doing their shopping with Klemme merchants because they know they can get thee goods here and get it at a low price.

If you have any secrets you wish kept quiet the editor of the Times is sure to find them out. So it is with R. B. Irving, the restaurant proprietor of this city. "Scotty" had a dandy little secret which he was waiting to spring on his friends. The secret is a fine baby girl who arrived two weeks ago last Sunday at Winnebago, Ill., where Mrs. Irving has been visiting her mother for the past couple of months. Now Ralph has been acting queer of late but this explains his excessive degree of good cheer and happiness. His plans were to wait until Mrs. Irving and the little girl came back to Klemme and spring this surprise. At that "Scotty" was a pretty sly old bird to keep this secret that long. Mother and babe are reported to be fine and are expected home here in about a month.

SIOUX CITY, Ia.,—Dr. William Jepson of Sioux City has given to the Methodist Episcopal church organization of northwestern Iowa his private hospital property here, "St. John," and a tract of 280 acres of land just outside the city limits. The gift has been accepted. The present hospital probably will be sold and a modern 200-bed institution erected. It is proposed to operate an orphanage on the farm.

Ford

THE UNIVERSAL CAR

Buy Now While Diliveries Are Possible

Buy your Ford Car now while deliveries are possible. There is only a limited, specified number of Ford cars allotted to this territory. You will be wise to buy one now while we can get cars to deliver. A signed order with us is your protection.

Even our small allotment of Ford cars is not shipped us nntil we have bona-fide orders for them. his is because the demand for Ford cars all over the country is greater then the supply or prodnction. So, don't depend on spring delivery.

Only so many Ford ears will be shipped to this territory; only so many will be able to get Ford cars. If you would be forenanded and plan ahead, you will have us deliver you a Ford car as soon as possible. Then you will have it to use whenever you want it.

The Ford is an all year utility.—in your home or business. Its serviceability, its ease of operation, its low cost of maintaince has made it such. It will serve you the year around. Spring and S mmea, autumn and winter, it is your servent; always reaby to do your bidding.

Authorized Ford Agent — **Klemme, Iowa**

KLEMME TIMES

Twenty-fourth Year Number 21 Klemme, Iowa, Thursday, January 29, 1920 $2.00 In Advance. $2.50 Outside of County

Former Resident of Klemme Called

Obituary Mrs. Schafer

Julia Kaste Schafer, wife of E. P. Schafer, was born March 15th, 1865, in Buffalo County, Wisconsin, and died January 15th, 1920, in the Augustana Hospital at Chicago, Illinois. She attained an age of 54 years and 10 months.

On June 29th, 1893, she was married to E. P. Schafer with whom she lived very happily and to whom she was a true companion and helpmete to the end. To their happy union one son was born, who with his father mourns over the loss of a kind and affectionate mother.

Her young life was spent in a Methodist parsonage and from personal experience she knew something about the privations and hardships and trials of the earlier parsonage home, but also of the wholesome Christian influence and the Christian spirit of that home.

At an early age she gave her life to God and learned to love and serve Him. She developed a beautiful Christian character which made her life one of devotion to duty, of love and charity toward others and of consecration and service to God. Being the oldest in the family some of the family duties developed on her and it was here in her early life where she displayed this Christ-like character which made her a model Christian woman in later life.

At an early age she united with the Methodist church and has always been a devoted and true member to the end.

After her marriage she made her home for a while at Klemme, Iowa. then for a while at Crookston, Minn., till finally she settled at Hebron, Ill., where she lived till the end.

About six months ago she was taken ill and for five months she has been a constant sufferer of intense pain. But in her suffering she showed forth her Christian character and bore her suffering with patience and in a Christian spirit.

To her father who visited her and her pastor she gave the assurance that it was well with her, that she did not fear death but was ready to go home to be with God.

She leaves her sorrowing husband and one son, also her father, three brothers and six sisters. One sister proceeded her in death.

May the peace of God which surpasseth understanding comfort their sorrowing hearts and may the spirit of God guide them through life's gloomy pathway to the eternal home in glory.

J. E. WICHMAN OUT FOR STATE SENATOR

Last week we ran the announcement thnt J. E. Wichman is out for the office of State Senaor. Hancock couny is entitled to the office this time and we know of no better man than Mr. Wichman. He has been Representative from this county for the past wo terms and has been the originator of many good bills passed while he was in office. With his wide experience in law and both county and state politics we believe there cannot be found a man in this district who can better serve the office of State Senator than Mr. Wichman. It is to the interest of all the republican voters in this county to support Mr. Wichman, the home candidate.

The Klemme Band is doing well under the able supervision of Mr. E. C. Crotty, the instructor. A number of boys are taking private insructions that hey migh learn more rapidly heir part in the band. The boys will be in shape to begin their concerts about the first of June and will receive a little aid from some of the older band members who will help them for a time until they master the music. The boys are very enthusiastic over their new band and are putting in many hours of hard practice each week.

"PECK" HANSON ANNOUNCES FOR SHERIFF

E. P. Hanson, better known as "Peck" Hanson, of Garner, has his hat in the ring for sheriff of Hancock county. He is so well known over the county that it is just wasting a lot of good printers' ink to give his history. "Peck" is perhaps better known thruout the county than any other man who ever ran for office or anything else. He is one of those rare fellows who is always a good friend to everybody. "Peck" is no new hand at the game of politics in this county for he has had wide experience in the court house offices and has always made a very good officer. Now that he has been coaxed into running again by his many friends he will no doubt be the next man to pin the sheriff's star on his vest. From what we can learn here the voters seem to be favorably impressed that "Peck" has decided to come out for sheriff and no doubt he will receive a strong support from this neck of the woods, for when ever "Peck" Hanson runs he runs like a wild race horse, so get out of the road he's coming back again.

WIDE TRACK SLEDS FOR NEXT YEAR

There is a petition being circulated among the farmers near Klemme to widen out bob sleds next winter so that the tracks will be of the same width as a wagon or auto track. We understand that nearly all the farmers have signed it, some have already made arrangements to have their sleds widened and some have ordered new wide models. In our opinion this is a very good idea. If successfully carried out next winter it will mean that the farmers and also others will be enabled to use their autos the greaer part of the winter. Auto driving here has been tied up all winter because cars could not travel where a narrow track sled had gone. The farmer now days does not like to ride to town back of old Dobbin if he can make the same trip with old Lizzy. The petition is supposed to take effect the first of November, this year.

WOMEN WILL VOTE

Iowa Women Have Franchise Regardless of Whether or Not Amendment is Ratified—Can Express Choice for Presidential Electors in General Election.

Iowa women have the right to vote for presidential electors next November, whether the federal amendment is ratified by that time or not. This is the most important addition to their suffrage rights made by the legislature at its last session.

An amendment to the state constiution would doubtless have been effective by this time, if the secretary of state had not failed in making effective the action of the previous legislatures and therefore set back the state movement by a couple of years.

But Iowa women can vote for president this year, and by the time of the next general election thereafter, equal suffrage will have become nationwide and questions as to woman's status will be quite superfluous.

"The year which we have passed through has been 365 days of worry and expenses and new troublesome and anxiety. Every day brought increased expenses and new troubles to overcome, but it has been good to live. Never in the short space of twelve months have there been so many epochal events crowded into 535,600 minutes. Nineteen-nineteen was a year among years. Germany got slammed in the slats; Dempsey licked Willard before they entered the ring; Americans flew across the Atlantic in less time than a submarine could back across; Sir John Barleycorn was sent to the hospital with no hope of an early convalescence; the shimmy dance was buried with its clothes on; a pound of sugar or news-print was worth more han a peck of diamonds. In general i was a h—l of a year."—Clearfield (Pa.) Progress.

A perfectly adjusted spine cures a "lame back" and insures good nerves, freely circulating blood, and a perfect digestion. Treatment will be given in your home when necessary. Telephone message may be left at the Hotel to be delivered to Dr. R. W. Schultz. tf.

BIG STOCK SHIPMENTS EVERY WEEK

Klemme farmers are doing their part to supply the world with pork and beef for every week a good sized train load of live stock leaves Klemme. Last week Wednesday night there were fifteen car loads of live stock shipped out. Saturday night there were nine car loads shipped out. Some of the cars containing hogs were "double-decker" cars which hold as much as two single cars, so if the double decks were counted as two car loads there would be much more on the list. The stock buyers report that the hogs and cattle are getting pretty well cleaned up now and there will not be so many large shipments for some time.

ED. FORD NOW DOWS BANKER

Ed. Ford whom most of you know and who formerly was located at Garner, and is now at Iowa Falls, has been elected Active Vice-President of the Farmers State Bank of Dows. Ed. takes up his new position behind the counter February first and will move the family to Dows in the near future. Before selling life insurance Ed. was connected with the Farmers National Bank at Garner as assistant cashier. A fine salary is connected with his new position at Dows and Ed. says he will like his new position better as it will allow him to be home most of the time now. The Dows directors were wise in selecting a man like Mr. Ford for their bank.

FUNNY THINGS STILL HAPPEN IN KANSAS

A lot of funny things have come out of Emporia. Also a lot of funny things remain there to happen, as witness the following, contributed by Orson Angell of the College of Emporia:

Four high school girls of Columbus, Kan., went in cahoots and bought a turkey for Christmas dinner. None of the girls had the nerve to chop off the bird's head so they chloroformed it, although the turkey nearly wrecked the premises before he quit flopping. Then he girls dry-picked the gobbler, and put the carcass in the clothes closet to remain until ready to be dressed and roasted. A few hours later one of the girls went to the closet to get some article of apparel, and when she opened the door, the turky (having recovered from the insufficient anesthetic) calmly walked out without a stitch on!

A RELIEF TO ALL

Railroads Turned Back To Owners. Public Pays The Bill And Learns A Lesson

The president's proclamation fixing March 1, 1920, as the time for the return of the railroads and the express companies ot their owners came as a relief to the public, to Congress and to the owners.

Railroading is not a business that can be made profitable under government operation. Business in politics never can be made to pay. In this venture we have learned the lesson anew, and if we will only remember it—if we will always remember to turn a deaf ear to the doctrinaries who urge plans looking to Government ownership—the money required to balance the railroads' books will have been well spent.

IN DEFENSE OF SCHOOLMA'AMS

On account of the shortage of teachers the Upper Des Moines Republican of Algona suggests that a law be enacted prohibiting teachers from marrying or even being courted while they are engaged in teaching. Leo Wolfe, editor of the Titonka Topic and candidate for the legislature, is opposed to this plan and says so in black type. This stand taken by Mr. Wolfe will no doubt prove to be a vote getter, as he should receive the solid support of the schoolma'ams for championing their cause. Mr. Wolfe doesn't say why he opposes the Republican's plan, but perhaps he has reasons which are all his own.—Corwith Hustler.

UNITED STATES LEADS IN OIL PRODUCTION

The United States has produced more than 61 per cent of the world's crude petroleum since the discovery of that product and at last reports was producing more than 69 per cent of the world's annual supply.

TEACHERS' MEETING

A county teachers' meeting will be held at the high school building in Garner Saturday, January 31st. For this meeting the Extension Department of the Iowa State Teachers' College will send two of its most able instructors. As this will be the last meeting for the year, teachers and normal training students are requested to make a special effort to be present.

TELL IT TO THE TIMES

If anybody has a party, if you have out of town company, if you or some member of your family takes a trip, if you hear of an unusual accident, or if you know any other news item, call 12, we appreciate news.

Latest State News

The efficient use of labor is one of the factors that influence farm profits. There usually are many ways to utilize man labor on the farm, but the average horse works only about 3½ hours each work day. That is what makes horse labor expensive.

According to Tom C. Stone, sheep specialist, Iowa State College, and secretary of the Iowa Wood Fleece Growers' Association, the present high price of clothing is surely not caused by the price of virgin wool. At the present market value, if cloth were made from virgin wool and the raw material were donated to the manufacturerer, it would only reduce the cost of a man's suit about $5.00 or $6.00.

Clay county farmers are becoming interested in sugar beats as a crop. Britt, Garner and Mason City fields have been looked over by interested farmers and there is every likelihood that another year will see a goodly acreage planted to sugar beets in Clay county. Representatives of the Northern Sugar Corporation have ask that 500 acres be pledged in the county before a dump is built at Spencer.

Fourteen million six hundred thousand dollars will be available in Iowa July 1 for construction work on the primary road system. These figures are given in the annual report of the State Highway Commission, the first portion of which has just been completed and turned over to Governor Harding. Construction at the close of the 1919 season was under way on contracts for improvement of 231 miles of primary road.

One interesting experiment with sweet clover in Webster county was that of turning a car load of western steers on a 43 acre sweet clover field for thirty-one days before it was plowed under as a clover crop. The figures as to the increase of weight on the steers for the thirty-one days is 100 pounds per head. The growth of the cattle was so marked that it made a deep impression on all the farmers who saw the cattle at the beginning and end of the four weeks.

W. B. Loveland, well known farmer of near Waverly, received a milk check amounting to $246.00 for the month of October. During that month he milked 12 Holstein cows and sold the milk to the Janesville cheese factory. The cows were not given any special care, receiving about the same attention that the average herd does in Bremer County. Mr. Loveland says that his cows are bringing him a very fair return on the amount of money and labor represented in them.

Recent investigations throughout Clarke county has disclosed some very valuable limestone quarries in certain sections of the county. The quarries have been tested and show as high a quality as any limestone in the state. A movement is on foot to contract orders for several hundred tons of pulverized limestone and then organize a company and install a pulveriser. Some twenty farms in the county have been tested for acidity and it has been found that practically all of these farms are deficient in lime, needing from two to four tons to the acre to correct the accidity.

Imagine, if you can, forty fine, sleek Holstein cows, twenty in a row, standing back to back, with their heads in metal stanchions, and their tails fastened in holders to prevent them becoming soiled; see in your mind's eye the contentment of these animals as they stand or lie, munching their clover hay or chewing their cuds, and you have a picture of the milch cow department of what is declared to be the finest dairy barn in Iowa. This barn, just completed by C. H. Hicks, two and a half miles northeast of Ames, is a veritable palace for cows. Clean and sanitary, electric lighted, well ventilated, and equipped with the most modern conveniences for the care of the stock, it is no wonder that the owner and his boss herdsman, Albert Miller, show the visitor thru the place with pride.

Due to so many hogs being raised in Montgomery county we are confronted with a great deal of trouble with worms in our hogs after they reach 60 pounds in weight" said Frank F. Barker, county agent, recently. "We were bothered greatly with this trouble recently and something had to be done to combat it. Stockfood salesmen were continually bothering our farmers, trying to sell them food to kill these worms. Little or no good is derived from these foods and in all cases there is a high price asked for them. I have had dozens of calls the past season from farmers over the county to come to their places and show them how to use the bolling gun, whereby a capsule, containing suitable drugs for expelling worms, is forced down the hog's throat. It is a simple process when once seen. Excellent results have been obtained. Much feed has been saved by not having to give corn to worm-infested swine and money was not wasted on worthless stock-powders.

A new tractor school will be held in New Hampton soon. A. W. Turner of Iowa State College will be the expert in charge of the work. Local tractor dealers and the Farm Bureau are cooperating in this work.

A load of pop corn perhaps the first load of its kind sold in Decatur county was sold in Leon recently for $66.40. The corn weighed 1660 pounds and belonged to W. A. Allbaugh. The corn was grown by Walter Dunham, a well known farmer of the county and was of exceptional quality.

Tributes to the Departed.

Obituary notices in Australian papers are often, Lady Poore tells us, accompanied by poetic tributes to the departed. These tributes sometimes tumble into awkwardness, but she quotes as champion in that way a prose tribute in these words: "Mrs. B. has just passed away at the age of eighty-five. For some months she had been in failing health, but during the last few days, she approached the grave in leaps and bounds."—From "Recollections of an Admiral's Wife."

Thoughtful Bobbie.

When Bobbie went to see his grandmother he was much interested in whatever went on in the kitchen. One morning she said to him: "I'm going to make you a nice little pie in a saucer, Bobbie, all for yourself. Don't you think I'm pretty good to take so much trouble?" Bobbie thought about it a moment. "Grandma," he said, "mamma told me not to be a bother, and if it's going to be any trouble you can just as well make my pie the reg'lar size."

Left Algernon Pondering.

Algernon (after being accepted)—"Have you ever loved before?" Angela—"No! I have often admired men—for their strength, courage, beauty, intelligence, or something like that, you know; but with you, Algernon, it's all love—nothing else!"

"Did your husband have much luck in his hunting this season?"

"Yes, indeed. He compromised cheaply with all the guides he shot."

"CALIFORNIA FIG SYRUP" IS CHILD'S LAXATIVE

Look at tongue! Remove poisons from stomach, liver and bowels.

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless laxative or physic for the little stomach, liver and bowels. Children love its delicious fruity taste. Full directions for child's dose on each bottle. Give it without fear.

Mother! You must say "California." —Adv.

His Class.

"Pa, what is an ultimate consumer?"

"An ultimate consumer, my son, is the man who consumes anything the high prices, the war taxes and the charitable contributions for starving Europe leave enough of to buy."

HEAD STUFFED FROM CATARRH OR A COLD

Says Cream Applied in Nostrils Opens Air Passages Right Up.

Instant relief—no waiting. Your clogged nostrils open right up; the air passages of your head clear and you can breathe freely. No more hawking, snuffing, blowing, headache, dryness. No struggling for breath at night; your cold or catarrh disappears.

Get a small bottle of Ely's Cream Balm from your druggist now. Apply a little of this fragrant, antiseptic, healing cream in your nostrils. It penetrates through every air passage of the head, soothes the inflamed or swollen mucous membrane and relief comes instantly.

It's just fine. Don't stay stuffed up with a cold or nasty catarrh.—Adv.

Luck may be a good servant, but as a master his pay days are uncertain.

WOLVES of the SEA

By RANDALL PARRISH

Copyright by A. C. McClurg & Co.

CHAPTER XXV—Continued.

—17—

She turned her head, and I felt her eyes searching the dim outline of my face questioningly.

"Of course I did everything I knew," she replied. "Why should I not? You are here, Captain Carlyle, for my sake; I owe you service."

"And must I be content merely with that thought?" I urged, far from pleased. "This would mean that your only interest in me arises from gratitude."

"And friendship," her voice as confidential as my own. "There is no reason why you should doubt that surely."

"It would be easier for me to understand, but for the memory of what I am—a bond slave."

"Your meaning is that true friendship has as a basis equality?"

"Does it not? Can real friendship exist otherwise?"

"No," she acknowledged gravely. "And the fact that such friendship does exist between us evidences my faith in you. I have never felt this social distinction, Captain Carlyle, have given it no thought. This may seem strange to you, yet is most natural. You bear an honorable name, and belong to a family of gentlemen. You held a position of command, won by your own efforts. You bore the part of a man in a revolution; if guilty of any crime, it was a political one, in no way sullying your honor. I have every reason to believe you were falsely accused and convicted. Consequently that conviction does not exist between us; you are not my uncle's servant, but my friend—you understand me now?"

"And you would actually have me speak with you as of your own class—a free man, worthy to claim your friendship in life?"

"Yes," frankly, her face uplifted. "Why should it be otherwise? No man could have done more, or proved himself more stanch and true. We are in danger yet, but such peril is nothing compared with what I have escaped. I feel that your skill and courage will bring us safely to land. I am no longer afraid, for I have learned to trust you. You possess my entire confidence."

"But do you understand fully?" I questioned anxiously. "All I have done for you would have been done for any other woman under the same conditions of danger. Such service to another would have been a duty, and no more. But to be with you, aiding and protecting, has been a delight, a joy. I have served Dorothy Fairfax for her own sake—not as I would any other."

"Did you not suppose I knew?"

Her glance flashed into mine through the star-gleam, with a sudden message of revealment.

"You knew—that—that it was you personally I served?"

"Of course I knew. A woman is never unaware of such things. Now, if ever, I must tell you the truth. I know you care for me, and have cared since first we met. An interest no less fateful has led me to seek your acquaintance, and give you my aid. Surely it is not unmaidenly for me to confess this when we face the chance of death together?"

"But," I stammered, "I can scarcely believe you realize your words. I—I love you Dorothy."

"And is it not also possible for me to love?"

"You—you mean, you love me?"

"I love you—are you sorry?"

"Sorry! I am mad with the joy of it; yet stricken dumb. Dorothy Fairfax, I have never even dared dream of such a message from your lips. Dear, dear girl, do you forget who I am? What my future?"

"I forget nothing," she said, proudly. "It is because I know what you are that my heart responds. Nor is your future so clouded. You are today a free man if we escape these perils, for whether Roger Fairfax be alive, or dead, he will never seek you again to hold in servitude. If alive he will join his efforts with mine to obtain a pardon because of these services, and we have influence in England. Yet, should such effort fail, you are a sailor, and the seas of the world are free. It is not necessary that your vessel fly the English flag."

"You give me hope—a wonderful hope."

"And courage," her hands firmly clasping mine. "Courage to fight on in faith. I would have that my gift to you, Geoffry. We are in peril still, great peril, but you will face it beside me, knowing that whether we live or die we are together. I am not afraid any more."

CHAPTER XXVI.

A Floating Coffin.

The laboring boat rested so low in the water it was only as we were thrown upward on the crest of a wave that I could gain any view about through the pallid light of the dawn. It was all a desolate, restless waste in the midst of which we tossed, while above hung masses of dark clouds obscuring the sky. We were but a hurtling speck between the gray above and the gray below.

The first thing needing my attention was the food and water. I crept forward cautiously and soon had Sam busily engaged in passing out the various articles for inspection. Only essentials had been chosen, yet the supply seemed ample for the distance I believed we would have to cover before attaining land. But the nature of that unknown coast was so doubtful I determined to deal out the provisions sparingly, saving every crumb possible. The men grumbled at the smallness of the ration, yet munched away contentedly enough, once convinced that we all shared alike.

"All right, lads," I said cheerfully. "Now we understand each other and can get at work. We'll divide into watches first of all—two men aft here and one at the bow. Watkins and I will take it watch and watch, but there is enough right now for all hands to turn to and make the craft shipshape. Two of you bail out that water till she's dry, and the others get out that extra sail forward and rig up a jib. She'll ride easier and make better progress with more canvas showing."

The men gradually knocked off work and lay down, and finally I yielded to Dorothy's pleadings and fell into a sound sleep. It seemed as though I scarcely lost consciousness, yet I must have slept for an hour or more, my head pillowed on her lap. When I awoke Schmitt was again at the steering paddle, and both he and Dorothy were staring across me out over the port quarter.

"What is it?" I asked eagerly, but before the words were entirely uttered a hoarse voice forward bawled out excitedly:

"There you see it; straight out agin that cloud edge. It's a full-rigged schooner."

"Ay," boomed another, "an' headin' straight cross our course astern."

I reached my feet, clinging to the mast to keep erect and, as the boat was again flung upward, gained clearly the glimpse I sought.

"Ay, you're right, lads!" I exclaimed. "It's a schooner, heading to clear us by a hundred fathoms. Port your helm, Schmitt—hard down, man. Now, Sam, off with that red shirt; tie it on the boat hook and let fly. They can't help seeing us if there is any watch on deck."

We swept about in a wide circle, headed straight across the bows of the on-coming vessel. All eyes stared out watchfully, Sam's shirt flapping above

We Swept By in a Large Circle.

us, and both Watkins and Schmitt straining their muscles to hold the plunging quarter-boat against the force of the wind. A man forward on his knees growled out a curse.

"What's the matter aboard there?" he yelled. "Did yer ever see a boat yaw like that, afore? Damn me, if I believe they got a hand at the wheel."

The same thought had leaped into my mind. The schooner was headed to pass us on the port quarter, yet yawing so crazily at times as to make me fearful of being run down. I could perceive no sign of life aboard, no signal that we had been seen. The sight angered me.

"Stand by, all hands," I cried desperately. "We'll board whether they want us or not. Slip across, Miss Fairfax, out of the way. Now, Watkins, run us in under those fore-chains; easy man, don't let her strike us. Lay hold quick, lads, and hang on for your lives. Give me that end of rope—ready now, all of you; I'll make the leap. Now then—hold hard!"

It was five feet, and up, my purchase the tossing boat, but I made it, one hand desperately gripping a shroud, until I gained balance and was flung inboard by a sharp plunge of the vessel. My head was at a level with the rail, yet I saw nothing, my whole effort being to make fast before the grip of the men should be torn loose. This done, I glanced back into the upturned faces below.

"Hand in slowly, lads; yes, let go, the rope will hold, and the boat ride safely through. Let a couple of men come up till we see what's wrong with the hooker—the rest of you trail on. Let Schmitt and Sam come with me."

I helped them clamber up and then lifted my body onto the rail, from which position I had a clear view of the forward deck. It was inexpressibly dirty, yet otherwise ship shape enough. Nothing human greeted me, and conscious of a strange feeling of horror, I slipped over onto the deck. The next moment the negro and Dutchman joined me, the former staring about wildly, the whites of his eyes revealing his terror.

"My Gawd, sah," he ejaculated. "Ah done know dis boat—it's shore de Santa Marie. Ah's cooked in dat galley. She was a slaver, sah." He sniffed the air. "A kin smell dem niggers right now, sah. Ah suah reckon dars a bunch o' ded ones under dem hatches right dis minute."

Schmitt's hand fell heavily on my sleeve and I glanced into his stolid face.

"I just bet I know vat wus der trouble."

"What, man?"

"Cholera," he whispered; "ve haf boarded a death ship."

CHAPTER XXVII.

On Board the Slaver.

The terror of the two men as this thought dawned upon them in all its horror was apparent enough. Nothing, not even fire, was more to be dreaded than a visitation of this awful nature on shipboard. Charnel ship though this might be, it was safer by far than the cockleshell towing alongside.

"Let's find out the truth first, men," I said quietly. "Hold your tongues. There is no use giving up until we know what the danger is. Will you come with me?"

The terror in Sam's eyes caused me to laugh and my own courage came back with a rush.

"Afraid of dead men, are you? Then we'll face them together, my lads, and have it over with. Come on, now, both of you. Buckle up; there is nothing to fear, if you do what I tell you—this isn't the first cholera ship I've been aboard."

It was no pleasant job confronting us, although we had less dead men to handle than I anticipated. Indeed, we found only five bodies on board. There were only two on deck, a giant, coal-black negro, and a gray-bearded white man, his face pitted with smallpox. Determined on what was to be done, I wasted no time with either body. The two sailors hung back, terrorized at the mere thought of touching these victims of plague. I steeled myself to the job and handled them alone, dragging the bodies across the deck and launching them over the low rail into the sea. I ordered Schmitt to cut the lashings and take charge of the wheel.

"See here, Sam, and you too, Schmitt, I am in love with that girl in the boat. Do you suppose I would ever have her come on this deck if I believed she might contract cholera? You do as I say and you are perfectly safe. Now, Schmitt, remain at the wheel, and you, Sam, come with me. There will be a dead nigger aboard unless you jump when I speak."

He trotted close at my heels as I flung open the door leading into the cabin. The air seemed fresh enough and I noted two of the ports wide open. A tall, smooth-shaven man, with an ugly scar down one cheek, lay outstretched on a divan at the foot of the after mast, his very posture proclaiming him dead. His face was the color of parchment, wrinkled with age.

The negro crept up behind me and stared at the upturned face.

"My Gaud, sah, he wus de ol' captain. Paradilla, sah; damn his soul!"

In what was evidently the captain's room I discovered a pricked chart and log-book, with no entry in it for three days. Without waiting to examine these I stowed them away in my pocket. Between us we forced the stiffened form of the captain through the open after port and heard it splash into the sea astern. There were two dead seamen in the forecastle, both swarthy fellows, with long Indian hair. I never saw a dirtier hole, the filth overpowering, and once satisfied that both men were beyond help, I was content to lower the scuttle and leave them there. God! it was a relief to return once more to the open deck and breathe in the fresh air. I hailed the boat towing below.

"Come aboard, Watkins," I called sharply. "Pass the lady up first, and turn the boat adrift."

I caught Dorothy's hands and aided her over the rail.

"Why was the vessel abandoned?" she asked. "What has happened? Do you know?"

Quietly I told her the truth and assured her that if we staid on deck and used our own bedding and provisions we were in no danger.

"How can I help you?"

"Tell the men just what I have told you," I said gravely. "They will be ashamed to show less courage than you."

We turned and faced them together as they formed a little group against the rail. Hallin was first to speak.

In Use For Over Thirty Years

CASTORIA

THE CENTAUR COMPANY, NEW YORK CITY.

WORK DIDN'T SHOW FOR MUCH

Lecturer's Wife May Have Had the Idea That Perhaps He Was Wasting His Time.

The steel and coal strikes were on; the reds were busy in thousands of American communities stirring up anarchy; the civilized world was literally broiling with discontent; the profiteers were piling up their guilty millions unrestrained. And Fred Warren, former editor of the Appeal to Reason at Girard, Kan., a socialist lecturer of national renown, was starting out from home with his traveling bag in hand, to fill a speaking engagement.

"Where are you going now?" inquired Mrs. Warren.

"Out to save the world," he replied.

"How long have you been engaged in saving the world?" she asked retrospectively.

"About fifteen years," was his answer.

"And now look at it!" she lamented. —Fort Scott Tribune.

Long Meteor Flight.

Numerous observations of the brilliant meteor seen in the early evening of October 21, 1919, show that it had the long horizontal flight of 335 miles from over a point 20 miles northeast of York, England, to 30 miles southwest of St. Valery, France. It traveled at a speed of about 33 miles a second and its average altitude was 74 miles. Its radiant point and speed agree nearly with those compared by Prof. A. S. Herschel for the meteors from the comet of 1739.—Scientific American.

An Apology.

He—Excuse my cigar.

She—Oh, you may smoke, or I shouldn't have given it to you. It is one of father's, you know.

He—That's why I am apologizing.

Assured Knowledge.

"How is it that woman knows so much about bringing up children?"

"She never had any."

Wealth in North Dakota.

According to United States government statistics the agricultural products of North Dakota have increased about $278,000,000 since 1915, making a per capita wealth in the state of $2,966 at the close of 1918. The United States census bureau estimates the per capita wealth of the entire Union at $1,956, so that the average wealth in North Dakota is more than $1,000 greater than the average for the whole Union. Including horses, cattle, hogs, sheep and creamery products, the agricultural production of the state at the close of 1918 was valued at about $638,000,000. The same production at the close of 1915 was valued at about $260,000,000.

Worth Paying Premiums For.

A $5,000 life insurance policy was taken out on a hen exhibited in Portland, Ore., recently. This hen is a White Leghorn, owned by Doctor Tancred of Kent, Wash. She set a world's record for production by laying 336 eggs in 365 days ending September 16. This is about four times the production of the average hen. The owner consented to allow her to be placed on exhibition by one of the poultry feed companies, but stipulated that she must be insured for $5,000.

A Triumph.

"Was the Grabcoin reception a success?"

"I judge so," replied Mr. Dubwaite. "Yes?"

"Mrs. Grabcoin's Paris gown was such a marvel that quite a number of the ladies present left earlier than they intended, and I understand that were very disagreeable to their husbands on the way home."

The Likeness.

"The nations are like the people at this time."

"How do you mean?"

"They're just fed up with Turkey."

Often a man's character would be unable to recognize his reputation when they were to meet.

Soul That Is Truly Great.

Emerson, that greatest of modern philosophers, has told us that it is easy when in a crowd to allow ourselves to be swayed by the opinions about us and comparatively easy to keep our individuality and sweetness when alone, but that the great soul is he who in the midst of a mass of other individuals can still keep the poise and sweetness of solitude.

Work and Workers.

There is not so much difference in the world's work as in the world's workers. It is not so much difference what we are doing—so long as it is useful—that counts as the way in which we are doing it. The work of which we are ashamed we either have no right to do, or we are not doing it as we should.

WOMEN OF MIDDLE AGE

May Pass the Critical Period Safely and Comfortably by Taking Lydia E. Pinkham's Vegetable Compound.

Summit, N. J.—"I have taken Lydia E. Pinkham's Vegetable Compound during Change of Life and I think it is a good remedy in such a condition. I could not digest my food and had much pain and burning in my stomach after meals. I could not sleep, had backache, and worst of all were the hot flashes. I saw in the papers about Vegetable Compound so I tried it. Now I feel all right and can work better. You have my permission to publish this letter."—VICTORIA KOPPL, 21 Oak Ridge Ave., Summit, N. J.

If you have warning symptoms such as a sense of suffocation, hot flashes, headaches, backache, dread of impending evil, timidity, sounds in the ears, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness, inquietude, and dizziness, get a bottle of Lydia E. Pinkham's Vegetable Compound and begin taking the medicine at once. We know it will help you as it did Mrs. Koppl.

WATCH THE BIG 4

Stomach-Kidneys-Heart-Liver

HEADACHE

Often Caused by

Acid-Stomach

Yes, indeed, more often than you think. Because ACID-STOMACH, starting with indigestion, heartburn, belching, food-repeating, bloat and gas, if not checked, will eventually affect every vital organ of the body. Severe, blinding, splitting headaches are, therefore, of frequent occurrence as a result of this upset condition.

Take EATONIC. It quickly banishes acid-stomach with its sour bloat, pain and gas.

It aids digestion—helps the stomach get full strength from every mouthful of food you eat. Millions of people are miserable, weak, sick and ailing because of ACID-STOMACH. Poisons, created by partly digested food charged with acid, are absorbed into the blood and distributed throughout the entire system. This often causes rheumatism, biliousness, cirrhosis of the liver, heart trouble, ulcers and even cancer of the stomach. It robs its victims of their health, undermines the strength of the most rigorous.

If you want to get back your physical and mental strength—be full of vim and vigor—enjoy life and be happy, you must get rid of your acid-stomach.

In EATONIC you will find the very help you need and it's guaranteed. So get a big 50c box from your druggist today. If it fails to please you, return it and he will refund your money.

PISO'S

DAIRY TALE

BREED HEIFERS FOR JUNIORS

Animals Are Relatively Easy to Handle and Young Owner Gains Experience in Handling.

(Prepared by the United States Department of Agriculture.)

Many junior dairy clubs favor the maintenance of bred heifers by their members, because these animals are relatively easy to handle while their young owner gains experience in feeding and caring for the young females before they calve. Subsequently he learns how to handle the calf, which constantly is increasing in value. Where mature cows are distributed among the junior dairy club members more risk is involved, as many of the youngsters are not experienced sufficiently to handle them properly.

The advantage of distributing calves among the next generation of stock breeders, according to specialists, is the low initial cost of the animal and

Club Members Exhibiting Their Calves.

the fact that its keeping involves less expense and care on the part of the attendant. On the other hand, it requires three years to complete the project. This may be considered undesirable, as interest of the club members will likely become lessened. In both the case of the bred heifer and the calf it is difficult to select the best animals which will prove to be profitable producers, while in the case of the cow, she demonstrates her worth if proper records of production and expenses are kept. The junior dairy club work develops potential breeders who will mature from raisers of a single heifer or calf into full-grown owners of extensive and quality herds.

LIBERAL FEEDING FOR COWS

Animals Starting Into Winter in Thin Condition Need Extra Care to Nourish Calves.

(Prepared by the United States Department of Agriculture.)

Breeding cows that started into the winter in thin condition need extra care and liberal feeding at this time if they are to nourish their calves properly and maintain their own bodies satisfactorily. It is a mistaken idea of economy to starve through the winter a cow that is to drop a calf in the spring. Such practice not only reduces the vitality of the cow but dwarfs the growth of her offspring, because she is not able to nourish it properly.

The cow should be provided with a liberal amount of silage, or legume hay if no silage is available. A protein supplement in the form of velvet beans or cottonseed meal should be provided in addition to two or three pounds of grain. Corn stover or straw may also be used if available at this time of year.

ASSETS IN MILK PRODUCTION

Large Flow of Blood Indicates Digestive Organs and Heart Are Functioning Properly.

It is a well established fact that milk is produced from the elements carried to the udder by the blood. It seems reasonable, therefore, that the quantity of milk produced depends largely on the amount of blood which circulates through the udder. It is also self evident that a large flow of blood indicates that the digestive organs are functioning properly, and that the heart is strong. Both of these are very important assets in milk production, and in transmitting vigor to the offspring of the cow.

DAIRY NOTES

Fill the churn only half full and you will have better churning results.

* * *

Thoroughly cleanse and sterilize the cooler, cans, pails, strainers and other milk utensils.

* * *

The cow barn is a dirty place in the winter months unless the proper methods of handling are exercised.

* * *

The cow-testing association is apt to start many a boarder cow on a sightseeing excursion with the return ticket lost.

* * *

Good, clean corn stover is excellent for part of the roughage feed. Silage is especially good and should be fed at the rate of three pounds of silage per 100 pounds live weight.

MISS PLINY

By JACK LAWTON.

(Copyright, 1920, Western Newspaper Union)

Miss Pliny pinned an imaginary loose hair into the smooth coil at the back of her head as she regarded a small, blue-eyed girl, seated before a typewriter near by. The figure of the small blue-eyed girl drooped despondently, and her face was wistfully appealing.

"Miss Pliny," the girl asked, as though aware of the sympathy in the gaze bent upon her, "what ever have you done with all your evenings, alone in this big city? I was thinking about it last night as I sat in my room. You told me once that you had never had an admirer or lover to take you about. Neither have I, nor am I likely to have, for it was the same back home where I knew everybody. I seem to have missed some way the secret of attraction. Or it may be, that realizing the lack of men's interest in myself, I grow bored and tiresome in their company. I don't know the reason, but conditions are not likely to improve in a city where I am a stranger, while the girls have too many good times of their own to bother about lonely me. Miss Pliny, dear, how do you spend your time and keep from utter dullness?"

The elder woman smiled.

"I used to ask myself just that question," she replied, "until I learned how to find, and give, happiness. My dear Violet," Miss Pliny leaned forward, her shrewd eyes sparkling. "I've had many love affairs, though never a lover. Highly diverting affairs they were, too."

Violet stared. "You don't mean," she asked aghast, "that you loved without having your love returned—and were happy!"

"Exactly," nodded Miss Pliny.

Violet closed her typewriter.

"I can't see," she said laughingly, "how that could brighten a lonely evening."

The elder woman studied the girl with a certain inscrutable expression, which her associates in the office recognized as preceding some clever business venture. Miss Pliny had long been a valued, though silent member of the firm.

"Good night!" nodded Jim Bradley toward her desk as he took his departure, "Good night!" called Billy Blair, the office favorite. Miss Pliny responded absently. She was thinking of little Violet, and wondering impatiently why these same good-looking, honest young fellows could pass her shy, pretty assistant each day, without a gleam of interest in their faces? Miss Pliny knew the firms employees; they were good boys, and straight on the road to success. It was as Violet said. The other merry girls of the office openly refused to recognize her existence.

The girl slipped into her chair next morning with her usual low-voiced greeting, and it was not until near closing time that Miss Pliny became aware of a certain subdued excitement in her manner. Violet's blue eyes glinted, her pale cheeks were flushed with color.

"Miss Pliny," she said at last breathlessly, "the most wonderful thing has happened. I don't know how to explain it, and I do not know, exactly, what to do. Please, advise me. On my desk, when I came back from lunch, was a florist's box filled with glorious red roses. Red roses, Miss Pliny, with an audacious card reading, 'Red roses, for love.' Nothing more, Miss Pliny. No clue at all as to the sender. The message had apparently been written by the florist, for when I called up to learn the name of the donor, the clerk informed me that the person distinctly wished to remain unknown. I have met no men here, Miss Pliny, save those in the office, and you know, how likely they would be, to send me flowers."

"Just wait and keep quiet," advised Miss Pliny safely; "truth will come out."

After the fourth box of fragrant roses had been received, Jim Bradley approached Miss Pliny's desk.

"So the quiet one has a sentimental admirer," he said laughingly.

"Violet is lovely enough to have a dozen of admirers," Miss Pliny brusquely retorted.

And Jim Bradley, pausing, regarded with a new light in his eyes the bowed head of the little stenographer. Billy Blair, passing later, motioned toward the crimson bloom.

"Tribute of devotion?" he asked Miss Pliny, "or are we turning into a conservatory?"

Miss Pliny smiled. "Devotion would naturally be Violet's tribute," she said.

Billy Blair gazed into the happily transformed face of the stenographer, as though he were, for the first time, seeing her.

Miss Pliny, seated before her desk several weeks later, looked up to see Violet standing shining-eyed before her. "I have something to tell you," Violet said, "I— am going to be married, and to Billy Blair, Miss Pliny. Jim Bradley actually asked me, too. It is all so remarkable. Each of those foolish boys insisted upon believing that the other sent me flowers! So, of course, my red roses could have come from neither. I hope," Violet's radiant eyes clouded, "that whoever it was, will not be unhappy."

"'Who it was' won't be," Miss Pliny briskly responded. "Whoever it was is happy, indeed. She's been having another of her love affairs."

Home Town Helps

PROLONGING LIFE OF TREES

Filling Cavities With Cement Ends the Spread of Decay, and Is a Simple Operation.

Filling the cavities of trees with cement to prolong their lives is being commonly and successfully practiced. It is not only worth while in preserving fruit trees, but is also the means of saving valuable shade trees. Trees with cavities several inches deep are often cut down when, by using a little cement and sand, they could be kept alive for ten or fifteen years longer.

Of course, the cavities are small at first, but continue to get larger. They favor decay, weakening the tree.

With a knife or a chisel remove all of the decayed wood. Trim the edges of the wound smoothly with a sharp knife. Then a coat of paint or shellac should be given the outer edge of the wound. Successful growers recommend the use of creosote and coal tar to disinfect the inside of the cavity after it has been thoroughly cleaned out. This may be applied with a brush.

The cement may then be put in immediately. A good mixture may be made of one part cement to two parts of clean sand.

After the cement and sand have been stirred a few minutes add enough water to make the mixture into a thick paste. Begin filling the cavity

Putting a new heart into a tree. Cement has been substituted for the "heart" and most of the body.

from the bottom and tamp the material thoroughly. The work may be done on a warm day, and cement must be protected from freezing at least forty-eight hours. Remember that warmth and moisture are essential for the uniform and rapid hardening of concrete.

UNEVEN PAINT COATINGS BAD

Great Care Should Always Be Taken to Have Them of Equal Moisture Resistance.

Coatings of equal moisture resistance should be applied to all surfaces of a wood product which would give dissatisfaction if it were to warp in service. Tests at the forest products laboratory, Madison, Wis., have shown that even when wood is properly kiln dried, no coating entirely prevents it from picking up or giving off moisture and, consequently, from swelling and shrinking under the influence of varying atmospheric conditions.

Varnish, shellac, and other moisture-resistant finishes merely decrease the rate at which the moisture changes in wood occur. The higher the grade and the more coats applied, the slower will be the moisture changes.

Unequal coatings on opposite surfaces of wooden articles cause unequal rates of change in moisture content and hence unequal shrinkage on the two sides of the piece. The result is that the wood tends to cup or twist out of shape.

Planting Memorial Trees.

Planting of trees in honor of heroes who gave their lives in the late war is becoming a favorite method of perpetuating the memory of these men. In Cleveland, O., May 30, Memorial day will be made memorable by the dedication of Liberty row, which will extend for nine miles and will contain 694 trees each planted in memory of a gold star hero of Cleveland.

The trees will be called Victory oaks and each will contain a tablet bearing the name of a soldier, and the date and place of his death.

Do Away With the Billboard.

Signboards more than ever are becoming a nuisance on account of their increasing size and number. Our roadsides are boarded up with great signs in flashy colors. Just as a traveler along roadways reaches a point where a fine view is expected a glaring sign completely obstructs the view. It is exasperating to have a merchant intrude and force attention to his business on an individual at a time and place where it is not wanted. No good salesman conducts himself in this manner.—Exchange.

TERRIFYING DISCOMFORTS FROM SKIN DISEASES

Itching and Burning Eruptions Torture Victims.

If your skin seems ablaze with the fiery, burning and itching of Eczema, real and lasting relief can only come from treatment that goes below the surface — that reaches down to the very source of the trouble. Skin-diseases come from a disordered condition of the blood, and search far and near, you cannot find a blood remedy that approaches S. S. S. for real efficiency. S. S. S. has been on the market for fifty years, during which time it has been giving uniform satisfaction for all disorders for which it is recommended. If you want prompt relief, you can rely upon S. S. S. For expert advice as to the treatment of your own individual case, write to-day to Chief Medical Adviser, Swift Specific Co., Dept. 44, Atlanta, Ga.

LEADS TO ODD RELATIONSHIP

Hawaiian Custom of Adoption of Children Has Been the Cause of Amusing Complications.

The very old custom of legal adoption in the Hawaiian islands, which originated when there were many tribes often at war with one another, was intended to bring peace among them. The cause has long since disappeared, but the custom still persists. When a child is "spoken for" by some relative or friend, the little baby, as soon as it can leave its own mother, will be given to the foster mother, and will be regarded as a sacred trust. A Youth's Companion contributor tells of one woman who was the mother of eight children, seven of whom had been adopted by friends. When she was asked why she gave them away, she replied sadly: "It is a superstition, I know, but if they are 'asked for' and I refuse I fear some harm might come to them." The poor soul let them go just because she loved them so much!

The custom leads to very amusing complications. One of the native princesses now living has given her baby to her own mother. The little girl is legally adopted, and therefore has become the grandmother's daughter.

Trying to Fool Philander.

"Brother Philander," said I, to our head deacon last Monday, "I was detained yesterday morning and could not get to services." "So I noticed," replied Philander. "I would have been absent, too, had I not washed my car Saturday afternoon."—Kansas City Star.

As to Terms.

"Is that a dirigible?"

"No; it's just a balloon airship."—Baltimore American.

DID NOT NEED INTRODUCTION

First School Teacher Had Met Her Chum's Friend Somewhat Earlier in the Day.

These two teachers were chums. They are still chums. The first one met the second one and was out of humor about something. "Why, the most terrible thing happened today. A regular pill of a teacher visited me. She didn't even tell me that she enjoyed my work when the visit was over—just put up her head and sailed out of the room."

The second one essayed comfort and invited the first one home with her to supper. "Then we'll go to a show and forget all about that visitor," she said.

The first one accompanied her home, and there in the living room was another visitor. The second one greeted the out-of-town cousin and turned to introduce her to her friend, when the friend began, with a sickly smile: "Oh, you visited me this afternoon."—Indianapolis News.

Marital Inconsistency.

"Married couples should yield to one another's opinions to get along," said the sober-faced man.

"I dunno," responded the other. "It didn't work in our case. I told my wife I wasn't worthy of her and she declared I was. For the sake of harmony, I yielded my opinion and said I was worthy of her, and she, not to be outdone in generosity, I suppose, yielded her opinion and said I wasn't. And so we parted. No, I guess what you said isn't so, stranger."

Learned Something.

"Flubdub seems subdued. He used to think he was the whole thing."

"He got married."

BUTCH SCHROEDER
Seller of Fat Steers at Chicago For
CENTRAL

Selling

FAT STEERS

For

Central Live Stock Commission Company

At Chicago
The Greatest Market in the World

That's my Job!

I lived in Klemme and dealt in fat cattle all my life before I came to Chicago where bigger opportunities were presented me.

I beleive I am safe in saying that I know the kind of cattle which come from your locality better then anyone here at Chicago.

I know the men who feed them and the conditions under which they are hand-becanse my firm receives a lot of them.

I know every steer buyer at Chicago and the class of cattle each one wants. I can guess the dressing percentage on a drove of cattle as close as any of them because the many years I spent in the butcher bu iness at Klemme gave me some mighty valuable experience which helps me greatly in selling fat steers.

Since the finst of the year, I became a member of Central Live Stock Commission Co, and my ambition is to get in touch with every man who handles fat cattle or any live stock in your locality.

I don' think anyone will question my statement that CENTRAL has the best cattle sales pens in the yards. Right against the Ezchange Building two minuets walk from the office; on the main alley where I crn stop all the buyers as they pass back and forth.

Write me a letter. Describe your cattle fully. Tell me how much they weigh and how long you have fed them. I will help you.

WILD ANIMALS HUNTED DOWN

Government Hunters Kill Many Beasts That Destroy Live Stock.

WORK OF VALUE TO FARMERS

Mountain Lion That Had Killed $1,000 Worth of Stock in Month Is Slain—Wolves Lay Heavy Toll on Flocks.

Washington. — You would hardly think of the United States department of agriculture as an agency for hunting down desperadoes, but it is. That the desperadoes happen to be not men but wild animals does not detract either from the adventure or the value of the work. Now and then a wild animal becomes notorious for its exploits in killing live stock. The inspectors of the bureau of biological survey make special efforts to hunt

One of the Wolves, With Young, Killed by Hunters of Biological Survey.

down and kill such animals. A mountain lion that was known to have destroyed $1,000 worth of live stock in one month was killed near Dubois, Wyo., a few months ago. That the animal had eluded many private hunters was shown by the number of scars on the body. Another mountain lion taken in April had killed seven colts during the spring. In the same state a pair of wolves that had destroyed $2,500 worth of live stock was killed, the female by a government hunter and the male by a private hunter.

Ranch Owner Loses 300 Sheep.

A ranch owner near Mertzon, Tex., reported that within three months he had lost 300 sheep, valued at $3,200, as the result of the depredations of six coyotes. Government hunters, in July, captured all six of the beasts.

But not all of the bad beasts have been disposed of. About 30 very cunning wolves still roam the ranges of New Mexico, causing annual losses to live stock amounting to about $2,000 each. When the department's campaign for destruction of predatory animals began, however, there were between 300 and 400 wolves in the state. The small number remaining, though made up of the most cunning and destructive individuals of the packs, is being steadily reduced, in spite of the fact that the stock of wolves in that state is constantly recruited by stragglers from the mountains of northern Chihuahua, Mexico.

SCOTS WOULD BAN 'MACBETH'

Shakespeare's Play Libel to King, Is Claim of League of Veterans of World War.

New York.—A resolution demanding the elimination of Shakespeare's "Macbeth" from school curriculums on the ground that it was a libel on the Scotch in its "misinterpretation in presenting King Macbeth as a traitor and murderer," was adopted here by the League of Scottish veterans of the world war.

The resolution was addressed to the Newark (N. J.) board of education, which recently barred "The Merchant of Venice" from the schools because of the alleged slander to the Jewish race.

"If they have banned Shylock, I see no reason why they should not ban Macbeth," said Capt. Ian McTavish. "If the Jewish gaberdine is to be cleaned they should also remove the stain from the Scottish kilt."

Wild Ducks Not Scared by Those Men Who Fly

Washington.—Airplanes do not bother wild ducks, the army air service announces, and sportsmen who believe they do are unduly alarmed.

Lieut. Col. H. M. Hickman, when in command of Dorr and Chisholm fields, flew twice a day for several months over a swamp that was the feeding place of wild ducks. To flush the fowl he had to pilot his plane within 50 or 100 feet of the surface. But when he would take off the ducks would immediately return to the swamp.

REDEEMS HER OLD PROMISE

Woman Exchanges Gold for Silver Pieces on Her Golden Wedding.

London.—A promise made twenty-five years ago has just been redeemed by Lady Pender of Donhead, St. Andrew, Wilts.

At her silver wedding celebration in 1892 she gave threepenny pieces to a number of children, who were told that they would be exchanged for half sovereigns at the golden wedding.

Nearly thirty of the recipients returned their silver coins when Sir James and Lady Pender celebrated their golden wedding this year and each one has received the promised half sovereign.

Lady Pender has had the threepenny pieces gilded and made into a necklace as a souvenir.

SEEK TO SAVE STARVING ELK

Two Principal Herds in Country in Danger of Serious Depletion.

SPECIAL FUND TO BUY HAY

Officials of Department of Agriculture Making Every Effort to Procure the Needed Feed—Scarcity of Forage.

Washington.—The two principal herds of elk in the United States—one of which is under the protection of the biological survey of the United States department of agriculture—are in danger of such serious depletion, due to early severe weather and feed shortage, that special funds have been set aside for the purchase of hay for these animals whose home is in and near Yellowstone national park. Department officials are making every possible effort to procure the needed feed despite the serious scarcity of hay and forage in the region. Approximately 40,000 elk roam this section of the country. They are divided into two groups, known as the northern and southern herd, respectively. The latter, which winters in the vicinity of Jackson Hole, to the south of Yellowstone park, is the one for which the department of agriculture is seeking to make provision.

Ranchmen Slow to Part With Hay.

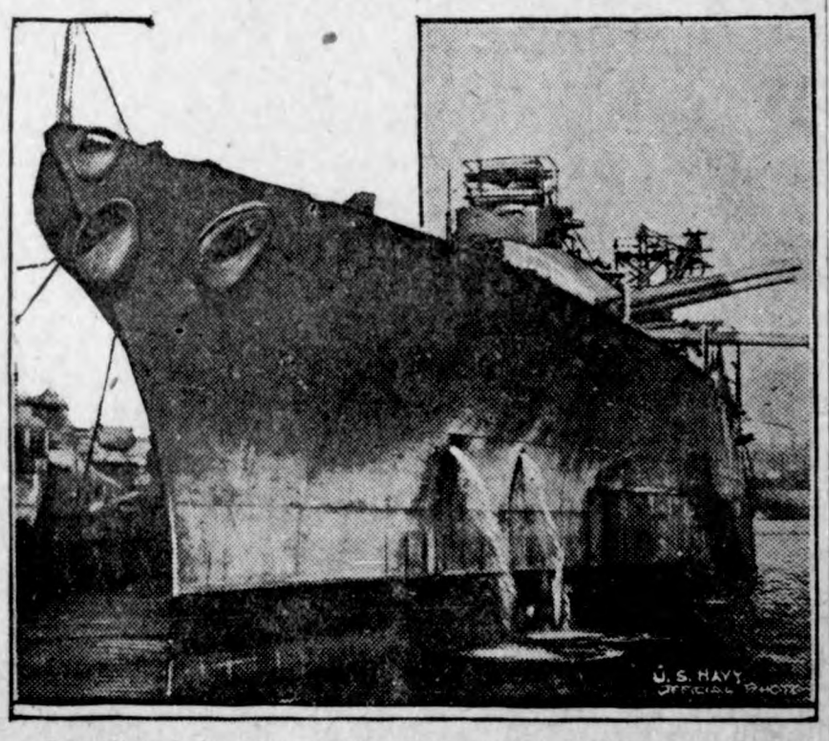
Reports have recently been received from government representatives in the region of Yellowstone national park stating that many elk are destined to starve if the present severe weather continues and if no additional supplies of feed are provided. On the winter elk refuge in Jackson Hole the department has in store approximately 1,300 tons of hay which normally would be sufficient to carry the southern herd through the winter. But cold weather and heavy snows came so early that there is grave danger that the animals will be without feed before many weeks have passed. Ranchmen in the region are confronted with a serious condition and are reluctant to part with any of their hay.

Largest Herds in Country.

The northern elk herd is under the supervision of the national park service of the department of the interior, which is also making every effort possible to prevent loss of these animals.

These two herds are the largest elk herds remaining in this country, though at one time elk were to be found in large numbers as far east as the Blue Ridge mountains. These animals, like the buffalo and antelope, have now been reduced to a mere fraction of their former numbers. The few herds that remain besides those in the vicinity of the Yellowstone park are relatively small. Loss of many of the animals in the larger herds might be irreparable, say government officials.

THE TENNESSEE NEARING COMPLETION



Bow view of the great superdreadnaught U. S. S. Tennessee, which is nearing completion at the Brooklyn navy yard. She was launched April 30, 1919, and when completed will be one of the largest and most powerful battleships afloat.

$12,512 in Pelts.

Burne, Ore.—W. Duncan, who has several hundred coyote traps, has just made his semi-annual trip to Burne and sold his entire stock of 650 skins, which brought $16.25 each, besides about $3 bounty each. The fur industry continues to be good. The entire returns of the 650 pelts, including bounty, amounted to $12,512.

VIOLATE FOOD RULES

Illicit Trade Is Spreading in Germany.

Smuggling and Usury Increase—Courts Crowded With Those Who Break Laws.

Coblenz.—Illicit trade in food, with its attendant evils of smuggling and usury, is on the increase throughout Germany, according to newspaper accounts.

The rationing system has never been abandoned even in the occupied areas of the Rhineland, and some of the newspapers contend that the average individual cannot subsist on the amount of food issued. The authorities are making every effort to check the illegal traffic in foods of all kinds, and the courts are crowded day after day.

Smuggling of potatoes is being carried on this winter in all parts of Germany on a scale greater than in war time. Germany produced an excellent potato crop this year, and the authorities are trying to save it from falling into the hands of the speculators.

Well-to-do people have been going to Bavaria from Prussia, Wuerttemberg and Thuringia to buy potatoes, eggs and fats, for which the farmers charged exorbitant prices. This worked a hardship on the poorer people, who could not compete with them.

Living appears to be cheaper in Bavaria than elsewhere in Germany. Butter has been selling there at 5 marks a pound, compared with 30 marks in Berlin. Eggs are quoted at 25 pfennigs each, while in Berlin they cost 1.75 marks apiece. Eggs in the occupied area have been bringing from 2 to 2.50 marks each this winter, but are very scarce at any price.

Meat is also reported as fairly plentiful in Bavaria, although in all other states this form of food is virtually unpurchasable by householders through regular channels excepting once or twice each month, when the authorities permit a few ounces to be distributed by the card system to the individuals.

Most of the hotels throughout Germany continue to serve meat three or four days each week, however. The proprietors say they obtain this from Holland and that this does not violate the food regulations.

Pearls in Oysters.

Spokane, Wash.—Ten pearls from a quart of oysters that cost him 45 cents were taken by one customers of a local fish market, and two pearls were found by another, the dealer reported. He, himself, found one, he said. The pearls are said to range in value from $2 to $10 each.

Plane Service for Peruvian Coast.

Lima, Peru.—An announcement is made that the Handley Page Airplane company will in a short time inaugurate commercial hydroplane service along the Peruvian coast.

STICK BY EX-KAISER

HOLLAND INFORMS ALLIES SHE WON'T YIELD WILHELM.

CANNOT BE BOUND BY TREATY

National Honor Impels Country Not to Betray Host—Would Be Party to New Regime.

Paris.—The Dutch government has refused the demand of the allied powers for the extradition of former Emperor William of Germany.

The reply of the Holland government to the note of the allied powers demanding the extradition of the former war lord, so that he might be placed on trial for his war crimes, received here January 23, declares that the government of Holland cannot be bound by the peace treaty, to which she is not a party. Neither the Dutch constitution nor tradition permit of her acceding to the demand of the allied powers, the note sets forth.

The national honor, the reply declares, does not permit the betrayal of the confidence of those who entrusted themselves to Holland and her free institutions. The note further asserts that if in the future there should be instituted by the society of nations an international jurisdiction competent to judge in case of war needs, qualified as crimes and submitted to the jurisdiction by statute ante-dating the acts committed, it would be fit for Holland to associate itself with the new regime.

ANTI STRIKE LAW.

Legislation Enacted for Kansas Revolutionary in Scope.

Topeka, Kan.—Industrial legislation, said by many to be revolutionary in character, was completed in Kansas, when the legislature enacted a bill establishing in the state a court of industrial relations having jurisdiction over essential industries invested with public interest. The bill, which was signed by Gov. H. J. Allen, affects food, clothing, fuel and transportation, prohibits strikes or lockouts in these industries and provides severe penalties for conspiracy to promote strikes or to interfere with production. It also provides that the court can fix wages and settle industrial disputes in these industries and serve as a court of arbitration to consider disputes in other industries not listed as essential. It was passed by large majorities in both houses.

Stirred By Hoover Boom.

Washington, D. C.—The Herbert Hoover for president boom, urged by the New York World, has resulted in a lively political stir here. The New York World, one of the foremost democratic newspapers in the country, has come forward boldly and claimed Hoover as its own.

In the senate, Hoover talk has been heard both for and against the former food dictator. Generally speaking, republicans opposed Hoover as their candidate. Democratic comment offered more profitable field for speculation. It has been conceded there was a chance of his nomination in San Francisco next summer.

Bogus Booze Hounds at Work.

New York.—An organized band of fraudulent revenue agents who are alleged to have worked under direction of a few dishonest agents of the revenue department and to have victimized more than 100 New York saloon keepers, has been uncovered and the ringleaders identified, it was announced by James J. Quigley, assistant supervising federal prohibition agent. The amounts collected by the agents, it was said, varied from $1 to $500, and in several instances large quantities of liquor were confiscated by the impostors.

Raiding New York Wet Joints.

New York.—Whiskey, wines and cordials valued at from $5,000,000 to $10,000,000 have been seized here by government prohibition agents. About 100 federal officers are searching saloons, warehouses and piers.

Many Girls Vanish.

Los Angeles, Calif.—Two hundred and twentyeight girls disappeared in Los Angeles in 1919, according to records of the police department, just made public.

After Profiteers in Iowa.

Council Bluffs, Ia.—Louis and Moses Bernstein, proprietors of a department store here, were held to the federal grand jury under $2,000 bonds each by United States Commissioner R. D. Neely, charged with profiteering in the sale of twenty-five bags of beet sugar on January 12, represented as cane sugar.

Newspapers in Mourning.

Berlin.—A dispatch to the Lokal Anzeiger from Budapest says that all the Hungarian newspapers appeared with black mourning borders on the occasion of the publication of the peace terms for Hungary.

Permits Trade With Russia.

Washington, D. C.—Reciprocal interchange of certain commodities, including foodstuffs, between the Russian people and allied and neutral countries has been decided upon by the supreme council.

EVIDENCE AGANIST CARRANZA

Startling Disclosures Made Before Senate Committee Investigating Mexican Affairs.

San Antonio, Texas.—Carranza and a few of his principal lieutenants instigated and directed the long series of raids on American properties that began along the Rio Grande early in 1915, according to documentary evidence placed before the senate subcommittee investigating the Mexican situation.

This was supported by testimony by John A. Walls, the district attorney at Brownville, Texas; L. R. Barnes, in charge of the United States army intelligence work along the border during the war, and other witnesses. The committee obtained from them and from documentary evidence information tending to show that not only were the highest Mexican officials cognizant of the program of the raiding parties which was carried out under the provisions of the "plan of San Diego," but that as late as June, 1915, they were still given encouragement to and aiding those who participated in those raids in plans inimical to the United States.

The committee also gained further information as to the success encountered by Germans in bidding for the sympathy and support of Mexico during the war and the reported present drift toward bolshevism. T. B. Allendorf, a Pole who was in the intelligence service of the American army during the war, was placed on the witness stand long enough to identify Mario Mendez, the director of telegraphs in Mexico, as one of those whom Minister Von Eckhardt kept on his payroll during the war.

Summarized, the plan of San Diego, a copy of which was read into the record, follows:

"The states of Texas, New Mexico, Colorado, Arizona and California are to be invaded simultaneously with uprising with Mexico and negro citizens on the American side.

"A separate government is to be established and re-annexation to Mexico requested. Six other states contiguous to this territory are to be carved out of the United States to be formed into a negro republic under the protection of Mexico. This is to be accomplished in a ruthless manner. All male Americans more than 16 years of age are to be killed."

SUSPENSION MEANS "REVOLT."

Grave Consequences Predicted if Members of Assembly Lose Seats.

Albany, N. Y.—Morris Hilquit, chief counsel for the five suspended socialist assemblymen, declared at the opening of their trial that if the assembly permanently ousted the defendants, the act "will loosen the violent revolution which we socialists have always endeavored, and are endeavoring, to stem."

Mr. Hilquit added this "one word of solemn warning," after asserting that the Romanoffs and all instruments of oppression in Russia had been destroyed after the government had tried to outlaw the socialist movement and that "we are not afraid of suppression at the time one-half the world is under socialist control."

This "warning" was later interpreted by Martin W. Littleton, asociate counsel for the committee, as "a warning to the country, a threat to the committee and an admonishment to the assembly that they do not dare deal with the gentlemen he represents unless they wish to invite revolution to this country." Mr. Hilquit denied that his remarks were intended as a "threat," and said instead he had 'made a sort of love offer" that "we socialists are ready to see the thing through in a constitutional manner and by peaceful methods."

Influenza Epidemic in Cuba.

Washington, D. C.—Six thousand cases of influenza have been reported in Havana, Cuba, the public health service is advised. The service announced that all possible precautions to prevent an influx of the disease into the United States is being taken.

Empty Wine in Gutter.

Los Angeles.—Thirty-five thousand gallons of wine, valued at more than $100,000, according to officials, was poured into the gutter here under provisions of the prohibition law.

Campaign to Save Men.

Lincoln, Neb.—A postcard bombardment to force Governor McKelvie to reprieve Alson B. Cole and Allen Vincent Grammer, sentenced to be electrocuted here January 30 on an earlier reprieve from January 16, has been launched by the newly organized Nebraska Anti-capital Punishment league. It has also undertaken the task of securing 30,000 signatures to petitions before the execution. If the postcards fail the petitions will place a moral obligation on the governor to act.

Methodist Churches Unite.

Louisville, Ky.—Recommendations of the joint commission of the Methodist Episcopal churches, north and south, that the two branches again be reunited, were unanimously adopted by the convention here of 100 or more bishops, pastors and laymen of both churches. The merger plan provides that the unified churches be named the Methodist church. The recommendations of the commission will be submitted to the general conferences for final decision. The northern conference meets next May in Des Moines.

PAIN IN BACK

Boy River, Minn.—"I have used Pierce's medicine with good results in family for years. In winter I was taken with La Grippe and left me run-down, with pains in my and back. I took different medicines without getting any benefit. At last I and got some of Pierce's Anuric took it and am feeling well and doing a good day's work. I commenced taking the Anuric Tablets I could hardly get out of the bed, as though a knife was sticking in my back."—A. C. Blodgett, Box 2.

KIDNEYS AND BLADDER

Inland, S. Dak.—"I can recommend Dr. Pierce's Pleasant Pellets and Anuric (anti-uric-acid) Tablets as grand medicines. I was troubled with my stomach, and had weakness of the bladder and I started taking Dr. Pierce's Anuric Tablets and Pleasant Pellets and I believe they have cured me of my trouble. I think my stomach trouble was dyspepsia. 'Pleasant Pellets' are the best regulator of the stomach and bowels I have ever used and I would recommend them highly. I have used four bottles of Anuric Tablets and four vials of Pleasant Pellets."—E. Eastman.

Rheumatism, Feet Swollen

Stillwater, Minn.—"I feel that it is my duty to write about the wonderful results I received from the use of 'Anuric.' I was suffering from kidney and bladder trouble, scalding, rheumatism, also my feet and ankles swelled so that at times I could not walk without assistance. Had taken several different kinds of kidney remedies and all failed. Finally I sent to Dr. Pierce for a package of his new discovery, 'Anuric' (anti-uric-acid), which I received by mail in tablet form. I soon got better and am convinced that this popular new medicine is good. I wish to recommend it to my neighbors and everybody suffering from kidney troubles."—Mrs. M. J. Sargent, 218 E. Elm St.

No Loss.

"What's the gloom about, Dauber?"

"I was just worrying over the arts."

"Why worry? There's a lot of stuff around now that ought to be lost."—Kansas City Journal.

TAKE ASPIRIN ONLY AS TOLD BY BAYER

"Bayer" introduced Aspirin to physicians over 18 years ago.

To get quick relief follow carefully the safe and proper directions in each unbroken package of "Bayer Tablets of Aspirin." This package is plainly stamped with the safety "Bayer Cross."

The "Bayer Cross" means the genuine, world-famous Aspirin prescribed by physicians for over eighteen years.

"Bayer Tablets of Aspirin" can be taken safely for Colds, Headache, Toothache, Earache, Neuralgia, Lumbago, Rheumatism, Joint Pains, Neuritis, and Pain generally.

Handy tin boxes of 12 tablets cost but a few cents. Druggists also sell larger "Bayer" packages. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.—Adv.

It's our opinion that the average woman is better than the average man.

WAS DISCOURAGED

St. Charles Man Tells How He Suffered Before Doan's Cured Him.

"Heavy strains on my back and being exposed to all kinds of weather, weakened my kidneys," says John S. Shelton of St. Charles, Mo. "The misery in my back was constant and I had to get up several times during the night to pass the kidney secretions. I got no rest night or day and lost twenty-two pounds in weight. My eyes burned as if there were fire in them. I also had dizzy spells and would feel as if I were going to pitch forward. Sharp catches would take me in my back as if someone were driving a sharp knife into my back. My kidneys were so weak I had no control over them and the secretions were scanty and burned in passage. I had pains in my bladder too. I was discouraged. I tried different remedies but received no benefit. I was advised to use *Doan's Kidney Pills* and when I did so I was soon relieved of my misery. *Doan's* cured me."

Mr. Shelton

Skin Troubles —Soothed— With Cuticura

Soap 25c, Ointment 25 and 50c, Talcum 25c

Colds Break

Get instant relief with "Pape's Cold Compound"

Don't stay stuffed-up! Quit blowing and snuffling! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up a cold and ends all grippe misery.

The very first dose opens your clogged-up nostrils and the air passages of your head; stops nose running; relieves the headache, dullness, feverishness, sneezing, soreness, stiffness.

"Pape's Cold Compound" is the quickest, surest relief known and costs only a few cents at drug stores. It acts without assistance. Tastes nice. Contains no quinine. Insist on Pape's!—Adv.

Stopped.

"Algy fell in love with a girl at the glove counter. He bought gloves every day for a week. To discourage his attentions, she became a manicurist."

"Then he got his nails manicured every day, I suppose."

"Just so. However, I don't think he will follow her any farther."

"Why not?"

"Then she got employment with a dentist."—London Tit-Bits.

As we grow more sensible, we refuse drug cathartics and take instead Nature's herb cure, Garfield Tea.—Adv.

Dissimilar Tastes.

"Professor Diggs is gone to visit the site of ancient Babylon for the sixteenth time."

"That's the difference between an archeologist and a 'jazz hound.'"

"What do you mean?"

"The archeologist delights in a dead city, but what the 'jazz hound' is looking for is a live one."—Birmingham Age-Herald.

WHY DRUGGISTS RECOMMEND SWAMP-ROOT

For many years druggists have watched with much interest the remarkable record maintained by Dr. Kilmer's Swamp-Root, the great kidney, liver and bladder medicine.

It is a physician's prescription.

Swamp-Root is a strengthening medicine. It helps the kidneys, liver and bladder do the work nature intended they should do.

Swamp-Root has stood the test of years. It is sold by all druggists on its merit and it should help you. No other kidney medicine has so many friends.

Be sure to get Swamp-Root and start treatment at once.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

Fast on Their Feet.

Hewitt—Do you believe that college training fits a boy for practical life?

Jewett—It sure does. I have known a young fellow who made a record as a sprinter at college to become one of the most successful dodgers of creditors in the community.

To Have a Clear Sweet Skin.

Touch pimples, redness, roughness or itching, if any, with Cuticura Ointment, then bathe with Cuticura Soap and hot water. Rinse, dry gently and dust on a little Cuticura Talcum to leave a fascinating fragrance on skin. Everywhere 25c each.—Adv.

Correct Attire.

"What kind of a costume is the actress going to wear in that motion picture play?"

"Oh, I suppose a real filmy gown."

BOSCHEE'S SYRUP.

A cold is probably the most common of all disorders and when neglected is apt to be most dangerous. Statistics show that more than three times as many people died from influenza last year, as were killed in the greatest war the world has ever known. For the last fifty-three years Boschee's Syrup has been used for coughs, bronchitis, colds, throat irritation and especially lung troubles. It gives the patient a good night's rest free from coughing, with easy expectoration in the morning. Made in America and used in the homes of thousands of families all over the civilized world. Sold everywhere.—Adv.

On the Rialto.

"Yes, I may say I have inherited the mantle of Booth." "It will go around you at least four times."

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

Laugh a little less at your neighbor's troubles and a little more at your own.

ART OF MILKING FULLY OUTLINED

Chief Object of Milker Should Be to Increase Quantity and Keep It Clean.

FIRST COMES CLEANLINESS

Cow Should Be Curried and Given Sponge Bath—Harshness Should Be Avoided and Work Done Rapidly—Weigh Milk Daily.

(Prepared by the United States Department of Agriculture.)

Do you know how to milk?

The question is neither irrelevant nor impertinent. In sober fact, a great many persons who milk cows twice a day really know little about the true art of it, and a great many more could add to their present knowledge.

The writer of this article met one of the men in the dairy division of the United States department of agriculture who knew how to milk. He was a tall, quiet gentleman.

"I'll just drive the cow in the office here," he said. And he did. She was a pasteboard cow, to be sure, but she served very nicely to illustrate several things about milking. And following are a few of the essential things that this man who knows how to milk said about milking.

First Comes Cleanliness.

The first essentials are clean, healthy cows and a clean, healthy milker.

The next, perhaps, is a clean and sterilized pail with a narrow or partially covered top.

The cow should be curried before milking to remove loose hairs, dirt and dandruff. This should be done, if possible, an hour before milking to allow all dust to settle before milking is begun.

The Good Milker Gets the Larger Yield.

The next thing in order is a sort of sponge bath for the cow. It is a very simple matter, though, for all that is required is a pail of clean water and a cloth. Wash off and wipe the udder, the flanks, the thighs and the switch.

That done, everything is ready for the actual milking—which process, by the way, should be approached with hands that are not only clean, but dry.

The milker sits down on a stool placed on the right-hand side of the cow. It is not very clear just why the right side is universally the milking side. Perhaps it is partially due to the fact that the great majority of persons are right handed. The milker on the right side of the cow, if she starts to kick or to move, is in a better position to yank the pail out of harm's way before she can upset it.

The milker then grasps a teat in the palm of each hand. He squeezes the teat by closing the fingers around it and at the same time pulling the teat slightly downward. Then the fingers are loosened around the teat and the hand raised slightly to allow the teat to assume its original form and position, while the other hand squeezes and pulls slightly downward on the other teat. Thus each hand alternately gives a downward squeeze, in rhythmic order.

Getting Rid of Bacteria.

It is wise to milk about two squirts out of each teat before allowing any milk to go into the pail. Bacteria appear to accumulate around the end of the teat, and to be got rid of largely in this way.

Then clasp the small-top milk pail between the knees, with the covered portion of the top nearest the milker. If held in this position the covered portion will prevent hairs and dirt from falling into the milk.

Milk quietly but rapidly. The milker makes use of the mother instinct in the cow. Harshness is against that instinct and the cow does not secrete as much milk as she would if she were milked and handled quietly.

It must be remembered that not all the milk is in the udder when the milking process is begun. The cow secretes milk more rapidly during the milking process; and the milking, to be be successful, must be done in such a way as to promote that secretion If it is done so as to give pain to the cow or to alarm or disquiet her, she will not give so much milk.

Keep milking as long as it is possible to get any milk. The last milk is the richest. The first milk drawn is always comparatively low in butterfat. It is the "strippings," or last milk given, that contain the highest per cent of butterfat.

Milk Should Be Weighed.

Well, that is about all there is to the milking process. A great many things are related to it. The department of agriculture recommends that the milk should be weighed daily. There are several reasons for this. One is that the ration should be adjusted to the weight of milk. A safe rule, the department experts say, is one pound of grain to every three and one-half or four pounds of milk. Another, and perhaps more accurate, rule is to feed as many pounds of grain a day as the cow gives pounds of butterfat in a week; but this latter rule is not so conveniently applied in the case of the family cow, because of the necessity of making a Babcock test for butterfat.

The weight of milk produced, in proportion to the grain ration, is of particular importance during the first 30 days after the cow freshens. She is at that time most easily able to establish her working basis. She has just had her vacation. Her milk-secreting glands are sensitive, her digestive apparatus active. A few days after she becomes fresh, increase her grain one-half or three-quarters of a pound a day, and see how much milk she gives the following day. Keep up the increase from day to day as long as she responds with enough increase in milk to pay for the increased grain. When the point is reached where the milk flow fails to increase with increased feeding, reduce the grain ration a pound or two, and keep along this line until the point is found at which the cow produces the greatest and most economical flow of milk. Then fix this as her regular grain ration as long as she produces that amount of milk.

INFERIOR SIRES ELIMINATED

First Count of Scrub Purebreds Over Considerable Area—More Profit From Herds.

(Prepared by the United States Department of Agriculture.)

Of particular interest in a live stock survey recently completed in South Dakota are figures on the quality of purebred sires, as well as on the number of scrubs and grades in that region. Fourteen counties typical of live stock conditions in the state were included in the survey. Of the sires in herds of cattle 65 per cent were grades or scrubs, and about 25 per cent of the purebred sires were classed as inferior, according to a part of the reports. This is the first count of scrub purebreds, over a considerable area, received by the United States department of agriculture.

It was found that when purebred sires were used, the average herd of 20 grade cows returned $540 more profit during 1918 than when grade or scrub sires were used. It has been estimated that the elimination of inferior purebred sires would increase the average profit in each herd from $540 to $800 annually.

CLUB MEMBER PRIZE WINNER

Junior Poland China Sow Ascended to Reserve Championship at Colorado County Fair.

One of the largest and best exhibits of registered pigs ever shown in Colorado was brought together at the Larimer county fair, Loveland, by the boys and girls of pig clubs organized by the United States department of agriculture and the state agricultural college. Sixty-six registered pigs, Poland Chinas and Duroc Jerseys, were shown. Only nine club pigs entered were graded. The club pigs competed successfully with the entries of the best swine breeders in the state. A Junior Poland China sow, the property of a club member, ascended to the reserve championship, any age, any breed, being second only to a Duroc sow raised at the Colorado Agricultural college.

GENERAL FARM NOTES

Guard against wear by continuous repair.

* * *

All high-protein feeds are high in price this year.

* * *

Leaves which fall from trees are benficial to garden soils.

* * *

As with all live stock, it pays to have purebred ducks and geese.

* * *

Good alfalfa seed is now very scarce and commands a high price on the market.

* * *

Leaves are especially valuable when barnyard manure is scarce and hard to obtain.

* * *

Crimson clover does not succeed unless either the seed or the ground is inoculated.

* * *

To rid land of Bermuda grass or salt grass, plant Napier fodder next spring or fall.

OBTAIN MAXIMUM YIELD OF OATS

Light Frosts or Even Severe Freezes After Seed Is Sown Rarely Injure Plant.

DATE OF SEEDING UNCERTAIN

Midseason-Maturing Varieties Usually Give Best Yields in Northern States—Preparation of Seedbed Important.

(Prepared by the United States Department of Agriculture.)

To obtain maximum yields sow oats as early as it is possible to get land in satisfactory condition. This crop grows best in cool weather, and frequently is injured considerably by a few hot days when approaching maturity, and light frosts or even severe freezes after the seed is sown rarely injure it.

The date of seeding naturally depends on the locality and season. In the corn belt the best date is usually from about March 25 to April 15. In the more northern states seeding during the latter half of April is advisable whenever conditions permit. In favorable seasons seeding before the middle of April frequently can be done to advantage, while in unfavorable ones seeding may have to be delayed until early May.

The Disk Is the Implement Most Commonly Used in Preparing a Seedbed for Oats.

Varieties of Oats to Sow.

Throughout the northern states midseason-maturing varieties, such as Swedish Select, Silvermine, Banner and Victory usually outyield other varieties. In average yield the large, late (side oat) varieties rarely surpass the midseason type in this section. In unfavorable seasons, however, early varieties, such as Kherson and Sixty-day, frequently outyield the midseason varieties. In the corn belt early varieties as a rule produce the most satisfactory yields. For the northern portion of this section strains of the Kherson and Sixty-day type are to be recommended, while in the southern portion Red Rustproof, an early red oat, is the most dependable. For growing under irrigation at high elevations midseason varieties of the Swedish Select and Silvermine types are the most suitable.

Seedbed for Oats.

Prepare a good seedbed for oats. The old idea that oats will produce well on a poor seedbed has persisted too long. This crop responds as well to thorough seedbed preparation as any other cereal. Do not plow land that was in a cultivated crop last year, but disk and harrow sufficiently to make a loose, friable surface seedbed two or three inches deep. As oats require a fairly firm seedbed below the two or three inches of top soil, spring plowing is not desirable, there not being sufficient time for the soil to settle before sowing. Disking also is less expensive than plowing. Of course if a heavy growth of weeds is present in the cultivated crop it will be necessary to plow the land, in which case the seedbed should be rolled or dragged and worked down as much as possible.

Seed and Sowing.

Sow the best seed oats obtainable. Usually seed grown in the region where it is to be sown is better than that brought from some other section. Thoroughly fan and grade your seed, and then treat it for smut. The largest yields are obtained by use of a good grain drill. Drilling requires less seed, insures a more even distribution a more uniform covering, and consequetly quicker and more uniform germination. Under humid conditions the best amount of seed to use on a well-prepared seedbed is from eight to ten pecks to the acre. If it is necessary to sow broadcast on a poorly prepared seedbed use about twelve pecks. Under dry-land conditions these rates of seeding are usually reduced about one-half, from four to six pecks usually giving the best results.

GIVE CORN IN COLD WEATHER

One of Best Winter Feeds for Poultry, but Must Not Be Depended on Entirely.

More corn should be given to poultry in cold weather than in warm weather; in fact, corn is one of the best cold-weather feeds, though of course it should not be depended on entirely, for it does not contain all of the things needed to promote health and egg production.

PRACTICAL PLAN TO MEET HAY SHORTAGE

Utilization of Sugar Beet By-Products Is Recommended.

Tops Placed In Pit Silo Will Furnish Warm, Appetizing Feed Throughout Winter for Beef or Dairy Cattle and Sheep.

(Prepared by the United States Department of Agriculture.)

A very practical way of meeting the present hay shortage is through the use of beet-top silage, 30 pounds of which per day per steer will reduce the animal's hay requirements by one-half. That three pounds of beet-top silage per day per head of sheep will reduce the hay requirements fully one-half is the experience of many feeders who have tried out the newer way of utilizing sugar beet by-products.

On many fields as much as five tons per acre of silage can be had, when the tops are promptly gathered and put into piles, immediately after the beets are topped. This prevents scattering and waste. The farmer, after gathering the tops, should pile them in a pit silo, packing them down firmly, and sealing them over with fresh beet pulp or earth. A satisfactory silo may be made by scooping out a hole of suitable size and lining the sides and bottom with straw before filling. After 30 days, on opening the pit a fine quality of warm, succulent feed will be available. The silage has a value equal to about one-half the value of hay. The feed should be collected handy to the feeding yards. The silage comes out of the pit in warm, appetizing condition all through the winter feeding period. In fact, some growers hold a part of the silage for summer feeding to supplement the short-grass season when pastures are suffering for lack of moisture.

The silage is good for beef or dairy cattle and also for sheep. When fed in regulated amounts, excellent results are had. Much larger values are had from beet tops when siloed and fed as a blended ration than when grazed off the field in the usual way. Saving one-half of the hay crop is a big item this season where a hay shortage exists.

IS YOUR ICE HOUSE FILLED?

Season Is Getting Late and Farmer Should Not Wait Any Longer for Summer Supply.

(Prepared by the United States Department of Agriculture.)

Next summer when the little heat waves are rising from the cornfield and everything is parched and dusty, you're going to be mighty sorry if there isn't any ice in the ice house. No ice cream, no cool drinks, and lots of sour milk returned to you. Well, it will be your own fault. You let the winter slip by without harvesting ice. Maybe you planned to do it when the next heavy freeze came. But it never came, and you lost your golden opportunity.

It's getting late now. Soon sap will be running and buds swelling. You can't afford to wait any longer. This is nature's "last call" for ice. Cut it even if it isn't very thick. If it's spongy or soft, put up more than you would ordinarily to allow for greater waste. Get busy. You've heard about that place that's paved with good intentions! Ice next summer depends upon prompt action now—not next week.

A Farm Ice House.

DETERMINE QUALITY OF EGGS

To Obtain Accurate Knowledge of Condition It Is Necessary to Rotate Before Candle.

It is necessary to rotate an egg before the candle if one is to obtain an accurate knowledge of its condition. By tilting at various angles, the location and size of the air space can be seen, and very often the position of the yolk. But the quality of the egg is very largely determined by the ease with which the yolk moves and the direction of its motion. The operator, therefore—

1. Grasps the pointed end of the egg with the tips of the fingers.

2. Holding the blunt end uppermost, places the egg closely against the opening or spout of the candle.

3. Gives the egg a quick turn to the right or left, watching the movement of the yolk.

If the egg is perfectly fresh it may be difficult to find the yolk at first glance, but as the egg is turned a glimpse of it will be obtained.

HAIR FALLING? HERE IS WHERE IT SHOWS

Don't worry! Let "Danderine" save your hair and double its beauty.

To stop falling hair at once and rid the scalp of every particle of dandruff, get a small bottle of delightful "Danderine" at any drug or toilet counter for a few cents, pour a little in your hand and rub it into the scalp. After several applications the hair usually stops coming out and you can't find any dandruff. Your hair will grow strong, thick and long and appear soft, glossy and twice as beautiful and abundant. Try it!—Adv.

An Advantage.

Joe was visiting at grandmother's house and was being put to bed when he recalled that he had almost forgotten to say his prayers. He then said them at grandmother's knee—his usual "Now I lay me," ending by asking a special blessing for father, mother and his two little sisters.

At its close he realized he had not remembered his grandmother. "Why, I forgot you, grandma," he said and then smiled encouragingly "but don't you mind that. Pretty soon I'll be big enough to make my own prayers and then I can pray for everybody."

Catarrh Cannot Be Cured

by LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a local disease, greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE will cure catarrh. It is taken internally and acts through the Blood on the Mucous Surfaces of the System. HALL'S CATARRH MEDICINE is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in HALL'S CATARRH MEDICINE is what produces such wonderful results in catarrhal conditions.

There are a lot of sales booked for this month. Let the Times print your sale bills and arrange your advertising. A liberal use of printers' ink will put dollars in your pocket.

The Woman's Foreign Missionary Society of the First Methodist Church will hold their February meeting on Thursday, February 5th, at the home of Mrs. August Ridder. A cordial invitation is extended to all.

The firemen of Garner have decided they need a new whistle. They lack the necessary funds with which to procure one, so they have decided to give a dance and turn the proceeds into a whistle fund. The whistle they have in mind is one which will be driven by a motor and which is guaranteed to wake the dead.

Mrs. Josten has disposed of her millinery stock to the Liebenstein Co. at Garner, who expect to put in a millinery departmene in their large store. Mrs. Josten has gone out of the business entirely now after conducting a millinry store for quite a number of years. Klemme is now without a millinery store with little or no hopes of having one for some time as there is no good location now for an establishment of this kind.

Miss Wanda Jean Lau, is the name of the pretty young lady who came Sunday morning to make her home with Mr. and Mrs. Walter F. Lau. Miss Wanda tipped the scales at eight pounds and her proud father says she is the finest baby he has ever seen. Walt is exceedingly happy these days and we had difficulty in getting the item as he was all excited over Wanda and spent a lot of time in explaining her various fine qualities. This is their second child, both are girls. Both mother and babe are doing well, but "dad" can't quite get over it.

POLITICAL ADVERTISEMENTS

FOR COUNTY TREASURER

I hereby announce myself a candidate for the office of County Treasurer, subject to the decision of the Republican Primaries to be held June 7th, 1920. Yours very truly,

1-1-20 JOHN SUURBALLE

ANNOUNCEMENT

I hereby announce myself a candidate for the office of State Senator from the district composed of Hancock, Cerro Gordo and Franklin counties, subject to the decision of the Republican voters of said counties at the June, 1920, Primaries.

Dated at Garner, Iowa, this 12th day of January, 1920.

1-22-tf. J. E. WICHMAN

FOR SHERIFF

I hereby announce myself a candidate for the office of Sheriff for Hancock County, subject to the decision of the voters at the June, 1920, primaries.

1-29-p. E. PECK HANSON

I hereby announce myself a candidate for the office of sheriff of Hancock county, subject to the decision of the Republican voters of said county, at the Primary election to be held in June.

W. C. ZIESEMER,
Garner, Iowa

Items of Interest Summarized for Busy Readers

S. K. Hazlett of Oelwein has been elected president of the Iowa Veterinary Association.

Warblers are regarded as of great value to forests because of their destruction of insects.

John L. Berry, 79, is dead at his home in Iowa City. He was a pioneer contractor and builder.

Page county claims the Iowa wheat championship. This county raised 1,013,000 bushels during the past year.

According to County Agent George H. Munger of Appanoose county, fully 98 per cent of the soil in the county is sour and needs limestone.

In order to have good wool, it is necessary that good purebred rams be uesd and that the flock be fed properly during the winter months.

Dr. W. L. Bullis, a prominent physician, of Wayne County, for 49 years died very suddenly at his home in Allerton of heart disease at the age of 74 years.

The Lee county supervisors have a bridge building program which will involve about $50,000. The bridges will be of steel and concrete and will replace wood and iron structures.

A load of clover seed valued at $2,444 was sold recently in Afton, Union county, to C. B. Crumpacker by Messer & Bissnell. The load contained 104 bushels and sold for $23.50 per bushel.

The Jackson county board of supervisors has appointed Hugh Williamson as county agent for a term of three years to succeed George McClellan, who just resigned.

The central division of the Iowa State Teachers association will meet in Des Moines April 1, 2 and 3. Dr. Allan Judd of Chicago university is one of the celebrities announced as a speaker.

Adams county farmers to the number of sixty have organized a shipping association. More are expected to join and there is talk of buying an elevator and engaging in the grain business also.

Two meetings recently held at Avoca and Walnut on farm management problems were preparatory to fourteen of such meetings which will be held in every township in the county soon, Income tax problems will be discussed.

Frank Scales, one of the well known farmers of Lucas county, says that there is much feeding in the county this winter and adds that feed is quite plentiful. "Shelled corn, clover hay and oil meal the rations I use in fattening my cattle," says Mr. Scales. "With my cattle are hogs following them; in this way hogs fatten on what the cattle drop."

As a result of the dual orchard and poultry demonstrations held in Van Buren county recently with R. B. Herrick and Mr. Parkhurst in charge, there will be formed the coming year a number of spraying clubs in the county, so that groups of orchardists may have their spraying done at a minimum of expense. More than 100 farmers attended the recent demonstrations.

The Union county Breeders' Association, organized some months ago, is proving to be a good thing for Union county in many ways. This association was started in October and the first meeting called was well attended by all breeders of the county. Officers were elected and a board of directors, consisting of one from each breed, who will have charge of the association business was chosen.

E. S. Kitterman, a well known breeder of Plymouth county, has recently purchased the champion under year boar, from E. N. Kern of Stanton, Neb. The price paid was $8300. This pig won first in his class at the state fair in Nebraska and was made world's champion at the National Swine Show held in Des Moines recently. The price paid is the largest ever paid for a pig of this age.

The object of the Iowa Farm Bureau Federation is not to displace or run counter with any other organization now existing, but rather to develop, strengthen and correlate the work of the county farm bureaus of the State; to encourage and promote cooperation of all representative agricultural organizations in every effort to improve facilities and conditions for efficient production, conservation, marketing, transportation and distribution of farm products; to further the study of agricultural legislation, and to advise with farm bureaus in all movements that effect their interests.

The German synod of the Lutheran Church at Waverly has brought suit in District Court to determine whether or not the German language may be taught in private of parochial schools.

Farmers in Iowa must use the very best methods of flock husbandry in order to get the greatest returns from their flocks. Sheep meetings are to be held in many of the counties this year and farmers of the state are urged to attend these when the announcement is made of such meetings.

Obituary

E. Alvin Schaefer, son of Mr. and Mrs. C. C. Schaefer, was born in Liberty township the 17th of December, 1903. He died at the Methodist hospital in Des Moines, on February 1st, 1920, his death being caused by influenza. He attained the age of 16 years, 1 month and 14 days.

Alvin was a bright and friendly boy and much beloved by all who knew him. Born into a Christian home and trained by God-fearing parents, his life was directed in the right paths of life from his early childhood, and he was given every opportunity to develop a strong Christian character, which he did. He loved the Sunday School and church of his choice. He was confirmed in the catechism and received into full membership of the Methodist Episcopal Church on March 31, 1918. Alvin seemed to enjoy a fair degree of health, but having hurt himself some day and causing hernia, it was thought best for him to go to the hospital and undergo an operation. So with his father, brother Emery and cousin Elmer, he left January the 19th for the Methodist hospital where he was operated on Friday morning, January the 23rd. For two days after the operation he was getting along very well, but then influenza appeared and soon made inroads on his life. All that loving hands on the part of his father, kind nurses and best medical skill could do was done to save his life, but all was of no avail. On Sunday evening at 9:30 he quietly and peacefully went to be with his Saviour, after giving his father the assurance that all was well and all darkness had vanished in the light of heaven. He leaves to mourn his early death, his father, mother, one brother, two sisters, one grandmother, one grandfather, nine aunts, eight uncles, eight cousins and many other relatives and friends. Funeral services were held at the First Methodist church on Wednesday afternoon. Interment was made in Calvary cemetery.

A BAD ACCIDENT

Last Saturday just after noon George Lalor living southwest of Belmond, went to the George Barry farm nearby, taking his shot gun along as he expected to hunt rabbits with Barry's man, a son of Tom Bayliss. When going through the hog lot in some manner his gun was knocked down and discharged the entire contents taking effect in the calf of his right leg, badly lacerating it and shattering the bone of the leg. Dr. McBurney was called and dressed the wound, and he appeared to be recovering from the shock. Sunday he was removed to the Steele hospital in Belmond. The wound was so serious that it is now feared his leg will have to be amputated. It is reported that the dogs playing or fighting nearby knocked down the gun leaning against the hog house, but that is not certain. It is a very serious accident, and his family and friends are very anxious as to his condition.—Belmond Herald-Press.

Rudd Review—"The gun that wasn't loaded" claimed another victim last Saturday when Avery Kimbell, 14-year-old son of Mr. and Mrs. F. E. Kimbell, was accidentally shot and killed by his 16-year-old brother, Herman.

The accident happened about noon in the kitchen of their home. The mother was in the room at thee time and was an invountary witness of the terrible accident, which nearly prostrated her. Avery and one of his younger brothers were in the kitchen and were playing with one of the guns they had, when they started inquiring in a friendly controversy who could puli thee trigger the fastest. The older brother, who was in the room at thee time, started to take a hand in the discussion, picking up a double-barreled shotgun that was handy and started pulling the trigger to show his ability, with the sad result above chronicled. The charge entered the body right above the heart and at the close range was mutilated terribly.

The Kimbell family moved on the Kidam place (the old Kittleson farm) last March, coming there from the Ogden place near Otranto. Funeral services were held today, conducted by Rev. Waldeland. The family have the sincere sympathy of the entire community in their hour of trial.

BELMOND MINISTER SUES TRUSTEES OF CHURCH

Failed To Pay Salary. Congregation Divided. Published Statement In Belmond Herald Which Caused Humiliation. Claims $10,000 Damages

Rev. Henry F. Horton, pastor of the Congregational church, at Belmond, has filed suits in district court against members of the board of trustees of the church.

In his petition he states that the trustees named became his enemies, interferred with him in the performance of his pastoral duties, and by their conduct and attitude brought about a division in the congregation of the church. He says that his salary is $1,200 a year and that it was paid to him so irregularly that he could not pay his bills with regular promptness.

Then the main climax in Dr. Horton's petition is made when he asserts that on December 17, 1919, the trustees caused an alleged financial statement to be published in the Belmond Herald-Press as an advertisement and in publishing this alleged statement he avers the trustees really charged him indirectly with being irresponsible, dishonest, extravagant, and as being a citizen and a clergyman living beyond his means. He claims this subjected him to public shame, humiliation and disgrace—all to his damage to sum of $10,000.

The case probably will be tried at this term of court.—Renwick Times.

IN MEMORY OF LINCOLN

The approach of Lincoln's birthday renders timely the special service at the Methodist Episcopal church next Sunday evening in commemoration of the great president. It is peculiarly fitting, in this second great national period of reconstruction, now not only national but international, that we should recall the figure of that American whose leadership meant so much to our country and to the world

In one of the boy Lincoln's school books, still extant, is the inscription in his then scrawling, unformed handwriting, "Abraham Lincoln, his hand and pen. he will be good but God knows When." Did that time ever come? Was Lincoln a Christian? Herndon, his law partner at Springfield, and his biographer, asserts that Lincoln was a "freethinker." A discussion of this phase of his character will be a minor part of the address by Dr. Buriff Sunday evening.

All patriotic citizens having no other church engagements, are urged to do honor to the memory of Lincoln by attending this service.

THIS IS NO FISH STORY

We are informed by W. H. Green, who is on the J. J. Johnson farm, that on the 24th day of December he lost one of his calves and they looked every where that a calf could get, but with no avail. There was a straw stack that had blown over and they looked there, but nothing doing. On the 24th day of January they were hauling straw and sure enough they found the calf and it was alive. They gave it some water and in a short time it went to the barn, and they say that it is doing nicely when they phoned this office. Nothing strange for a camel to go without water, but think of a calf.—Dows Advocate.

MR. GROUND HOG SAYS GOOD WEATHER

According to old myths the second day of February is "Ground Hog Day." On that day the ground hog is supposed to come out of his hole and if the sun happens to be shining he will see his shadow. This is supposed to frighten the ground hog and he will scamper to his hole where he will hide and sleep for six more weeks, which also indicates that six weeks of cold and stormy weather will follow. If on that day the sun does not shine and the ground hog does not see his shadow then it is an indication of an early spring with good weather to follow. If we believe in the old tale we can therefore look for good weather from now on as the sun did not appear during any time of the day.

FLU RAGING AT GOODELL

Flu has broken out at Goodell and quite a number are down with the disease. The church is being used as a hospital at present. Monday night a sixteen year old girl died at Goodell after suffering a short time with the flu.

LEONARD WOOD, ADMINISTRATOR

WOOD HAS VARIED CIVIL EXPERIENCE

ADMINISTRATIVE QUALITIES ARE TESTED AND PROVED IN HANDLING GREAT BUSINESS PROBLEMS.

By EDWARD B. CLARK.

From time to time people ask, "What has been the administrative and business experience of Leonard Wood? What has been his experience with men outside of the army? What does he know about conditions in the different parts of the United States and in our overseas possessions? Has he any thorough knowledge of foreign affairs and of our foreign relations?"

The administrative qualities of Leonard Wood have been tested and proved. No American living has been tried more thoroughly than he in complex fields of constructive civil work, administrative work of the highest order which carried with it the necessity for the exercise of keen business acumen.

The republic of Cuba, built upon firm democratic foundations, is a monument to the administrative ability of Leonard Wood. In the Philippines is to be found another monument to his statesmanship.

Leonard Wood graduated in medicine from Harvard University in 1884 and served for more than a year in one of the great hospitals, later to take charge of the charity departments in a section of the city of Boston where the poor lived.

Not long after the completion of Wood's work in Boston he became an assistant surgeon in the army, coming into contact with the western plainsman, the miner, the people generally, and giving much of his time to the work of assisting the Indians and to a study of the problems of irrigation and reclamation.

Then for Leonard Wood there came four years in California. He covered the state many times in pursuance of his duties and extended his field as occasion required into the states of the Northwest. Then for two years he was in service in the South, having headquarters in Georgia.

From the South Leonard Wood went to the city of Washington, where his work brought him into daily contact with Grover Cleveland. Then he had the same intimate relations with William McKinley and the men of his time.

Then came the Spanish war and the active campaign in Cuba as the colonel of the regiment of rough riders of which Theodore Roosevelt was the lieutenant colonel.

At the close of the Spanish war Leonard Wood's supreme administrative duties began. He was made the governor of the city of Santiago and a few weeks later of the entire eastern half of Cuba.

Under Wood profiteering was abolished, industry was built up, agriculture rehabilitated, hospitals organized, equipped and maintained, tens of thousands of people clothed and fed—and all this done in a thorough businesslike manner. It was done under tribulations which arose from the fact that the people were impoverished to the point of starvation and had been dying by thousands for the lack of the things which Wood quickly provided.

Then there came the rehabilitation of the municipalities, the establishment of schools, the opening of roads, the organizing of government in the provinces, the readjustment of taxation and of the courts, and the work of providing for the thousands of children made orphans by war or famine.

There was more business and more varieties of it than it has been the lot of many men ever to have placed upon their shoulders.

Not long after this there came the greater opportunities in Havana. It was necessary to re-write the election laws to make them fit the habits of the people. Production had to be stimulated, for agriculture was the main source of the island's wealth. Here again the same measures were followed and as a result there were established law and order, protection of life and property, and liberty within the law.

These were the foundation stones. Wood knew that the government must be run by the Cubans, and so 90 per cent of the officials engaged in the great work of reconstructiop were selected from the people of the island. The Cubans were taught government while the government was being built and thus they were able to run it when the rule of the island was turned over to its inhabitants.

When it became necessary to reorganize the Cuban railroads Wood secured the services of Sir William Van Horne, president of the Canadian Pacific, and of Granville M. Dodge, builder of the Union Pacific.

The same general policy was followed in dealing with the problem of caring for the tens of thousands of orphans that had been left by the war. Homer Folks, commissioner of charities of the state of New York, was called to Cuba by Wood to aid in the establishment of a system for placing and permanently caring for these little desolates. Chief Justice White of the Supreme court of the United States, at that time an associate justice, was consulted as to the method to be pursued in reorganizing the courts.

Leonard Wood was in Cuba about four years. He left there a reorganized and sound banking system, a good railroad system, no debts, nearly $2,000,000 unincumbered money in the treasury, a sugar crop of nearly 1,000,000 tons, sound municipal laws, fine public works, a firm agricultural foundation and an absolute respect among the people for life and property. The school system which Wood established was founded on the laws of Massachusetts and Ohio. Roads were built which made communication speedy. The hospitals erected under his supervision were of the highest type.

Lord Cromer said he wished this American officer was available to follow him in his reconstruction work in Egypt. Elihu Root said this work never was paralleled in colonial possessions anywhere. Theodore Roosevelt said that Leonard Wood "has rendered services to Cuba of a kind which, if performed three thousand years ago, would have made him a hero mixed up with the sun god in various ways."

After the Cuban experience Wood was for five years in the Philippines confronted with the difficult labor of establishing a civil government, this time among a Mohammedan people. There he did the same successful work he did in Cuba.

This period of residence in the Philippines gave Wood an opportunity to study conditions in the British colonies, Borneo, Singapore, and to keep in close touch with conditions in Japan and along the China coast. Wood traveled through India, spent some time with the Dutch in Java, and with Lord Cromer in Egypt. He gained and retained knowledge of all which at that time came under his studious observation.

Then Leonard Wood became chief of the general staff of the United States army, in whose hands rests very largely the direction and administration of the military establishment, which after all is 90 per cent a business matter.

The administrative career of Leonard Wood is spread upon the records of his country. The work which he has done is lasting. It is a statesman's work.

SURPRISE PARTY

Last Thursday evening a crowd of about thirty neighbors gathered at the U. G. Smid home as a surprise on U. G. Smid and A. W. White to celebrate the events of the two gentlemen's birthdays. Needless to say a merry time was soon in progress and many games were played by both old and young. After playing games until everyone was quite tired and ready to get their share of the fine luncheon which was served by the ladies. At a late hour all departed for home, looking forward to another such gathering

PARTY ON THE KIRKWOODS

Saturday evening a number of friends of Mr. and Mrs. Wm. Kirkwood gathered at the A. Kirkwood home here to give Mr. and Mrs. Wm. Kirkwood a farewell party before they departed for their new home at Milaca, Minn., where Mr. Kirkwood will farm this year. They left here Tuesday.

IOWA PRESS ASSOCIATION CONVENTION WILL BE HELD IN DES MOINES

The fifth annual convention of the Iowa Press Association will be held in Des Moines, Iowa, Friday and Saturday, February 6 and 7, with a Prelude of High Jinks Evening of February 5.

All members of the Iowa Press Association and delegates and ladies will be guests of the Greater Des Moines Committee at a banquet in the ball room of the Savery Hotel. By fortunate arrangement the principal address will be by Federal Judge Kenesaw Mountain Landis of Chicago. Other prominent speakesr will also address the assemblage.

FREIGHT TRAIN DE-RAILED

Last Thursday the north bound freight train while rounding the curve just south of town and just north of the river bridge, parted company with eight box cars which it switched off the rails. The accident was due to the frost leaving the rails which turned over as the train rounded the bend. The train lost several hours in getting the cars back on the track and the passenger was also held up several hours waiting to get by.

METHODIST EPISCOPAL CHURCH

Public worship with sermon at 10:30 a. m. and 7:30 p. m.

Sunday School at 11:30 a. m. A live, happy, growing school. Interesting lesson study. Music by orchestra. Adults especially invited.

Special service in honor of Abraham Lincoln Sunday evening. Patriotic music. Address, "Abraham Lincoln, American."

A. E. Buriff, Minister

GOOD WORK IN CANAL ZONE

Archdeacon Carson Tells of Religious Activities Among Those Employed on the "Big Ditch."

Few men perhaps have so intimate a knowledge of the spiritual progress made in the canal zone as the Rev. Henry Roberts Carson, archdeacon of the Protestant Episcopal church there.

From those days when the canal was yet a great doubt until the present, Mr. Carson has been laboring among the employees of the canal that they might have comfort of body and welfare of soul. White and black, the men there know him well and have come to love him, for Archdeacon Carson was with them in the now almost forgotten days when fever raged upon the isthmus and each noon struck men to the death.

Those early days Archdeacon Carson recalled in the missions house of the Protestant Episcopal church at New York the other day before returning to the canal zone.

"We were few in number then and the work was more than enough for many," he said. "The employees, most of them natives of the British West Indies, were housed in labor camps here and there, for the channel was not cut through from one end to the other; but activities were everywhere along its path.

"And in these camps we started churches and the church moved when the camp moved, for when the work in that immediate vicinity was completed the camp went elsewhere. When the water was turned into the canal it submerged these places where we had held divine service."

While the work stretches from one ocean to the other, with churches at a dozen places, some of the most unselfish labor is among lepers in the mission of the Holy Comfort on the west coast. There are to be found some 90 patients, including about a dozen children, and not a week passes without services being held for them.

Lovely Women to Be Lovelier.

American women are growing more beautiful and their loveliness is increasing with every passing year, said Howard Chandler Christy, famous artist, on the twenty-second anniversary of the beginning of his study of the American women.

"The American women, already the fairest on earth, are destined to continue their progress in beauty until they attain a degree of loveliness little dreamed of by the average male of today," he said.

Christy added that whether this feminine progress will prove a boon to the other side of the house all depends on the viewpoint.

"The reason America's girls are becoming more bewitching," he explained, "is because being beautiful is an art—and the American women are keeping ahead of their foreign sisters in the arts, like the American brethren are in business."

Joy for Philatelist.

The postage stamp collector, the philatelist, is in a new haven of joy. The changed world is developing new stamps and hundreds have already appeared in this country.

One of the prettiest of the stamps is from the new republic of Czecho-Slovakia. Several scores of varieties have emanated since the dual monarchy, Austria-Hungary, disintegrated under war pressure.

Jugo-Slavia also is in line with a number of new stamps that delight the collector, and the Hungarian republic is printing 28 different stamps for temporary use until a permanent series can be decided upon. Esthonia is in line with at least four varieties. Livonia has 11 new stamps; Ukrainia has a new series and the republic of Poland is offering an unusual stamp with 60 varieties.—Detroit News.

Up-to-Date Youngster.

Leroy had spent all of his allowance for fireworks. His little brother, Earl, being more conservative, still had some money left. From this amount Leroy was attempting to borrow 10 cents.

"Why, Leroy," I said, "are you going to take some of your little brother's money?"

"Sure," he replied, "isn't it all right? He's going to let me have 10 cents and I'm going to pay him back 11 cents."

Wondering where he had acquired his idea of interest, I asked:

"Why the extra cent?"

"That 1 cent is for war tax."—Chicago Tribune.

Tributes to the Departed.

Obituary notices in Australian papers are often, Lady Poore tells us, accompanied by poetic tributes to the departed. These tributes sometimes tumble into awkwardness, but she quotes as champion in that way a prose tribute in these words: "Mrs. B. has just passed away at the age of eighty-five. For some months she has been in failing health, but during the last few days, she approached the grave in leaps and bounds."—From "Recollections of an Admiral's Wife."

South France.

Of all parts of France perhaps the Nimes country is the most interesting. Nimes itself, with its Roman amphitheater, still used for circus shows and bull fights, its "Maison carree," otherwise a perfectly preserved second-century temple, and its beautiful gardens, is a charming place to stay in, though dusty when the mistral blows.

NOW FREE FROM PAIN

Lydia E. Pinkham's Vegetable Compound Frees Another Woman From Suffering.

Bayonne, N. J.—"Before I was married I suffered a great deal with periodical pains. I had pains in my side and back and also headaches, and got so weak I could not do anything. I took Lydia E. Pinkham's Vegetable Compound and soon felt better. Now I am married and have two little boys. Before the first one came I was weak and nervous, could not eat and was dizzy. After I took the Vegetable Compound I could work and eat. Now I am strong and recommend your medicine to my friends."—Mrs. ANNA SLEVA, 25 East 17th Street, Bayonne, N. J.

Women who recover their health, naturally tell others what helped them. Some write and allow their names and photographs to be published with testimonials. Many more tell their friends.

If you need a medicine for women's ailments, try that well known and successful remedy Lydia E. Pinkham's Vegetable Compound. Write Lydia E. Pinkham Medicine Co. (confidential) for anything you need to know about these troubles.

Easily Figured.

"What are the 'jaws of death,' pa?"

"Almost any married man is liable to be jawed to death, my son. You can figure out the rest of it yourself."

WOMEN WONDER AT HER MANY CLOTHES

"Diamond Dyes" Make Faded, Old, Shabby Garments New.

Don't worry about perfect results. Use "Diamond Dyes," guaranteed to give a new, rich, fadeless color to any fabric, whether it be wool, silk, linen, cotton or mixed goods,—dresses, blouses, stockings, skirts, children's coats, feathers—everything!

Direction Book in package tells how to diamond dye over any color. To match any material, have dealer show you "Diamond Dye" Color Card.—Adv.

Schoolbooks.

Cover the children's schoolbooks with eithrestiff paper or cloth so they will last the year and be in condition for the next in the family who will need to use them.

A Lady of Distinction.

Is recognized by the delicate fascinating influence of the perfume she uses. A bath with Cuticura Soap and hot water to thoroughly cleanse the pores, followed by a dusting with Cuticura Talcum Powder usually means a clear, sweet, healthy skin.—Adv.

Some folks are so economical that they use the same air over and over all night long.

"Labor," says Thomas Carlyle, "rids us of three ills—tediousness, vice and poverty."

112 Millions used last year to KILL COLDS

HILL'S CASCARA QUININE BROMIDE

Standard cold remedy for 20 years—in tablet form—safe, sure, no opiates—breaks up a cold in 24 hours—relieves grip in 3 days. Money back if it fails. The genuine box has a Red top with Mr. Hill's picture.

At All Drug Stores

BAD BREATH

Often Caused by

Acid-Stomach

How can anyone with a sour, gassy stomach, who is constantly belching, has heartburn and suffers from indigestion have anything but a bad breath? All of these stomach disorders mean just one thing—Acid-Stomach.

EATONIC, the wonderful new stomach remedy in pleasant tasting tablet form that you eat like a bit of candy, brings quick relief from these stomach miseries. EATONIC sweetens the breath because it makes the stomach sweet, cool and comfortable. Try it for that nasty taste, congested throat and "heady feeling" after too much smoking.

If neglected, Acid-Stomach may cause you a lot of serious trouble. It leads to nervousness, headaches, insomnia, melancholia, rheumatism, sciatica, heart trouble, ulcer and cancer of the stomach. It makes its millions of victims weak and miserable, listless, lacking in energy, all tired out. It often brings about chronic invalidism, premature old age, a shortening of one's days.

You need the help that EATONIC can give you if you are not feeling as strong and well as you should. You will be surprised to see how much better you will feel just as soon as you begin taking this wonderful stomach remedy. Get a big 50 cent box from your druggist today. He will return your money if you are not satisfied.

"Vot vas eet you say 'bout dis sheep? Eet haf cholera—hey?"

Dorothy took a step forward, and confronted them, her cheeks flushed.

"You are sailors," she said, speaking swiftly, "and ought not to be afraid if a girl isn't. It is true this vessed was ravaged by cholera, and the crew died; but the bodies have been flung overboard—Captain Carlyle risked his life to do that before he asked us aboard. Now there is no danger so long as we remain on deck. I have no fear."

The Swede shook his head, grumbling something, but before the revolt could spread Watkins broke in.

"An' that's right, miss. I wus on the Bombay Castle when she took cholera, an' we hed twenty-one days of it beatin' agin head winds off the Cape. We lost sixteen o' the crew, but not a man among us who stayed on deck got sick. Anyhow, these blokes are goin' ter try their luck aboard yere, er else swim fer it."

He grinned cheerfully, letting slip the end of the painter, the released quarter-boat gliding gently away astern, the width of water constantly increasing.

"Now, bullies, jump fer it if yer want ter go. All right then, my hearties, let's hunt up something to work with and scrub this deck. That's the way to clean out cholera."

He led the way and they followed him, grumbling and cursing, but obedient. I added a word of encouragement, and in a few minutes the whole gang was busily engaged in cleaning up the mess forward, their first fears evidently forgotten in action. Watkins kept after them like a slave driver.

It was not difficult finding plently for the lads to do, making the neglected schooner shipshape, and adjusting the spread of canvas aloft to the new course I decided upon. Sam started a fire in the galley and prepared a hot meal, singing as he worked, and before noon I had as cheerful a ship's crew forward as any man could possibly ask for. Dorothy and I glanced over the log, but gained little information. As the sun reached the meridian I ventured again into the cabin and returned with the necessary instruments to determine our position. With these and the pricked chart, I managed fairly well in determining our location, and choosing the most direct course toward the coast.

CHAPTER XXVIII.

A New Plan of Escape.

Nothing occurred during the afternoon to disturb the routine work aboard or to cause me any uneasiness. Sunset brought clouds, and by the time it was really dark the entire sky was overcast, but the sea remained comparatively calm and the wind steady.

It was a pleasant night in spite of the darkness, the air soft and refreshing. The locker was filled with flags, representing almost every nation on earth. I dragged these out and spread them on the deck abaft the cabin, thus forming a very comfortable bed, and at last induced the girl to lie down, wrapping her in a blanket. Finally I found a seat beside her on a coil of rope, and we fell into conversation.

This was the first opportunity we had enjoyed to actually talk with each other alone.

"Dorothy," I said humbly, "you were frightened last night. I cannot hold you to what you said to me then."

"You mean you do not wish to? But I was not frightened."

"And you still repeat what you said then? You said, 'I love you.'"

"Yes, I can repeat that—I love you."

"Those are dear, dear words; but I ought not to listen to them, or believe. I am not free to ask a pledge of you, or to beg you to trust me in marriage."

"Is not that rather for me to decide?" she questioned archly. "I make a confession now. You remember the night I met you on deck, when you were a prisoner, and told you that you had become the property of Roger Fairfax? I loved you then, although I scarcely acknowledged the truth even to myself. We are all alike, we Fairfaxes; we choose for ourselves, and laugh at the world. That is my answer, Geoffry Carlyle; I give you love for love."

"I would ask an opportunity denied me—to stand once more in honor among men. I would not be ashamed before Dorothy Fairfax."

"Nor need you be," she exclaimed impetuously, her hands pressing mine. "You wrong yourself, even as you have been wronged. You have already done that which shall win you freedom, if it be properly presented to those in power. I mean that it shall be, once I am safely back in Virginia. Tell me, what are your plans with—with this schooner?"

"To beach it somewhere along shore, and leave it there a wreck, while we escape. The men insist on it with good reason. They have been pirates, and might be hung if caught."

"And yet to my mind," she insisted earnestly, "that choice is most dangerous. I am a girl, but if I commanded here, do you know what I would do? I would sail this vessel straight to the Chesapeake and surrender it to the authorities. The men have nothing to fear with me aboard and ready to testify in their behalf. The governor will accept my word without a question. These men are not pirates, but honest seamen compelled to serve in order to save their lives; they mutinied and captured the bark, but were later overcome, and compelled to take the boats. The same plea can be made for you, Geoffry, only you were there in an effort to save me. It is a service which ought to win you freedom. If the governor fail me, I will bear my story to the feet of the king. I am a Fairfax, and we have friends in England, strong, powerful friends."

"I am convinced," I admitted, after a pause, "that this course is the wiser one, but fear the opposition of the men. They will never go willingly."

"There is an argument which will overcome their fear. I mean cupidity. Each sailor aboard has an interest in the salvage of this vessel under the English law. Also there must be gold aboard—perhaps treasure also. Let the crew dream that dream and you will need no whip to drive them into an English port."

"Full pardon, and possibly wealth with it," I laughed. "A beautiful scheme, Dorothy, yet it might work. Still, if I know sailormen, they would doubt the truth, if it came direct from me, for I am not really one of them."

"But Watkins is. Explain it all to him; tell him who I am, the influence I can wield in the colony, and then let him whisper the news to the others. Will you not do this—for my sake?"

"Yes," I answered; "I believe you have found the right course. If you will promise to lie down and sleep I will talk with Watkins now. I may catch some catnaps before morning, but most of the time shall be prowling about deck. Good night, dear girl."

She extended her arms, and drew me down until our lips met.

"You are actually afraid of me still," she said. "Why should you be?"

"Somehow, Dorothy, you have always seemed so far away from me I

I Dared Not Let Go.

have never been able to forget. But now the touch of your lips has—"

"Broken down the last barrier?"

"Yes, forever."

"Are you sure? Would you not feel still less doubt if you kissed me again?"

I held her closely, gazing down into the dimly revealed outline of her face, and this time felt myself the master.

I left her there and groped my own way forward. I found Watkins awake. He listened gravely to what I had to say, with little comment, and was evidently weighing every argument in his mind.

"I've bin in Virginia and Maryland, sir," he said at last seriously, "and if the young woman is a Fairfax, she'll likely have influence enough ter do just whut she says. I'll talk it over with the lads. If they wus only sure thar wus treasure aboard I guess most of 'em would face hell ter git their hands on a share of it."

"Then why not search and see?"

He shook his head obstinately.

"Not me, sir! I don't prowl around in no cholera ship, loaded with dead men—not if I never git rich."

"Then I will," and I got to my feet in sudden determination. "You keep the deck while I go below. Light the lantern and bring it here. If there is any specie hidden aboard this hooker it will be either in the cabin or lazaret. And, whether there is or not, my man, the Santa Marie turns north tomorrow if I have to fight every sea wolf on board single-handed."

CHAPTER XXIX.

A Struggle in the Dark.

He came back with the lantern in his hand, a mere tin box containing a candle, the dim flame visible through numerous punctures. Neither of us spoke until my hand was on the companion door ready to slide it open.

"I'll not be long below," I said soberly. "Better go forward and see that your lookout men are awake, and then come back here."

The port stateroom I had not previously entered because of a locked door. I determined on breaking in here. There was no key in the lock, and the stout door resisted by efforts. Placing the lantern on the deck I succeeded finally in inserting the blade of a hatchet so as to gain a purchase sufficient to release the latch. As the door yielded a sharp cry assailed me from within. It came forth so suddenly and with so wild an accent I stepped blindly backward in fright, my foot overturning the lantern, which, with a single flicker of the candle, went out. In that last gleam I saw a dim, grotesque outline fronting me. Then, in the darkness, gleamed two green, menacing eyes, growing steadily larger, nearer, as I stared at them in horror. Was it man or beast? Devil from hell, or some crazed human against whom I must battle for life? The green eyes glared into my face. I lifted my hand toward him, and touched—hair! My antagonist was a giant African ape.

Even as the big ape's grip caught me, ripping through jacket sleeve to the flesh, I realized my great peril, but I was no longer paralyzed with fear, helpless before the unknown. I drove my hatchet straight between those two gleaming eyes. The brute staggered back, dragging me with him. His humanlike cry of pain ended in a snarl, but, brief as the respite proved, it gave me grip on his under jaw and an opportunity to drive my weapon twice more against the hairy face. The pain served only to madden the beast, and before I could wrench free he had me clutched in an iron grip, my jacket torn into shreds. His jaws snapped at my face, but I had such purchase as to prevent their touching me, and mindless of the claws tearing at my flesh I forced the animal's head back until the neck cracked and the lips gave vent to a wild scream of agony. I dared not let go; dared not relax for an instant the exercise of every ounce of strength. I felt as though the life was being squeezed out of me by the grasp of those hairy arms; yet the very vise in which I was held yielded me leverage. The hatchet dropped to the deck and both my hands found lodgment under the jaw, the muscles of my arms strained to the utmost, as I forced back that horrid head. Little by little it gave way, the suffering brute whining in agony, until, the pain becoming unendurable, the clinging arms suddenly released their hold letting me drop heavily to the deck.

By some good fortune I fell upon the discarded hatchet, and stumbled to my feet once more, gripping the weapon again in my fingers. I sprang straight toward him, sending the sharp blade of the hatchet crashing against the skull. The aim was good, the stroke a death blow, yet the monster got me with one paw, and we fell to the deck together, he savagely clawing me in his death agony. Then the hairy figure quivered and lay motionless. I released the stiffening grip, rising to my knees, only to immediately pitch forward unconscious.

When I came back once more to life I was upon the schooner's deck breathing the fresh night air, Dorothy and Watkins bending over me.

CHAPTER XXX.

Opening of the Treasure Chest.

The dawn came slowly, and with but little increase of light. The breeze had almost entirely died away, leaving the canvas aloft motionless, the schooner barely moving through a slightly heaving sea, in the midst of a dull-gray mist. When Watkins emerged from the mist I proposed to him that we go below and continue the search for gold. He was not anxious to go and Dorothy persuaded me to let her go with me. In the room where the ape had been hidden we found a big chest and I set to work to open it.

It proved harder than I had believed, the staple of the lock clinging to the hard teak wood of which the chest was made. The lid was heavy, but as I finally forced it backward a hinge snapped and permitted it to drop crashing to the deck. For an instant I could see nothing within.

"Lift up the lantern, Dorothy, please. No, higher than that. What in God's name? Why, it is the corpse of a woman!"

(TO BE CONTINUED.)

A Good Fight.

A good fight is never for its day alone. It is for many days. And it is not alone for him who bears its utmost stress. No man can live his own life bravely and not be an energy of social good, virtue proceeding forth from him to heal some brother's wounded heart. There is a riddle here for us to guess.—John White Chadwick.

An Advantage.

Another advantage of tortoise shell glasses is that they cover up a good deal of face.—Kansas Industrialist.

CROSS PURPOSES

By GRACE E. RILEY.

(©, 1920, by McClure Newspaper Syndicate.)

"It is hard for you to have my mother all the time; but it is also hard for me to have yours, dear; don't forget that."

"Oh, I don't forget, Dan; I forget nothing connected with the whole affair. I only wish I could. It wouldn't be so hard if they did not quarrel so; and it isn't because they are tired as I am. I don't let them lift a finger. They offer from time to time, but the poor dears had their years of labor and deserve to rest now."

"Perhaps they would be happier if they did work, Jane," suggested her husband.

"Oh, you don't know what you're talking about!" Jane answered with irritation.

A year before her mother, Mrs. James, had decided to live with her married daughter. Mrs. James was right, of course; Mrs. James was always right. Six months later Dan had seen that it was necessary to have his mother, too, for she was failing in strength and needed her only son near her. From that day small irritabilities, endless arguments and tiresome dissensions had changed the harmonious atmosphere of the once happy Harrington home, and Jane was finding it almost more than she could bear.

When Dan awoke the next morning he was surprised to see that Jane was still sleeping—Jane, who usually awoke early, prepared breakfast and then called him—and the clock hands mercilessly pointed to eight o'clock.

"Jane!" Jane stirred restlessly, but did not awaken.

"Jane!" Dan spoke again. "Girl, it's after eight o'clock." This time Jane opened her eyes. "What's the matter, Jane? Look how late it is!" And Jane awoke—awoke to an understanding of the hour; to the fact that she had overslept and that Dan was late; but more alert to the pain in her back and head than to anything else.

"I guess I'm sick, Dan; you'll have to call mother."

Dan was quickly out of bed and downstairs tapping at Mrs. James' door.

"What is it?"

"Jane's sick—will you come upstairs as soon as you can?"

Then he went to his mother's room. "Mother," he said, "Jane is sick; her mother is going to her. Will you get me some breakfast while I go for the doctor?"

"Why, certainly, Dannie, I'll be right down." The thought flashed through Dan's mind that not for years had he heard his mother speak so cheerfully; but he could give no more thought to this now—there was much to be done. Dressing hastily, he went for Doctor Meade, who returned with him and gave Jane a thorough examination.

"She is certainly a very sick girl, but nothing dangerous, I think. Evidently a complete nervous breakdown, and she must have absolute rest and quiet."

"Had I better remain at home, doctor?"

"Better not; far better not," said the busy doctor, as he piled small stacks of pink and white and red pills on the dressing table.

Downstairs, Mrs. Harrington had prepared not only a tempting breakfast for Mrs. James and Dan, but had a tray ready to take up to Jane.

"Brace up, Dannie, we will bring her back to health before you know she's sick, son." A wealth of love and tenderness was in her tone, and Dan could scarcely believe his ears.

"Thanks, mother—and just be a little patient with Mrs. James, won't you? It wears on Jane frightfully to hear you two argue."

"Lan' sakes, son! We don't mean anything by our arguing—why, I think a heap of Mrs. James; and anyway, we will be too busy today, I reckon, for arguments."

Here Mrs. James put in an appearance looking frail and anxious.

"Now, Mathilde James, don't you worry a mite—the doctor told me Jane would be all right with you to nurse her," said Mrs. Harrington, as she drew her friend and enemy into a chair before the table.

"Did he say so, Mary? But who will do the housework?"

"Goodness, me, Mathilde, don't you reckon I have still strength enough to wield a dishmop?" sniffed Mrs. Harrington with fire in her eye. But of a sudden the fire disappeared. "Guess you and me, between us, Mathilde, can keep the house clean and take care of Jane, too, can't we?"

"You're a good woman, Mary Harrington—and I've always said so—though you have got a frightful temper," said Mathilde James, stopping to kiss Mary as she carried a pile of dishes to the kitchen.

During that day and those that followed, the two old ladies lived peacefully together, vying with one another in cooking, nursing and cleaning. Their minds were so occupied that there was no room for petty disagreements. Gradually was borne in upon Jane the realization that the keynote of the present harmony lay in the joy of the mothers in the round of duties with which they were daily confronted.

"We were all working at cross-purposes, Dan—but I've learned my lesson," she confidently informed her husband one evening.

"It takes you, dear, always to find the right way in the end," her husband lovingly assured her.

BAKER'S COCOA

IS GOOD for Breakfast Luncheon Dinner Supper

Any time that any one wants a delicious drink with a real, satisfying, sustaining food value.

We guarantee its purity and high quality. We have been making chocolate and cocoa for nearly 140 years.

PARTIAL TO LAMB

Armenians Make Meat Staple Article of Diet.

Methods of Preparing It Seem Strange to Those Accustomed to Western Cooking—Eggplant a Favorite Vegetable.

Lamb appears to be the basic item of the Armenian diet if one is to judge by the number of Armenian dishes in which it plays a part. No less than 23 ways of using this meat are given in a list of typical Armenian dishes prepared by an expert.

Roast lamb with matzoon sauce and lamb broiled whole are substantial features of Armenian banquets. Then there is boiled lamb, lamb roasted in paper, lamb roasted with tomato, whole spring lamb roasted, lamb stuffed with rice, steamed lamb, lamb broiled, hunter style; lamb grilled on skewers, braised lamb with wine sauce, braised lamb with currie, braised lamb with tomato sauce, braised lamb with onions and braised lamb in paper dishes seasoned with peas.

Kouzou kapama is an elaborate lamb dish in which the meat is steamed with scallion and lettuce; kouzou guvey is lamb roasted in an earthen pot with rice and tomatoes.

Eggplant is a favorite Armenian vegetable which is often used with the lamb to make a delicious dish. Hunkair beyendi is mashed eggplant and potted lamb; patijan cheop kebab is fried lamb and eggplant grilled on skewers; eggplant stewed in lamb broth and braised lamb and eggplant are other savory dishes.

All sorts of vegetables and even fruits are stewed in lamb broth to give them that richness which is a feature of the national taste in cookery. Fresh peas, artichokes, string beans, celery, leeks, spinach and quinces are mentioned in Armenian culinary lore as being the better for simmering slowly for some time in the lamb broth. A variation dish is nohud yahni, Turkish peas stewed with onions in lamb broth.

Ouscoumri dolma is an elaborate Armenian dish, composed of mackerel stuffed with onions, pinenuts and currants, fried in olive oil and served cold. Eggplant stuffed with rice and onions and cooked in olive oil is also served cold. Fassouli pulaki is beans stewed with vegetables and olive oil and served cold.

Pinenuts and currants are favorite ingredients of stuffing, appearing not only in the stuffed mackerel but also with rice as a stuffing for turkey in a dish called Hindi dolma. Harpoot keofteh are delicious boiled meat balls prepared with cracked wheat and stuffed with meat, pinenuts and currants. Stuffed vine leaves, yalanji dolman and yaprak sarma are other favorite dishes. The leaves of the grapevine are used for the outer wrappings of these viands. In the yalanji dolman rice and onions already cooked through are wrapped in the vine leaves and the whole again subjected to a slow simmering process in olive oil. In the yaprak sarma the rice and meat are cooked together or, rather, the rice is cooked in a rich stock and then wrapped in the vine leaves and simmered in oil.

The names of these Armenian dishes cannot be translated according to their sound, for hashlama is not an effort to orientalize the well-known boarding house viand of lamb hash, but plain boiled lamb, and shish lebab instead of being a Turkish form of TNT, is a mild and savory dish of lamb grilled on skewers.

Making Thrift Compulsory.

In the police courts of New York state it is getting to be a common practice to sentence minor offenders to a term of saving, and in Syracuse last year $5,000 was invested in this way in War Savings stamps, all later returned to the men or used to help their families. At Niagara Falls, when David Broderick was placed on probation six months ago and ordered to give the probation officer $12 a week for War Savings stamps, he complained bitterly. At the end of six months he received $230.50 worth of stamps, and he voluntarily placed himself on indefinite probation, promising to bring $10 a week to continue his savings investment.

Outguessed Him.

Pauline Lord went to call on William Harris, Jr., anent an engagement just before he set sail for Europe.

"What's your salary?" demanded Harris, after the other details had been discussed. Miss Lord told him.

"Ouch!" decried the manager, wincing at the sum.

"Why, don't you think I'm worth it?" Miss Lord asked.

"Yes," admitted Harris, "but I didn't think you did."

Some Kicks.

"And you say the mule kicked you, Sam?"

"'Deed he did, boss."

"How far did he kick you?"

"Watcher mean, boss?"

"How far were you from him after he kicked you?"

"Does you mean how fur was I from him after he kicked me de first or de las' time, boss?"—Yonkers Statesman.

Land for National Forests.

To date the national forest reservation commission has approved for purchase 1,751,115 acres for national forest purposes in the mountain areas of the eastern national forests.

Mystery of Chimney Swift.

The chimney swift furnishes one of the unsolved problems of bird life. The flocks drift slowly south until on the northern coast of the Gulf of Mexico they become an innumerable host. Then they disappear and for five months their hiding place is a mystery.

Benefit of Deep Breathing.

Deep breathing is an excellent preventive against catching cold or will head off one that has just been caught. Everybody ought to take twelve deep breaths every day and do this breathing outside or with windows wide open, be the weather cold, warm, dry, damp, clear or cloudy. Deep breathing is imperative for all snorers, cold sufferers and chilly people.

We Have.

R. J. S. wants to know if we have ever met the people who never go to bed, but retire; who never sleep, but slumber; who never get up, but rise; who never eat, but dine; who never drink, but indulge; who never talk, but converse; who never read, but peruse; who never buy, but purchase, and who never get sick, but become ill?—Cincinnati Enquirer.

Putting It Formally.

The four-year-old had just been reproved at the table. He continued to talk cheerfully, though unanswered, to father. After some minutes of soliloquy he turned to mother and remarked: "Your husband doesn't talk very much this noon, does he, mother?"—Harper's Magazine.

Animal Isles.

There is the Isle of Dogs and Whale island, Pewitt island in Essex and Crane and Gulf islands off the coast of Cornwall, England. Near Lundy island are Rat island and the Hen and Chickens. A few miles off the coast of Wales are Puffin island, Sheep island and the Cow and Calf island in Pembroke.

Japanese Claim Credit for Fan.

Japan takes credit for the folding fan. The original kind was of the palm-leaf variety—an oval or round shape which could not be folded. But Japan conceived the idea, just when or how nobody knows, of fastening half a circle of paper on a frame made of sticks fastened together at one end—and the collapsible fan resulted.

Any Shape.

Butcher—"Will you have a round steak, ma'am?" Mrs. Youngbride—"I don't care what shape it is, so it's tender."—Boston Transcript.

CLOSING OUT AT PUBLIC AUCTION

As I am going to quit farming I will hold a sale at my barn in Klemme, on

WEDNESDAY, FEB. 11

Sale to begin promptly at 1:00 P. M.

14 Head of Horses 14

Team of bay chunks coming 4 and 5, wt. 2800; team gray mares 5 years old, wt. 2900; pair black geldings coming 3, wt. 2600; pair black mares 7 yrs. old, wt. 3200; pair of black driving horses wt. 2300; pair of 3 year old mules, wt. 2100; 3 year old saddle pony gentle and broke to drive; one Perheron Stallion "INDEX" pure bred, 8 yrs. old and sound, registered and recorded, pedigree furnished.

Farm Bureau News

Members of the Farm Bureau in Hancock County will be interestec in the new Farm Bureau Dept. in

WALLACES' FARMER

Good Farming, Clear Thinking, Right Living
A Weekly Journal For Thinking Farmers

This Department contains all the important news about the farm Bureau activities. It tells all about the local Farm Bureaus and their problems. It gives the news of the state and national organizations. It will be devoted to securing better markets, better transportation and ec onomic justice for the farmer.

Edited by Carl N. Kennedy

To edit the Farm Bureau Department Wallaces Farme has been fortunate to secure the services of Carl N. Kennedy. He has been one of the most successful county agents in Iowa, and he is president of the National County Farm agents association. Mr Kennedy is pecularily fitted to make this Department of the greatest value to Farm Bureau members.

Mr Kennedy will spend most of his time in the field He can assist local farm bureaus in various ways. He has been in the farm bureau movement from the start and is enthusiastic for its posiibilities to become the business representative of the fatmer.

Articles From Farm Bureau Leaders

In addition to Mr. Kennedys weekly notes the new Departme..t will contain important articles written by Farm Bureau state nd notional leaders. Several are ready for publication this month and others ore promised for later issues.

A Business-Like Subscription Policy

Wallaces Farmer sells on its merits alont, as a clean constructive farm journel. All subscriptions stop when the time is out. The price is $1.25 per year or $3.00 for 3 years

The new Farm Bureau Department is alone worth the subscription price to any man who has farm interest Orderr may be sent direct to Wallaces Farmer, Des Moines, Iowa or be plaed thru the local subscription aent in every neighborhood.

Iowa News

Items of Interest Summarized for Busy Readers .:.

Eastern divisional college oratorical contest will be held at Upper Iowa University in Fayette, Feb. 12.

Farmers of Wayne county are making hundreds of dollars by trapping. Mink, skunk, coon, muskrat and opossum are caught in abundance.

The Franklin county drive for Farm Bureau members has ended and a contribution to the Iowa Farm Bureau Federation, of over $4,000.

The farmers of the northern part of Story county are planning for their annual farmers institute which is to be held at Roland on Feb. 17, 18 and 19.

Beuna Vista county has an automobile for every 4.7 inhabitants. Altho the registration is not complete, the county has already taken fees from 3600 auto owners, representing a sum of $58,000.

With a total of nearly 1,400 members enrolled the Black Hawk County Farm Bureau is continuing its campaign to enroll every farmer in the county in the association. Units of the organization with their own officers are being formed in every township, this work being more than half finished to date.

The Mahaska county farm institute and corn show held in Oskaloosa was one of the most successful ever held in the county. Over $1500 was distributed to farmers in corn prizes alone. Seven counties were represented in this show. Every corn grower in the seven counties was invited to enter their products.

The launching of the new steamship, Mason City, took place Jan. 31 at the Bethlehem Ship Company's yards at Wilmington, Del. Miss Elizabeth Muse of Mason City was sponsor for the ship. The ship was named by C. H. McNider, who was given the privilege in recognition of the Liberty Bond work he accomplished in Iowa.

The consolidated schools of Jesup, Dunkerton, LaPorte City and Jubilee are conducting agricultural short courses under the auspices of the vocational educational board of the state. The school at Hudson has been conducting a school of this nature for some weeks while the work has been carried on for the past year in the Orange township consolidated school.

Bert L. France has resigned as county agent of Palo Alto county and his place will be filled by Fred F. Clark of Anamosa. Mr. Clark is a graduate of Iowa State college and has been county agent of Jones county for three years past. Mr. France will devote his time to looking after his farming interests in this county.

An appropriation of $1,000 was made for the 1920 Waterloo Dairy Cattle Congress by directors of American Jersey Cattle club at a meeting recently in New York City. The Cattle Congress had asked for but $900, but H. G. Van Pelt, who is a member of the Jersey club board, solicited the extra $100. This money will be used for prizes in Jersey classes at the show.

The annual Farm and Home Short Course will be held at the Iowa State College at Ames, on February 9, 10, 11, 12, 13 and 14. This will be the first Short Course since the war. These Short Courses have been very well attended in previous years. Hundreds of folks, both men and women, have written to the College that these Short Courses have helped them to do better farming, to make a larger profit, and to keep better homes.

Twenty-two thousand bushels of corn from 350 acres of Carrol county land is the record of Oliver Conner, a well known farmer of the county, living a short distance from Glidden. The corn is averaging about 63 bushels to the acre, while in some cases the yield averages over 100 bushels to the acre. The farm was originally a part of the Storm Creek swamp, owned by G. E. Klick. The land was drained by means of the county drain.

Three Clinton-county farmers, John McCoy and Trimble Bros. of De Witt, shipped stock to the Chicago market recently, Trimble Bros. Shipping butcher stock and a load of hogs, the latter weighing 180 pounds and bringing $14.80, while McCoy shipped a load which averaged 183 pounds and brought him $14.80. McCoy says he thinks the hog market will go up in April or May. Many hogs are being raised in Clinton-county this year, while very few cattle and sheep are being fed.

Eight men picked 820 bushels corn in one day with weather 14 below zero. The men are Art Campbell, Cecil Buzzard, Grant Nelson, Bud Nelson, Norman Hughes, Hobert Chandler and two Smith boys of Ida Grove.

Report gathered from threshermen of Henry county show that 388,288 bushels of oats were threshed from 11,616 acres of ground last year, or an average of 33.5 bushels to the acre. Winter wheat, 44,399, grown on 2,231 acres; spring wheat, 1,972 bushels, from 226 acres.

In an attempt to market his stock profitably and without delay, Adolf Trede, a farmer near Treynor, used five motor trucks advantageously on a recent occasion when he marketed on the Omaha market, ninteen head of cattle averaging slightly under 1,200 pounds and which brought him $14.00 per hundredweight.

An organization of Jersey cattle breeders for Iowa will be effected at Ames, Feb. 12. Iowa has some of the finest Jersey herds in the country, and the American Society of Jersey Breeders has seen the desirability of having a branch established. National officers will be present at Ames to perfect the organization.

The farm labor problem is the most serious on confronting agriculture today. This is the conclusion of the farmers themselves. Out of 2,301 farmers interviewed by the U. S. department of Agriculture, a big percentage of them said that no other problem weighed so heavy in importance—not even marketing, good roads or matters of crop improvement.

John Miszner has sold his farm near LaPorte City to J. R. Blitch at $300.00 an acre. Mr. Miszner bought the place five years ago for $175.00 an acre. It is not his intention to quit farming as he has purchased another place three miles west of LaPorte City of E. F. Sult for which he gave $330.00 an acre. Mr. Miszner's last purchase is a fine place. The soil is good and will make him an ideal home.

A fee of $5 a member is to be recommended by the directors of the Polk County Pure Bred Livestock association as the result of a recent conference. Heretofore, membership has been automatic after joining the farm bureau. Funds needed for the proposed advertising campaign made the fee advisable. A nominating committee appointed consists of Clarence Pierson, Mitchellville; H. M. Meneough, Grimes, and Otho Smith, Altoona.

L. M. Pearce, manager of the Otis Dairy Farm in Yell township, Boone County is the first man in the county to have his herd tested for tuberculosis. The test has been completed and only two reactors were found in the entire herd of sixty head. These were disposed of at once. The loss of the two head is nothing compared with the satisfaction of having a full accredited herd with the state and government O. K. upon it.

Iowa will spend $30,000,000 during 1920 for road improvements and bridges, Fred R. White of Ames, chief engineer, announced recently. This money will be apportioned as follows: Road paving—355.85 miles. Road graveling—231 miles. Grading and draining earth roads—1334 miles. In addition, work will be done on 2000 miles of primary or main road systems calling for federal aid. The paving contracts are mostly for concrete and brick.

E. T. Meredith, of Des Moines, publisher of Successful Farming, has been appointed Secretary of Agriculture by President Wilson, to succeed David S. Houston, who has been appointed Secretary of the Treasury. From a penniless boy on an Iowa farm, Meredith has become at the age of forty-three the publisher of one of the largest farm journals in the United States. He is president of the Associated Advertising Clubs of the World, and director of the Federal Reserve Bank of the Seventh District. With his family, the Des Moines publisher will locate a temporary residence at Washington. His term will extend to March 4, 1921.

Live stock marketing problems will get special consideration in connection with the meeting of the Iowa Beef Producers Association during the farm home week at Ames, Feb. 9 to 14. It is not unlikely that the attending representatives of the local co-operative shipping association organized through the state will set up some kind of a state organization. The co-operative idea in marketing will be discussed from the stand-point of the associations by Knute Espe, president of the national organization of co-operative shippers; by A. A. Sykes, president of the Corn Belt Meat Producers Association, and by Capt. E. N. Wentworth, for the packers.

The Iowa Farm Bureau Federation was organized December 27, 1918, at a meeting called for that purpose in Marshalltown. Every county in the State was invited to send delegates to the meeting to participate in organizing a State Federation. Seventy counties responded. A constitution was worked out, officers elected and the new body sent on its way. During the year past the membership has been increased 200 per cent, a working fund of more than $300,000 provided and assistance given to several other states that are organizing state federations on the Iowa plan. Altho only one year old, Iowa has the largest and strongest state farm bureau organization in the country.

C. F. Hamilton, for many years active in the stock raising game, and who has been out of the business for some years, has again enrolled among Jackson county breeders.

County Agriculturist A. A. Burger and Home Demonstration Agent Clara M. Sutter of Black Hawk county are co-operating with the Orange township consolidated school in preparations for the annual farmers' institute and judging contest to be held there. A prominent list of speakers has been secured and many interesting features planned for the sessions.

I hereby announce myself a candidate for the office of State Senator from the district composed of Hancock, Cerro Gordo and Franklin counties, subject to the decision of the Republican voters of said counties at the June, 1920, Primaries.

Dated at Garner, Iowa, this 12th day of January, 1920.

1-22-tf. J. E. WICHMAN

FOR SHERIFF

I hereby announce myself a candidate for the office of Sheriff for Hancock County, subject to the decision of the voters at the June, 1920, primaries.

1-29-tf. E. PECK HANSON

I hereby announce myself a candidate for the office of sheriff of Hancock county, subject to the decision of the Republican voters of said county, at the Primary election to be held in June.

W. C. ZIESEMER,

1-22-tf Garner, Iowa

AUDITOR

I am a candidate for re-election, subject to the will of Republican voters at Primary Election next.

Very truly yours,
Chris Jacobs, Auditor

STATE REPRESENTATIVE

I hereby announce myself a candidate for the office of State Representative from Hancock County, subject to the decision of the Republican Voters of said County, at the June 1920, Primaries.

Dated at Britt, Iowa, this 26th day of January, 1920.

E. P. Healy

Fish That Builds a Nest.

The stickleback is one of the most interesting members of the finny tribe. It constructs a home for its prospective mate, and then mounts guard over it until the mate comes along. The home is built from seaweed, twigs and aquatic plants, which are ingeniously woven together. There are two entrances to the home, which are never left unguarded by the master of the house until the lady of his choice signifies her willingness to enter.—Popular Science Monthly.

Friendship's Reward.

The most I can do for my friend is simply to be his friend. If he knows I am happy in loving him he will want no other reward.—Thoreau.

Ordering Meals Electrically.

An electrical system of ordering for lunchrooms, clubs, restaurants and hotels has been devised. You simply press a button which operates an annunciator installed in the kitchen, telling the kitchen hands just what food you want.—Popular Science Monthly.

ANNOUNCEMENT

Owing to the press of work due to the Flu and the usual acute winter diseases I will be unable to make my visits to Klemme until towards Spring. Patients from Klemme may come to Garner either on the morning or afternoon trains. Special calls will be attended to as usual.

Respectfully,
Dr. R. W. Schultz,
1w Osteopathic Physician

Vers Libre.

"Vers libre" (free verse) is so called because of its freedom from the formal laws governing poetic rhythm. It is by no means "new." Walt Whitman wrote almost entirely in "free" cadences, and Milton, to quote one classic example, used what we would call "vers libre" in the choruses of Samson Agonistes. The demand for "complete metrical freedom" stands out, however, as the most obvious element in "the new poetry."

Uncle Eben.

"George Washington was de father of his country," said Uncle Eben; "an' he ain' de only father whose folks got to thinkin' dey knowed mo' dan he did."

Modern Girl No Hypocrite.

Tom—"When you proposed to her I suppose she said, 'This is so sudden!'" Dick—"No, she was honest and said, 'This suspense has been terrible.'"

FILMS IN SCHOOLS

Writer Sees Vast Possibilities for Moving Pictures.

Visualized Geography and History Among Subjects Which Would Claim the Eager Attention of Pupils of All Grades.

Visualized geography, it is believed, will beat the maps a good deal further than a live bird beats a stuffed one.

Likewise, visualized history, it is expected, will beat the narratives of the books, which we sometimes say, when they are written by a graphic writer, make the dead past live again. But it is visualized history that will indeed resurrect the past, so far as a moving picture can make a scene that is past and gone real again. For these terms, visualized geography and visualized history, are used with reference to the possibilities and the development of the moving picture.

The president of one of the big moving picture companies has been talking very eloquently about the use of the film in the schools and surely he brings before our imagination a thousand school rooms full, not of languid but of eager pupils. Educators are thinking about the same thing, and we may be thankful that they are, for more of fact, information and instruction in the film service to this age, and less of hysteria, emotionalism, cheap farce and thrill is a desideratum, asserts Omaha World-Herald.

The classes in geography will see the mountains, the plains, the rivers, animated by such life as is peculiar to them. They will see the natural products of various countries being cultivated or gathered. Before them will appear companies of the inhabitants of each. In front of the eyes will troop the wild animals of which they see only the flat prints in the books. They will see exports moving out and imports moving in, the work at the wharves, the carrying to the seaboard, the laden ships plowing the ocean. It will be like taking them traveling over the earth to learn what it looks like, and they will get the vivid impression that is made on the eye, and their memory will be associated as by a personal recollection.

As for history, millions have been able to see on the screen the momentous history that has been in the making during the last few years—the camps and cantonments, the marching columns, the moving ocean transports, the busy shipyards, the construction and factory work of the war, the batteries in action, the destroyed cities, the flight of refugees, the commanding figures whether on the field or in the government cabinet—all the scenes of war, of war-swept countries, glimpses of wretchedness and the ministrations of comfort and mercy. Hereafter a film record of the more notable historical events will be kept for what will be both the entertainment and the instruction of after generations.

It is going to be a big work to get the moving picture installed as a common equipment for educational work in the schools. Schools will have to have the films and the machines, and they will require men, teachers or not, to operate them. This signifies that a great development of moving picture facility will have to be made in all the appliances and technique connected with the exhibition of the pictures. The moving picture will overflow from the theater into the schools, for it would be impossible for the theaters alone to do the work. It will also be necessary to improve the production of the pictures on the screen so that there will be no problem of vision and no over-straining of the eyes of children—a difficulty not yet overcome save when equipment and operation are the very best.

Bald Eagles Photographed.

A. S. Dockham, photographer of the Lafayette National park, has succeeded in making a photograph of two young bald eagles in their nest near Eagle lake, Maine, in the top of a high maple, 50 feet from the ground. Mr. Dockham erected a platform on which a ladder was raised. The ladder top was 60 feet above the ground and commanded a fine view of the nest. He clamped his camera on the ladder and led a string from the shutter to the crotch of the tree about 20 feet lower. Here he remained and watched the nest. In order to obtain the photographs he was forced to remain in the tree for five hours.

Milwaukee's "Medicinal" Water.

The city of Milwaukee has been greatly bothered with a peculiar taste in its drinking water. The water is obtained from the lake and is chlorinated before distribution. At first it was thought that the chlorine produced the taste, but a series of tests proved that this was not the source of contamination. There seems to be some connection between the intensity of the taste and the direction of the wind, and finally the source of trouble was located in a couple of plants, one three miles away and the other eight miles away, which were producing coal tar products.

Circulating News.

[illegible] its share of [illegible] in circulation in this country [illegible]—nearly $5 more than it was a year ago.

Customer Beak—Well, I can account for that extra five circulating I think.

"Well?"

"I had $5 a year ago."—Yonkers Statesman.

Porpoise Killed Shark.

How a bottle-nosed dolphin, a porpoise commonly called the seahog, slew a 6-foot shark, is described by Galveston (Texas) fishermen, who say they witnessed the killing from the causeway which connects Galveston island with the mainland.

The seahog, according to the boys, is a "most sociable and gregarious fish," but these fishermen declared there was nothing sociable about this dolphin. When the shark was within a few feet of the porpoise the fishermen saw the seahog charge, a gray streak in the water. It struck the shark squarely amidships, they declare, ripped it open and then tore the body into pieces.

The theory of the fishermen is that the porpoise fought to protect its single young one, which the shark was menacing.

His Caddie's Advice.

Clergyman (playing at historic St. Andrew's for the first time, to caddie)—What is that yawning abyss in the distance, caddie?

Caddie—That's hell, sir.

Clergyman—Indeed! What a name to give a bunker!

Caddie—You see, sir, it's called hell because yince ye get in ye canna get out.

Clergyman (after playing and landing in the bunker calls for his niblick and plays a good shot out of the hazard)—What have you got to say to that now?

Caddie—A' that I hae to say, sir, is when we dee tak' yer niblick wi' ye.—Portland Telegram.

Slang Is a Necessity.

"My friend," said the fussy old gentleman, "why do you say you must 'toddle along?' You are in the prime of life and walk with the easy tread of a banker."

"Sir," said the facetious citizen, "if everybody were as particular about the choice of words as you are, book reviewers would write up baseball games and heckling the umpire would become a lost art."—Birmingham Age-Herald.

Prevalence of Deafness.

The last census showed that there are in the United States 89,287 persons who are totally deaf. Dr. Wendell C. Phillips of New York told the Philadelphia College of Physicians recently that in New York city there are at least 100,000 persons more or less incapacitated as a result of partial deafness, and of these probably 80 per cent are of the working class.

Prices for Canadian Wool.

The average value of unwashed wool a pound in Canada was 62 cents to producers in 1918 and 59 cents in 1917; washed, 80 cents in 1918 and 75 cents in 1917.

BUTCH SCHROEDER
His Job--Getting the High Dollar for Fat Steers for CENTRAL

Selling Fat Steers

THE FIRST REQUIREMENT

of a FAT STEER SALESMAN is his ability to judge the cattle he has for sale. He must know whether they are fat or not This may sound ridiculous, but if you will stop and think a minute, your memory will be freshened by some past experience where a difference of opinion existed as to the relative merits of a certain drove of cattle. Perhaps you thought they were Prime and Fat and someone else argued that they were big and horsey.

THE SECOND REQUIREMENT

of a FAT STEER SALESMAN is the possession of a wide and thorough acquaintance with steer buyers and an intimate knowledge of the class of stuff they need. It naturally follows that the man best qualified to possess this second requirement is the one who continually handles Fat Cattle and is thrown in contact with the buyers each and every day.

THE THIRD REQUIREMENT

is the ability to keep in close touch with market conditions, or, in other words, being well posted. His finger must be on the pulse of the law of supply and demand so as to enable him to obtain full market values at all times.

THE FOURTH REQUIREMENT

Provides for a STRONG ORGANIZATION behind the man charged with the enormous responsibility of Sales Pens, plenty of help to feed, water and proven worth. In other words, you must be satisfied that the firm behind the man has already made good. You can't afford to take any chances.

of selling Fat Steers. This includes the location weigh together with an established reputation of

Now let us see how close Butch Schroeder and the Central Organization behind him comes up to these four requirements.

FIRST

The one thing BUTCH SCHROEDER does know is FAT CATTLE. Up until ten years ago when he came to Chicago, his business was that of handling and shipping them to market. His entire time and attention is devoted to handling FAT CATTLE exclusively for the CENTRAL ORGANIZATION. He does nothing else.

SECOND

The volume of steers handled DAILY by Butch SCHROEDER serves to keep him in close touch with all classes of STEER BUYERS on the Chicago market. His nickname, "BUTCH" was derived because of the fact that he did a Butcher Business in connection with his live stock transactions prior to being associated on the selling side at this market and the experience thus gained enables him to beat the buyers at their own game of guessing dressing percentages on droves of cattle How many salesmen possess an education which enables them to look at cattle from the Buyers' Standpoint?

THIRD

BUTCH SCHROEDER is always well informed as to the law of Supply and Demand, the two big factors which determine market conditions, He knows the men who buy Fat Steers, the kind of cattle they are purchasing each day, he keeps in touch with the outside demand, which at times varies and knows more or less regarding the supply of dressed beef for consumption.

FOURTH

The CENTRAL ORGANIZATION, with a splendid record for producing successful results, stands behind BUTCH SCHROEDER, who is a member of the firm. Our cattle sales pens are directly against the Exchange Building, two minutes walk from the office. TWO MAIN ALLEYS intersect our pens. This enables us to stop all the BUYERS as they pass to and fro and eliminates a lot of wasted time and extra shrink which would be spent if we had to hunt for them one at a time. It means that your cattle are given the full strength of the market and sent to the scales in the shortest possible space of time. We have plenty of yard help to feed, water and weigh our consignments. The CENTRAL ORGANIZATION is now entering its eighth successful year, the past one having been the most successful ever experienced in both volume of business and number of satisfied customers

We have always kept pace with our growth, and the present time finds all departments in strong hands, fully equipped to render an exceptional class of service that holds old customers and makes "Regulars" out of New Ones.

BUTLER MAY BE REPUBLICANS' CHOSEN LEADER

Famous American Honored by Iowa Society in Metropolis—Is Great Business Expert.

FAST FRIEND AND CONSULTANT OF THEO. ROOSEVELT

Chosen to Advise Congress Concerning National Budget System—Has Refused More Cabinet Positions Than Any Other Man.

By EDWARD MARSHALL.

New York, Jan. 28.—The chief speaker and guest of honor of the Iowa Society last night was no one less distinguished than the man whom the Republican party leaders in a growing number of states throughout the Union are considering as the most available aspirant for the presidential nomination—Nicholas Murray Butler.

The occasion was in many respects notable. The reception committee consisted of a list of able Iowans who have won success and standing in the great field of the metropolis. It included Ambrose O'Connell, president of the society; M. J. Morris, vice-president; Harry M. Farrell, secretary; Dr. Clinton E. Thorn, treasurer; Jerry B. Sullivan, William R. Huntington, Frank R. Raiff, George E. Roberts, Theodore N. Vail (the famous head of the Bell telephone system), Dr. Newell Dwight Hillis (pastor of the celebrated Plymouth Church, of which Beecher once was pastor), George F. Brownell, vice president of the Erie Railroad; W. A. Clark, George F. Parker, Thomas F. Buckner, the famous Dr. Albert Shaw, editor of The Review of Reviews; James R. Sheffield, president of the Republican Club of New York; Charles M. Hodgens, William M. Dodge and Daniel V. Raymond.

The hostesses were Mrs. James S. Clarkson, widow of the late celebrated general; Mrs. Warren F. Thummel, Mrs. William R. Huntington, Mrs. Jerry B. Sullivan, Mrs. George E. Roberts, Mrs. Chester F. S. Whitney, Mrs. Edward S. Devine, Miss Gilchrist, Mrs. Charles S. Gallager and Miss Dolliver.

Every Iowa college was represented—Ames, Iowa State University and Grinnell. A delegation from Cornell was present and a goodly number from Columbia had gathered to listen to the address of the distinguished president of their university. It was obvious on all sides that many thoughts were intent upon the frequent mention of Mr. Butler's name in connection with the presidential nomination by the Republican party. The Iowa Society felt itself particularly honored by the fact that the distinguished man upon whose time, just now, there are so many claims, felt willing to give it the evening.

Among the Iowans in New York, as among those at home, he has many keen admirers. At the present moment there are particular reasons, his friends think, why Nicholas Murray Butler must be admitted to be especially well qualified to steer the ship of state. The ending of the war has brought about conditions of great complexity, involving the United States in relationships, newly close, with practically every other inch of the earth's surface and with every people resident thereon.

Probably no other American is personally acquainted (unless it be Mr. Wilson himself, as the result of his peace conference experience, and even that is doubtful), with so many leaders of European political thought as are well known to Mr. Butler.

He has had personal acquaintance with almost every important statesman of Europe during the last fifth of a century—in England, Lloyd George, Asquith, Sir Edward Grey, Balfour and all the others; in France, practically everyone; in Italy, Nitti and nearly all who have been of importance since the war's beginning; he knows Masserich and Paderewski and Milikoff, leader of the Russian Cadets; he knows the foremost men of China and Japan.

In American political life he has played an important role. Probably he has refused more cabinet positions than any other man alive. Roosevelt wanted him and really wanted him very much. But Mr. Butler could not see his way to the acceptance of the proffered honor.

Indeed, every president since Benjamin Harrison has asked him to take a cabinet or a diplomatic post except Grover Cleveland, who, although of opposite political faith, asked him to become a member of the National Civil Service Commission. He has been a delegate at four Republican national conventions—those of 1888, 1904, 1912 and 1916—and received the Republican electoral vote for vice-president of the United States in 1913. He has become famous in the party as the author of critical and difficult platform planks. During 1912 he acted as chairman of the New York State Republican Committee.

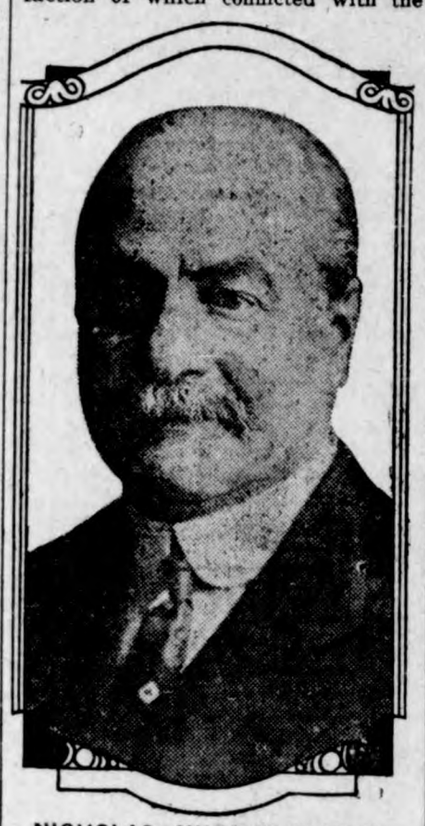
No Amateur in Politics.

His was a political family, his father having been chairman of, first, his County Committee and then of his State Committee. The elder Butler was as keen as his distinguished son has been in the study of American political life and systems and in work for the improvement of both, but, like his son, refused office. Mr. Butler's daughter is today the captain of the Republican organization in their home district.

Nicholas Murray Butler's early political experience was full of satisfaction for so young a man, although it was marked by the refusal of rather than by election to public office. A purely political career was suggested to him by a Republican no less distinguished and important than Garrett P. Hobart, later vice president of the nation and at that time one of the most powerful Republican leaders in New Jersey and the nation.

The Butlers and the Hobarts were neighbors and when Nicholas Murray Butler left college it was Garrett P. Hobart's own suggestion that he become a candidate for the New Jersey Assembly. The idea appealed to the young man, who even then had begun to speak and write upon the making of American citizenship, who already had established passionate national ideals and who was intensely anxious to bear his full share of the obligations of that nation which from his boyhood had been to him more of a religion to thrill for than an indefinite, inchoate and somewhat stupidly ponderous affair to read about in histories and books on civil government.

The suggestion was a tempting one, but there had grown in young Butler another and greater desire the satisfaction of which conflicted with the



NICHOLAS MURRAY BUTLER

possible gratification of this. Even as long ago as that he quite understood that the nations of the world were interdependent and that a fully equipped American must know, preferably at first hand, many things about other countries. When he gave this argument to Mr. Hobart, suggesting his desire to visit Europe for a time, the elder man quite saw the force of the idea and agreed, even in the circumstances commending it, but saying:

"All right, Murray; go abroad, study, learn what you can about the way in which they do things over there. If you can find anything good there that we haven't got, tell us about it when you come home. At any rate, the experience will broaden you. And when you return you must go into politics."

The young man went abroad and there laid the foundations for his extraordinary friendships with men of the first importance in European affairs, friendships which he never has abandoned and which have been of great value to all concerned. He came back much benefited, and Mr. Hobart saw it instantly. Again the older man suggested to the youth a political career, but at the time to follow the suggestion was impossible, for young Butler never believed that politics should be regarded as the means to a financial end, holding that view to be perhaps the greatest peril threatening America, and he was confronted by the necessity for earning his own living.

A Trained Expert in Government.

In order to do this he wrote, taught and earned in other ways, but his deep interest in politics and government did not decrease. He was one of the group which drew and passed the New Jersey state libraries act, putting the libraries of the state of New Jersey for the first time on a firm foundation. Soon afterwards he showed the fully practical nature of his predilection for educational progression by drawing up and securing the passage of the bill which gave New Jersey her first state aid for manual training. New Jersey then, as now, was a factory state, and it was the thought of the young author of this measure that it would be of especial value to young men engaged in industry, as, indeed, it has proved to be to an extraordinary degree.

This was the first important manifestation of the Butler conviction that the United States could not be a real and ultimate democracy until among the privileges which it offered to each individual was that of learning how most efficiently to make a living.

Then, as since, and this has been proved a thousand times in the course of his life work, young Butler was intensely anxious to be among those striving for an equality of opportunity in the United States which would extend far, far beyond mere equality in primary and secondary education, such as is provided for by all our school systems.

Asked to Go to Congress.

His work attracted wide attention, and he was asked to take the congressional nomination for the Fifth New Jersey District, then represented by the famous John Hill, father of the postal card, and by the celebrated William Walter Phelps. Again he felt that he could not afford to make a political campaign.

Later, after he became a resident of New York state, the political office continued to pursue him, and he continued to resist temptation. Three times he was urged to become the Republican candidate for mayor of New York and on one of these occasions a Republican was elected to the office. Twice he was urged to run for governor of New York state, in 1904, when the nomination was equivalent to election, and in 1912, when the situation was more dubious. All these proffered opportunities he refused.

So much for past recognition of his political sagacity and knowledge of government. It is interesting to note that the acknowledgment of his business ability has been as complete. Several times he has been offered the presidency of New York trust companies at salaries many times as great as that of any college president, and repeated offers from a great industrial corporation have named a sum more than six times that of Mr. Butler's academic income.

Close Friend and Adviser of the Great Roosevelt.

During the nearly ten years while Theodore Roosevelt was governor of New York state and president of the nation Nicholas Murray Butler was his most intimate unofficial counsellor. They were in daily contact throughout this long and intensely important period, either by correspondence or personal association, and Mr. Butler shared to an extent which even his close friends did not dream, until after Roosevelt's death, in shaping the policies which made the great Rough Rider the idol of the nation.

In 1908 he toured the West with Roosevelt. Some of his utterances almost amounted to uncanny predictions of that which has occurred under Democratic rule. Particularly he prophecied that should the Democratic party come into power just such a spread of radicalism would result as actually has occurred. Roosevelt's high ideals and broad patriotism were his continual themes.

"Such devotion to Roosevelt as Butler shows must entitle him to an ambassadorship," said a critic, and, as a matter of fact we know now that Roosevelt quite agreed with this, for he made an offer to exactly that effect and many others of attractive sorts. But Butler had not been devoted for a price; he never had sold his loyalty; he declined all the pleasant suggestions of the great Rough Rider and clung steadfastly to his chosen task of making real Americans.

Many Democrats Will Vote for Butler.

There is positive evidence at hand with which I am quite familiar, that the nomination of Nicholas Murray Butler by the Republican National Convention will draw from the Democratic party many votes. One man has said to me (and he is of great importance in the Democratic ranks) that if Butler is chosen as the Republican nominee and comes out (as he is thought to be practically sure to) with a declaration putting his feet squarely on an all-American platform, denouncing bolshevism, declaring for scientific rather than for haphazard taxation and governmental businness methods, the Democratic party will be split wide open and many prominent Democrats will declare for the New Yorker.

It is the contention of such Democrats that Wilson so far has departed from their traditional principles as to have destroyed their party, to all practical intents and purposes, leaving nothing worth while upon which to build anew. Such men, irrespective of old political affiliations, would work and vote for a real economic and business genius such as Butler.

They want him, if for no other reason, because he is a business man.

Nicholas Murray Butler has been recognized as the one greatest budget expert in the United States. When Senator Medill McCormick first began to advocate his senate bill, providing for a rearrangement of our government finance upon a budget system, he referred to Mr. Butler as one of the few Americans whose wisdom he had consulted and later Mr. Butler was called to Washington to offer his advice officially.

Mr. Butler's job, since he assumed the presidency of Columbia as the youngest man ever inducted into an office of similar importance, has been that of an administrator of a great business rather than that of a professor. The scholastic side of his work of course has had for him its strong appeal but with increasing clarity he has seen that education in the United States, the most desirable and necessary of all things, is nothing less than a great business.

Skilled Economist.

He has been a lifelong student of economics, theoretical and practical, not only in the United States, but throughout the world, and he has seen economics from that broad and lofty viewpoint which has included in their consideration a simultaneous survey of those political conditions which chiefly affect them. Naturally he has devoted most of his thought upon such topics to their manifestations as found in the United States, but at any moment his stored mind can bring into juxtaposition with any American problem the corresponding problems existing in every European country.

AUCTION SALE

Having sold my farm and going to move to town, I will sell at public auction at my farm 2 1-2 miles east of Klemme, known as the old Fred Bock farm, on-

TUESDAY, FEB. 17

Sale to begin at 10:00 A. M. Sharp

A GOOD FREE HOT LUNCH AT NOON, 12:00 O'CLOCK SHARP

8 Head of Horses 8

Bay team 3 and 5 yrs old; wt 3100; Sorrel team 2 and 4 yrs old, wt 2600; Sorrel mare 13 yrs old, wt 1300; Bay mare 7 yrs old, wt 1450; Black mare 2 yrs old, wt 1350; Yearling horse colt.

38 Head of Cattle 38

9 milch cows mostly fresh; 4 2-yr old heifers; 6 yearling steers; 3 yearling heifers; 9 spring and summer calves; 7 small calves; 1 registered Polled Durham Bull, 5 ydars old.

20 Head of Poland China Brood Sows

Farm Machinery, Household Goods, Etc.

8-ft McCormick binder; John Deere corn binder nearly new; 6-ft Standard mower; Hayes corn planter with 110 rods wire; endgate seed with cart; 11-ft seeder with grass seed attachment; Dain hay loader; Dain side rake new; 3 6-shovel corn plows; 2 surface corn plows; 2 16-in sulky plows; Emerson 8-ft disc; Rock Island 8-ft disc; Bradley 8-ft cutaway disc; 20-ft steel flexible harrow; 20-ft steel lever drag; high wheel wagon with new triple box; 3-in tire wagon with boq; steel wheel truck with hay rack; bob sled; 14 h.p. gasoline engine; Letz 10-in feed grinder; 2 hole sheller; hay rack; combined stock and hay rack; 12-ft hog rack; 15-bu seed corn drier; 12-hog self feeder; 2 Ideal hog waterers; surrey, top buggy; set buggy runners; blacksmith forge, anvil, vise; 7-ft stock tank; 2 steel milk tanks; wood milk tank; sickle grinder; Climax ensilage cutter 10 to 15 ton capacity; cider press; 2 siugle harnesses 3 sets work hsrness, 3 sets fly nets; some collars; 110 gal oil tank, 50 gal tank with some crude oil; 30 gal tank with tractor oil; tiling spades, shovels, forks, Robinson manure spreader, 2 sets h y slings, about 5 tons hay, Seed Corn Grader, some Seed Corn, fanning mill.

Kitchen cabinet, Wardrobe, Lap robe, heating stove, power washing machine, etc.

Usual terms of sale. 10 month's time.

H. J. SCHLICHTING

Col. B. A. Reemstma, Auct. First National Bank, Klemme, Clerk

PUBLIC SALE

Having sold my farm and moving to Story county, I am closing out the following described property at Public Sale to the highest bidder, at my farm residence, 5 miles south and 2 west of Klemme, and 1 mile north and 2 miles west of Goodell, on

Thursday, Feb. 12

FREE LUNCH AT 11:30 SALE STARTS AT 12:00

97 HEAD OF LIVE STOCK 97

13 Head of Horses and Mules 13

Black team, mare and gelding, well mated, 5 and 6 years old; 1 bay horse 5 years old; 1 gray mare 6 years old; 1 bay horse 5 years old; 1 bay mare 6 years old; 1 bay horse 8 years old; 1 sorrel horse 7 years old; 1 span of mules 8 years old; 1 mule colt coming 2 years old; 1 mule colt coming 1 year old; suckling colt.

Scott, Jr., No 94001, Pure Bred Percheron Stallion owned by W. H. Brand, will be sold.

58 Head of Cattle 58

2 milch cows, giving milk; 2 fat cows; 12 2-year-old steers; 10 yearling steers; 12 heifer calves; 20 steer calves.

25 Head of Good Hogs 25

16 High Grade Duroc Jersey Sows; 1 Registered Duroc Jersey Boar; 8 Summer Pigs.

Machinery, Etc.

McCormick 8-ft. binder; McCormick mower; Emerson self-dump hay rake; 4-section flexible harrow; 7-section Boss harrow; harrow cart; fanning mill; endgate eeder; John Deere gang plow; Sattley gang plow; walking plow; 8-foot John Deere disc; 10-ft. LaCrosse disc; Rock Island corn planter with 160 rods wire; 2-row cultivator with surface attachment; Tower surface cultivator; 3 6-shovel corn plows; hay rack and truck; combination hay and hog rack; 2 wagons; top buggy; pump jack; Nelson tank heater; hand sheller; Only hog waterer; Monarch 60-gallon hog waterer; hay fork; 2 self feeders; 2 feed bunks; Ideal corn tester, 400 ears; seed corn rack, 15 bushel; Dean ear corn cutter; 6 steel chicken coops; 6-hole Peerless all steel range; 5 sets work harness; hand forge; other articles too numerous to mention

About 12 ton tame hay, stack straw, about 150 Rhode Island Red Chickens

TERMS—All sums $10 and under, cash; over that amount 1 year's time will be given on approved notes bearing 8 per cent interest. No property to be removed until settled for.

WESTERN CANADA CORN

Wins First Honors at Kansas City.

While visiting the Canadian Government Information Bureau at Kansas City, where there is on exhibition a very creditable display of Canadian products, my attention, says a writer in the agricultural press, was directed to a few ears of Dent corn, bearing the modest inscription,

"This Northwestern Dent corn took the first prize at the Soil Products Exposition recently held in Kansas City, Mo., and was grown by John Hamilton of Kelwood, Manitoba."

Kelwood, Manitoba, lies about twelve hundred miles north of Kansas City, and it was quite pardonable that these Canadians should so proudly parade the fact that they had been able to carry off for their corn display the blue ribbon that for years the old "corn-growing" states had looked upon as being practically their own, and for which they were strong contestants in the recent show.

I asked Mr. Hewitt, agent in charge of the Canadian Government office at 2012 Main Street, Kansas City, what the winning of the prize means for Canada. His reply was that it means the "corn belt" is moving northward, and in a few years to the fame that Canada has already achieved as a wheat, barley and oats producing country, will have to be added that of growing the best corn in America.

"Why," he said, "twenty years ago a friend of mine was attracted at the Minnesota State Fair by the number of those who were examining some corn growth north of Crookston, Minnesota. It was not the large ear produced farther south, but it was an even ear and perfect kernel. The interest centered in it was the fact that it had been grown so far north. That was twenty years ago. Today, the traveler on any of the railways in that section of the country may see field after field of corn. In many portions of Manitoba," he continued, "out into Saskatchewan and Alberta, the growing of corn is receiving much attention, at presently mainly for fodder, but within a short time, with acclimated seed a maturing corn of good quality may reasonably be expected. Already the number of silos in use in Western Canada indicates that the progressive farmers there look forward to the day when corn will be one of their most important crops.

"Corn lands in South Dakota are said to be selling as high as $250 per acre, and if corn has been the means of placing these lands at this price what may be expected of Western Canada lands, when the day comes that corn will be grown as successfully there?"

It was not in corn alone that Western Canada carried off the honors at the Soil Products Exposition. The awards won by Western Canada were 40 first, 29 second, and 26 third prizes. These included 1st, 2nd and 3rd prizes for hard spring wheat; the sweepstakes for wheat and the cup offered by Canadian Pacific Railway for the best half-bushel of hard spring wheat; 1st, 2nd and 3rd prizes and sweepstakes for oats; 1st, 2nd and 3rd prizes for barley; and 2nd and 3rd prizes for oats.

It is interesting to note that the sweepstakes for wheat and first prize for hard red spring wheat have been won by Saskatchewan exhibitors seven times in the last eight years, Manitoba winning one year.

Potato classes have some interesting successes for Western Canadian exhibitors, who won four firsts, three seconds and three thirds. Exhibitors from these provinces also made fine showing in the vegetable classes, winnig among other prizes the premium prizes for cabbages, cauliflowers, pumpkins squash and watermelons. —Adv.

Better Results.

"I see they are experimenting with a machine for laying the dust."

"I' rather have one for raisoing it."

UP A SINGIN'!

Tomorrow will be clear and bright, if you take "Cascarets" tonight

Feeling half-sick, bilious, constipated? Ambition way below zero? Here is help! Take Cascarets tonight for your liver and bowels. You'll wake up clear, rosy, and full of life. Cascarets act without griping or inconvenience. They never sicken you like Calomel, Salts, Oil or nasty, harsh pills. They cost so little too—Cascarets work while you sleep.—Adv.

After a girl gets to be about so old she tries to forget that she once wanted to marry a poet.

Catarrh Cannot Be Cured

by LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a local disease, greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE will cure catarrh. It is taken internally and acts through the Blood on the Mucous Surfaces of the System. HALL'S CATARRH MEDICINE is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in HALL'S CATARRH MEDICINE is what produces such wonderful results in catarrhal conditions.

DAIRY

MILK RECORD IS EXCELLENT

Shipment Made From Los Angeles to Chicago Found Sweet Eighteen Days Afterward.

(Prepared by the United States Department of Agriculture.)

When a bottle of cream shipped from Los Angeles to the national dairy show at Chicago, was opened and tested 18 days after it had left the cow, it was pronounced in perfect condition by those who examined it. Other samples of milk and cream entered in the national milk and cream contest and examined 15 to 18 days after production were also found to be sweet.

Because of the number of bacteria present, ordinary milk will not remain wholesome for such a long time, even if kept cold. The milk and cream which made such long keeping records were produced under very sanitary conditions, and every precaution was taken to keep them clean and to keep the bacteria count low. Furthermore, the milk was cooled to a low temperature immediately after it was drawn, and held there. The success attained in producing milk of such long-keeping qualities and low bacterial count is due in a large measure to the educational value of the local milk and cream contests which have been especially popular in cities of the Pacific coast states.

The bottles of milk, which were placed in boxes, and surrounded with crushed ice, were kept at a temperature from 32 degrees to 34 degrees F. at all times. The boxes were shipped in baggage cars to Chicago, and most of them were not re-iced along the route. An inspection of the samples on arrival at Chicago showed that of the various methods of packing, the insulated box filled with crushed ice was the most effective. The bottles of milk in these boxes were entirely surrounded by the ice, which was packed in as tightly as possible. One or two samples packed in ice and sawdust arrived in a spoiled condition, due to the fact that a low enough temperature had not been maintained. The ice in the insulated boxes lasted well, and one box from Portland, Oregon, which was re-iced at Minneapolis on Tuesday did not arrive in Chicago until the following Saturday, but was still in good condition.

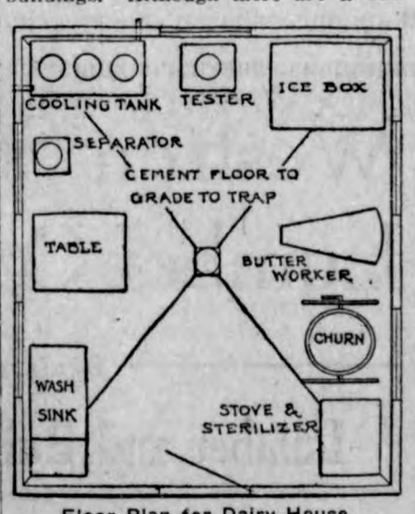
When milk is produced and handled under the right conditions it can be shipped to almost any point in the United States, or to foreign countries, and arrive in good condition. At present considerable quantities are being shipped to Panama, and are used on ocean liners plying between this country and Europe.

FAVOR ONE-STORY BUILDINGS

Recent Survey of Milk Plants Indicate That Low Structures Are Most Satisfactory.

(Prepared by the United States Department of Agriculture.)

A recent survey of more than 100 milk plants, made by the dairy division, bureau of animal industry, shows that for establishments handling more than 1,000 and less than 5,000 gallons of mily daily, the typical structure is two stories high; where less than 1,000 gallons of milk are handled daily, the plants are usually housed in one-story buildings. Although there are a few



Floor Plan for Dairy House.

plants of three or more stories, this record would seem to indicate that fewer stories prove more satisfactory in most cases. One of the most noteworthy disadvantages of a milk plant having several stories is the increasing quantity of labor needed, in proportion to the size of the business.

BALANCED RATION FOR COWS

Combination of Ground Oats, Gluten, Bran and Cottonseed Meal Is Quite Economical.

A balanced ration for dairy cows, used largely by New York farmers who feed silage, hay and some corn fodder for roughage, consists of 200 pounds ground oats, 200 pounds gluten, 100 pounds bran and 100 pounds cottonseed meal. Considering nutritive value it is about the cheapest ration a farmer can buy.

PUTTING RURAL COMMUNITIES ON MAP BY CO-OPERATION IS MOST EXCELLENT PLAN

Many Country Neighborhoods Are Coming to Realize the Value of Community Gatherings From a Commercial as Well as a Social Standpoint.

(Prepared by the United States Department of Agriculture.)

Communities, as well as firms and individuals, can reap legitimate profits through advertising. In her day Rome was a big advertiser and kept at it so persistently that eventually all roads led to that metropolis. From the standpoint of legitimate municipal publicity, America has several Romes. But this sort of co-operative advertising is not monopolized by the big centers. Indeed there are scores of communities—rural and semirural—that have put themselves on the map in big red letters. Their fame has not been restricted by their small size. The secret lies in their emphasizing some local product which the community is well suited to produce, and getting all interested persons to do their very best in that line.

A purse is trash compared with a good name, according to Shakespeare, and many towns recognizing the inestimable value of a good name have built up reputations that have lined the purses of those forming the community. For example, Monroe county, in southern Wisconsin, has built up a national reputation for the fine quality of its cheese. Not the least factor in winning and keeping leadership in this line has been the annual cheese day, a splendid community event at which quantities of the delicious product of the region are given away in sandwiches and in other forms to thousands who share in the occasion.

What Monroe county has done with cheese, Carrizo Springs, Tex., has done with strawberries. The whole countryside in the vicinity of this village joins in honoring its favorite product each season. Distinguished citizens come from miles around to take part in the festivities. The governor of the state counts it a privilege to be present.

Plowing Made a Fine Art.

That the humblest of farm tasks can be honored and exalted by community effort and the community in turn greatly profit thereby is shown by the record of the Wheatland plowing match in northern Illinois. This annual event, instituted something like half a century ago along lines followed by the founders' ancestors in Scotland, attracts annually 10,000 to 15,000 people. Here plowmen of all ages are divided into classes, the members of which compete for prizes offered for the best work done with riding, walking and tractor plows. The reputation for skill in agriculture created by this annual event has been worth an incalculable amount to the farmers of this region, and partly because of it Wheatland farms and Wheatland products are considered among the best in the whole Mississippi valley.

The orange growers of California have learned a similar lesson. Each year they hold a magnificent orange festival which is one of the big events of the Pacific coast, attracting as many as 25,000 people, some of them from distant states. The rivalry for honors has done much to raise and maintain high standards among the orange growers of the region.

A community celebration of a somewhat different character but equally effective in its advertising power, is the Ground-Hog day picnic at Punxsutawney, Pa. At this novel annual event farmers, politicians and former residents to the number of many thousands gather to share in eating a splendid repast, the principal feature of which is ground-hog meat. The meat is cooked in barbecue fashion and invariably wins the praise of the celebrants. Speeches and informal hearty greetings of old friends occupy the afternoon. While this event is not designed to advertise a farm product, its distinctive character and the fine spirit of hospitality that obtains puts Punxsutawney and the surrounding country on the map.

Texas Turkey Drives Famous.

The little town of Cuero, Tex., has won fame from ocean to ocean because of its turkey drives. Drivers of turkeys within a radius of 100 to 150 miles bring in flocks of birds on foot. The fowls travel at a slow rate during daylight and at dusk instinctively huddle together, while their drivers camp by the roadside until dawn, when the journey toward Cuero, a Mecca of turkeydom, is resumed. The culminating feature of this event is the turkey parade in which all of the drivers lead their flocks through the principal streets of the town. On a recent turkey day no less than 28,000 birds were in the procession. Following the parade the turkeys are loaded on cars and shipped to markets in all parts of the country.

There are thousands of communities which might undertake a celebration similar to these cited. In some cases the spring is the appropriate season, in others the fall or summer is the logical time. The first need is for an association or individual to gather together persons interested in promoting this idea. The winter days, when the farm work is less strenuous, offer an opportunity for preliminary conferences. The office of farm management of the United States department of agriculture will be glad to offer any inquirers suggestions regarding the best methods of promoting such events.

HELPS IN MARKETING WOODLAND PRODUCTS

(Prepared by the United States Department of Agriculture.)

Get prices for various wood products from as many sawmills and other wood-using plants as possible.

Before selling, consult neighbors who have sold timber, and benefit from their experience.

Investigate local timber requirements and prices. Your products may be worth more locally because transportation is saved.

Advertise in papers and otherwise secure outside competition for your product.

Secure bids, if practicable, both by the lump and by log-scale measure.

Be sure that you are selling to responsible purchasers.

Get a reliable estimate of the amount and value of the material before selling.

Market the higher grades of timber and use the cheaper for farm purposes.

Remember that standing timber can wait over a period of low prices without rapid deterioration.

Use a written agreement in selling timber, especially if the cutting is to be done by the purchaser.

CUT BADLY DISEASED TREES

Excellent Forestry Practice to Use All Inferior Specimens in Wood Lot for Fuel.

It is an excellent forestry practice to cut out the badly diseased, crooked, overcrowded, inferior trees in a wood lot for fuel wood, giving more growing space to the straight, promising young trees, according to forestry specialists of the United States department of agriculture. In some cases, such as in stands of old pines, a few large trees should be left for seed to restock the land, unless the area is to be cleared. In many sections of the country the present high prices of coal have made profitable a renewal of the wood fuel industry so that many farmers are finding it worth their while to clear out the less desirable trees in cordwood or shorter lengths.

GENERAL FARM NOTES

Do some of the repair work now.

* * *

Blood will tell—and so will feed.

* * *

Fighting stops, but feeding must go on.

* * *

Hogging down corn saves labor and time, increases pork production and puts the soil in excellent condition to be plowed.

Orchard Information

GIVE ATTENTION TO GRAPES

Important That All Grapevines and Other Small Fruits Be Pruned and Sprayed in Spring.

(Prepared by the United States Department of Agriculture.)

With the approach of spring it is very important that all grapevines and other small fruits be pruned, sprayed, and given proper attention. Grapes especially need attention at this time. If the vines have not been pruned, do not delay but prune them at once. If the pruning is put off too long the vines will bleed and lose their vitality. There are two or three methods for pruning grapevines, but the main essential is to prune back the lateral branches that were formed last year, leaving about three or four buds; also, if the number of these branches is too great, they should be thinned out and only the stronger ones left.

The fruit is borne on the new wood formed during the early springtime, and the old wood simply serves as a basis for the production of this new wood. If the vines are left without pruning, a great number of new branches will be formed, the vines will be too thick, and the fruit small and inferior. It is a good plan to spray the grapevine with a commercial lime-sulphur solution, at the rate of one part to nine parts of water. This spray to be applied before the buds start. Later, after the fruit has set, make

Muscadine Grapes.

two sprayings with bordeaux mixture consisting of 1 pound of copper sulphate, 1½ pounds fresh stone lime, and 12 gallons of water. The copper sulphate should be dissolved in about 6 gallons of water, and at the same time the lime should be slaked in a little water, then diluted to 6 gallons, and the two solutions poured together and used immediately. This spray will go a long way toward preventing rot and mildew of the grapes.

A very simple method of protecting grapes from rot is to place a 2-pound bag over each bunch, tying the bag around the stem of the bunch by means of a short piece of string. The bunches of grapes will develop in their paper bags and will be protected not only from decay but also from bees and and other insects.

TOP GRAFTING IN ORCHARDS

Scions Need Not Be Cut From Trees Until Just Before Work Is to Be Performed.

When one is going to do top grafting in an orchard with scions from one's own orchard the scions need not be cut from the trees until just before the work is to be done, unless the grafting is delayed. If this is the case, the scions should be cut while still dormant and kept in a cool place until needed. When trees are root grafted in the winter the scions are cut in late autumn when the wood is thoroughly matured, and stored in forest leaves or sand in a cool cellar until needed. They must be kept plump, and usually there is sufficient moisture in the leaves and in the sand to keep them so without watering.

BEST MARKET STRAWBERRIES

Fruit Uniform in Size and Color Usually Sells at Premium—Grow Several Varieties.

The market demands strawberries that are uniform in size and color. Such berries sell at a premium usually and it is well to grow several varieties until we get the one that meets these requirements best.

PRUNE APPLE TREE ANY TIME

Most Convenient and Best Time Is Late Winter or Early Spring After Cold Weather.

Apple trees may be pruned any time with good success and with no appreciable injury, but the most convenient and, all things considered, the best time is late winter

WHEN THE DAY IS OVER

When the household cares and the worries of every-day life have dragged you down, made you unhappy, and there is nothing in life but headache, backache and worry, turn to the right prescription, one gotten up by Dr. Pierce fifty years ago, called Dr. Pierce's Favorite Prescription.

A Prominent Minnesota Woman

St. Paul, Minn.—"I used Dr. Pierce's Favorite Prescription to help me during expectancy and can say that it is all that is claimed for it. I also took Dr. Pierce's Pleasant Pellets at the same time and think they are a splendid purgative. I have four children and we are all in perfect health. Dr. Pierce's book, 'The People's Common Sense Medical Adviser,' has been a great help to me in bringing up my family. I gladly recommend Dr. Pierce's remedies to those who need them."—Mrs. A. J. Allen, 343 Walnut St.

Doctor Said She Would Not Live

Fort Dodge, Iowa.—"At one time my daughter was very nervous and run-down in health. The doctor said she would not live a year. Before she had finished taking a bottle of Dr. Pierce's Favorite Prescription her health was fully restored.

"My mother took the 'Prescription' about twenty-five years ago for general weakness and she was cured. I always recommend it."—Mrs. Mohler, 520 20th Street.

Healthy Liver Healthy Life

Your liver—healthy or clogged, active or sluggish—makes all the difference between a vigorous, cheerful life and low spirits and failure. To subdue a stubborn liver; overcome constipation, dizziness, biliousness, indigestion, headache and the blues there is nothing on earth so good as Carter's Little Liver Pills. Purely vegetable.

CARTER'S LITTLE LIVER PILLS

Small Pill—Small Dose—Small Price

DR. CARTER'S IRON PILLS, Nature's great nerve and blood tonic for Anemia, Rheumatism, Nervousness, Sleeplessness and Female Weakness.

TRULY NOTHING IS CERTAIN

Small Girl Had Future All Laid Out, but Recognized One Direful Possibility.

Inez Haines Gilmore, the author of many successful children's books, being complimented at a Greenwich tea on her work, replied:

"To write books that please children one must study child psychology—a fascinating subject, by the way, full of amusing revelations. For example, take my friend's little daughter, who said one day:

"'When I grow up, mamma, I'm going to get married and have three children.'

"The mother, surprised and amused, remarked:

"'Well, you will be very fortunate, indeed.'

"Then the little girl lapsed into thought a moment and finally said:

"'But you can never tell, mamma. I might marry a bachelor.'"

A cup of Garfield Tea before retiring will next day relieve your system gently and thoroughly of all impurities.—Adv.

Men Attract Lightning.

Mrs. Flatbush—A curious fact revealed by statisticians is that the number of men struck by lightning is nearly four times that of women.

Mrs. Bensonhurst—That does seem strange when we remember that women are so much more attractive than men.

Naturally.

"Why are gossips quoted as authorities?"

"Because whatever they say goes."

Weak and Miserable?

Does the least exertion tire you out? Feel "blue" and worried and have daily backache, lameness, headache, dizziness, and kidney irregularities? Sick kidneys are often to blame for this unhappy state. You must act quickly to prevent more serious trouble. Use *Doan's Kidney Pills*, the remedy recommended everywhere by grateful users. *Ask your neighbor!*

An Iowa Case

Mrs. Henry Witt, 726 Otsego St., Storm Lake, Iowa, says: "My kidneys and bladder both caused me much suffering. My limbs were swollen and there were puffy sacs under my eyes. I used Doan's Kidney Pills and they relieved me from the first and soon restored me to good health. I can't say enough in praise of this medicine."

TURKEYS

I have some nice Bourbon Red Turkey Hens left at $5.50 each if taken before the 10th of February. Also a few toms at $8.00. Mrs. Frank Sandry, Goodell, Iowa.

WANTED

Bring in your old iron and scrap metal now while you have time and while I can pay good prices. Henry Lau & Son. 2w

Benefit of Deep Breathing.

Deep breathing is an excellent preventive against catching cold or will head off one that has just been caught. Everybody ought to take twelve deep breaths every day and do this breathing outside or with windows wide open, be the weather cold, warm, dry, damp, clear or cloudy. Deep breathing is imperative for all snorers, cold sufferers and chilly people.

Putting It Formally.

The four-year-old had just been reproved at the table. He continued to talk cheerfully, though unanswered, to father. After some minutes of soliloquy he turned to mother and remarked: "Your husband doesn't talk very much this noon, does he, mother?" —Harper's Magazine.

Was Looking for Easy Money.

"I asked for alimony of $50 a week. I see wimmen are getting that right along." "But, madam," expostulated the lawyer, "your husband is earning only $12." "What's that got to do with it? I thought the government provided the alimony."

Dr. R. W. Schultz, Osteopathic Physician, Masonic Bldg., Garner, Ia.

Mr. Arthur Wellemeyer was at Goodell on business Tuesday.

Mrs. M. O. Hocum was a Garner caller between trains last Friday.

Mrs. Chas. Ax was a Garner caller Monday morning between trains.

Mrs. F. J. Wenck was a visitor at Garner Monday afternoon between trains.

Mrs. R. W. Elder and son, Clarence, were Garner visitors Saturday between trains.

Mrs. Henry Knoke came Tuesday morning to visit with relatives and friends during the day.

Bill Miligan, of Goodell, was transacting business in Klemme on Tuesday.

Jeff Bell returned last Friday from a week's visit with relatives and friends at Clinton, Illinois.

Mr. Fred Gates went to Forest City Tuesday afternoon, and from there expected to go to Minneapolis to see his sister.

Prof. Tompkins, of Garner, was transacting business in Klemme Friday. We presume he was here writing insurance.

NOTICE—If you owe me on account I MUST have the money at once. I will give no further notice. Dr. Geo. Zinn. adv-1-w

Earl Josten and Fred Arnold were callers at Garner Monday between trains. We believe they were having some dental work done.

Philip Bock, Hod Lawhorn and Mr. Albers returned Monday morning from their trip into Oklahoma and Kansas where they spent about a week or so looking over land.

Mrs. Johnson, who has been visiting at the Kahrs home for the past two or three weeks, left Saturday for Minneapolis to visit a sister before she leaves for her home in California.

Tom Blank, of this place, is acting road master on this division during the sickness of his son, Ralph, who is at present laid up with the flu. Tom makes a pretty good "boss" and goes at it like an old timer.

Miss Esther Green and Mrs. W. A. Thompson came up from Belmond on Tuesday to shop in our good little town. Every day we come across someone from Garner, Goodell or Belmond, which certainly speaks well for our merchants.

by all.

In this issue of the Times we call your attention to the sale ads of G. A. Kahler, Clark Bredbenner, Geo. F. Kessler, H. J. Schlichting and T. P. Frandson. These sales are all large and it will pay you to look over the list of stuff.

Chris Jacobs, our county auditor, of Garner, was a business caller in Klemme Monday afternoon. Chris came down to see how his son Ed was getting along with the hardware business. Needless to say Chris found everything in ship-shape, so after "gassing" with the Times editor a little while he again beat it for Garner

County Treasurer Thompson informs us that he has issued 2,300 auto licenses, and there are between 300 and 400 applications on file at this time that will be issued as soon as the plates can be secured. Of the numbers issued, 30 have been for trucks, 21 motorcycles and 6 trailers. There has been just one transfer recorded. The receipts are approximately $40,000.00. When Treasurer Thompson planned for handling this automobile license business he bought new fixtures to be installed last fall. He has just received notice that the fixtures have been shipped.—Garner Signal.

Animal Isles.

There is the Isle of Dogs and Whale island, Pewitt island in Essex and Crane and Gulf islands off the coast of Cornwall, England. Near Lundy island are Rat island and the Hen and Chickens. A few miles off the coast of Wales are Puffin island, Sheep island and the Cow and Calf island in Pembroke.

Mystery of Chimney Swift.

The chimney swift furnishes one of the unsolved problems of bird life. The flocks drift slowly south until on the northern coast of the Gulf of Mexico they become an innumerable host. Then they disappear and for five months their hiding place is a mystery.

A Conservative Estimate.

Nine times out of ten, when a man "makes a good husband" for a woman, it is his wife who deserves all the credit.

When an experienced burglar enters a house he takes his time before he takes anything else.

If he chooses with care, without cost why shouldn t you' since you have to pay for what yon take?

Taking your time is second only to visiting the right house when the time comes,

You can call on us as late as you please --look as long as you prefer but you won't need a dark lantern to find what you're looking foror a jimmy to pry us loose from a genuine value.

A man is pretty safe at 9-11 So. Federal Ave., and we guess that nearly everybody in Northern Iowa knows it.

KLEMME TIMES

Twenty-fourth Year Number 23 | Klemme, Iowa, Thursday, February 12, 1920 | $2.00 In Advance. $2.50 Outside of County

TWO DUROCS BRING LOCAL RAISER $1,000.00

Saturday our local Duroc Jersey man, F. H. Schuldt, sold two Duroc Jersey brood sows to Miner Bros. at Garner, for $1,000.00. To make a good story of this transaction it might be well to go back a couple of years. In 1917 when Miner Bros. held their first Duroc Jersey sale Mr. Schuldt bought a yearling female of them for $70, which he thought was a big price for the hog which was labeled "Marion's Golden Lady." But since that time he has come to find that he had a valuable animal for he has sold about $3,000 of pigs from her litters. Then this winter he put the old sow on the Miner Bros. sale at Garner and she brought him the top price at $465. The hogs he sold to Miner Bros. Saturday were both sisters and from her litter. One of them, "Marion A" took 2nd prize at Des Moines in 1918 in the under one year gilt class. In addition to selling all these hogs Mr. Schuldt still has sixty pure breds on hand and also a sister to "Marion A" which he values at $500 or more. This goes to show what can be done in the thoroughbred line and also goes to show there is more money in raising pure breds than there is in raising just common every day pigs.

A FEW REAL ESTATE TRANSFERS THE PAST WEEK

Last Thursday Henry Church sold his town property east of the park to H. J. Bailey, who now resides on a farm west of Klemme. The Church's have not decided their new location. Louie Knoke sold his residence property on the west side to Carl Suckow. After selling this Mr. Knoke bought the Swartz property in the northeast part of town where Barnabee now lives.

SURPRISE PARTY

Last Friday night a large gathering of friends and neighbors met at the Chas. Ax home ot give them a farewell send-off in the form of a surprise party. All came with baskets heavily laden with many good things to eat. Games were enjoyed, followed up wth a fine big lunch. As a gift of remembrance the guests presented the Ax family with a beautiful set of dishes. The Ax family will soon move to their farm west of town.

IOWA PRESS ASSOCIATION HOLDS BIG MEETING AT DES MOINES

Last Thursday evening opened the session of the annual meeting of the Iowa Press Association at Des Moines. Friday and Saturday were the big days of the convention when all newspaper men in the state met to hear famous newspaper men give interesting lectures and talks. It was the intention of the Times editor to take in the meetings, but we were over rushed on work and are still "snowed" under. The Iowa Press Association, of which the Times is a member, has done a lot for the newspapers of Iowa, and has also set examples for the Associations of other tsates.

SERMONS ON THE SHADOWLAND

During the past year or more there has been in England a great revival of belief in spiritualism. There is every indication that in this country we are on the eve of a similar movement. More books on the occult are printed and read than during any other time for a quarter of a century past. Ouija boards are spelling out messages, ostensibly from hovering spirits; books have been written, printed and sold by the thousand from manuscript prepared by planchette or automatic writing; more people are investigating spiritualistic phenomena than ever before. Our periodical literature, from the daily paper to the staid reviews, is inceasingly occupied with the discussion.

It is a subject that intrudes itself upon our attenion. Under these circumstances it would seem that sober thought should be enlisted to determine the reality of these phenomena and religion be heard as to whether these teachings be recognized as friendly or inimical. The pastor of the Methodist Episcopal church will therefore speak on next Sunday evening on the theme, "Where are the dead?" and will follow this with other Sunday vening sermons on modern witchcraft, spiritualism, dreams, apparitions and kindred topics, as may seem advisable and as the interest of the public may warrant.

PAST YEAR SHOWS BIG SHIPPING BUSINESS FROM KLEMME

During the year 1919 there were five hundred and forty-seven car loads of live stock and grain shipped out from Klemme. This is not counting any other shipments in car lots. The following table gives the result:

Live Stock

Hogs	223 cars
Cattle	106 cars
Sheep	3 cars
Horses	2 cars
Total	334 cars

Grain

Wheat	6 cars
Corn	63 cars
Oats	140 cars
Seeds	4 cars
Total	213 cars

TOTAL CARS SHIPPED, 547

That is doing pretty well for a town of the size of Klemme and we doubt if there are very many towns of even larger sizes that have come anywhere near these figures.

For the month of January, 1920, thee were a total of 67 cars of live stock and grain shippd as follows: 21 cars of cattle; 29 cars of hogs; 1 car of sheep; 9 cars of corn; and 7 cars of oats, which totals 51 cars of live stock and 16 cars of grain, or 67 cars all told.

RELEASE WHISKEY TO FLU SUFFERERS

Government Orders U. S. Marshall To Supply Liquor To Physicians

Detroit, Mich.—United States Marshall Henry Behrendt was authorized this morning in a telegram from Washington to furnish free of charge to all reputable physicians whiskey to be used in the treatment of influenza cases.—The Dubuque Telegraph Herald.

We suppose if the above is true and the doctors can really get a jug of whiskey that there will suddenly be an overwhelming lot of flu sufferers.

SOCIAL ANNOUNCEMENT

Thursday, February 19, 1920

We extend a cordial invitation to everybody to attend our basket social to be given on Thursday evening, February 19, 1920, at District No. 8, Ell Township, 2 miles east of Klemme. Ladies, don't forget the baskets A big welcome awaiting for all.

F. Annetta Schuldt

The flu is hitting nearly every town in this patr of the State, according to the exchanges which reach our desk. Kanawha is having a time of it and have closed their churches and school, theatre, pool room, and the post office lobby during delivery hours. The schools and churches are closed at Whittemore. Lake Mills is under quarantine to prevent the spread of the disease. Albert Lea and other southern Minnesota towns are experiencig a siege of the flu. There are a large number of cases at Garner and Belmond, but the schools and churches are open and the disease is in a milder form. Two deaths on account of the flu at Goodell last week and the church used as a hospital, but this week the epidemic seems to be under control. As yet there are no flu cases in Klemme, but there are a few cases of Grippe and bad colds, which may possibly be flu in a real mild form.

Geo. Gruetzmacher has purchased a new Ford roadster which he will use this summer in selling silos.

Johnny Was Curious.

As a great privilege, John was taken to church to see his baby cousin baptized. Just as the minister had the water all ready and there was a hush in the congregation, John leaned toward his mother and asked in a too audible stage whisper, "Hot or cold?"

Fault-Finder's Folly.

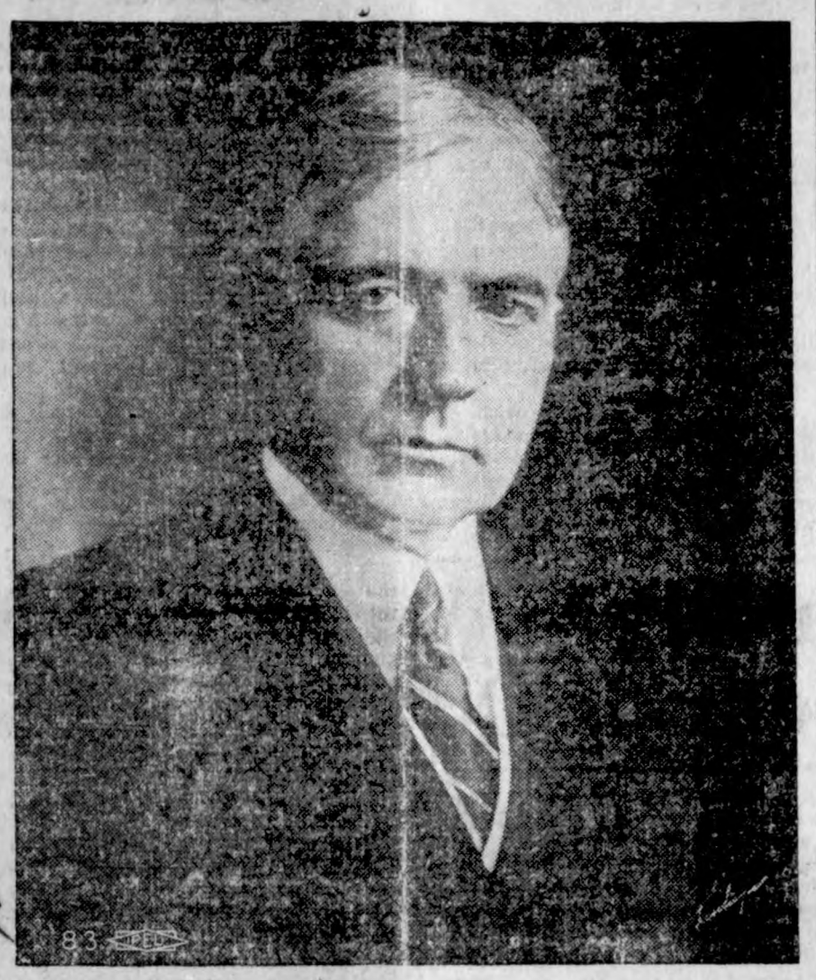
He who seeks only for faults sees nothing else, and will be so fully conscious of the faults of others that he will be at fault himself.

ANNOUNCEMENT

Owing to the press of work due to the Flu and the usual acute winter diseases I will be unable to make my visits to Klemme until towards Spring. Patients from Klemme may come to Garner either on the morning or afternoon trains. Special calls will be attended to as usual.

Respectfully,
Dr. R. W. Schultz,
1w Osteopathic Physician

Popular With The Iowa Voters For President



Gov. Lowden, of Illinois, Candidate for President

BLACKSMITH'S SON MAY BE PRESIDENT

Governor Lowden of Illinois, Leading Republican Candidate, Had Humble Start.

WON OVER MANY OBSTACLES

A Schoolmaster at Fifteen—Worked Way Through College and Law School—From Law to Politics —Farming His Big Interest.

Gov. Frank O. Lowden of Illinois, one of the prominent candidates for the Republican presidential nomination, won success in life by grit and hard work. Son of a village blacksmith, confronted by the privations of an undeveloped country, enjoying only such advantages as he could earn by unremitting work and sacrifice—it was not the kind of beginning to promise a brilliant future. But by determination, ambition and ability Lowden leveled the obstacles that rose about him and made success look his way.

Governor Lowden was born near Sunrise, Minn., on January 26, 1861. His father was Lorenzo Lowden, who ran the village blacksmith shop. The Lowdens left Sunrise when Frank was seven years old, barely out of the primer class at the school which Lorenzo helped to build, and moved to Hardin county, Iowa. There the elder Lowden took up farming. The boy farmed, too, but did more. He made spare time for himself and demanded an education. So well did he succeed that at fifteen he was master of the country school, saving his few dollars for college. At twenty he entered the University of Iowa. By outside work he made enough money to complete his course—at the head of his class.

Then he went to Chicago. He wanted to be a lawyer. By the same program of work and sacrifice that had advanced him thus far Lowden worked his way through the Union college of law, completing a two-year course in one year—again at the head of his class.

Now came more years of hard work, but blessed with greater rewards than the young man had before known. In 1896 he was married to Miss Florence Pullman, daughter of one of America's greatest business men. Four children have been born to them, a son and three daughters.

Lowden began to take an active interest in politics. He was a delegate to the national convention that in 1900 nominated McKinley and Roosevelt. Four years later he was a candidate before the Republican gubernatorial convention, but a combination of the Yates-Deneen forces defeated him. Lowden took the stump and helped elect his successful rival, Charles S. Deneen.

Two years later he was elected to congress from the Thirteenth Illinois district. He retired voluntarily after two and a half terms. On quitting congress he went to his farm near Oregon, Ill., and devoted himself to making that one of the finest properties of its kind in the state.

Meanwhile in 1904 he had been made a member of the Republican national committee from Illinois, on which he served until 1912. In 1916 he entered the gubernatorial primary and was nominated for that office. He was elected and took his seat the following January to begin what has proved one of the most constructive and successful administrations recorded in the history of the state.

In brief, the chief events of Governor Lowden's life, are as follows:

1861—Born, Sunrise, Minn.
1868—Moved to Hardin county, Ia.
1885—Graduated from University of Iowa.
1887—Graduated from law school.
1896—Married to Miss Florence Pullman.
1898—Entered law partnership of Lowden, Estabrook & Davis. Appointed lieutenant colonel, first infantry, Illinois National Guard.
1904—Defeated for Republican nomination for governor.
1906—Elected to congress.
1911—Retired from congress.
1916—Elected governor of Illinois.

LOWDEN SPONSORS GOOD ROADS MOVE

ILLINOIS EXECUTIVE STARTS CONSTRUCTION OF 4,800 MILES OF HIGHWAY.

Under the direction of Gov. Frank O. Lowden, Illinois has begun the construction of a system of 4,800 miles of good roads at a cost of $87,000,000, which, when completed, will cause automobilists and farmers to rejoice. Two hundred miles of good roads were built last year and plans have been made for the construction of more than 1,000 miles this year. When the work is completed Illinois will have one of the finest systems of hard roads in the country.

The voters of the state approved a $60,000,000 bond issue for good roads, and with the federal government appropriation the sum available for trunk line, hard surfaced highways has been fixed at $87,000,000.

LOWDEN'S WAR RECORD

Governor Active Aid of National Authorities.

His Own Son, Pullman, Wins His Stripes in Overseas Service.

Friends of Frank O. Lawden point with pride to his record as war governor of Illinois. Promptly following the severance of diplomatic relations between the United States and Germany Gov. Lowden issued an appeal to the people of Illinois to uphold President Wilson.

"It is the solemn duty of all Americans," he said, "to rally to his support."

Three days later he went before a joint session of the two branches of the legislature to renew his appeal.

"We may have many sympathies," he said. "We can have but one allegiance and that allegiance is to the United States."

The authorities in Washington regarded Illinois as critical territory. Gov. Lowden took immediate steps to demonstrate that the state was unitedly back of the government in whatever war measures it undertook. He appointed a state council of defense, representing all parties and all elements, to organize the war activities of Illinois.

The work of this council was noteworthy. Financed by an appropriation of $50,000 as against appropriations for similar purposes in other states running as high as $5,000,000, the Illinois council achieved results equal in importance to those of any other body of its kind in the country. Among the things it did of direct aid to the government's military plans was to give preliminary training to several thousand drafted men, so that on reporting to camp they were able to obtain immediate recognition as noncommissioned officers. The council's' chief function, however, was in building up the morale of the people at home, fostering economies, and aiding movements of whatever kind designed to increase national efficiency.

The governor kept in close personal touch with the Illinois boys in khaki and blue. He visited them in their camps, traveled to the seaboard to bid Godspeed to departing contingents and was at New York to give welcome in the name of the state to the veterans who came back at the close of the fighting.

His interest in the soldiers was not merely official. Among them was his own son, Pullman Lowden—a member of the Prairie division. In that division was the "Dandy First" regiment of the Illinois national guard with which Lowden served for three years as lieutenant-colonel. Pullman went overseas with his outfit, did his bit in the ranks as a common soldier, and came back with the cherished gold service stripes.

LOWDEN FOR ECONOMY

Term as Governor a Record of Saving and Efficiency.

Simplifies Management of State Affairs With Results Profitable to the Tax Payers.

The high cost of government has supplied the supporters of Frank O. Lowden the platform on which they are confident he will be elected president of the United States.

Governor Lowden was born on a farm and worked his way through school by teaching. He is a product of the Middle West, having been born in Minnesota, raised in Iowa and then coming to Chicago. He worked as a clerk in a chicago law office for $8 a week while preparing for his profession. Later he entered politics. He was thrice elected congressman from the Thirteenth Illinois district before voluntarily retiring.

He was elected governor of the state in 1916 by a tremendous plurality and his record as chief executive has put him in the list of presidential possibilities. Friends of the governor explain that he had to be dragged into the race for president. Certainly he does not seem to worry about the outcome of the campaign.

"I think one of the greatest needs of the country today is a stronger, finer, happier Americanism," said Governor Lowden. "We can compel aliens to respect our form of government, or get out, and that we must do. At the same time we are under the profound necessity of earning that respect from all right thinking men. We are hearing strong preachments against profiteering and extravagance. Yet it is hardly dawning on the public mind that we can be paying excessively for government, as well as for sugar, meat or fuel.

"Illinois formerly had 125 separate boards and commissions handling its affairs. No one man, no score of men, were responsible. A premium was put on spending.

"Under my administration these bureaus have been consolidated into nine departments, whose chiefs reside at the state capital and are held individually responsible. One effect of this has been to reduce the tax rate of the state 33 per cent in two years. Adoption of a budget system has been a valuable adjunct in saving the taxpayers money. I think efficiency and economy in government is one mighty step in the direction of improved Americanism."

METHODIST EPISCOPAL CHURCH

Public worship at 10:30 a. m., and 7:30 p. m. with sermons by the pastor.

Sunday School at 11:30 a. m. A bright, interesting, helpful hour.

Sermon subject for Sunday evening, "Where are the dead?" This is the first of a series of Sunday evening sermons on religion and the occult.

POLITICAL ADVERTISEMENTS

I hereby announce myself a candidate for the office of County Treasurer, subject to the decision of the Republican Primaries to be held June 7th, 1920. Yours very truly,
1-1-20 JOHN SUURBALLE

I hereby announce myself a candidate for the office of State Senator from the district composed of Hancock, Cerro Gordo and Franklin counties, subject to the decision of the Republican voters of said counties at the June, 1920, Primaries.

Dated at Garner, Iowa, this 12th day of January, 1920.
1-22-tf. J. E. WICHMAN

I hereby announce myself a candidate for the office of Sheriff for Hancock County, subject to the decision of the voters at the June, 1920, primaries.
1-29-p. E. PECK HANSON

I hereby announce myself a candidate for the office of sheriff of Hancock county, subject to the decision of the Republican voters of said county, at the Primary election to be held in June.

W. C. ZIESEMER,
1-22-tf Garner, Iowa

I am a candidate for re-election subject to the will of Republican voters at Primary Election next.

Very truly yours,
Chris Jacobs, Auditor

I hereby announce myself a candidate for the office of State Representative from Hancock County, subject to the decision of the Republican Voters of said County, at the June 1920, Primaries.

Dated at Britt, Iowa, this 26th day of January, 1920.

E. P. Healy

"Red" Menace Is Moving East

Whole World in Grave Danger Through Advancing Tide of Bolshevism.

NOW FLUSHED WITH VICTORY

Practically All of Asia Is Open to the Propaganda, and Result May Be Bloodiest Chapter in World's History.

Washington.—The danger to the world from bolshevism was never greater than at the present moment.

The collapse of the Russian national forces under General Kolchak in Siberia and the retreat of General Denikine's army from the Moscow front are regarded in every capital in Europe and in Washington as constituting a threat of a possible invasion of Europe, a certain penetration by the bolsheviki in Asia and a menace to the peace of the entire world.

Even Prince Michael Cantacuzene, husband of a granddaughter of President Grant, who has just arrived in the United States, while hopeful that the Russian national forces may still save themselves, confesses that their plight is desperate unless allied aid reaches them. "They have no shoes, no clothes, very little ammunition and very little food. If the allies wish to stop the spread of bolshevism throughout the world they must come to the rescue of Kolchak and Denikine."

This is the belief of a man who is fresh from Siberia and who is optimistic enough to advance the opinion that if bolshevism can be kept isolated in Russia it will wear itself out by its own excesses.

On the High Tide of Victory.

The word "if" makes all the difference in the world. But the fact is that bolshevism is now riding on the high tide of victory and there does not seem one chance in a million that it will be confined to Russia. Nearly all of Asia is now open to its propaganda. The defeat of the forces of General Denikine opens the door between Moscow and the Black sea. The connecting military link between the former Kolchak and Denikine lines has been obliterated and nothing remains to prevent the agents of the bolshevists from moving toward Armenia, Persia, Afghanistan and India. Agents of the Russian reds have already stirred up considerable trouble among the hill tribes on the northern confines of India and British troops are now engaged in suppressing uprisings.

As for Siberia, the red propaganda is moving eastward rapidly. It has become so serious a menace to China and Japan that the government of Japan is taking steps to halt the advance of the reds before it reaches the very threshold of Manchuria and the island empire itself.

Among the ignorant masses both of China and India there is great opportunity for the bolsheviki to spread their doctrines, and if these countries embrace the propaganda, the sequel will be written in the bloodiest chapter in history.

But it is not against Asia merely that the bolshevists are plotting. An invasion of Europe is among their plans. All recent developments indicate that it is the program of the reds to bring military pressure to bear against the Baltic provinces, Poland and the new nations which the Versailles conference has been erecting in central Europe and that the soviet military machine will this year be hurled against that front.

It is idle, nay, it is criminal to talk of peace while bolshevism remains in Russia, ever threatening to spread its accursed cult throughout the world. Treaties of peace may be drawn up at Versailles and signed at Paris, as the treaty with Germany was the other day, but such treaties have no more effect on bolshevism than the passing of a sedition bill by the senate. Bolshevism must be suppressed if the world is to know peace. And bolshevism must be ended if the world is not to become bolshevik. Between it and the principles of government in other lands there is an irrepressible conflict and one or other of these opposing forces must perish.

A few years ago in the United States communism was regarded as a "joke." Is it a "joke" today? Two years ago bolshevism in Russia was regarded as a passing mania. But it has not passed. It is in Russia still and it threatens to overflow its confines and plunge the world into another bath of blood.

Thieves Took Big Chances.

Baltimore, Md.—Taking chances of being dashed to death, a pair of daring hotel robbers used a narrow ledge outside the Hotel Emerson to enter the fourteenth floor rooms of Mr. and Mrs. William F. Stutz of Washington.

They filled a suitcase with fine dresses and lingerie owned by Mrs. Stutz and valued at $600 and escaped, carrying the plunder by the same dangerous route, a single slip upon which would have been certain death.

"Drys" In Fight Since Year 1808

Growth of Prohibition Can Be Traced More Than Century.

ADVANCE HAS BEEN STEADY

Moderation Was First Sought, and Not Until 1847 Did Demand for Abolition of Strong Liquor Make Itself Heard.

Chicago.—Prohibition sentiment, culminating in the epoch-making amendment to the federal Constitution, has been growing steadily in this country since 1808, according to records compiled by the board of temperance of the Methodist Episcopal church. At that time a demand for moderation in the use of ardent spirits arose, followed ten years later by an even broader movement for abstinence from ardent spirits and for moderation in the use of malt liquors. This in turn gave way in 1840 to sentiment for abstinence from all alcoholic beverages.

Agitation for abolition of the practice of licensing the sale of liquors did not come until 1847, resulting four years later in the enactment of prohibition laws in Maine, the first state to put prohibition into effect. Kansas was second, in 1880, and North Dakota third in 1889. Meanwhile the movement had grown to such proportions that the national Prohibition party was formed at a convention in Chicago in 1869.

Women, always in the forefront of the activity to stop the sale of alcoholic drinks, organized for a concerted fight after the famous woman's crusade, 1873-74. Their association was later to become known throughout the world by the name of Woman's Christian Temperance union.

Anti-Saloon League in 1893.

Another powerful influence in the fight for prohibition came into existence in 1893 in the formation of the Anti-Saloon league. It is noteworthy that both these organizations had their inception in Ohio.

The modern wave of prohibition legislation began with Georgia in 1907. Since that time, the movement gained strength more rapidly than any other reform in the history of the world, so that 33 states already have prohibition by state action, in 21 adopted by popular vote and in the others by legislative measures. At the time the constitutional amendment was submitted, 24 of the 48 states and considerably more than half of the territorial United States had prohibition. In states where prohibition was not state-wide, it has been adopted under local option laws by many communities.

In addition to state laws, there have been in effect stringent measures adopted by congress as aids toward winning the war, which gave a tremendous impetus to the prohibition movement. Studying the examples of foreign countries, a law was passed making it unlawful to provide any man in uniform with alcoholic beverages. Making of beer and whisky was stopped under the food control act and the sale of drinks was terminated at midnight last June 30. Shipment of liquor into any states was prohibited by the bone-dry law.

Ratifications Took 13 Months.

The constitutional amendment was finally adopted by congress on December 18, 1917, with a restrictive clause, hitherto unknown in legislative procedure, that it would be inoperative unless ratified within seven years. The vote in the house was 281 to 128 and in the senate 65 to 20. The ratification required only 13 months, the thirty-sixth state taking favorable action January 16, 1919. Frank L. Polk, acting secretary of state, proclaimed the amendment as part of the Constitution under date of January 29, 1919, but it went into effect one year from the date of ratification by the thirty-sixth state.

After that date nine states voted for ratification, making 45 in all. Rhode Island, Connecticut and New Jersey were the only exceptions.

FRENCH PAINTER, BLINDED, IS DECORATED

...thpick Brings Back Voice of Ex-Soldier

...ux City, Ia.—Swallowing a ...pick was a blessing in dis...se for Donald Cullings of this ...y, an ex-soldier, here. At ...inner a bit of toothpick lodged ...n his throat and he coughed violently, choked and nearly strangled before it was dislodged.

But when he had recovered he found that his voice, which he had almost lost following an attack at St. Mihiel, September 12, 1918—just a year to the day—had returned. After recovering from the gas attack Cullings could only speak in a husky whisper.

A True Sport.

Women have been accused of lack of sportsmanship; yet was a woman ever known to beat a carpet when it was down?—Boston Transcript.

MARVELS OF SURGERY

Taken From Rabbits and Grafted Into Soldiers Paralyzed by Shot Wounds —Cures Effected.

Chicago.—The miracles of modern surgery which have developed since the World war have made it possible to transplant into a human being the nerves of an animal and so to repair the part of the anatomy that has been shattered by shots.

There are wards in the big military hospital at Fort Sheridan filled with men who had nerves cut in half by bullets and fragments of shell and as a result were paralyzed. Sometimes the severed ends of these nerves could be sewed together, but in other cases a considerable length of nerve would be carried away so that a splice had to be put in.

The nerve to be grafted does not have to be used immediately, but can be kept indefinitely in cold storage or chemicals until it is needed. There have developed experimental proofs where nerves have been taken from the dead, preserved for a short period and grafted to the injured part of living persons.

In ward 59 is Joseph Higgins. A shell carried away the muscles and nerves of the upper part of his left arm. The wound healed, but his arm was paralyzed. Surgeons decided to transplant muscles from his chest. He is now regaining the use of his arm.

Private Joseph Fleischman, One Hundred and Forty-eighth infantry, who hails from Antigo, Wis., was hit by a machine gun bullet, which cut a nerve and resulted in the loss of control of his right leg. He was sent to the British expeditionary hospital and from there to Fort Sheridan. The leg was operated on, nerves from a rabbit grafted in, and now, six months later, he is again feeling sensation in the part of the leg which was dead.

MALTA IN HISTORY

Had Part in Each Step of Western Civilization.

Island Made Famous Forever When It Beat Back the Turkish Hordes in 1565—Deserving of Promised Home Rule.

"Perhaps no other by-product of the world war save the recovery of Jerusalem stirs the imagination so profoundly as the British announcement of home rule for Malta," says a bulletin of the National Geographic society, which explains:

"The Malta island group is a shrine of mythology, and of sacred and profane history. Calypso, vampire of Homer's word motion pictures, rescued the shipwrecked Ulysses, and employed her charms to make him stay on the island. St. Paul swam ashore there after his vessel ran aground. Publius, the island governor, according to Acts, 28, received and lodged him, and the apostle founded a Christian community before he departed.

"The date of Christ's birth is but the half-way point in Maltese chronology. Since its recorded history began ten nations have held sway over the coveted islands, beginning with the Phoenicians of Paul's time, and running a scale of Greeks, Carthaginians, Romans, Goths, Arabs, Germans, Spaniards and French, until the present sovereignty of the British.

"It has been said that Malta's chronicle holds, in microcosm, the history of Europe, and that its archeological remains mark each step in western civilization.

"But Malta was an actor, as well as a librarian of historic drama. Literally she became the savior of the western world when the Knights of Malta beat back the Turkish hordes during the famous siege of 1565. The alien knights, along with native Maltese, kept the blighted head of Moslem from crushing the lands which fostered those infant ideals of freedom which now are erected in England's concession.

"The thrills of that siege and the heroism displayed are unsurpassed. Of the 3,000 Maltese who fought with the knights, practically all were killed. Characteristic of the knights' valor was that of the defenders of Fort St. Elmo. Wounded and desperate, the few survivors of months of fighting went to a small chapel within the fort, embraced each other, received the eucharist, and prepared to die. The little company was cut off from all assistance, but fought on. Many fell with sword in hand.

"Fearing they would be exterminated before the assailants were beaten back, a Maltese was sent to swim across the harbor by night to inform the grand master of the danger. The messenger delivered his 'message to Garcia' by diving and swimming mostly under water. 'Hold the fort, or die fighting,' was the command he brought back. Every man obeyed—and died. But the consternation wrought by their frenzied resistance worked such havoc among the assailants that the news of it spread to other divisions of the Turkish forces, and turned the tide toward a Maltese victory.

"In command of the Turkish sea forces was Dragut, who rose from cabin boy and galley slave to be admiral of the Turkish navy, and was mortally wounded before Malta."

Deadly Snake in Bananas.

Patrons of a prosaic grocery store in a sedate Iowa community had an exciting taste of tropical adventure a few days ago. A bunch of bananas which had been ripening in the store for a week suddenly gave up a strange and brilliant snake, about three feet long and unpleasantly active. Taken in a glass-covered box to a local school, the reptile was identified as a bush master, most deadly of South American snakes. Its slender body is pinkish-yellow in color, with a row of large, diamond-shaped patches from head to tail, the latter being black, with stripes of pinkish-yellow. It is related to the better known fer-de-lance, but grows even larger than that six-foot carrier of swift poison. Because of local prejudice against the visitor, it was chloroformed.—Popular Mechanics Magazine.

Much Unproductive Land.

About one-fifth of a billion acres of the cutover land and woodland in the United States might be cleared up and the stumps removed so that the land would be available for productive farming. If all this agriculturally suitable forest and cutover land could be made into farms averaging 160 acres, it would provide 1,250,000 farms, an increase of about 20 per cent over the present number. It is believed unlikely that more than 50,000,000 acres, or enough for perhaps 300,000 farms, will be cleared of the stumps unless the govrenment assumes responsibility.

Sardonic Suggestion.

"Did you tell the janitor we need more warmth?"

"Yes," replied Mrs. Frizzle.

"Did he pay any attention to the matter?"

"Immediately. He sent up a booklet of winter resort advertisements."

The Trouble With Villa.

Redd—Why don't somebody down in Mexico kill that fellow Villa?

Greene—They have, but the trouble is he won't stay dead.

GLASS DECLINES AID TO EUROPE

Says Peoples Overseas Must Meet Own Problem of Sinking Exchange.

UNITED STATES GIVES LIMIT

Suggests That Europeans Live Within Their Incomes and Increase Their Production as Much as Possible, in Blunt Statement.

Washington, Feb. 2.—Europe, in so far as the United States government is concerned, must rely upon her own resources in retrieving financial equilibrium.

This was the interpretation here generally of the letter Secretary of the Treasury Glass has sent to a committee of the Chamber of Commerce of the United States, which sought a government expression on the proposed international conference of financiers and commercial leaders to discuss reconstruction problems.

In a blunt statement of the facts as he sees them, Mr. Glass declared "the American government has done all that it believes advisable and practicable to aid Europe. The conference," he added, "would serve to cause confusion and revive hopes, doomed to disappointment, of further government loans."

Does Not Oppose Conference.

The treasury department does not offer objection, Mr. Glass said, if the Chamber of Commerce of the United States, which has charge of the details of the conference, wishes to name delegates to an informal conference, "provided the scope and character and limitations of such a conference, as well as the impossibility of United States government action, are clearly understood."

"If the people and governments of Europe," Mr. Glass declared, "live within their incomes, increase their production as much as possible and limit their imports to actual necessities, foreign credits to cover adverse balances would most probably be supplied by private investors and the demand to resort to such impracticable methods as government loans and bank credits would cease.

"The American people should not, in my opinion, be called upon to finance, and would not, in my opinion, respond to a demand that they finance the requirements of Europe in so far as they result from the failure to take necessary steps for the rehabilitation of credit.

"There is no more logical or practical step toward solving their own reconstruction problems than for the allies to give value to their indemnity claims against Germany by reducing these claims to a determinate amount which Germany may reasonably be expected to pay. The maintenance of the claims which cannot be paid causes apprehension and serves no useful purpose."

Case Is Desperate, Say French.

Paris, Feb. 2.—Commenting upon the exchange situation, the Intransigeant said: "This is one of the gravest crises of the last five years."

"If no remedy is possible, if gangrene has infected the organism," the newspaper continued, "only an operation will save us. In financial language this means liquidation or some kind of compression of our debt."

PUZZLED ON ENDING OF WAR

British Barristers at Sea—Committee Has Been Appointed to Fix Official Data.

London, Feb. 2.—A committee of counselors has been named to decide the official date of the ending of the world war. It is declared that thousands of pounds are involved in legal proceedings which have been held up pending an authoritative decision on the point. Interviewed on the subject, a prominent barrister said recently: "So many war measures were passed, such as the rents restriction acts and the orders in council, that one must not trade with the enemy or do this or that and the other, that the legal profession, generally speaking, is looking for guidance. No one can possibly answer the question offhand. Some contracts used the phrase 'at the termination of hostilities'; while others spoke of the 'duration of the war,' and in each case the parties probably intended the same thing."

CRAZED BY FLU; KILLS TWO

Husband Shoots Wife and Baby to Death, and Then Tries to End Own Life in Cleveland.

Cleveland, O., Feb. 2.—Mrs. Edith Bullman and her five-months-old daughter Pauline were shot to death and the husband and father, Martin, was reported dying with a bullet in his brain. The police believe Bullman, deranged by influenza, killed his wife and baby and then shot himself.

Anarchist Escapes Police.

Rome, Feb. 2.—Enrico Malatesta, the anarchist leader, is reported to have dieappeared. Diligent search is being made for him by the police, who hold a warrant for his arrest on a charge of inciting class hatred and attempting to overthrow the present regime in Italy.

Nasty Colds

Get instant relief with "Pape's Cold Compound"

Don't stay stuffed-up! Quit blowing and snuffling! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up a cold and ends all grippe misery.

The very first dose opens your clogged-up nostrils and the air passages of the head; stops nose running; relieves the headache, dullness, feverishness, sneezing, soreness and stiffness.

"Pape's Cold Compound" is the quickest, surest relief known and costs only a few cents at drug stores. It acts without assistance. Tastes nice. Contains no quinine. Insist on Pape's! Ad.

Then It Ran.

I wanted to make a trip downtown. The motor started without trouble, but when I put it in gear the car refused to budge.

After working frantically on it for some time I called a garageman, but he was no more successful than I, until, quite by accident, he walked around to the rear of the car.

"What on earth are these two jacks doing under the rear wheels?" he exclaimed.

I had jacked the car up the night before and had forgotten to remove the jacks.

IF BACK HURTS USE SALTS FOR KIDNEYS

Eat less meat if Kidneys feel like lead or Bladder bothers.

Most folks forget that the kidneys, like the bowels, get sluggish and clogged and need a flushing occasionally, else we have backache and dull misery in the kidney region, severe headaches, rheumatic twinges, torpid liver, acid stomach, sleeplessness and all sorts of bladder disorders.

You simply must keep your kidneys active and clean, and the moment you feel an ache or pain in the kidney region, get about four ounces of Jad Salts from any good drug store here, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and is harmless to flush clogged kidneys and stimulates them to normal activity. It also neutralizes the acids in the urine so it no longer irritates, thus ending bladder disorders.

Jad Salts is harmless; inexpensive; makes a delightful effervescent lithia-water drink which everybody should take now and then to keep the kidneys clean, thus avoiding serious complications.

A well-known local druggist says he sells lots of Jad Salts to folks who believe in overcoming kidney trouble while it is only trouble.—Adv.

He Thought He Understood.

"I came in answer to your advertisement in the paper for a man," said the poor-looking chap at the door.

"Oh, yes," replied the lady. "Are you temperate?"

"Yes, ma'am."

"Industrious?"

"Yes, ma'am."

"No bad habits at all?"

"No, ma'am."

"How old are you?"

"Just thirty-two, ma'am."

"I guess you'll do. Come in."

"Oh, come to think of it, I guess I don't want the job, ma'am. I'm not a marrying man anyway, ma'am."

If not already acquainted, get to know Garfield Tea, the advance agent of Abounding Health.—Adv.

Charitable.

Mrs. Flatbush—So your husband went to church with you?

Mrs. Bensonhurst—Yes. he did.

"What was the minister's sermon about?"

"Charity toward all."

"And did your husband derive any benefit from the discourse?"

"Well, I'll say he did, for when the preacher asked him what he thought of the sermon my husband refrained from replying."

Rather Tactless.

As they sat holding hands in the moonlight, she said: "Are you lucky at poker?"

"No," he replied; "it is always my luck to hold bum hands—at poker and everything."—Houston Post.

MAKING PROFIT IN CUT TIMBER

Understanding of Elementary Principles of Forestry Will Assist Farmer.

CAN SELL IN CARLOAD LOTS

Wasteful Practice to Put High-Priced Logs to Ordinary Use on Farm—Much Pine, Yellow Poplar and Cotton Wood Used for Pulp.

(Prepared by the United States Department of Agriculture.)

An understanding of the elementary principles of farm forestry will enable the farmer to market his timber far more profitably than it is done on the average farm. In the Southern states, and in many other sections of the country as well, high-grade logs of such trees as white oak, yellow poplar, red gum, ash, cherry, and black walnut can usually be sold in carload lots direct to manufacturing plants, even though these are located at some distance. Many local log-using plants buy in lots as small as a wagon or truck load. In the South clear logs of white oak and yellow poplar 16 inches and up in diameter are most profitably sold to sawmill plants especially equipped for quartering and veneering woods. High prices at loading points make it wasteful to put such logs to ordinary use at home.

Paper Pulp Wood.

Large quantities of pine are cut and sold by southern farmers for paper pulp wood. Yellow poplar and cottonwood, red gum, tupelo and others in less amounts are used for the same purpose, according to forestry specialists. The wood must be pealed and is usually marketed in 4-foot lengths and 3 to 10 inches in diameter. Pulp wood is sold by the cord, and the prices usually range from about $4 to $6 for pine and from $5 to $9 for poplar, cottonwood, etc.

Farm Timber Product.

Railroad ties have long been a standard farm timber product. As a rule, however, the price represents only fair wages for cutting, hewing, and hauling, with little return for the timber itself. For example, a tie 7 inches by 8 inches by 8½ feet long, if sold at 50 cents, when the items in the cost of manufacture are taken into account, would have a value equivalent to the same amount of lumber valued at $16.50 a thousand board feet. This is a low figure for white oak. It is often a mistake to cut a young tree for one small tie when in a short time the tree could produce two ties.

INSPECTION SERVICE GROWS

Certificates Issued by Inspectors State Condition of Interstate Shipments.

The inspection service for shipments of fruits and vegetables, started in 1917 by the bureau of markets, United States department of agriculture, has been extended to cover 150 designated

Federal Inspector Inspecting Carload of Badly Sprouted Potatoes.

markets. The certificates issued by inspectors upon request state the condition of interstate shipments as they arrive at market centers and are used as a basis for settling claims that may arise between shipper and consignee.

WHITE LEGHORN BEST LAYER

Average Total Production of Eggs During Life Is About 500—Profitable Four Years.

The White Leghorn is the most important egg-producing breed at the present time. The average life of a White Leghorn is about six years. The average total production of eggs is above 500 and the maximum possible above 1,000, but they are seldom profitable to keep after the fourth year.

REMOVE RAM DURING WINTER

Should Not Be Permitted to Run With Ewes Because He Gets "Bossy" and Eats Too Much.

The ram can be allowed to stay with the ewes until winter and then he should be taken away from them. If he stays with the ewes during the winter he will eat too much, get "bossy" and bunt them around, often causing abortions.

THOUSANDS OF WILD ANIMALS DESTROYED

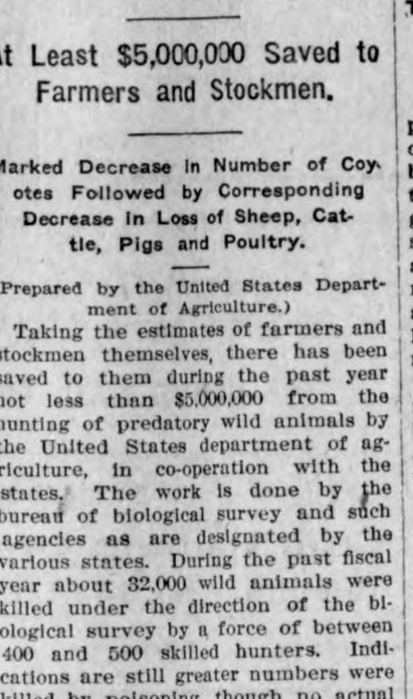
At Least $5,000,000 Saved to Farmers and Stockmen.

Marked Decrease in Number of Coyotes Followed by Corresponding Decrease in Loss of Sheep, Cattle, Pigs and Poultry.

(Prepared by the United States Department of Agriculture.)

Taking the estimates of farmers and stockmen themselves, there has been saved to them during the past year not less than $5,000,000 from the hunting of predatory wild animals by the United States department of agriculture, in co-operation with the states. The work is done by the bureau of biological survey and such agencies as are designated by the various states. During the past fiscal year about 32,000 wild animals were killed under the direction of the biological survey by a force of between 400 and 500 skilled hunters. Indications are still greater numbers were killed by poisoning, though no actual count was made of animals thus destroyed.

Extensive poisoning operations were conducted in the great sheep-growing sections of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming. This was followed by a marked decrease in the number of coyotes, particularly with a corresponding decrease in the losses of sheep, cattle,



Half-Grown Mountain Lions Snapped in Top of a Yellow Pine Tree—There Are Still a Considerable Number of These Animals in the West Which Have Eluded the Hunters.

pigs, colts, and poultry. Stockmen say that on many important ranges and lambing grounds the former heavy annual losses have become negligible or have been entirely eliminated. As an illustration, there is an area about 75 miles in diameter in western Colorado where sheep owners formerly reported an average loss of about 25 sheep a day throughout the season. Poisoning operations have been conducted through two successive seasons. Destruction of predatory animals has been so thorough that sheep now range freely, sometimes unattended for several days in succession, without loss. Losses throughout the area are nominal.

BORAX USED IN FERTILIZER

Container Must Be Properly Marked According to Order of Secretary of Agriculture.

A recent order signed under the control act by the secretary of agriculture, and issued by the bureau of soils of the United States department of agriculture provides as follows:

"That hereafter no licensee handling or dealing in fertilizers or fertilizer ingredients shall sell for application to the soil any mixed fertilizer which contains more than one-tenth of 1 per cent of boron, expressed as anhydrous borax, unless the container thereon be marked, tagged, branded, or labeled so as to show plainly and conspicuously, as part of the analysis, the percentage of borax present."

ANIMAL FOOD IS ESSENTIAL

Farmer Makes Mistake In Neglecting Any of Elements In Ration Stimulating Eggs.

Many poultry flocks which receive an abundance of fine quality grain do not lay many eggs in the winter due to a lack of animal food like sour milk, buttermilk or beef scrap. Many experiments by practical farmers prove the value of both beef scrap and sour milk in the hen's ration. At the present price of grain and eggs the farmer can hardly afford to neglect any of the elements in the ration which enable the hen to pay for her feed.

EXCELLENT FEED FOR SHEEP

Ewes Thrive on Three to Five Pounds of Silage Daily, With Alfalfa as Roughage.

An ideal winter feed for breeding ewes is three to five pounds per day of good corn silage to each ewe, and what alfalfa hay they will eat up clean. The silage should be made from well-matured, well-cured corn.

LESS MEAT IF BACK AND KIDNEYS HURT

Take a Glass of Salts to Flush Kidneys if Bladder Bothers You.

Eating meat regularly eventually produces kidney trouble in some form or other, says a well-known authority, because the uric acid in meat excites the kidneys, they become overworked; get sluggish; clog up and cause all sorts of distress, particularly backache and misery in the kidney region; rheumatic twinges, severe headaches, acid stomach, constipation, torpid liver, sleeplessness, bladder and urinary irritation.

The moment your back hurts or kidneys aren't acting right, or if bladder bothers you, get about four ounces of Jad Salts from any good pharmacy; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to flush clogged kidneys and stimulate them to normal activity; also to neutralize the acids in the urine so it no longer irritates, thus ending bladder disorders.

Jad Salts cannot injure anyone; makes a delightful effervescent lithia-water drink which millions of men and women take now and then to keep the kidneys and urinary organs clean, thus avoiding serious kidney disease.—Adv.

An Easy Mark Drops In.

"There's a woman up in front who wants to buy a 'gen-u-wine' Persian rug," said the clerk.

"'Gen-u-wine,' did you say?" replied the dealer in Oriental goods.

"That's the way she pronounced it."

"Ahem! Does she appear to have money?"

"Yes, and she doesn't appear to have had it long."

"Ah! In that case get down some of those rugs we got from our factory in New Jersey the other day. I suspect that what we have in our net is a 'gen-u-wine' fish."—Birmingham Age-Herald.

"CALIFORNIA FIG SYRUP" IS CHILD'S LAXATIVE

Look at tongue! Remove poisons from stomach, liver and Bowels.

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless laxative or physic for the little stomach, liver and bowels. Children love its delicious fruity taste. Full directions for child's dose on each bottle. Give it without fear.

Mother! You must say "California."—Adv.

Civic Pride.

"But this town has no civic beauty," said the critical visitor.

"It doesn't need any," said the satisfied business man. "In my eyes there's nothing more beautiful than miles of factories in operation and hundreds of big smokestacks belching smoke day and night. Why, sir, every time I get a flake of soot on my face or my collar I wear it as a proud badge of prosperity." — Birmingham Age-Herald.

OPEN NOSTRILS! END COLD OR CATARRH

How to Get Relief When Head and Nose Are Stuffed Up.

Count fifty. Your cold in head or catarh disappears. Your clogged nostrils will open, the air passages of your head will clear and you can breathe freely. No more snuffling, hawking, mucous discharge, dryness or headache, no struggling for breath at night.

Get a small bottle of Ely's Cream Balm from your druggist and apply a little of this fragrant antiseptic cream in your nostrils. It penetrates through every air passage of the head, soothing and healing the swollen or inflamed mucous membrane, giving you instant relief. Head colds and catarrh yield like magic. Don't stay stuffed-up and miserable. Relief is sure.—Adv.

His Eccentricity.

"Honest t' goodness!" ejaculated Heloise of the rapid fire restaurant, "Hughey is the queerest guy you ever seen. Actually, he thinks a fellah ought to have a wife along when he goes to a show or dines out in the evening, and all that."

"Whose — yaw-w-wn — wife?" asked Claudine of the same establishment.

"His own wife."

"Gee!"—Kansas City Star.

Don't waste your time trying to distinguish between a woman's "no" and "yes."

Tbourg to Honor De L'Isle.

py Moving Signs Work.

neral way, the mechanism of electric sign is like the old- ic box drum, filled with pins. rum revolves the pins make gaps a gross return of a little less than $40. The all-important point, however, is that 300 families, or 1,500 people, were fed with fresh vegetables during the summer, and a supply was canned or stored for winter use.

Thousands upon thousands of home gardens were an important factor last year in supplying food, and it is important that many more thousands of gardens be placed in 1920. With food prices still soaring, it behooves every householder to plant a garden and grow his own supply of vegetables. The job of producing food for the nation has been well taken care of by the farmers, but the spare hours of industrial workers are now needed to supplement the efforts of the farmers, say specialists of the United States department of agriculture. The man or woman who works in the store, office, or factory cannot be of much direct assistance to the farmer, but can at least spend one or two hours every day in the cultivation of a vegetable garden in a back yard or vacant lot.

Home gardens are especially needed in densely populated sections, where the people are largely dependent upon transportation facilities for bringing their food to them. Every foot of suitable land in and around large cities should be made to produce its quota the coming season.

Time to Plan the Garden.

During January, while the southern gardener is planting peas, onions and potatoes the middle states gardener is looking over seed catalogues, and the New England and Minnesota gardeners have just settled down for a hard winter. It is just as important that the New England gardener be making his plans during January as that the southern gardener be planting

A Forecast of What Careful Planning Now Will Mean Next Summer.

his peas, onions and potatoes. Three months may constitute the growing season in certain parts of the extreme northern United States, and it is important that the northern gardener have all his plans made and be ready to make the most of the time at his disposal.

Looking back over last season's garden experience, anybody can see just where improvements could have been made in his methods. Most home gardeners did not have a definite garden plan to begin with, and simply rambled along through the summer, doing things as they called for attention.

Plan of Work.

This season there should be a "plan of work" for all garden operations. You may depart more or less from this plan, but you should start right, anyway. The winter is the proper time to make plans and build castles. With a mental picture of last year's garden, proceed with the aid of pencil, rule and paper. Plan just what you are going to do in your garden this season.

First of all, the plan must conform to the size and shape of the garden plot. If only a small piece of land is available, careful planning is necessary in order to provide for the crops that you want to grow. Last year, perhaps, too much space was devoted to lettuce and radishes, and not enough to beets, carrots and beans. Some of the crops did very poorly because they were shaded by the corn and pole beans, and the cucumbers

ashes ran all over the late nd carrots. Now, with your rule and paper, work out a whereby all, or most, of these es will be avoided. Provide os and intercrops, also a succ- of crops, so that the little gar- t will give maximum results.

Schedule of Work.

the garden plan is made, and low, or think you know, just e garden will look after it is the next step will be to formu- scheme of work providing for hings at the proper season and This does not mean planting crops at the right time of on, but at the right season and ll conditions are favorable. The rdeners believe that moonshine moonshine, anyway, and that nshine and some other things, s fertilizer, good seeds, and of work, are the essential re- ents for growing a good gar-

the lengthening of the days, it ot be long until work can be in the garden. In the mean- seeds should be procured, a few o and cabbage plants should be d in a window box, and the first should be taken toward the nting of a thrift garden.

All over the country various organizations are studying ways and means to promote thrift and reduce the high cost of living. Begin now to plan a thrift garden for 1920.

WAYS TUBERCULOSIS MAY BE INTRODUCED

Easy Matter to Transmit Disease to Healthy Herd.

Various Means by Which Infection Is Spread Is Outlined by Department of Agriculture—Disorder Develops Slowly.

Tuberculosis may be introduced into a healthy herd, says the United States department of agriculture, by any of the following means:

By the addition of an animal that is affected with the disease; therefore animals should be purchased only from herds known to be free from tuberculosis, or from herds under supervision for the eradication of the disease.

By feeding calves with milk or other dairy products from tuberculous cows; this frequently occurs where the owner purchases mixed skim milk from the creamery and feeds it to his calves without first making it safe by boiling or pasteurization.

By showing cattle at fairs and exhibitions; reports have indicated that numerous herds become infected through mingling with infected cattle at shows or by occupying infected premises.

The shipment of animals in cars which have recently carried diseased cattle and which have not been disinfected properly.

Community pastures; pastures in which tuberculous cattle are allowed to graze are a source of danger.

In most cases the outward appearance of the animal bears no relation to the degree of infection. The disease frequently develops so slowly that in some cases it may be months or even longer before any symptoms are shown; therefore be on the safe side and have your herd tested.

FORECASTS OF GREAT VALUE

Weather Bureau's Predictions of Weather Aid Shippers of Various Farm Products.

The weather bureau's various forecasting services are of particular value to growers of produce that is shipped in the winter, says the United States department of agriculture. Supplementing the general forecasts which appear in the daily papers and on cards conspicuously posted the bureau issues, among other forecasts, special warnings on which shippers place much dependence. These tell of the approach of cold waves and permit carriers of perishable stuffs to give them the necessary additional protection, or to delay shipment until milder weather. One result of this special service to shippers, transportation companies, and allied interests is that buyers are less subject to uncertainty as to the arrival of shipments, since the hazard of shipping in cold weather is reduced. Another result is a reduction in the amount of foodstuffs that is injured by cold.

GENERAL FARM NOTES

Larger crops do not always mean larger profits.

* * *

Begin right now to keep a book account of the farm's production.

* * *

More celery is lost in storage by keeping it too warm than too cold.

* * *

Dirt must be kept away from the bottom of silos. It hastens rotting.

* * *

Plant at least a small area in grazing crops for your pigs, calves, lambs and chickens.

* * *

Do not be deceived. We cannot get something from nothing. Neglect and carelessness will not bring returns from farm lands.

48,000 Drug Stores Sell It.

Five million people use it to KILL COLDS

HILL'S CASCARA QUININE BROMIDE

Standard cold remedy for 20 years—in tablet form—safe, sure, no opiates—breaks up a cold in 24 hours—relieves grip in 3 days. Money back if it fails. The genuine box has a Red top with Mr. Hill's picture.

At All Drug Stores

VICTIMS RESCUED

Kidney, liver, bladder and uric acid troubles are most dangerous because of their insidious attacks. Heed the first warning they give that they need attention by taking

The world's standard remedy for these disorders, will often ward off these diseases and strengthen the body against further attacks. Three sizes, all druggists. Look for the name Gold Medal on every box and accept no imitation

The Trouble.

"Is this son you speak of adolescent?"

"Mercy no, ma'am. He's just a little queer in the head."

COAX 'EM

Stop Whipping Bowels into Activity, but take "Cascarets"

Put aside the Salts, Pills, Castor Oil, or Purgative Waters that irritate and lash the bowels into action but which do not thoroughly cleanse, freshen and purify these drainage organs, and have no effect whatever upon the liver and stomach.

Keep your "insides" pure and fresh with Cascarets, which thoroughly cleanse the stomach, remove the undigested, sour food and foul gases, take the excess bile from the liver and carry out of the system all the constipated waste matter and poisons in the bowels which are keeping you half sick, headachy, and miserable.

Cascarets tonight will make you feel great by morning. They work while you sleep—never gripe, sicken or cause inconvenience. Cascarets cost so little too.—Adv.

Those Girls.

"Maud reminds me of a public office."

"Why so?"

"She's continually seeking the man."

BREAKS YOUR COLD IN JUST A FEW HOURS

"Pape's Cold Compound" instantly relieves stuffiness and distress

Don't stay stuffed-up! Quit blowing and snuffling! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up a severe cold and ends all grippe misery.

The very first dose opens your clogged-up nostrils and the air passages of the head; stops nose running; relieves the headache, dullness, feverishness, sneezing, soreness and stiffness.

"Pape's Cold Compound" is the quickest, surest relief known and costs only a few cents at drug stores. It acts without assistance, tastes nice, contains no quinine—Insist upon Pape's!—Adv.

He has no force with men who has no faith in himself.

Variety is the spice of life—especially a first-class vaudeville show.

J. N. Day's

The Busy Stors **Phone 72**

Treaties of peace may be drawn up at Versailles and signed at Paris, as the treaty with Germany was the other day, but such treaties have no more effect on bolshevism than the passing of a sedition bill by the senate. Bolshevism must be suppressed if the world is to know peace. And bolshevism must be ended if the world is not to become bolshevik. Between it and the principles of government in other lands there is an irrepressible conflict and one or other of these opposing forces must perish.

A few years ago in the United States communism was regarded as a "joke." Is it a "joke" today? Two years ago bolshevism in Russia was regarded as a passing mania. But it has not passed. It is in Russia still and it threatens to overflow its confines and plunge the world into another bath of blood.

Thieves Took Big Chances.

Baltimore, Md.—Taking chances of being dashed to death, a pair of daring hotel robbers used a narrow ledge outside the Hotel Emerson to enter the fourteenth floor rooms of Mr. and Mrs. William F. Stutz of Washington.

They filled a suitcase with fine dresses and lingerie owned by Mrs. Stutz and valued at $600 and escaped, the plunder by the same dan-

Fireweed's Good Work.

Fireweed, otherwise known as the "great willow-herb," seems to have been created as an antidote for one of the ugliest sights a landscape may offer—burnt-over ground. The fireweed is a genuine cosmopolite, for it sends its consoling shaft above the ashes of burnt forests not only throughout America but in Europe and Asia.

Things Not to Be Hidden.

Three things cannot be hidden—love, a cough, and smoke—yea, even a hearth, and that is the signs of abundant life on a lively farm.

$700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of ear corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us about it.

Hotel Klemme

What are you going to Varnish?

That determines the kind of varnish to buy

You buy one kind of paint for the outside of your house, another kind for your porch floor and still another kind for your inside woodwork. You have learned from experience that a single kind of paint will do for all these different surfaces. Have you learned this same lesson about varnishes.

Varnish like paint, is nothing more than a film that protects only so long as it will stand the wear imposed upon it.

Different kinds of varnish surfaces get different kinds of wear just as different kinds of paint surfaces do. It depends upon their nature, their location and to the uses to which they are put.

Sherman-Williams Varnish

Each Sherman-Williams Varnish, like each Sherman-Williams Paint, is made with a particular surface in mind and a knowledge of the kind of wear to be resisted.

THEREFORE, each Sherman-Williams Varnish is bound to give greater durability, and greater satisfaction on the surface it is made to protect.

Different Surfaces get different Wear

So there must be a different varnish for each

That's logical, isn't it? You do not walk on tables, but you do on floors. You do not subject your furniture to heat, rain, snow and ice, but outside surfaces must stand such exposure.

S-W MAR NOT for floors

Has a toughness and elasticity that resists the trying wear floors get. Holds its lusture against repeated cleaning and stands up under the wear of walking, dancing and moving about of furniture.

S-W SCAR-NOT furniture - woodwork

It is famous for the beautiful polish it takes. It will stand the knock and rubs of usage, and is heatproof and waterproof. Hot liquids do not scar or turn it white.

S-W REXPAR for all outdoors

It is made to stand weather--the severest wear that varnish ever gets In government tests for airplane use it successfully passed 34 of the severest tests ever given a varnish.

Floorlac **The all around varnish stain, for staining and varnishing at one operation.**

We also handle Flat Tone wall paint, all colors.

G. W. Kluckhohn & Sons

Strasbourg to Honor De L'Isle.

It is a pleasant detail in the coming erection of a memorial at Strasbourg to Rouget de l'Isle and his "Chant de guerre de l'armee du Rhin," which became "La Marseillaise," that the chairman of the committee in charge bears the name and is a direct descendant of Mayor Dietrich, in whose house the song was first sung. Little enough when De l'Isle composed it did he foresee either that his song would provide inspiration for a French revolution or that time would bring him a permanent memorial in a Strasbourg that had passed out of French possession and come back again. The author himself suffered both by loss of his commission and by imprisonment, first because the adoption of his song by the Revolution made him suspected of revolutionary beliefs by what power still remained to the older government, and later because his lack of enthusiasm for the revolution made him an object of an attack by the new leaders.

How Moving Signs Work.

In a general way, the mechanism of a moving electric sign is like the old-time music box drum, filled with pins. As the drum revolves the pins make the contacts at determined intervals, and the illusions of revolving circles of light, bird effects and designs almost without limit are produced.

Optimistic Thought.

Things hardly attained are longer retained.

Thoughtful Bobbie.

When Bobbie went to see his grandmother he was much interested in whatever went on in the kitchen. One morning she said to him: "I'm going to make you a nice little pie in a saucer, Bobbie, all for yourself. Don't you think I'm pretty good to take so much trouble?" Bobbie thought about it a moment. "Grandma," he said, "mamma told me not to be a bother, and if it's going to be any trouble you can just as well make my pie the reg'lar size."

We Have.

R. J. S. wants to know if we have ever met the people who never go to bed, but retire; who never sleep, but slumber; who never get up, but rise; who never eat, but dine; who never drink, but indulge; who never talk, but converse; who never read, but peruse; who never buy, but purchase, and who never get sick, but become ill?—Cincinnati Enquirer.

The Orange in Spain.

It is considered a very healthful thing to eat an orange before breakfast. But who can eat an orange well? One must go to Spain to see that done. The senorita cuts off the rind with her silver knife; then, putting her fork into the peeled fruit, she detaches every morsel with her pearly teeth and continues to eat the orange without losing a drop of the juice and lays down the core with the fork still in it.—Exchange.

MUST WEAR DARK CLOTHES

Strict Rule for Employees in Factories Where Work Is Done on Gold.

Clothes of a light color are not favorites where work is done on gold. In fact, in many such factories a dark suit of clothes is absolutely demanded, and even a light waistcoat may lose a man a job. The reason for this is that any stray grains of gold that may get on the clothing can easily be caught on a dark suit, while they might get away from the establishment if light clothes were worn.

That such a rule was enforced among gold workers one man learned recently when a Bohemian gold beater applied to him for a helping hand. The Bohemian said that he had not been in this country long, that he had had a chance to obtain a good job at his trade, but that the place had been refused him because he turned up with a light suit and waistcoat on, and they were the only clothes he had.

The man whom he approached was struck by the story and offered to help him out if it proved true. He went to a factory with him and found out that the man could have the job if he presented himself within an hour clad in the proper clothes. So a suit of desired kind was obtained for him and sure enough he got the job.

"You may think this is strange," said the foreman of the factory, "but it means quite a lot to us. Every man's clothing is carefully examined when he leaves the place at night and the gold is brushed off whenever we see any on his clothing. It is impossible to hide even tiny grains on a dark background, but in the case of a mixed or a light suit we might easily lose quite an amount of gold, and gold isn't anything you want to lose even in small quantities."

Japanese Claim Credit for Fan.

Japan takes credit for the folding fan. The original kind was of the palm-leaf variety—an oval or round shape which could not be folded. But Japan conceived the idea, just when or how nobody knows, of fastening half a circle of paper on a frame made of sticks fastened together at one end—and the collapsible fan resulted.

AFTER 7 YEARS--STILL WELL

Now Enjoys Best of Health and Does Her Housework Unaided

"I didn't enjoy one day of good health for more than two years," says Mrs. C. E. Wildes, 746 E. Georgia St., Memphis, Tenn. "At first I had nothing more than backache. Afterwards terrible attacks of pain left me weak and limp. My arms and limbs ached. My feet felt weighted with tons of lead. I couldn't walk without a cane and had to be carried to bed every night. I couldn't do a bit of work and kept my people busy rubbing my aching limbs. Sometimes my whole body became rigid. My feet were swollen twice their normal size.

Mrs. Wildes

"It almost killed me to pass the kidney secretions. I lost 42 pounds and each day felt I had aged a year. I was so nervous the rustle of a paper made me scream.

"Finally I was advised to use *Doan's Kidney Pills* and seven boxes made me a well woman. I have enjoyed the best of health for seven years, and have done all my housework without any trouble." Sworn to before me.

JOHN McNULTY, Notary Public.

Mother Gray's Powders Benefit Many Children

TRADE MARK

Thousands of Mothers have found **MOTHER GRAY'S SWEET POWDERS** an excellent remedy for children complaining of Headaches, Colds, Constipation, Feverishness, Stomach Troubles and Bowel Irregularities from which children suffer at this season. These powders are easy and pleasant to take and excellent results are accomplished by their use. *Used by Mothers for over 30 years.* Sold by Druggists everywhere. Trial package FREE. Address, THE MOTHER GRAY CO., Le Roy, N. Y.

A Business Answer.

"And shall we find the pot of gold at the end of the rainbow?" bellowed the stump speaker.

"Not if the salvage gang gets there first," answered the vet.—The Home Sector.

BOSCHEE'S SYRUP.

A cold is probably the most common of all disorders and when neglected is apt to be most dangerous. Statistics show that more than three times as many people died from influenza last year, as were killed in the greatest war the world has ever known. For the last fifty-three years Boschee's Syrup has been used for coughs, bronchitis, colds, throat irritation and especially lung troubles. It gives the patient a good night's rest, free from coughing, with easy expectoration in the morning. Made in America and used in the homes of thousands of families all over the civilized world. Sold everywhere.—Adv.

Took the Better Way.

"Why did you jump from in front of Simpson's car directly in the path of Barton's car?"

"Well, I saw I was bound to be hit by one of them, and Barton has the most money."—Toledo Blade.

There is nothing heavenly about war, or dyspepsia. The world is outgrowing the first and Garfield Tea will conquer dyspepsia.—Adv.

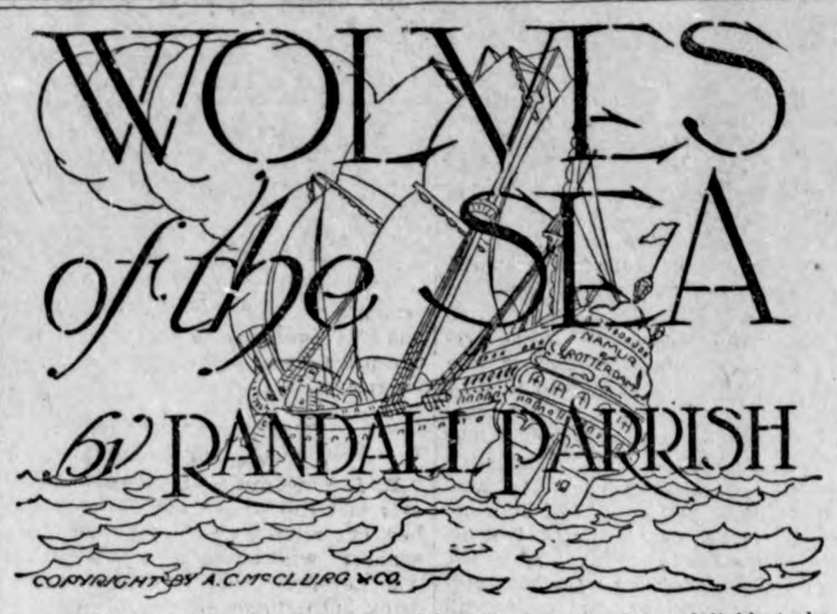
"Safety first" is a good motto until it hooks up with "let the other fellow do it."

MURINE FOR YOUR EYES

Night and Morning. *Have Strong, Healthy Eyes.* If they Tire, Itch, Smart or Burn, if Sore, Irritated, Inflamed or Granulated, use Murine often. Soothes, Refreshes. Safe for Adult. At all Druggists. Write for

WOLVES of the SEA

By RANDALL PARRISH



CHAPTER XXX—Continued.

—19—

I heard her cry out, and barely caught the lantern as it fell from her hand. At first I doubted the evidence of my own eyes, snatching the bit of flaring candle from its tin socket and holding it where the full glare of light fell across the grewsome object. Ay, it was a woman, with lower limbs doubled back from lack of space, but otherwise lying as though she slept, so perfect in preservation her cheeks appeared flushed with health, her lips half smiling. It was a face of real beauty—an English face, although her eyes and hair were dark and her mantilla and long earrings were unquestionably Spanish. A string of pearls encircled her throat, and there were numerous rings upon her fingers. The very contrast added immeasurably to the horror.

"She is alive! Surely she is alive!" The words were sobbed into my ear from Dorothy's lips.

"Alive! No, that is impossible!" I touched the figure with my hand. "The flesh is like stone," I said, "thus held lifelike by some magic of the Indies. What can it all mean? Who could the woman be? It is love or hate?"

"Not love, Geoffry. Love would never do this thing. It is hate, the gloating of revenge; there can be no other answer—this is the end of a tragedy."

There was nothing, not a scrap of paper, not even the semblance of a wound exposed. The smile on those parted lips had become one of mockery; I could bear the sight no longer, and rose to my feet, clasping Dorothy close to me, as she still gazed down in fascination at the ghastly sight.

"We will never know. The man who could tell is dead."

"Captain Paradilla?"

"Who else could it be? This was his schooner, and here he alone could hide such a secret. There is nothing more we can learn, and the horror unnerves me. Hold the light, dear, while I replace the lid of the chest."

It required my utmost effort to accomplish this. I was glad to have the thing hidden, to escape the stare of those fixed eyes, the death smile of those red lips. It was no longer a reality but a dream of delirium; I dare not think or speculate—my only desire being to get away, to get Dorothy away. In absolute terror I drew her with me to the open door—then stopped, paralyzed; the half revealed figure of a man appeared on the cabin stairs.

"Stop! Who are you?"

"Watkins, sir. I came below to call you. There's sumthin' bloomin' odd takin' place out there in the fog, Captain Carlyle. We want yer on deck, sir, right away."

CHAPTER XXXI.

The Boat Attack.

He waited for us just without the companion, but my eyes caught nothing unusual as I emerged into the daylight. I could barely see amidships, and on either side hung the impenetrable bank of cloud, leaving sea and sky invisible.

"What is it, Watkins? Where are the men?"

"Forrard, sir, a-hangin' over the starboard rail. Thar's somethin' cursedly strange a-happenin' in that fog. Ole was the first ter hear the clatter ov en oar slippin' in a rowlock. Then, sir, while we wus a-listenin' we both caught sound ov a Spanish oath, spoke as plain as if the buck was aboard."

"A lost boat, likely—shipwrecked sailors adrift in the fog; perhaps our other quarterboat. No one hailed them?"

"No, sir; I told the men ter keep still till I called you."

The crew were all gathered at the rail, staring out into the mist, whispering to each other. I pressed my way in among them. We may have been clinging there a minute of two, breathlessly listening. Then a voice spoke directly in front of me out from the dense fog.

"Try the port oar, Pedro; we must have missed the d——n ship."

I straightened up as though struck, my eyes seeking those of Watkins, who stared back at me, his mouth wide open in astonishment.

"You heard that?" I whispered. "Do you know who spoke?"

"Do I? Dead or alive, sir, it was Manuel Estevan."

"Ay; no other, and alive enough, no doubt. Lads, come close to me and listen—they must not hear us out there. By some devil's trick the Namur has followed our course, or else yonder are a part of his crew cast away. They clearly know of us—perhaps had a glimpse through some rift in the cloud—and are seeking to board with a boat party. 'Tis not likely those devils know who we are; probably take us for a merchant ship becalmed in the fog and liable to become an easy prey, if they can only slip on us unseen. How are you, bullies? Ready to battle your old mates?"

"Those were no mates o' ours, sir," said Watkins indignantly. "They are half-breed mongrels, and no sailors; Estevan is a hell-hound, an' so far as my voice goes, I'd rather die on this deck than ever agin be a bloody pirate. It that the right words, lads?"

The others grumbled assent, but their muttered words had in them a ring of sincerity, and their faces exhibited no cowardice. One only asked a question.

"I'm fer fightin', sir," he said grimly, "but what'll we use? Them lads ain't comin' aboard bare-handed, but damn if I've seed a weapon on this hooker."

"Dar's three knives, an' a meat cleaver in der galley, sah," chimed in Sam.

"We'll do well enough; some of you have your sheath knives yet, and the rest can use belaying pins and capstan bars. The point is to not let them get aboard, and, if there is only one boat, we will be pretty even-handed. Pick up what you can, and man this rail—quietly now, hearties, and keep your eyes open."

It proved a longer wait than I expected. Unable to withstand the inaction any longer I turned and took a few steps aft, thinking to gauge our progress by the wake astern. I was abaft the cabin on the port side when Dorothy called my name—a sudden accent of terror in her voice.

The alarm was sounded none too soon. Either fortune, or skill, had served those demons well. They had succeeded in circling the stern of the Santa Marie, unseen and unheard by anyone aboard. Even as she shrieked the alarm, a hand was at her throat, and she was struggling desperately in the merciless grip of a half-naked Indian.

Yet at that they were too late, the advantage of surprise had failed them. A half dozen had reached the deck, leaping from the rail, the others below clambering after their leaders, when with a rush we met them. It was a fierce, mad fight, fist and club pitted against knife and cutlass, but the defenders struck like demons incarnate. I doubt if the struggle lasted two mintes. I heard the blows, the oaths, the cries of pain, the dull thud of wood against bone, the sharp clang of steel in contact, the shuffling of feet on the deck, the splash of bodies hurled overboard. Each man fought for himself, in his own way. I thought only of her, and leaped straight for her assailant with bare hands, smashing recklessly through the hasty guard of his cutlass and gripped the copper devil by hair and throat. I knew she fell to the deck beneath our feet, but I had my work cut out for me. He was a hell-hound, slippery as an eel in his half nakedness, strong as an ox, and fighting like a fiend. Yet I had him foul, my grip unbreakable, as I forced his neck back against the rail, until it cracked, the swarthy body sliding inert to the deck. Whirling to assist the others I found no need. Except for bodies here and there the deck was clear; men were struggling in the chains; two below in the boat were endeavoring to cast off, and Schmitt, with Estevan helpless in his arms, staggered to the side and flung the shrieking Spanish cur overboard out into dark water. I heard the splash as he fell, the single cry his lips gave, but he never again appeared above the surface. Above the bedlam Watkins roared out an order.

"That's it, bullies! that's it! Now let her drop! We'll send them to hell where they belong. Good shot; she landed!"

It was the hank of a spare anchor, balanced for an instant on the rail, then sent crashing down through the frail bottom of the boat beneath. The wreck drifted away into the fog, the two miserable occupants clinging desperately to the gunwales. I lifted Dorothy to her feet, and she clung to me unsteadily, her face yet white.

"Watkins, have you figured up results?"

"Two of our men are cut rather badly, and one hasn't come to yet from a smart rap on the head."

"None got away?"

"Not 'less they swum, thar's six dead ones aboard. Four took ter the water, mostly because they hed to. The only livin' one o' the bunch is thet nigger 'longside the wheel, an' nuthin' but a thick skull saved him."

"Then there were eleven in the party. What do you suppose has become of the others aboard the Namur?"

"I dunno, sir; they might be a waitin' out there in fog. Perhaps the nigger cud tell you."

I crossed over to where the fellow sat on a grating, his head in his hands, the girl still clinging to my sleeve, as though fearful of being left alone. The man was a repulsive brute, his face stained with blood, dripping from a cut across his low forehead. He looked up sullenly at our approach, but made no effort to rise.

"Look yere, you black villain," roared Watkins, driving the lesson home with his foot, "don't be a playin' possum yer. Stand up an' answer Mister Carlyle, or yer'll git a worse clip than I give yer afore. Whar is the bloody bark?"

"Pounding her heart out on the rocks yonder," he said civilly, "unless she's slid off an' gone down. To the west, maybe a mile er so."

"What about the crew?"

"They got away in the boats, an' likely mostly are ashore. We were in the last boat launched, and headed out so far ter get 'round a ledge o' rocks we got lost in the fog. Then the mist sorter opened an' give us a glimpse o' yer topsails. We didn't expect no fight, once we got aboard."

"Expected to find something easy, of course? Perhaps it would have been if—what is it you see out there, Simms?"

The seaman, who was standing with hollowed hands shading his eyes, staring forth into the swirling drapery of fog, turned at my call and pointed excitedly.

"There's a bark aground yonder, sir; and it looks like the Namur!"

Even as I crossed the deck to his side the wreaths of obscuring mist seemed to divide, as though swept apart by some mighty hand, and there in the full glow of the sun, a picture in a frame, lay the wrecked vessel. Others saw it as I did, and gave vent to recognition.

"Damned if it ain't the old hooker!"

"She got what was coming to her all right mates."

"And she's lousy with treasure!"

"Come here, Sam! That's the last of the Namur."

CHAPTER XXXII.

The Last of the Namur.

The vessel was plainly a total wreck, rapidly pounding to death on a sharp ledge of rock. Both masts were down, and, lifted as the bow was, it was easy to perceive the deck was in splinters where falling spars and topmasts had crushed their way through. The bows had caught, seemingly jammed in between rocks, the stern sunk deep, with cabin port holes barely above reach of the waves. Not a living thing appeared on board, and, as the fog slowly drifted away, my eyes could discern no sign of any boat, no evidence of the crew, along the wide sweep of water. A voice aroused me.

"What was it you said, Jack, 'bout treasure on the old hooker? Why not get it afore it's too late?"

"It's thar, all right, Ole," and I knew the speaker to be Haines. "Ain't it, Mr. Carlyle?"

"Yes, lads, there must be money on board, unless those fellows took it with them in the boats. I know of fifty thousand pounds stolen in Virginia, and no doubt there is more than that. The bark is liable to slide off that rock any minute and go down like a stone. What do you say, bullies? Here is a risky job, but a pocket full of gold pieces, if we can get aboard and safely off again. Who'll go across with me?"

There was a babel of voices, the men crowding about me, all else forgotten as greed gripped their imaginations.

"Stand back, lads! I cannot use all of you. Four will be enough. You'll not lose anything of what we bring back; it'll be share and share alike, so fall, to, hearties."

I paused an instant to speak to Dorothy, seated on the flag locker, explaining to her swiftly my object in exploring the wreck and pledging myself not to be reckless in attempting to board. I read fear in her eyes, yet she said nothing to dissuade me.

I slipped down a rope and dropped into the boat, taking my place with a steering oar at the stern, and we shot away through the green water. The Namur proved to be a more complete wreck than our distant view had revealed, and lying in a more precarious position. It was no pleasant job getting aboard, but ordering Haines to accompany me, and the others to lie by, I made use of a dangling backstay, and thus hauled myself up to a reasonably secure footing. The fellow joined me breathless, and together we perched on the rail to gain view of the deck.

It was a distressing, hopeless sight, the vessel rising before us like the roof of a house, the deck planks stove in, a horrible jumble of running rigging, booms and spars, blocking the way forward. There were three bodies tangled in the wreckage within our sight, crushed out of all human resemblance, and the face of a negro, caught beneath the ruins of the galley, seemed to grin back at me in death. Every timber groaned as the waves struck and rocked the sodden mass, and I had no doubt but that the vessel had already broken in two.

(TO BE CONTINUED.)

Bigger and Heavier Hen Fruit.

It is thought by naturalists that the eggs of domestic hens of the present day are larger and heavier by nearly a third than those of the hens of the ancients. Eggs differ a good deal in weight, the average weight being about two ounces. A good egg is made up of ten parts shell, 60 parts white and 30 parts yolk. The white of an egg contains 86 per cent water. The shell contains about 2 per cent animal matter and 1 per cent of the phosphates of lime and magnesia, the rest consisting of carbonate of lime. Half the various specimens of snakes lay eggs. Instead of shell the covering of the egg is a tough, white, leathern substance. The largest egg of any bird today is the ostrich egg.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

Rather.

Mary Pickford said at a Los Angeles tea:

"Some people try to tell you that beauty doesn't count for much in the movie world. Well, such talk is rot."

Miss Pickford smiled and added:

"A girl can't help her looks, but her looks can help her."

"I've persuaded a practical politician to adopt me."—Birmingham Age-Herald.

Shave With Cuticura Soap

And double your razor efficiency as well as promote skin purity, skin comfort and skin health. No mug, no slimy soap, no germs, no waste, no irritation even when shaved twice daily. One soap for all uses—shaving, bathing and shampooing.—Adv.

GREAT SOLDIERS POOR SHOTS

Neither Napoleon Nor Wellington Could Have Qualified as Marksmen, Even in Slow Company.

Wellington, the "Iron Duke," frequently stayed at Maresfield park, the estate in Sussex owned by Prince Munster von Dernburg. Sir John Shelley named Maresfield park in Wellington's time, and Lady Shelley records in her diary a woeful exhibition by the duke during one of his visits. "I accompanied the guns in the afternoon," she writes on September 8, 1819. "The hero of Waterloo was a very wild shot. After wounding a retriever and later on peppering a keeper's gaiters, he sprinkled the bare arms of an old woman who chanced to be washing clothes at her cottage window. 'My good woman,' I said, 'this ought to be the proudest moment of your life. You have had the distinction of being shot by the duke of Wellington.' . . . Her face was wreathed in smiles as the contrite duke slipped a gold coin into her hand."

Wellington shared his weakness as a poor shot with Napoleon, whose sole bag was a dog the only time he went out game shooting."

Cheer Up!

The homeward-bound doughboy was complaining sadly at the slowness of the ship, and the grizzled old top sought to cheer him up a bit.

"Cheer up, Buddie," he said, as the ship started up the near side of a huge green wave, "we'll make good time as soon as we get over this hill."—The American Legion Weekly.

You may at least learn something by trying to teach old dogs new tricks.

Laugh and the world laughs with you.

INDIGESTION, DYSPEPSIA

Torpid Liver, Pain in Side and Shoulder-blade

Lime Springs, Iowa.—"I have taken Pierce's Golden Medical Discovery, occasional dose 'Pleasant Pellets' for indigestion, dyspepsia, and torpid liver, with pain in side and under shoulder blade, which I thought was caused by rheumatism. I was so troubled with pain under the shoulder blade that chopping or sawing wood, the work which I have been engaged so much of the time by the day, I could not work steadily at it without being laid up entirely. I am now 58 years old and say that since taking the 'Discovery' and the 'Pleasant Pellets' as mentioned my stomach is in better condition than it has been before for 25 or 30 years. Not long since I chopped down and split up about 40 loads of wood as quickly as I ever did that amount in my life, and just enjoyed doing the work. I have taken the 'Discovery' and the 'Pleasant Pellets' a number of times in my family and never without very beneficial results. I also know that as a cough remedy for any rash or skin disease the 'Discovery' is a great remedy. I could say more in recommendation if space would permit."—James L. Colby, Rt. 4, Box 21.

COULD NOT SLEEP

Dubuque, Iowa. — "Have used Pierce's Pleasant Pellets for 36 years, can say nothing but what is to my credit. I could not sleep without them in the house. They have cured me of dizziness, constipation, and thus assisted in producing serious results."—R. C. Campbell, 1 W. Locust St.

SICK-HEADACHES

Shenandoah, Iowa.—"I have given Pierce's Golden Medical Discovery to my children at different times when they needed a tonic and it worked all right. It is mighty good for sick headaches. Some of my daughters took it for that and were relieved. It has always acted well with us. We have never taken any other medicine. I consider it one of the best medicines."—Mrs. B. J. Simmons, 711 Seventh Ave.

MANY USES FOR QUICKSILVER

Semi-Precious Metal, Much in Demand, Is Becoming Scarce—Sometimes Employed as Drug.

Quicksilver is one of the semi-precious metals, and is gradually becoming scarce. The metal is noted for many uses, besides the familiar one in the thermometer. Its tendency to unite with gold into an amalgam causes its chief use. The mercury is spread over a copper plate over which the gold ore is washed. The gold, by its weight comes in contact with the plate and is promptly amalgamated with the quicksilver, from which it is separated by heat.

Quicksilver is also known for its use as a medicine when rubbed with a fine, globular powder with water, under the name of blue mass. Among the chemical compounds of quicksilver is bichloride of mercury, made by heating a mixture of mercuric sulphate and common salt. This is sometimes taken as a poison, but results in painful and lengthy suffering and in death. Quicksilver is very essential to the manufacture of high-class mirrors.

A Cheerful Round.

"Do you go to the Green?" a stranger boarding a trolley car in an English city asked the conductor.

"Yes," said the conductor sadly, "I go to the Green twenty-five times a day, and to two cemeteries, two hospitals and an old ladies' home."

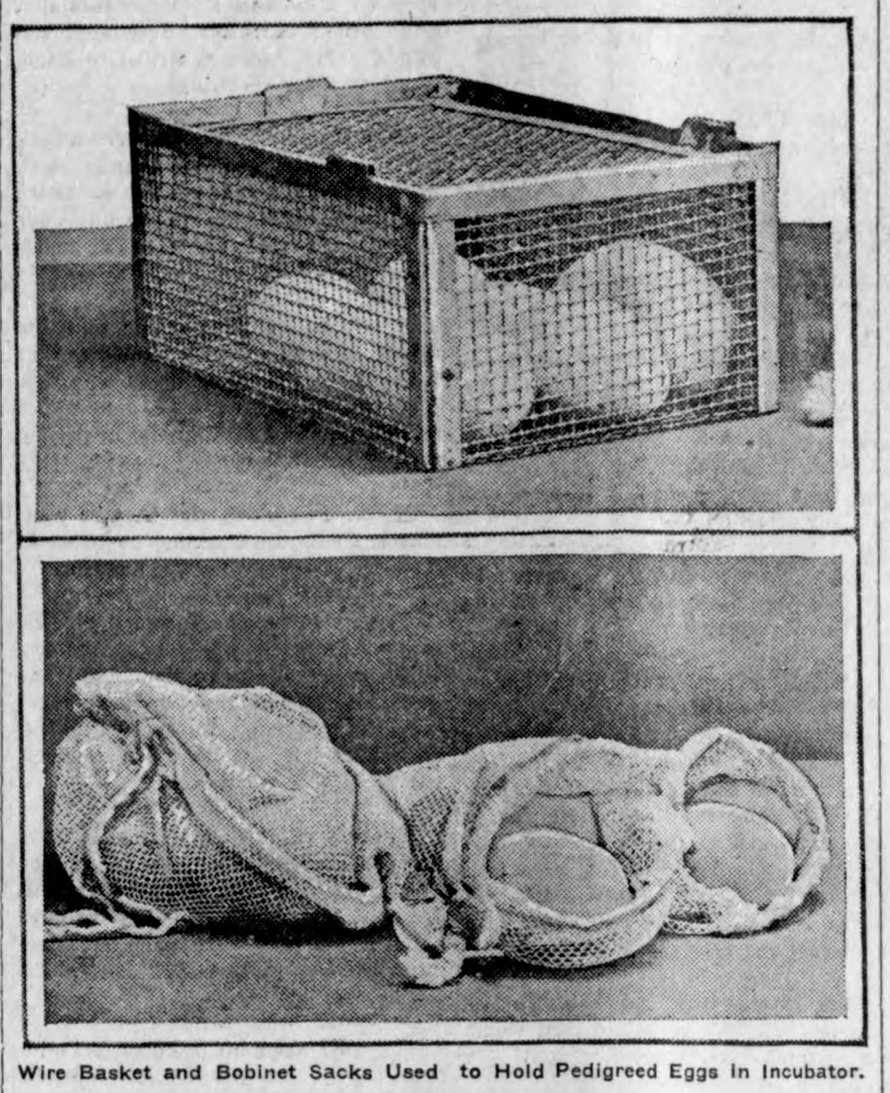
SCHEME OUTLINED FOR KEEPING ACCURATE PEDIGREE OF EACH CHICK IN INCUBATOR



Wire Basket and Bobinet Sacks Used to Hold Pedigreed Eggs in Incubator.

(Prepared by the United States Department of Agriculture.)

"Cockerel No. 1,164. The dam of this bird was No. 987. She held egg-laying record of 220 eggs in her pullet year. Sire of this cockerel was son of No. 840, that held a 3-year record of 536 eggs."

A bird with a pedigree like the one above is the kind that is commanding a fancy price in poultry circles today. Ancestry counts in chickens quite as much as in cattle or horses, and every poultry man or woman who is endeavoring to build up the egg productivity of his flock seeks a bird with a good egg-producing ancestry to head it. Better still, he buys a pen of pedigreed birds and gradually culls out his common stock. For these birds he goes to a reliable breeder of the va- rieties.

If laying heavily enough eggs from one hen for one setting may be safely saved when a hen is used for hatching. When an incubator is used a tray contains eggs from several hens. The method which the department of agriculture specialists use to identify the baby chicks when they hatch is as follows:

On the 18th day the eggs in the incubator are sorted. Each hen's eggs are put into a wire box or bobinet sack. These containers must be large enough to permit of plenty of room for the chicks. Each box or bag is tagged with the hen's number and the incubator is closed, not to be opened until the birds are hatched out of the shells.

Under ordinary conditions as soon as the chickens get their "sea legs" after hatching, they go toward the light in the front of the incubator and drop into the nursery below. Here the temperature is cooler. The pedigreed chicks in the boxes or bags, being unable to leave the tray, may become too warm. After the hatch is over, if they show signs of panting, the door should be fastened open so a little more air can enter.

Metal Band Applied.

As soon as the chicks are dry, or after about 12 hours, they are taken out of the bags and a small metal band with a number is wrapped around the leg. This should be folded until it will not slip over the foot. Some breeders put one of these baby chick or pigeon bands on each leg so if one gets off accidentally, there is still one left by which the bird can be identified. As the bands are put on, the record is made in the book. For instance, No. 1 would be the first chick's number and opposite this in the pedigree book would be written the hen's, and pen's number of the egg from which it hatched. By this means the accurate pedigree of each chick is assured.

How the identification of each bird is kept as it grows older and outgrows the baby chick leg band is another story.

POLITICAL ADVERTISEME

I hereby announce myself a c date for the office of County T urer, subject to the decision of Republican Primaries to be held J 7th, 1920. Yours very truly, 1-1-20 JOHN SUURBALI

I hereby announce myself a can date for the office of State Se from the district composed of cock, Cerro Gordo and F counties, subject to the de the Republican voters of s ties at the June, 1920, Pri fied and

By means of l ens and trap nests the breed announce to identify every egg produc ficers to mark each egg. The United States department of agriculture poultry specialists mark the big end of the egg with the number of the hen and then put underneath that the pen number. The number on the leg band of the hen gives the clue in the record book to her pedigree. The pen number gives the information regarding the sire.

PLANS FOR MAKING TIMBER PAY PROFIT

(Prepared by the United States Department of Agriculture.)

Farm forestry helps farmers in:

Marketing timber profitably.

Supplying timber for farm needs.

Furnishing paying employment during the winter.

Making waste lands yield a profit.

Increasing the sale value of the farm.

Farm forestry means:

Improving the woods by the right kind of cutting.

Protecting the woods from fire and other injuries.

Utilizing farm timber to the best advantage.

Reclaiming gullies and utilizing waste lands by planting forest trees.

Keeping woodlands growing at their maximum rate of production.

Farm forestry, as a branch of agriculture, is the handling of forest trees and woodlands in such a manner as to increase the income and permanent value of the farm and add to its comfort and attractiveness as a home.

Build Up Vigorous Calves.

We should do everything to build up a strong and vigorous constitution and a healthy frame during the first year of the calf's life, for unless this is being done we are doing exactly the other thing. There is no middle course in growing a calf.

PROVIDE DUST BOX FOR HENS

Chickens Cleanse Themselves of Insects by Wallowing in Dust—Best Size of Box.

Chickens never wash as many birds do, but cleanse themselves of insects by wallowing in dust. Where board or cement floors are used in the chicken house, some means of dusting during the winter months should be provided. A dust box 3 feet by 5 feet, or 4 feet by 4 feet will be found large enough in most instances, the United States department of agriculture suggests, for a flock of 50 or 60 fowls. It should be placed where it can be reached by sunlight during as much of the day as possible.

Fine, light dry dust is best for the box, but sandy loam is good. Road dust is recommended by many, but it is often hard to secure. Coal ashes may be mixed with the soil if desired to make it lighter.

POULTRY NOTES

A sandy soil makes the best poultry run.

* * *

A filthy henhouse is a sure breeder of disease.

* * *

To get winter eggs the first essential is good laying stock.

* * *

A dry mash hopper in which feed is always kept will mean more eggs and less bother in feeding.

* * *

All kinds of vegetables are good for poultry and those which they cannot eat raw can be cooked.

Knights of Malta.

The order of the Knights of Malta is of great antiquity and is supposed to have originated during the first crusades, from about 1070 to 1090. After the capture of Jerusalem, the order was founded by Gerard, who died in 1120.

If You Need a Medicine You Should Have the Best

Have you ever stopped to reason why it is that so many products that are extensively advertised, all at once drop out of sight and are soon forgotten? The reason is plain—the article did not fulfill the promises of the manufacturer. This applies more particularly to a medicine. A medicinal preparation that has real curative value almost sells itself, as like an endless chain system the remedy is recommended by those who have been benefited, to those who are in need of it.

A prominent druggist says "Take for example Dr. Kilmer's Swamp-Root, a preparation I have sold for many years and never hesitate to recommend, for in almost every case it shows excellent results, as many of my customers testify. No other kidney remedy has so large a sale."

According to sworn statements and verified testimony of thousands who have used the preparation, the success of Dr. Kilmer's Swamp-Root is due to the fact, so many people claim, that it fulfills almost every wish in overcoming kidney, liver and bladder ailments; corrects urinary troubles and neutralizes the uric acid which causes rheumatism.

You may receive a sample bottle of Swamp-Root by Parcels Post. Address Dr. Kilmer & Co., Binghamton, N. Y., and enclose ten cents; also mention this paper. Large and medium size bottles for sale at all drug stores.—Adv.

C. W. Wiles went to Miller Tuesday on a business mission.

Mrs. J. F. Wenck was at Garner between trains Friday morning.

Mrs. John Josten went to Garner Friday morning on business.

Mrs. R. A. Jorgenson was at Garner Saturday morning.

Miss Aravella Emerson left Monda ymorning for Spencer where she will visit with her parents.

Elmer and Emery Schaefer returned from the Des Moines hospital last Friday afternoon.

Mrs. Wallace Carr, of Garner, was in Klemme Saturday visiting at the Rafmond White home.

Mr. George Schaefer of Garner, was a Klemme visitor between trains Thursday.

Mrs. Emil Kraus and baby went to Garner Thursday afternoon for a few days' visit.

Mrs. J. N. Day was confined to the house a few days the past week due to a cold and sore throat.

Miss Mable Smith has been off duty at the J. N. Day store the past week on account of sickness.

Ed. Jacobs drove his Lizzy wagon to Garner Sunday for a visit with his folks.

Carl Schneider, of Garner, was a business caller in Klemme Monday between trains.

Mrs. Missman and son Byrnes returned Tuesday afternoon from a short visit at Belmond.

Oscar Swanson shipped a fine pure bred Chester White hog to a party in the southwest part of the state Monday.

Holly and Ernest Lewis, of Mason City, were over Sunday visitors in Klemme. The boys are working in the post office department there.

The big annual auto show is on at Des Moines next week and some of the local dealers and auto fans are planning on attending.

A brother of Rev. Depping, of the Reform Church, returned to his home at Waukon, Iowa, after spending about two weeks visiting here.

Mrs. Marlin Croner is making rapid recovery from he recent attack of pneumonia, but is still confined to the house.

Mr. Chas. Kraus and wife from Trosky, Minn., came Friday evening for a few weeks' visit at the homes of their son and daughter in Klemme.

Mr. Clyde Montgomery, of Galt, Iowa, came Tuesday morning for a few days' visit at the home of his brother-in-law, Owen Neuhring, west of town.

FOR SALE—Secod hand range, in good condition. Jacobs & Son.

Lloyd Ulrich and Jim Wade are both owners of brand new Fords of the latest style.

Miss Bryson, one of our high school teachers, did not return from her Iowa Falls visit Monday morning. She was reported to be ill and could not come then.

Mr. E. S. D. Kahrs left Tuesday noon for Dolliver, Iowa, to pack up his household goods to ship back to Klemme. He expects to be gone a few days.

Mr. John Baack, wife and daughter Mrs. Daley, from Great Falls, Montana, have been visiting at the Baack's in Klemme a few days last week.

Miss Ethel Jacobs came last Wednesday evening to assist in the bookkeeping at the Jacobs & Son store for a few days. She returned to Garner Saturday morning.

Chris Gram returned from Milaca, Minn., Monday morning. Chris acocmpanied a good load of goods to Minnesota last week for Wm. Kirkwood who was unable to go on account of sickness.

Mrs. Fred Jorgenson returned to her home at Forest City after spending a couple of weeks in Klemme at the home of her daughter, Mrs. A. L. Streiby. The Streiby family have been on the sick list for a couple of weeks and Mrs. Jorgenson was here helping care for them.

Dr. R. W. Schultz, Osteopathic Physician, Masonic Bldg., Garner, Ia.

Marion Elder, of Eagle Bend, Minn. came Saturday for an over Sunday visit with his son Ralph and family, and other Klemme relatives and friends. Mr. Elder returned to Eagle Bend Monday morning.

John Suurballe was over from Garner Tuesday shaking hands with friends and old acquaintances. Looks like John is slated to become our next county treasurer as so far he has no opposition.

E. G. Ell, Elmer Fuller and Jim Wade dove three Ford roadsters thru from Iowa Falls last week one day. They found the roads to be in rather bad shape and had difficulty in getting thru in some places.

H. A. Sweigard, the Garner postmaster, was transacting business in Klemme Tuesday between trains.

The poles for the farmers' electric line running east of Klemme are now all set and ready to be strung up. The line at present runs about two miles east. The farmers along the line will find electricity to be quite convenient for light and power.

Friends of the Pabst family have received letters from them at Los Angeles, California, stating that both Mr. and Mrs. Pabst and Elenore have had the flu and were quite sick, requiring the services of a trained nurse.

The new Klemme Band began on a few easy marches this week and will from now on work toward summer concerts which will begin about the first of June. They are making rapid progress under the instruction of Mr. Crottv.

Harold Gruetzmacher was expected home this week on his vacation from Ames, as the short course was to have been held at this time, but on account of the Flu and so much sickness, it was postponed, and the school vacation will begin March 13th.

Rev. Meyer went to Garner Saturday to assist Rev. Gauger Sunday with the Communion Services. In the afternoon Rev. Meyer preached at Hayfield. While he was away Rev. [illegible] the wide sweep of water. A aroused me.

l be e

Herman of r, an old timer in Klemme, is back again in the old stand, at the Lau elevator, where you will find him every day now helping with the grain, live stock or whatever it might be. He was recently discharged after serving six years in the regular army during which time he served about nineteen months in France. Herman thinks there is no place like Klemme and so he decided to come back here again.

Monday C. F. Keraus received a box of fine fruit from his brother-in-law, Mr. Patton. The box contained some big juicy oranges, grape-fruit, lemons and some large English walnuts. The fruit is much larger and sweeter than any that is shipped in here; we know, for Mr. Keraus left us a good sample and if he wants any more sampled we are perfectly willing to submit ourself as a good sampler. If anybody else is lucky enough to get some California fruit bring it around and we will take a bite and offer our verdict on same.

E. S. D. Kahrs (too many initials all at once) left Saturday night, armed with a scoop shovel for Nevada Iowa. Why the scoop shovel you ask. Well, he left here with the intention of driving his Buick Six back to Klemme, and also to visit while there with relatives. On his way back in the car in addition to the scoop shovel, he brought his brother-in-law, G. H. Ludwig, who he thought might come in handy to push the shovel. They got as far as a few miles south of Belmond when the scoop shovel failed to work properly and the services of a farmer and his team were needed to bring the car out from under a bank of snow. They reached Belmond all right but took the train the rest of the way home, getting here Monday afternoon. The scoop shovel and the car are still at Belmond.

When attending the Mason City Auto Show this week

we would like to have you drop in and get aquainted.

We will enjoy meeting you and since we are the foremost men's store in the City it wouldn't do yon any harm to meet us.

You are always welcome at.

KLEMME TIMES

Twenty-fourth Year Number 24 Klemme, Iowa, Thursday, February 19, 1920 $2.00 In Advance. $2.50 Outside of County

WIDE SLEIGHS FOR NEXT WINTER

The undersigned is very much interested in the movement for widening the sleighs for the winter of 1920 and 1921.

I have been informed that more than fifty farmers and teamsters in and about the town of Klemme have signed the agreement to have their sleighs widened to the regular wagon width which is fifty-six inches.

While this is very gratifying, it would however be well to have this number increased to one hundred or more and furthermore to have the movement spread to other towns in the county.

I would like therefore to call the attention of the readers of this paper to the following advantages of the wide sleigh:

First, it will reduce to a minimum the danger of upsetting, which in many cases has left lasting injuries on the bodies of those riding in such sleigh; and besides this the unpleasant task of picking up what is spilled, if this is possible.

Second, the wide sleighs and the narrow ones, of which there will be some, will make two wide paths for our heavy horses and the various kinds of vehicles to travel in, which will be a marked advantage over the narrow sleigh track.

Third, it will permit the use of a wagon for hauling hay, straw, etc., without any serious difficulties and without spoiling the sleigh track as is sometimes the case with the narrow track.

Fourth, it will help us to decide whether to take the wagon or the sleigh when the sleighnig is bad at places and good at other places.

We will then take the wagon and very nicely drive along in our wide sleigh track.

Fifth, it will permit the use of the automobile during the greater portion of the sleighing period, which will be much to the advantage of the farmer, the doctor, the preacher, the laboring man, the mail carrier, etc., etc., etc.

Thanking you in advance for the interest I know you will take in this matter and for speaking to your friends and neighbors about it, I am yours for a wide sleigh track, the sooner the quicker.

G. I. Schaper

NEW DOCTOR IN KLEMME, TO CO-OPERATE WITH DOCTOR ZINN

Dr. R. N. Reuber, a nephew of Dr. Zinn, came Monday to assist Dr. Zinn with his practice. Dr. Reuber since graduating has been practicing at Goldfield, Iowa, for about six months or more. He comes here from Chicago where he recently completed three months work specializing in eye, ear, nose and throat treatment. Dr. Reuber is a fine yung man, pleasant to meet and good natured. We believe he will make an excellent partner for Dr. Zinn in his large practice. The Doctors intend to remodel the present office by building on an addition and installing the latest type of X-Ray machine and other equipment. Dr. Reuber has already been initiated into the practice here as he had hardly time to say "hello" before he was called out on a case. We cordially welcome him to Klemme and wish him and the senior doctor the very best success.

FARM BUREAU HOLDS MEETING HERE MONDAY

L. T. Nutty, the county agent, came over from Britt Monday and met with the farmers of Ell township. A very interesting meeting was held and quite a number of farmers were in attendance. Various problems of interest to the farmer were fully discussed. A similar meeting was held the following afternoon in Liberty township. The farmers in the county are getting pretty well organized and the Farm Bureau is making rapid growth here.

METHODIST EPISCOPAL CHURCH

Public worship at 10:30 a. m. and 7:30 p. m., with sermon by the pastor.

Sunday School at 11:30 a. m. A live, interesting, enthusiastic school. Adults especially invited. No church in Algona district and only four other churches in all Northwest Iowa conference have a larger enrollment in Sunday School in proportion to the church membership. Come and learn the reason.

Sunday evening sermon continuing the series on Shadowland, will deal with Twentieth Century Witchcraft.

A. E. Buriff, Minister

THE BUYING PUBLIC AND ADVERTISING STORES

That the American people who buy merchandise like to read advertisements and patronize stores that do advertise has been proven by all preadventure of dispute.

A Boone county farmer's wife when asked her opinion of newspaper advertising by a Democrat reporter, and whether or not she read the "ads" replied: "To be sure I read them, we take a Des Moines daily almost wholly to have a chance to look over the dry goods and shoe advertising."

Years ago when a man opened up a new store he sat down and waited for customers to come around and see him. If he waited long enough—a good many years, they got used to his patience and did come around.

Modern business is built on the soliciting system and no matter how much we try to dodge the fact it remains that the man who solicits your business and does it in the right manner is going to have your trade—everything else being equal.

The retail dealer buys from the wholesale house that solicits his trade. He rarely bothers with firms that do not care enough about his patronage to solicit it and send a representative to call on him. He feels that they must be out of line with the modern tendency and that they are unlikely to be up-to-date or enterprising.

The buying public feels the same way about it.

They wait to see what store solicits their trade before deciding where to buy. If a merchant does not solicit their trade in any way, they must conclude he is out of the game.

As newspaper advertising is the only practical way of soliciting trade at a reasonable cost, it is the only way to make it appear that a dealer is playing the game of modern business.—Boone County Democrat.

TWENTIETH CENTURY WITCHCRAFT

"Do you believe in ghosts?"

"No, but I'm afraid of them."

None of us believe in superstitions (the other fellow's.) Most of us have a few little pet ones of our own. Four-fifths of mankind believe in witchcraft to this day. The last trial for witchcraft was in Salem, Massachusetts and the date was not in 1692 as the school histories recite, but in 1878.

The sermon on Sunday evening next, at the Methodist Episcopal church will deal with modern witchcraft and popular superstitions, presentiments, dreams, telepathy, etc., so far as the limits of time will allow. Spiritualism, apparitions, visions and kindred subjects will be treated on succeedng Sunday evenings. Great progress has been made during the past twenty years in our knowledge of the truths underlying these phenomena, the last five years being especially fruitful. A feature that should make these sermons more useful is the offer of Dr. Buriff to answer any questions from the audience at the conclusion of his discourse. If preferred, the questions may be written and handed up at the beginning or through the ushers in the course of the evening.

WANT GERMANIA AGAIN

Election Called at Lakota to Decide On Resuming Old Name

ALGONA, Ia.,—An election has been called for Feb. 17, to allow the residents of Lakota to vote on a proposition to change the name of the town back to Germania.

During the war the name of the town was changed on account of the feeling that existed against Germany.

Now that the war is over the city council has ordered a plebcicite to determine whether the old name shall be restored.

C. F. Specht is mayor and J. Gus Thaves is clerk of the town.

Will have a car of Washed Egg coal in a few days, order now. W. F. Lau

For Sale—3 good building lots, will sell at a bargain if taken before Mar. 1st, Chas Ax, Klemme, Iowa.

ANNOUNCEMENT

Owing to the press of work due to the Flu and the usual acute winter diseases I will be unable to make my visits to Klemme until towards Spring. Patients from Klemme may come to Garner either on the morning or afternoon trains. Special calls will be attended to as usual.

Respectfully,
Dr. R. W. Schultz,
Osteopathic Physician

W. C. ZIESEMER,
1-22-tf Garner, Iowa

I am a candidate for re-election, subject to the will of Republican voters at Primary Election next.

Very truly yours,
Chris Jacobs, Auditor

I hereby announce myself a candidate for the office of State Representative from Hancock County, subject to the decision of the Republican Voters of said County, at the June 1920, Primaries.

Dated at Britt, Iowa, this 26th day of January, 1920.

E. P. Healy

Left Algernon Pondering.

Algernon (after being accepted)—"Have you ever loved before?" Angela—"No! I have often admired men—for their strength, courage, beauty, intelligence, or something like that, you know; but with you, Algernon, it's all love—nothing else!"

How Moving Signs Work.

In a general way, the mechanism of a moving electric sign is like the old-time music box drum, filled with pins. As the drum revolves the pins make the contacts at determined intervals, and the illusions of revolving circles of light, bird effects and designs almost without limit are produced.

THE HOUSE OF TOO MUCH TROUBLE

In the House of Too Much Trouble
Lived a lonely little boy;
He was eager for a playmate,
He was hungry for a toy.
But 'twas always too much bother,
Too much dirt, and too much noise,
For the House of Too Much Trouble
Wasn't meant for little boys.
And sometimes the little fellow
Left a book upon the floor,
Or forgot and laughed too loudly,
Or he failed to close the door.
In the House of Too Much Truoble
Things must be precise and trim—
In a House of Too Much Trouble
There was little room for him.
He must never scatter playthings,
He must never romp and play;
Ev'ry room must be in order
And left quiet all the day.
He had never had companions,
He had never owned a pet—
In the House of Too Much Trouble,
It is trim and quiet yet.
Ev'ry room is set in order—
Every book is in it's place,
And the lonely little fellow
Wears a smile upon his face.
In the House of Too Much Trouble
He is silent and at rest—
In the House of Too Much Trouble,
With a lily on his breast.

—Albert Bigelow Paine

Fireweed's Good Work.

Fireweed, otherwise known as the "great willow-herb," seems to have been created as an antidote for one of the ugliest sights a landscape may offer—burnt-over ground. The fireweed is a genuine cosmopolite, for it sends its consoling shaft above the ashes of burnt forests not only throughout America but in Europe and Asia.

Protection Against Catarrh.

Any constitutional exercise which improves the circulation and makes the body resistant helps to protect one from catarrh. This is particularly true of all breathing exercises because the effects are beneficial locally as well as constitutionally, says one of the best-known physical culture teachers in New York. So let us teach our children the value of correct and deep breathing, and in doing so we improve our own health and thereby impart cheerfulness and happiness to our home.

Thoughtful Bobbie.

When Bobbie went to see his grandmother he was much interested in whatever went on in the kitchen. One morning she said to him: "I'm going to make you a nice little pie in a saucer, Bobbie, all for yourself. Don't you think I'm pretty good to take so much trouble?" Bobbie thought about it a moment. "Grandma," he said, "mamma told me not to be a bother, and if it's going to be any trouble you can just as well make my pie the reg'lar size."

THIRTEEN LEAP-YEAR BABIES

ST. LOUIS, Mo.—Thirteen four-year-old babies will celebrate their second birthday on Feb. 29, this year. A record of Feb. 29, 1916, shows that twenty-five babies were born in this city on that day, but some have died, others have been moved away and there are thirteen that have been traced to homes here. Two sets of twins are included in this number.

CO. TREASURER'S OFFICE IS SELF SUPPORTING

County Treasurer Thompson advises us that the interest paid by the banks on county deposits more than pays the expenses of the treasurer's office at the county seat. We often speak of the large expense of conducting the county offices without giving thought to the fact that our banking institutions pay interest on 90 per cent of the daily balances on all public funds deposited with them. If the interest more than pays the expenses of the county treasurer's office it is an item of revenue to the county worth mentioning for the expense of operating that office must of necessity be a considerable sum.—Britt News-Tribune.

FARM NEWS WANTED

We would like to have a correspondent in every farm locality in the vicinity of Klemme. Anyone can easily get together a few items each week of what is going on in your neighborhood. The only way we can get this news is to have a correspondent in each neighborhood. We will be glad to make arrangements with anyone who will volunteer to write news for us. Call at the Times office and see us. Editor.

TOO PARTICULAR

Particular concerning a particular matter is well enough, but too particular concerning a certain particular may be more particular than that particular warrants; so relative to that particular we wish to say in particular, let us not be quite so particular.

WELLEMEYER'S FIRST FURNITURE SHOW

This week beginning Saturday will mark the beginning of the first Furniture Show at the Wellemeyer Department Store. Mr. Wellemeyer will show all the latest styles in furniture, rugs, pianos, and everything that goes into a house to make it cozy.

FENTON MAY CONSOLIDATE

A proposal to consolidate the Fenton schools is being agitated. At last accounts petitions were in circulation Twenty-eight sections, or thereabouts, are to be included in the territory of the proposed district.—Algona Advance.

SHEFFIELD, Ia., Feb. 12.—Sheffield celebrated last night with bonfires and whistles as a result of the election held yesterday on the building of a memorial building to cost $25,000.

The vote stood 309 for to 57 against the issuing of these bonds.

Sheffield is the first town in the country to vote on a memorial to honor the soldiers.

CARD OF THANKS

We wish to thank our neighbors and friends for their help and sympathy in our recent bereavement.

Sincerely,
C. C. Schaefer and family

NEW BANK TO BE OPENED AT GARNER

It has been reported to us that a Mr. Butler, of Ringsted, has purchased the building next to the Signal office at Garner which he takes possession of March first, and will open for business about the first of April. There are now two banks in Garner, the Farmers National and the First National.

Henry Greiman brought another wolf pelt into the office of County Auditor Jacobs Wednesday and claimed the $10.00 bounty. In addition to the bounty the pelt itself was worth several dollars.—Garner Democrat.

Mr. C. V. McCullough came from Garner Monday evening to spend the night with his son and daughter here, Gerald and Mildred, and also to take his little girl home who came Saturday night for an over Sunday stay with her brother and sister.

TIMES PRINT SHOP REMODELED

We have had the carpenters busy the past week remodeling the interior of the Times print shop, which we believe is for the better. We have had the stairway leading to our press room changed about in such a manner that the floor space is greatly increased. The stones, type cases and the like have also been shifted about, and other smaller details re-arranged. We have also purchased a large quantity of new type and other materials and plan to add some more new machinery. Our office room will also undergo some changes in the near future.

Thirty years ago this month Ben Swalve moved up from Ackley and bought the Archie Christie place south of town for $20 an acre. Everybody thought this was an enormous price and he was informed that he got beat on the deal. The town of Klemme was practically nothing then and Ben says there were but four business men in town: Schafer & Dow conducted a general business in the place now occupied by Kirkwood, and a fellow by the name of Irickson and a pardner were conducting a grain office, but no elevator. Corn and oats were worth only a few cents per bushel. Compare this with the present prices both in land and grain, and the size and prosperity of Klemme today. We will say it is some difference.

Clark Bredbenner has been putting up ice in his ice house the past week and has had a full force of men busy every day cutting and hauling. The ice is taken from the river west of town near the bridge and is of extra fine quality this year. The ice being harvested this week was about twenty-three inches thick.

The Idle Hour Theatre was reopened again Monday of this week after being closed for a short time due to the flu scare. The entertainment given that night was Robert Briggs, entertainer, and fourth number of the lecture course. The attendance was good and all were highly pleased with the number.

For sale—3 used ranges, guaranteed in good condition. Jacobs & Son.

Rev. Meyer has been somewhat "under the weather" the past week and was unable to preach his usual Sunday sermon. However he was seen strutting about the first of this week again and seems to be recuperating. He has been suffering a great deal thi winter with neuralgia.

A blaze started in the roof of Hocum's elevator office yesterday caused by an overheated exhaust pipe from the engine. Chemical extinguishers killed the flames.

Mr. and Mrs. E. C. Buentenback arrived in Klemme this afternoon from Williams, Iowa and immediately began to the farm vacated by Earl Kahler. Also Mr. Buentenbach ordered the Times for one year.

Howard Spitler shipped a fine pure bred Chester White hog to a party at Storm Lake Tuesday. Klemme breeders of pure bred stock are becoming widely known. Hardly a week passes but what we notice some thoroughbred stock being shipped out by our local men.

E. G. Ell and Elmer Fuller left Monday for Des Moines to take in the auto show which is in session there this week. While at the city they will also attend study classes conducted by the Ford Company to learn more about the new starters and ignition system which is now installed on all Ford Cars.

There are four farm sales this week Tuesday H. J. Schlichting sold out his goods; Wednesday Dick Panoff held a sale; Thursday (today) is the big sale of Wm. C. Schmidt & Son, one of the largest held in the county this year. Friday G. H. Carlson has a sale. Tuesday, Feb. 24, Harry Sandrey has a sale. This will just about wind up the farm sales in this community. The Times office has printed sale bills and advertising for about fifty farm sales this winter. We have printed many bills for farmers outside of this territory. The majority of the farmers have seen the value of advertising and have in most instances advertised their sale in more than one paper, using either a quarter page or a half page ad with great results.

'FADE-OUT' MAN HALTS WEDDING

Wealthy Fiance of Sophie Loderhose Provides Brooklyn First-Class Mystery.

BRIDE-TO-BE IS SICK

Day Before Wedding News Is Received of Man's Death in Auto Accident—Investigation Shows No Such Accident Occurred.

New York.—Miss Sophie Loderhose of 1447 Dean street, Brooklyn, is under the care of physicians following her heart-breaking experience with a fiance whose personality is shrouded in mystery.

The man she expected to marry was known to her as "Dr. A. William Hoffman, Jr.," an officer of the United States navy, a man of wealth, who was supposed to have homes in Millbrook, N. Y., and Pasadena, Cal., and whose father was supposed to have been a well-known physician of Brooklyn.

Miss Loderhose met "Doctor Hoffman" first at a dance through a woman who said she was Doctor Hoffman's sister.

Courted by Telephone.

Following the engagement last March Miss Loderhose received many valuable gifts from the man, including a four-carat diamond ring.

She was constantly called on the telephone by "Doctor Hoffman" and these calls purported to come either from Millbrook, and more lately from Pasadena, Cal. Miss Loderhose sometimes conversed for hours with her fiance, who, she said, told her he was in Pasadena supervising the erection of the home in which they were to live.

The date for the wedding was set and invitations were issued. Elaborate arrangements for the wedding were made, including rearrangement of the

Was Constantly Called on the Telephone by "Dr. Hoffman."

seats of Immanuel Lutheran church, whose pastor, Rev. John C. Holthausen, was to have performed the ceremony.

Halted by Death Report.

The day before that set for the wedding came the news that "Doctor Hoffman," on his way east from Pasadena, while in an automobile with a friend, "Doctor Cochrane" (who had been named as one of the ushers) had been killed in an automobile accident at French Lick Springs, Ind.

The information came in the form of a long-distance telephone message to Miss Loderhose, from a person who said he was Doctor Hoffman, Sr., father of the mysterious fiance.

Doctor Holthausen's suspicions had become aroused, as had those of W. P. Phillips of Brooklyn, Miss Loderhose's brother-in-law. Independent investigations by both men have established the fact that no Doctor Hoffman is known either in Millbrook or in Pasadena; that no automobile accident occurred in or near French Lick Springs on the date of the supposed death of Doctor Hoffman, that no Doctor Hoffman is listed in the medical directories of Brooklyn.

STEALS SACRAMENTAL WINE

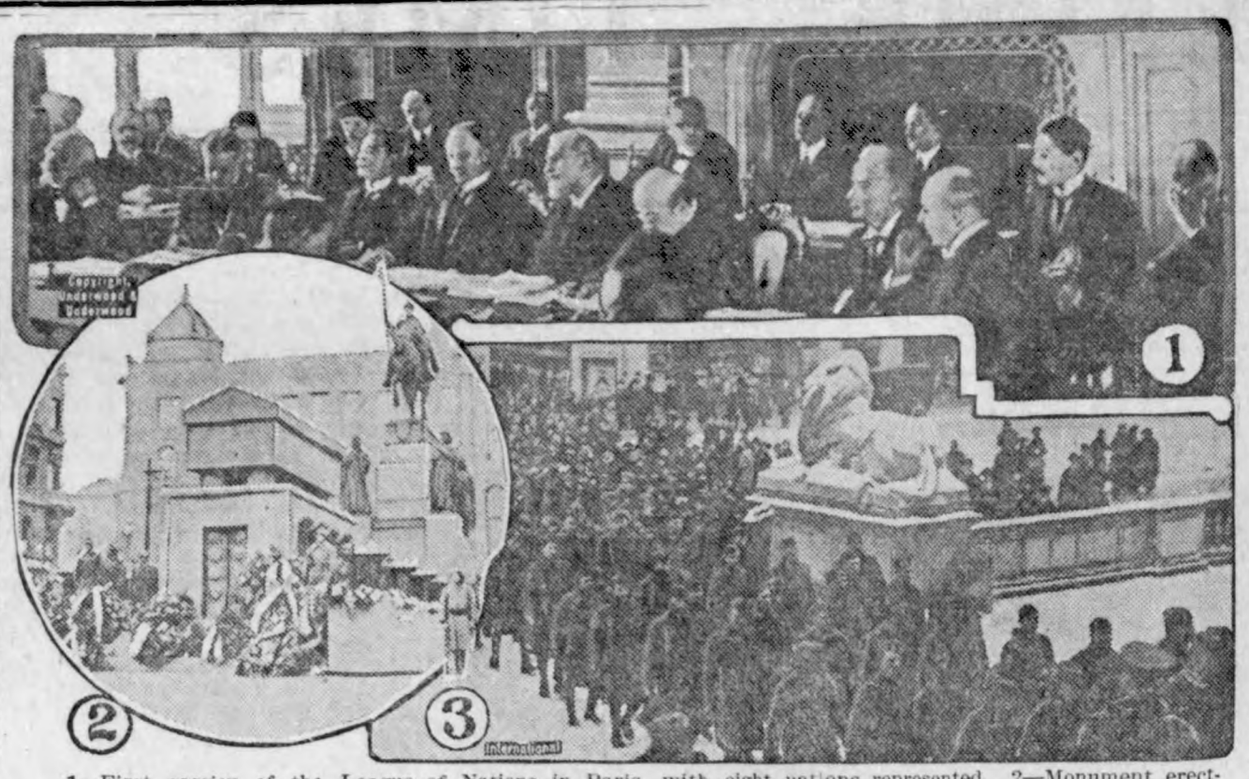
Thief Siphons Nine Barrels of Liquor From Dealer's Cellar in New York.

New York.—Theft of nine barrels of wine, intended for sacramental services in churches, was recently reported by a wholesale dealer.

The owner said the wine had been siphoned from his basement, where it was stored, to an adjoining cellar by means of a 75-foot pipe. The loss of the liquor was not discovered until some time after the theft.

'Dead' Goat Lived When Thawed Out.

Winsted, Conn.—Going to his goat barn early in the morning, B. E. Moore, found a newly-born kid, which apparently had frozen to death. He put it in the oven in the kitchen. The little goat thawed out and soon was able to scamper about the house.



1—First session of the League of Nations in Paris, with eight nations represented. 2—Monument erected in Prague to Czecho-Slovak volunteers who fought in other lands. 3—Last contingent of the A. E. F. to come home marching through New York city.

NEWS REVIEW OF CURRENT EVENTS

Germans Protest They Cannot Surrender War Criminals for Trial by Allies.

SAY GOVERNMENT WOULD FALL

Council of Ambassadors May Consider Some Modifications—Great Fall of Foreign Exchange May Stop Exports—Results of Viscount's Grey's Letter.

By EDWARD W. PICKARD.

Germany's always evident intention to evade as much of the Versailles treaty as she could brought matters between her and the allies to the critical stage last week. The test of the ability of the allies to enforce full compliance with the terms of the pact comes up in the case of the Germans who are accused of war crimes and whose extradition for trial is demanded, in accordance with the treaty which Germany signed. The list, comprising 890 names, was handed to Baron von Lersner, head of the German delegation at Paris, for transmission to his government. He had been protesting, verbally and in writing, against the enforcement of that clause of the treaty, and finding his arguments futile, sent the list back to the French foreign office and resigned his post. The list was sent to Berlin by telegraph, but the Berlin government made it plain that it would never consent to extradition of the accused. Its attitude was expressed by Miniser of Defense Noske, who said: "The surrender of these men is virtually impossible. Suppose I succeeded in getting the men arrested. Do you think the train taking them to France would be allowed to cross the frontier? And if a crowd held up the train, do you imagine that I could order Germans shot down so that other Germans should be handed over to the revenge of their enemies? The government might resign, but what party could take its place?"

Passive resistance, it was said, would be the course followed by Ebert's government. The Berlin press agreed that delivery of the men could not be made, and the general assertion was that insistence by the allies would mean the downfall of the government and a probable revolution.

The council of ambassadors in Paris was sufficiently impressed by the German assertions to consider a modification of its demands. Its plan as outlined there was that Germany should accept the list of offenders and thus admit their culpability, and that the allies should then consider the exigencies of the situation.

As for the former kaiser, his fate seems to be either trial and punishment by the allies or exile from Europe. Sir Auckland Geddes, British minister of national service and reconstruction, declared in a speech at Andover that the government intended to put the former emperor on trial and carry out whatever penalty was provided; and he added that if Holland persisted in giving him asylum it must put him on some island belonging to it outside of Europe, for the fallen ruler could not reside on Dutch territory in Europe. There has been talk of a trade embargo against Holland to compel her to surrender Wilhelm, but it is not considered likely that this will be resorted to by the allies.

Foreign exchange, which had been steadily falling for some time, went down with a crash last week, and financiers of all calibers were thrown into a near-panic. On American stock exchanges prices tumbled fast and holders of securities added to the collapse by dumping their stocks and bonds on the market. The causes and probable effects of all this must be left to the financial experts to tell. But one thing is made clear to every one. That is that the high cost of living in America is due to shortage of production no more than to the greed of the producers. For the downward trend of foreign exchange is putting a stop to the export of American products to Europe, and those who should know agree that this is almost certain to result in a decrease in prices in this country. The European importers cannot afford to buy these products when exchange is so much against them, and there will be a "backing up" in all lines of goods, which will be thrown on the American market. This movement already is under way. Prices of grains and other commodities declined considerably last week, and in the case of grains the drop was helped on by the action of the railway administration which placed a ten-day embargo on the use of freight cars for the shipment of anything except grain, wood pulp or sugar in the Mississippi valley states. This was done to provide the farmers with cars with which to send their crops to market, relieving the artificial shortage and releasing immense funds.

Dispatches from Warsaw made it plain that Poland was about to accept the peace offer of the soviet government of Russia provided guarantees were given that bolshevist propaganda in Poland and other European states would cease. Poland's aim, says Prince Lubomirski, minister to the United States, is to serve as a peaceful and moral bulwark against bolshevism, and for this she must have the economic support of the allies.

By the Russo-Esthonian peace treaty the soviet government renounces all sovereignty over Esthonia and recognizes its independence. Both parties renounce claims to compensation for war expenditures. The treaty provides that prisoners will be repatriated shortly by both. Russia is to pay Esthonia 15,000,000 rubles in gold. There are to be no customs or transit charges on goods by either country.

The soviet armies met with some reverses last week, notably one in the region of the Don where the best of the bolshevik cavalry was routed by the Russian volunteer forces. In general, however, the soviet forward movement was continued on all fronts. A local revolution in Vladivostok put that city in the hands of the rebels. In England and probably elsewhere the opinion is gaining strength that peace should be made with the Lenine government because the return to normal life in Russia will soon destroy bolshevism.

When Viscount Grey's letter to the London Times, justifying the delay of the senate in ratifying the peace treaty and explaining to the British the attitude of America toward world affairs, was made public, it was at once assumed that acceptance of the pact by the senate, with the Lodge reservations little modified, would soon follow. Both sides admitted that the Grey letter had knocked important props from under the opposition to the Lodge program, in that it made clear that Great Britain and, presumably, the other allied powers would welcome the adhesion of America even with the reservations. The informal committee of the senate had failed to reach a compromise and Hitchcock had given notice that he would move to take up the treaty in the open senate on February 10. Lodge countered with the statement that the Republicans would bring the pact before the senate one day earlier. As the days passed with no comment from the White House on the Grey letter, however, hope for early ratification faded, and toward the end of the week it was widely reported in Washington that the letter had angered the president and increased his determination never to accept the Lodge reservations or anything like them. It was said Mr. Wilson and his firm adherents looked on Viscount Grey's pronouncement as an unwarranted attempt by the spokesman of a foreign government to interfere in the legislative affairs of this country. Though it seemed the letter had persuaded many Democrats that it was best to accept the reservations, it was admitted that the president could still rally a sufficient number to prevent ratification.

As a matter of parliamentary procedure, the treaty now goes through the entire course through which it passed before its rejection on November 19, so any amendments are in order. Senator Johnson hurried back from the far West with the assertion that he would push his amendment giving the United States six votes in the League of Nations, the same as the British empire. This, Lord Grey intimated, was preferable to the Lenroot reservation, which sometimes would bar the empire from voting at all. Johnson and his supporters say now that opponents of his plan will find themselves in the position of being "more British than the British."

In any event Lord Grey's letter has justified, to the British and to many Americans, this country's hesitancy to enter the League of Nations without full consideration and careful examination, since it is so radical a departure from our traditional policy. It will go far toward restoring or maintaining sympathetic relations between America and Great Birtain, especially if we do finally enter the league.

Secretary of the Navy Daniels appeared before the senate subcommittee investigating navy awards and replied vigorously to the charges made by Rear Admiral Sims and others. He read a prepared statement in which he took up point by point statements before the subcommittee by Admiral Sims and dwelt at considerable length on the two major disagreements voiced by the admiral—namely, the awarding of decorations to officers who lost their ships through submarine attacks or by mines, and the relative importance of shore and sea duty. On the latter Mr. Daniels said he had not and never would "approve a disparity between awards given men who served on shore as compared with the men who went to sea." Admiral Sims, he asserted, probably advocated high awards for many officers who served on staff duty ashore and few awards for officers who went to sea because "most of Admiral Sims' duty in the navy has been on shore."

Secretary Daniels declared there was nothing the matter with the morale of the navy except a shortage of enlisted men in many ratings and insufficient pay for officers and men left.

The conference committee of the senate and house reached a full agreement on railroad legislation, and it seemed certain that the remodeled Esch-Cummins bill would soon be reported to both houses and passed before March 1. As it now stands the Cummins antistrike provision is omitted but the Esch voluntary arbitration plan is strengthened by the creation of a board of appeals of five members to be appointed by the president. Public opinion will be relied on to prevent strikes. The Cummins section providing for an average return of 5½ per cent remains but the interstate commerce commission is given authority, after one and a half or two years, to change the percentage. Earnings above 6 per cent are to be divided equally between carriers and a fund to be administered by the commerce commission for the benefit of weaker railroads. The guaranteed standard return now in effect is to be continued for six months, the government paying the deficit. A revolving fund of $300,000,000 is established to make loans to the railroads.

All week representatives of the railway administration and officials of the railway unions endeavored to reach an agreement on the wage demands of the brotherhoods, but at this writing the results were nil. On Thursday the executive committee of the maintenance of way employees and railway shop laborers met in Detroit to consider wage demands. The grand president of the union predicted a general strike on the railways if a satisfactory adjustment was not reached at Washington. Some of the railway labor leaders are seriously discussing the formation of a third big political party with government ownership and lowering of the cost of living as its platform, and with a showdown at the presidential election next fall.

HOME TOWN HELPS

GENERAL CLEANUP IN ORDER

Patriotic Advertising Is No Longer an Excuse for the Presence of Unsightly Billboard.

Now that the orgy of war advertising is ended, where does it all leave YOU—as the posters said—and your future contributions to the maintenance of the advertiser's paradise? You gladly saw patriotism written all over the beautiful buildings and places of the city—even though this writing was a kind of scribbling, so incongruous were the papers and flimsinesses. Beauty was for the moment nothing—nothing unless it, too, served. But now!

Are we to be equally content to see Piffle's Pickles emblazoned where we testified our intention to save food and thus help win the war? Will not chewing gum and chicle be more than ever an impertinence when inflated to the dimensions of our fatherland, the liberty of the world and the sacrifices of our sons?

Some have feared that the riot of outdoor war advertising would debase our taste and make the public still more heedless of the incongruousness and ugliness of the advertising nuisance. We think not. In spite of everything, the war advertising truly expressed us. We looked at it and read it—and liked some of it—because it did. It expressed us best when it was most beautiful. And although much of it was small in scale, it never was too big to express the great ideas. But now, will not the apotheosis of the insignificant seem more than ever cheap and tawdry? If so, the blatant advertisement has lost some of its advertising value. If it could only lose it all, if people would not patronize what is offensively advertised, it would disappear.—Bulletin of the Municipal Art Society of New York.

PLANTS ON CITY LAMP-POSTS

Authorities of Allentown, Pa., Turn Usually Unsightly Objects Into Things of Beauty.

Turning the street lamp-posts into things of beauty is the object of the authorities of Allentown, Pa.

In that city every lamp-post wears a hanging-garden effect from spring until late autumn. The flowers and decorative leaf-bearing plants are planted in urn-shaped globes which encircle the lamp-posts some distance below the light.

The city fathers who thought of and adopted the flowering lamp-post idea made a thorough job of beauti-

fying the town by removing all of the overhead telephone and telegraph wires—at least, in the principal streets.

But Allentown can boast of use as well as beauty. It is the county seat of a farming section which ranks as one of the leading potato producers of the country.—Popular Science Monthly.

All Should Own Homes.

From the national standpoint, it is most desirable that every citizen should own his home. The proper education of the child needs the sanctity of the home and the future of our country depends upon the average citizen doing his or her duty "to train up a child in the way he should go, and when he is old he will not depart from it."

Building and loan associations should be formed in all cities where they do not already exist, as they are most useful in assisting men to acquire a home through the monthly installment plan.—Exchange.

For Large and Small Cities.

There should be a definite park policy and an appropriation sufficient to open up one new small park or recreation ground each year. Density of population grows in sections, and property values rise accordingly.

A forehanded small park policy will follow the trail of population density with an eagle's eye. The toilers and their usually large brood of children should have these city breathing spots at their doors.—Chicago Journal.

GIRLS! A MASS OF WAVY, GLEAMY BEAUTIFUL HAIR

Let "Danderine" save and glorify your hair

In a few moments you can transform your plain, dull, flat hair. You can have it abundant, soft, glossy and full of life. Just get at any drug or toilet counter a small bottle of "Danderine" for a few cents. Then moisten a soft cloth with the Danderine and draw this through your hair taking one small strand at a time. Instantly, yes immediately, you have doubled the beauty of your hair. It will be a marvel so soft, lustrous, fluffy and so easy to do up. All dust, dirt and excessive oil is removed.

Let Danderine put more life, color, vigor and brightness in your hair. This stimulating tonic will freshen your scalp, check dandruff and falling hair and help your hair to grow long, thick, strong and beautiful.—Adv.

Those Wags.

Garfield Tea keeps the liver normal.—Adv.

Not That Goal.

"Are you going to the terminal on this car?" "Oh, no; we're just going to the end of the line."

Says Dodd's Kidney Pills Wonderful Remedy

Mrs. Delia Olson, of New London, Wis., like many others, knows after experiencing the use of Dodd's Kidney Pills that they are unexcelled. Here is what Mrs. Olson recently wrote us:

"I suffered with rheumatism for years. There was a gravel deposit in the urine and I had frequent headaches. I had dark circles around my eyes and was always tired. I bought a box of your Dodd's Kidney Pills and am glad I did, for I soon cured quick relief and think they are a wonderful remedy."

Mighty few people realize in time that kidney trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip. Result: Bright's Disease, hospital treatment, doctors' bills—often death.

When you have backache, dizziness, pain in loins, stiffness in stooping or lifting, spots before the eyes, sediment in secretions, rheumatic pains, or swollen joints, immediately start toning the kidneys by the regular use of the remedy endorsed by hundreds of users—DODD'S kidney Pills.

If your druggist does not carry them, order direct, sending us 60c in stamps and mention your druggist's name.

Dodd's Medicine Co., Buffalo, N. Y.

MILLIONS

Suffer from

Acid-Stomach

Millions of people suffer year after year from ailments affecting practically every part of the body, never dreaming that their ill health can be traced directly to acid-stomach. Here is the reason: poor digestion means poor nourishment of the different organs and tissues of the body. The blood is impoverished—becomes weak, thin, sluggish. Ailments of many kinds spring from such conditions. Biliousness, rheumatism, lumbago, sciatica, general weakness, loss of power and energy, headache, insomnia, nervousness, mental depression—even more serious ailments such as catarrh and cancer of the stomach, intestinal ulcers, cirrhosis of the liver, heart trouble—all of these can often be traced directly to acid-stomach.

Keep a sharp lookout for the first symptoms of acid-stomach—indigestion, heartburn, belching, food repeating, that awful painful bloat after eating, and sour, gassy stomach. EATONIC, the wonderful modern remedy for acid-stomach, is guaranteed to bring quick relief from these stomach miseries. Thousands say they never dreamed that anything could bring such speedy relief—and make them feel so much better in every way. Try EATONIC and you, too, will be just as enthusiastic in its praise. Make your life worth living—no aches or pains—no blues or melancholy—no more of that tired, listless feeling. Be well and strong. Get back your physical and mental punch; your vim, vigor and vitality. You will always be weak and ailing as long as you have acid-stomach. So get rid of it now. Take EATONIC Tablets—they taste good—you eat them like a bit of candy. Your druggist has EATONIC—50 cents for a big box. Get a box from him today and if you are not satisfied he will refund your money.

WARNS NATION OF RED PERIL

U. S. Department of Justice Urges Americans to Guard Against Bolshevism Menace.

CALLS RED PLANS CRIMINAL

Press, Church, Schools, Labor Unions and Civic Bodies Called Upon to Teach True Purpose of Bolshevist Propaganda.

Washington.—Calling for the patriotic support of all true Americans in its fight to protect their homes, religion and property from the spreading menace of Bolshevism, the United States Department of Justice has issued a warning against the insidious propaganda of the "Reds" during the new year. It reads:

"It would be extremely helpful to the cause of good government, the maintenance of law and order and the preservation of peace and happiness in our country if the people on this New Year's day would resolve to study, understand and appreciate the so-called 'Red' movement. They can counteract it most effectively by teaching its purpose through the press, the church, the schools, patriotic organizations and labor unions, all of which are within the range of its insidious attacks.

"Red" Theories Criminal.

"The 'Red' movement does not mean an attitude of protest against alleged defects in our present political and economic organization of society. It does not represent the radicalism of progress. It represents a specific doctrine—namely, the introduction of dictatorships the world over by force and violence. It is not a movement of liberty-loving persons, but a distinctly criminal and dishonest movement. Lenine himself made the statement at the Third Soviet Conference, 'Among one hundred so-called Bolshevists there is one real Bolshevik, thirty-nine criminals and sixty fools.' It advocates the destruction of all ownership in property, the destruction of all religion and belief in God. It is a movement organized against Democracy and in favor of the power of the few built by force. Bolshevism, syndicalism, the Soviet Government, sabotage, etc., are only names for old theories of violence and criminality.

Russian Labor Crushed.

"Though their adherents in this country are advocating and fomenting strikes, Lenine and Trotzky forbid strikes, and trade unions are being broken up and completely subordinated to the will of the few demagogues in control in Russia. This Bolshevist experiment on the living body of the Russian people has not proven in any sense of the word an experiment in Democracy. The Bolshevist leaders frankly repudiate democratic principles as we understand them. It has been a gamble which meant for Russia, and, indeed, for the whole of humanity, enormous losses in lives as well as in material resources. The Bolshevists have run up a colossal bill which the Russian workmen and peasants will have to pay.

"Reds" Menace America.

"Having lived at the expense of the Russian people for two years, these speculators in human lives and other people's earnings are trying to move to new fields to the east and to the west, hoping to take advantage of the economic distress and confusion of mind in which humanity finds itself after the terrific strain of five years of war.

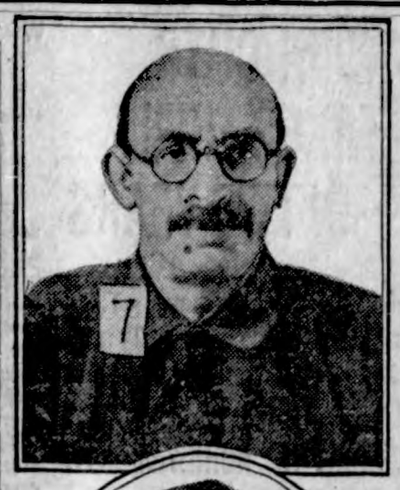
"Its sympathizers in this country are composed chiefly of criminals, mistaken idealists, social bigots and many unfortunate men and women suffering with varying forms of hyperesthesia. They are enemies of the government, of the church and of the home and advocate principles which mean the abolition of all three of these safeguards of civilization.

Would Rob Everybody.

"Twenty million people in this country own Liberty Bonds. These the 'Reds' propose to take away; 9,830,000 people in the United States own farms and 3,838,000 more own homes, which they would forfeit; 11,000,000 odd people have savings accounts in savings banks and 18,000,000 people have deposits in our national banks, at which they aim. There are hundreds of thousands of churches and religious institutions, all of which they would abolish. In other words, 110,000,000 hard-working and saving people who own property, love liberty and worship God are asked to abandon all the ideals of religion, liberty and government, which are the outcome of the struggles of their fathers and their own development, and to place themselves, their homes, their family and their religious faith in the keeping and their property under the domination of a small group of Lenines and Trotzkys.

Protection Promised.

"This department, as far as existing laws allow, intends during the forthcoming year to keep up an unflinching, persistent, aggressive warfare against any movement, no matter how cloaked or dissembled, having for its purpose either the promulgation of these ideas or the excitation of sympathy for those who spread them. The movement will not be permitted to go far enough in this country to disturb our peace and well-being or create any widespread distrust of the people's government. It will fall away before the light of popular knowledge and appreciation of its aims and purposes."



ALEXANDER BERKMAN
and
EMMA GOLDMAN,
Deported by U. S. Department of Justice as Leading Spirits in Communist Plots.

RED PAMPHLETS YANKS SPURNED

Poison Propaganda to Russian A. E. F. Revealed by U. S. Secret Service.

Extracts from pamphlets, published by the English-speaking Communists in Russia, and distributed among the American troops in the North—now in the possession of the U. S. Department of Justice.

"Comrades! Drop this dirty work. Turn your guns on your real enemies, the sweaters and capitalists.

"Come with us in the far nobler struggle to establish the triumph of labor the world over.

(Signed) N. LENIN."

"East and Central Europe is aflame with the revolt. The exploiting class has in some countries fallen, and in others are on the point of falling. The dawn of the day of Labor's emancipation has come!"

"You have arms. You know how to use them. Will you, like slaves, use them in defense of your master, or will you use them to help your class be free? If the former, then you know that you will meet with determined resistance of the united revolutionary people of East and Central Europe, and History will be your judge. If the latter, then here's a hearty welcome into the ranks of international labor."

"We want you to understand that every country in the world—including your own—can become a socialistic state, a workmen's country, if only it follows the Russian example. Every nation in the world—including the 'yankee race'—can become a really free nation, if it only does away with the trusts, the money lords and the bloodthirsty exploiters. It is up to you American soldiers to do it! It is up to you to bring the great lesson of the Russian Revolution home to your toiling and suffering brothers. It's up to you to start it there—in your own America, you just start it—and your brothers will follow you! You just dare! You have nothing to lose but your chains. You have a world to gain.

"You just dare to take home with you the Red Banner of the Revolution—and inscribe upon it:

"Down with capitalism!
"Long live Industrial Freedom!
"Long live Socialism!"

"You probably would let us alone and go home, if your officers would let you. But they do not intend to let you do so. You are under their orders, and they are under the orders of "higher ups," and those are under the orders of "still higher ups," etc. At the top of the whole pile are the wealthy capitalists who want to get their greedy hands upon the mines and factories, railways, etc., of Russia. That is the reason you are here to rob workingmen and make millionaires richer.

"We know that you are bound, hand and foot by discipline and have been in blind ignorance of what you were doing here or why you came. The only way that you can do the decent thing is by breaking the discipline that drives you to this crime against your own kind, the working class.

"The war is over. There is no honest reason for you to submit to military orders. You are not fighting 'German militarism.' You are submitting to it when you obey the commands of your own officer.

"You can break away. We know that you can, for we did. You are powerful enough and numerous enough to arrest the officers or to do with them what you please. Or you can come over to us."

If Its to Eat or Wear

We Have It

We carry a nice line of Fresh Groceries--Ladies, mens and childrens shoes for all kinds of wear--also a Complete line of

Dry Goods

Come in and let us show you the new goods for Spring which are coming in at this time. We will be interested to show you and you will be interested to see it,

LOWDEN CUTS TAXES THIRD IN TWO YEARS

Illinois Executive Shows That Business Methods More Than Counteract High Prices.

A RECORD OF ACHIEVEMENTS

Executive Departments Consolidated —Business Men Put in Office— Sound Financial Policy Applied to State Affairs.

Gov. Frank O. Lowden's great record as war executive of Illinois has made him one of the leading candidates for the Republican nomination for president. It is a story of administrative achievements. Every pledge to the people has been redeemed.

Despite high prices and unsettled conditions due to the war, Gov. Lowden, by the practical application of business methods to the management of the state's affairs, reduced the tax rate in Illinois 33 per cent in two years. His friends are certain that he can do for the nation what he has done for Illinois in the matter of good government and lower taxes if he is given the opportunity.

When Governor Lowden assumed office as executive of Illinois in January, 1917, the state treasury was practically bankrupt. There was only $550 to the credit of the general fund, when outstanding bills had been paid. One of his first official acts was to abolish many political jobs by combining the work of 125 different departments and bureaus into nine compact central departments. Gov. Lowden also had the state adopt a budget system which he thought would be a model for other commonwealths. He placed business men and trained experts in charge of each of these departments with gratifying results to the taxpayers.

The cost of conducting the state government was reduced hundreds of thousands of dollars a year while the quality of service to the public showed a marked improvement. The effects of a business administration in the state were manifest in a short time. The state gradually built up a cash balance and was able to discount its bills.

As a practical illustration of what good government means it is officially estimated that Illinois will have a cash balance of $9,877,225 on hand July 1, 1920, in spite of a reduction of 33 per cent in the tax rate. This is what Gov. Lowden's business administration has done for Illinois.

In addition to these things Gov. Lowden succeeded in accomplishing these concrete results:

Began work on the state's $60,000,000 good roads system. Two hundred miles of good road were built last year. One thousand miles will be completed in 1920.

Authorized the beginning of work on the last link of the state's system of waterways, which will connect the Great Lakes with the Mississippi river.

Obtained needed tax reforms for the people.

Reorganized the state's penal and charitable institutions on a humane basis.

Brought about a constitutional convention for Illinois, which is now in session forming a new basic law for the state.

Friends of Gov. Lowden believe that actions speak louder than words, and they point to his public record as evidence that he is the type of man needed for president in this critical period of the country's history.

PROGRESSIVE PARTY CHIEFS BACK LOWDEN

SENATOR McCORMICK, HAROLD ICKES AND OTHERS PUSH ILLINOISAN IN RACE.

The closest friends of the late Col. Theodore Roosevelt and former leaders of the Progressive party in Illinois and other states of the middle West are enthusiastically supporting Gov. Frank O. Lowden's candidacy for the Republican nomination for president. United States Senator Medill McCormick is one of the most active workers in Gov. Lowden's behalf, both in Washington and in Chicago.

Other former Progressives who are fighting for Lowden in the present campaign are: Harold L. Ickes, former chairman of the national committee of the Progressive party; Congressman Ira C. Copley of Aurora; B. F. Harris of Champaign; Frank H. Funk of Bloomington, Progressive party candidate for governor of Illinois in 1912; George H. Porter of Chicago, and Thomas D. Knight, former president of the Chicago Progressive club.

Col. Roosevelt was the guest of Gov. Lowden for three days at the executive mansion in Springfield, Ill., in August, and again in October, 1918.

If nominated for president Gov. Lowden will, in the opinion of the leaders, unite all factions of the party. He is perhaps the only candidate mentioned acceptable to the old leaders as well as to the Progressive element

WOMEN ARE KEEPING BOOKS IN 1920 THRIFT CAMPAIGN

Feminine Army Starts Three Months' Test to Pave Way for Safe Investment.

The savings division of the treasury department is depending on the women of the nation not only to help bring down the high cost of living, but to establish the permanent practice of saving money and material, and finally the investing of these savings in safe securities, such as War Savings stamps and $100 and $1,000 Treasury Savings certificates.

Under the signature of William Mather Lewis, director of the savings division, a letter has been sent to the presiding officers of all the principal women's organizations of the country. The general plan for the work of the women in 1920 has been worked out in a national way by Mrs. Grace G. Bartlett, vice director in charge of women's organizations.

Supplementing the letters sent out by her and Director Lewis, a similar letter has been sent to all the women's organizations in the five states of the Seventh district that have no national thrift chairmen. In his letter Director Lewis said in part:

"The influence of women in working out the great economic problems is invaluable. It is in the power of women to regulate the use and control the price of the necessities of life. They are the buyers. They must also be the savers. When this power is applied in a concentrated way, women will be one of the greatest factors in solving the present problem of the high cost of living and in establishing the permanent practice of saving money and material. The savings division called into conference the national thrift chairmen of the following women's organizations: Association of Collegiate Alumnae, Daughters of the American Revolution, General Federation of Women's Clubs, National Catholic War council, National Congress of Mothers and Parent-Teachers' associations, National Council of Jewish Women, National Federation of Business and Professional Women's Clubs, National League for Women's Service; Women's department, National Civic Federation, Young Women's Christian association.

"It was agreed that these organizations should be asked to make a test among their membership of the wisdom with which money is spent. This test was to be started January 1 and continued as an experiment through February and March. The plan is as follows:

"January—To keep accounts. Each individual will be asked to keep an account of her daily expenses, grouping them under such items as rent, food, clothing, household service, amusements, incidentals, etc.

"February—To save. Each individual will analyze the January expenses and make an effort through information gained in January to save a certain amount through conservation without hardship.

"March—To invest. Each individual will make a calculation of how much was saved on living expenses in February over an equal number of days in January. In this month an effort will be made to encourage the members of these organizations to invest their savings in government securities."

WAR SAVINGS STAMPS OF 1920 PAVE WAY TO INDEPENDENCE

The 1920 War Savings stamps are carmine in color and bear the head of George Washington. The price for January is $4.12 and it increases one cent a month to $4.23 in December. The 25-cent Thrift stamp also is on the market and is used as formerly to evidence payments on account of War Savings stamps and certificates. The 1920 War Savings stamp in size approximates the larger stamp used in 1918. It will have a maturity value of $5 January 1, 1925.

War Savings stamps of the series of 1918 and 1919 shall not be affixed to War Savings certificates of the series of 1920 and War Savings stamps of the series of 1920 shall not be affixed to War Savings certificates of 1918 or 1919. War Savings stamps of one series affixed to War Savings certificates of another series will not add to the value thereof. Thrift stamps, as such, are not directly redeemable in cash, but each Thrift card will, as usual, have spaces for 16 Thrift stamps. A filled Thrift card may be exchanged for a War Savings certificate stamp, series of 1920, at any post office or other authorized agency. As usual, post offices will require a written demand ten days in advance before payment will be made before maturity, and such War Savings stamp certificate must be surrendered for payment within 60 days after such demand. Otherwise the demand will be deemed to be waived.

WAY TO KNOCK OUT H. C. L.

"Only the most determined efforts toward thrift, economy, saving and simple living," said William Mather Lewis, director of the savings division, treasury department, "will bring about a reduction in the high cost of living, the stabilization of national industry and commerce, and the continuation of prosperous condition."

START TO BUILD A FORTUNE.

Rome wasn't built in a day. It went up stone by stone. Fortunes are not built in a day, either; they are built dollar by dollar. Commence building your fortune today by investing in Government Saving Stamps and keeping it up throughout 1920.

New Spring Styles

It's not necessary to be a judge of cloth in order to buy with safety here.

We'll give you the truth, the whole truth and nothing but the truth.

We know the iuside as well as the outside of every suit we sell and without amendments or reservations we you the facts. Otherwise we could not continue to build up an increasing business.

This week we are opening a few suits in the advanced Spring styles, novel colors and snappy patterns

C. W. Wiles

15th Annual Piano Sale!

of the largest and best stock of high grade Player Pianos ever displayed at a piano sale in Northern Iowa.

Consisting of Nearly Two Car Loads of Fine Instruments.

LISTEN, MR. PROSPECT! I'm talking to you! If you could make two dollars do the work of three—that is—if you could increase the purchasing power of a two dollar bill—make it expand and cover over what ordinarily would cost you three dollars, or make two dollars do the work of three, or five dollars do the work of ten dollars, you would do that very thing, wouldn't you? We all would, sure! We all want to save money but we do not wish to at the expense of quality. That would be poor judgment. But to actually save money on a good standard make high grade player piano, that would be driving a very shrewd deal—a good business transaction. Just a moment, Mr. Prospect! You know it costs to drive all over the country alking piano to the farmers. I might take a dozen trips twenty miles into the country and not learn that you were a prospect. All dealers must drive during good roads in order to get sufficient business to hold their agencies, as side line dealers cannot secure the agencies for the best pianos. Now Mr. Prospect! while the roads are bad let us change the usual order and instead you come to see me. It would just take one trip to attend this annual piano sale, and make your purchase. That is how you can make your dollars stretch out and increase their purchasing power. If we sell five pianos each day for five days at this sale we will have sold twenty-five pianos, which ordinarily would be three or four months' work the old way, driving through the country. This would eliminate much expense. To sell these twenty-five different families in five days if they come straight to my sale and buy of me here, the selling expense would be very little. Now Mr. Purchaser, this clearly illustrates how you can save considerable money by purchasing your piano at this sale.

MANY DEALERS are out of pianos and are not able to buy on account of the shortage of pianos. I am at this time and in this way very fortunate, having had my orders in over a year ago. I can furnish you player pianos good enough for the president of the United States or any ex-president, or Lloyd George of England. This stock of pianos, the greater part were purchased in the month of March, 1919, nearly one year ago, before the many advances in prices by all piano manufacturers. If you have a spark of interest in a good piano or player piano, Mr. Prospect, don't wait, sleep or eat, but get your family into the car or into the bob sled and drive straight to my store. Be the first one here and **be the first to write your check for your choice of pianos as I am going to GIVE the first purchaser the GREATEST bargain of all.** The greatest bargain ever offered before or ever afterwards, in the face of the fast advancing prices by all piano manufacturers. While I have not raised my prices as many other dealers have, they are costing me much more than last year at this time. While they have not raised in proportion to other commodities, but they are fast coming to it and it will be just a matter of a little time. So now is the accepted time for great bargains in pianos or player pianos. Don't resist and be forever a regretter. This sale begins

SATURDAY, FEB. 21

At 1 o'clock p. m. sharp

Auto hire or car fare and hotel expense will be allowed to out-of-town purchasers.

$375.00

5 per cent will be deducted from the special price for all cash purchases.

We sell pianos as far east as Malta, DeKalb and Sycamore, Ill., as far north as Minot and Granville, N. Dak., and as far southwest as Shadron, Neb. I have over 1,000 satisfied customers in and around Hancock county. Ask your neighbor if he didn't get his piano of C. D. Welty. Peter Duffy sent his check in full for a piano before he saw the piano—only heard of me in a business way. Below is his unsolicited testimonial:

Mr. C. D. Welty:—We wish to thank you very much for the pains you must have taken in selecting such a wonderfully fine instrument. We are more than pleased.
Yours very truly, PETER DUFFY, Shadron, Neb.

C. D. WELTY *The Piano Man*
BRITT, IOWA

DID NOT INVENT TELESCOPE

But Galileo Was the First to Perceive Its Possibilities in the Study of Astronomy.

The name of the man who first framed and used a telescope for the observation of the heavenly bodies is Galileo Galilei, though little known in that form. It was this scientist, who died January 8, 1642, who, it may be said, first gave stability and force to the theory which places the sun in the center of the planetary system. In April or May, 1609, Galileo heard at Venice of a little tubular instrument made by Hans Libbershey of Middleburg, which made distant objects appear nearer, and he immediately applied himself to experimentation on the means by which such an instrument could be produced. Procuring a couple of spectacle glasses, each plain on one side, but one convex and the second concave on the other side, and applying his eye to the concave glass, he found that objects were magnified three times, and brought apparently nearer. Soon after having made one which could magnify 930 times, Galileo commenced observations on the surface of the moon, which he discovered to be irregular, like that of the earth, and on Jupiter, which, in 1610, he ascertained to be attended by four stars, as he called them, which, afterward proved to be its satellites.

CRUSADERS WON AND LOST

In the End Nothing Was Gained by Attempted Conquest of the Holy Land.

During the four centuries from the Moslem conquest of Palestine until the crusades Christian, Jew and Moslem lived together in peace. Then along came Peter the Hermit and the Crusaders. The second coming of Christ had been forecast for the year 1000. The passing of that year without any catastrophe awakened an era of Christian piety that held the world safe through the year 1033, the anniversary of the crucifixion.

Peter the Hermit prevailed upon Pope Urban II to sanction the first crusade. It proved a successful venture, for Jerusalem was captured July 14, 1099, and Godfrey of Bouillon elected king of Jerusalem.

Saladin became master of Egypt and Syria toward the end of the twelfth century, after defeating the Crusaders at the battle of Hattin in 1187, capturing the most treasured of relics, a piece of the true Cross. This provoked the third crusade, led by Richard Coeur de Lion and commemorated in Scott's novel, "The Talisman." The Crusaders captured Constantinople for the Venetians, but failed of the entire conquest of Palestine.

Are You a Barometer?

Undoubtedly there is a great relation between the elements and certain complaints in the same way that some seasons of the year render certain people liable to illness more than others. The lower we investigate in the animal world the more prone are its subjects to be affected by the weather. A cat for as much as three days beforehand feels a coming storm; a horse's fine nostrils can sniff approaching rain in an uncanny manner. The birds of the air have but to be watched to see the way in which they seek their nests at a hint of danger in the air. The very trees and plants tremble in a peculiar manner before a severe storm. Many human beings are just as sensitive to the march of the elements, but do not always realize the significance of their sensitiveness. People who suffer from gout, rheumatism or neuralgia know at once when bad weather is approaching. Old wounds make themselves felt at certain times, and the stumps of members long since amputated give pain. Medical men have never satisfactorily explained these strange phenomena, neither can they tell why some people instinctively become restless and excited or moody, or sullen before thunderstorms.

Wilson Not the Only One.

One other president than Wilson traced his line to Carlisle, England; for Zachary Taylor was fifth in descent from James Taylor of Carlisle, who emigrated to this country in 1658. Considering the fairly uniform British extraction of our presidents, few indeed could have gone to the homes of really near ancestors in the British isles. Andrew Jackson is the only one whose father was born there, the elder Jackson having come from Carrickfergus, Ireland, a decade before the Revolution. Grant is not particularly distinguished in that his family had been American in all its branches for eight generations; as much could be said of others. It seems appropriate that the first president in office to visit the mother country felt so intimately the ties of blood that originally gave it the name of mother country.—New York Post.

Rumor.

The character of that sort of information that is generally known as news is changing with vertiginous rapidity. Once news was generally supposed to be a narration of something that had happened or was possibly going to happen, with, of course, due allowances for errors and mistaken judgments. Now, however, news seems to be made up of reporting what somebody alleges might have happened. Rumor, of itself, has a news value. The fact that a rumor existed is sufficient of itself, aside from the truth or falsity of the rumor, its probability or its possibility.

SAVINGS CERTIFICATES OUT; INVESTMENT VALUE SHOWN

"They Always Are Worth More Than You Paid for Them," Slogan of 1920.

"They are always worth more than you paid for them."

With this as their slogan representatives of the War Savings organization of the Seventh federal reserve district are touring the states of Illinois, Indiana, Iowa, Michigan and Wisconsin showing banks, corporations and individuals the high investment value of the 1920 Treasury Savings certificates of $100 and $1,000 denominations. This form of government security has been placed in local banks, and for the financial prosperity of the nation and the individual, the government is urging a wide distribution.

The Treasury Savings certificates, which are virtually "Baby" bonds, bear interest at a rate a little better than 4¼ per cent. The price of the $100 certificates for January is $82.40; February $82.60. The price increases 20 cents a month. The $1,000 certificates may be purchased in January for $824 and in February for $826. This class of security increases $2 a month.

Here are some of the attractive features of the $100 and $1,000 certificates:

They carry valuable tax-exemption privileges.

They cannot depreciate in value, not being subject to market fluctuations.

They are always worth more than you paid for them.

They yield a substantial income, actually more than 4¼ per cent.

They are short term, maturing January 1, 1925.

They represent absolute safety as obligations of the United States government.

A change has been made in the terms of the 1920 certificates. They are redeemable at the treasury beginning with the second calendar month after the month of purchase without the ten days' demand required by the terms of the 1919 certificates.

A special issue of Treasury Savings certificates has been put on the market for conversion purposes. It is possible for the holders of 1918 and 1919 War Savings certificates to convert them into these special Treasury Savings certificates, whose terms and conditions are substantially the same as those of the 1920 issue except for the earlier maturity dates.

Holders of one or more War Savings certificates of the 1918 or 1919 issue which bear War Savings stamps having a total maturity value of $100 or some multiple of a hundred dollars—$200, $300, $400, etc., may exchange the certificates for the same maturity value of Treasury Savings certificates of the corresponding issue. When two or more War Savings certificates of the same issue are offered for exchange, each one need not bear its full complement of 20 War Savings stamps provided the total value of the stamps aggregates $100 or some multiple of it.

Treasury Savings certificates taken in exchange may be made out in favor of new and different owners, if the owners of the War Savings certificates so request.

A Conservative Estimate.

Nine times out of ten, when a man "makes a good husband" for a woman, it is his wife who deserves all the credit.

Such It Was.

Twelve baldheaded men were jurors in a Massachusetts hair-restorer case. "Is this justice?" asked the Brooklyn Eagle. "It may be retributive justice," suggests the Albany Argus. Let's call it destiny."—Buffalo Times.

Social Contract.

An up-to-date bride, when asked at her wedding if she would "love, honor and obey," murmured, "I will if he does financially what he has promised."

Way of Brothers' Wives.

Each brothers' wife thinks that all the other brothers' wives have everything they want.—Fort Worth Star-Telegram.

IS 700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of your corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us about it.

PARTIAL PAYMENT PLAN TO HELP ALL SAVE FOR FUTURE

Seventh District Starts System With Banks to Aid Investment in Savings Certificates.

A partial payment plan which is calculated to give a big impetus to investment in the $100 and $1,000 Treasury Savings certificates, which always are worth more than you paid for them, is being put into effect by the Government Savings organization of the Seventh Federal Reserve District. This system enables the saver who wishes to invest in sound securities to do so on the installment plan as was done in the purchase of Liberty Loan bonds. Payments may be made on a weekly, semi-monthly or monthly basis, the minimum payments being $2, $4 and $8 respectively. The investor enters into a contract with a bank, to which he makes his partial payments. Under this agreement the bank deposits as a "nest egg" for the investor one dollar for each $100 certificate purchased from the bank.

"We have found," said W. B. Bosworth, executive secretary of the Seventh District Savings organization, "that there are vast numbers of people who would like to put their money in these Treasury Savings certificates who cannot afford to part with enough to pay for a $100 certificate in a single payment, so the organization of this district devised a partial payment plan, which was submitted to the Treasury Department at Washington and has received the official sanction of the Savings Division, headed by William Mather Lewis.

"The investor is thus enabled to purchase these Savings certificates on the installment plan and the certificates are turned over to him when he has completed his payments. The bank with which he does business also deposits to his credit in the bank one dollar as a savings account for each $100 certificate purchased. We feel that this partial payment system will enable many thousands to invest in these Government securities who otherwise would not be able to do so. It also will mean in many cases the starting of bank savings accounts.

"The safety of these securities is a feature that should not be lost sight of. Being registered, they are insured against loss through theft or fire. If one ever needs the money the certificates are redeemable, beginning with the second calendar month after the month of purchase without the ten days' demand required by the terms of the 1919 Savings securities."

Following is the text of the agreement entered into between the purchaser and the bank he selects:

I hereby enter my subscription with the bank named above for $..... (Maturity Value) in Treasury Savings Certificates, to be paid for regularly (Weekly) (Semi-monthly) (Monthly) at the rate of $..... Payments will begin on ....., 1920, and in no event can be completed later than December 31, 1920.

Purchase Price of $100.00 Certificates.

If final payment is made in July	$83.60
If final payment is made in August	83.80
If final payment is made in September	84.00
If final payment is made in October	84.20
If final payment is made in November	84.40
If final payment is made in December	84.60

Upon completion of said payments you agree to deliver to me the above described certificate or certificates, and for each $100 certificate so purchased to deposit $1.00 in your bank to the credit of a savings account with me (or any person I may designate), upon surrender to you of Partial Payment Contract of same date and number as this card.

It is understood and agreed that if I fail to make all payments promptly as above agreed and if any payment shall continue in default for more than thirty days, you may, in your discretion, after due notice to me, by letter addressed as below, issue to me War Savings Stamps and Thrift Stamps equivalent to the sum of all money actually paid in, upon surrender to you of said Partial Payment Contract. It is further agreed that I shall also be entitled at any time prior to completion of payments to a like refund of all payments made, if I so request and surrender the contract.

It is understood that this contract is solely between the bank named above and the subscriber and that no obligation on the part of the United States arises except on the Treasury Savings certificate (or certificates) after delivery to the purchaser.

FROM POVERTY TO $200,000,000.

The importance which the late Henry C. Frick placed on thrift and the habits of saving is clearly shown in the incidents of his career. Mr. Frick, who was called the founder of the industrial growth of Pittsburgh, was born in poverty and compiled an estate which at his death was estimated at fully $200,000,000.

HERE'S REAL GUIDE IN BUYING

Expert on Economics Gives Some Practical Tips on How and When To Purchase.

"How to buy, when to buy, when not to buy; save food, but encourage business."

With this as his guide, A. L. Marlatt, director of course in economics at the University of Wisconsin, has compiled the procedure to cut the high cost of living, and his outline has been sent to every woman's organization in the Seventh Federal Reserve District by the Government Savings organization in connection with the three months' campaign of the women in savings as paving the way for safe investment in government securities. Following is the guide as outlined by Prof. Marlatt:

HOW TO BUY:

1. Direct from the producer; at points where material is made; by parcel post; in municipal market.

2. Through wholesaler; co-operative buying (NOT for hoarding, but reasonable use); seasonable buying (contracts for future delivery insure reasonable prices for producer and buyer).

3. Through retailer: cash and carry stores. 5 per cent off for cash. 10 per cent off for cash and delivery. Buy in amounts so that dealer can cut prices for you. Pay cash or pay before the tenth of the month (so dealer can secure discounts).

WHEN TO BUY:

(Raise all the food you can.)

1. After study as to needs for week, month, season or year. Order once a week or order twice a week.

2. After distributing funds available, so that no need for healthful living is neglected.

3. Study as to exchange value in foods so that family will not suffer.

SAVE THE CHILD FIRST—They need to build muscle, they need to build bone, they need growth determiners.

SAVE THE ADULT SECOND—Adults need repair foods, adults need energy foods, adults need regulator foods. At Saturday sales, white goods sales, mill end sales. Avoid bargain counter sales unless you know the original price.

WHEN NOT TO BUY:

1. When product is a needless luxury.

2. When trusts have put up the prices (consult your state's attorney).

3. When by needless buying in large amounts prices may be sent soaring.

Japanese Claim Credit for Fan.

Japan takes credit for the folding fan. The original kind was of the palm-leaf variety—an oval or round shape which could not be folded. But Japan conceived the idea, just when or how nobody knows, of fastening half a circle of paper on a frame made of sticks fastened together at one end—and the collapsible fan resulted.

HEN KNIGHTS WERE BOLD"

s of the Tournament and the Joust Must Have Seen Some Pretty Lively "Scraps."

e national sports of Europe were long time confined to tourna- nd jousts, most of which were ated in by nobility, with the as a spectator.

e tournaments saw companies of five to a dozen knights ranged ist each other in the field, with es to see that the regularly set be observed. The plan of each stant was to unhorse the other blow with a blunt lance received from in front. A knight thrown side blow was considered the vicn that it showed poor horsemanon the part of the other.

e joust was entirely different the tournament, being virtually el, and usually a fight to death. ights seeking to fasten themselves saddle and thus save themselves being thrown, were deprived of thood. The knight was permitted ar an outer garment over his arthus lending a gay appearance to ontending forces.

Its Need.

am writing a book for chiropo- " hope it has plenty of foot notes."

Its Place.

n you tell me where a bight of is?" "I guess it is generally in the mouth of a river."

Earth presents one unconquerable trinity—Youth, Health and Brains.

ONLY WAY ASPIRIN SHOULD BE TAKEN

Look for name "Bayer" on tablets and follow directions in package.

The Bayer Company, who introduced Aspirin, tell in their careful directions in each package of genuine "Bayer Tablets of Aspirin" that to get the best results one or two glasses of water should be drank after taking tablets.

"Bayer Tablets of Aspirin" to be genuine must be marked with the safety "Bayer Cross." Then you are getting the world-famous Aspirin, prescribed by physicians for over eighteen years.

Each unbroken "Bayer" package contains proper directions for Colds, Headache, Toothache, Earache, Neuralgia, Lumbago, Rheumatism, Neuritis, and for Pain generally.

Handy tin boxes of twelve tablets cost but a few cents. Druggists also sell larger "Bayer" packages. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.—Adv.

Eventful Day in Yuma.

What must have been the excitement in Yuma, Ariz., when on January 4 rain fell there for the first time in 45 years? Grown men and women, young men and women, boys and girls who had never seen rain gazed in alarm or delight or wonder at an amazing sight; they saw the heavens veiled for the first time and water falling from the gray curtain drawn across their sky of brilliant blue! Probably the little ones were soon barefoot and paddling about in puddles; men and boys throwing off their coats more intimately to feel the delights of a cloud-sent shower bath. A shower took on the proportions of an event; a natural phenomenon reached the heights of a treat.

They Get Giddy.

Charles M. Schwab said at a luncheon in Pittsburgh, apropos of a young Pittsburgh banker who had eloped to South America with his cashier's wife:

"That settles Tom. His rise was rapid. He climbed high. But success spoiled him, and now he's down and out."

With a thoughtful smile Mr. Schwab added:

"One reason why there's always room at the top is that so many people, once they get there, become giddy and fall off!"

The Selection.

"I have been eating fish for the benefit of my brain."

"Weakfish?"

VALENTINE VERSES.

By Mary Humphrey.

To a Girl He Left Behind.

Dear Girl of My Dreams, I am coming,
Back from war I am coming to you;
And I wonder what fate will be waiting for me,
And will you be glad I came through?
It's so strange. They have called me a brave man,
And they gave me a medal or two;
In the fight I feared nothing—and yet I'm afraid
Of a small brown-eyed person like you!
Do you know that I love you? I wonder.
Oh, what ages and ages it seems
Since I left you! Perhaps it's absurb, but I hope
That I've been the Man of Your Dreams.

To His Fairy.

If I just dared to say it,
You sure can bet I would
Right up and tell you what I feel—
Gee, but I wish I could!
Oh, kiddo, you're so classy,
With those big eyes of blue,
You've got the others beat a mile—
There sure ain't none like you.
No chance for me—I know it,
I'm such a roughneck guy—
But if I thought you'd look at me,
Oh, Boy! I'd make the try.
Believe me, you're some fairy,
You're better'n I deserve;
I'd send a Valentine—but gee,
I just ain't got the nerve!

A Substitute.

A Valentine I've tried to find
That's nice enough for you;
But there is none—so here's my heart,
I hope that it will do.

To His Mother.

Today an old sweetheart of mine
Is my most precious Valentine;
My best and oldest sweetheart you
Are, mother dear. So loyal, true
And tender always. And your love
I cherish over and above
Earth's fairest gifts. You've made of me
All that I am and hope to be,
Mother mine,
My Valentine.

DAY SACRED TO LOVE MISSIVES

IT WAS an enterprising young girl who first captured the valentine trade for America. Her name was Esther Howland. After graduating from Mount Holyoke seminary she resided with her father, who was a stationer in Worcester, Mass. In 1849 she received from England a manufactured valentine, the first she had ever seen. It interested her so much that she decided to see whether she could make some of these valentines and find a sale for them.

She collected some lace paper, some printed verses and sentimental pictures, fixed up a few valentines and gave them to her brother, who was a traveling salesman for a grocery store. To her amazement her brother returned with orders for $5,000 worth of valentines! Her astonishment knew no bounds. She quickly got together some girl friends, taught them what she knew about valentines and commenced a prosperous trade that was to reach the one hundred thousand dollar mark.

First Love Missives.

It was a Frenchman who first conceived the idea of composing valentines in verse. Charles, Duke of Orleans, was taken prisoner by the English at the battle of Agincourt, in 1415. He was consigned to the Tower of London, where he spent the next twenty-five years of his life. But the cold walls of his dungeon could not completely dampen his sentimental nature, and from his gloomy vault came sunny little verses to the number of sixty, which are still to be seen among the royal papers in the staid old British museum. One of them reads:

Wilt thou be mine? Dear love, reply.
Sweetly consent or else deny.
Whisper softly, none shall know—
Wilt thou be mine, love? Aye or no?

Spite of fortune we may be
Happy by one word from thee.
Life flies swiftly. Ere it go,
Wilt thou be mine, love Aye or no?

England at once adopted the fad which its royal prisoner had set, and Valentine's day found the coaches more than usually laden with poetic outpourings of lovers, friends and even slight acquaintances.

Old Romance Recalled.

One of the most romantic histories of Valentine children is that of Lady Sarah Lennox, born on February 14, 1745. In fact, she apparently inherited a romantic temperament, for her own story is usually prefaced with a sketch of her parents' romance—by way of driving home the story's admonition, perhaps.

Her father's marriage was no more nor less than a bargain to cancel a gambling debt between the couple's parents. The young duke, then Lord March, was brought home from college to wed the plain little girl-bride just out of nursery. At the conclusion of the ceremony the indignant bridegroom fled to the continent with a tutor in tow, where he spent three years. On his return to London he carefully avoided going home, where he fancied a wrathful young woman was waiting to swoon at his arrival.

Instead, he went straight to the theatre and saw there a very handsome lady. He cursed his luck, but had breath left to ask who she might be. "Lady March, the toast of the season," informed his friends, to his utter astonishment. Then he blessed his luck, claimed his bride and, as it turned out, was very happy to the end. Her love was so great, too, that she died of grief for him after a year of widowhood.

Sentiment and Business.

Samuel Pepys has something to say in his famous diary about most of joys and disturbances, great and small, with which human nature is acquainted. Consequently one does not need to search very far to find allusions to Valentine's day and the customary pranks that it involved in the England of the seventeenth century.

On February 14, 1667, the following entry is made in the diary:

"This morning came up to my wife's bedside (I being up dressing myself) little Will Mercer to be her valentine, and brought her name written upon blue paper in gold letters, done by himself, very pretty; and we were both well pleased with it. But I am also this year my wife's valentine, and it will cost me five pounds; but that I must have laid it out if we had not been valentines."

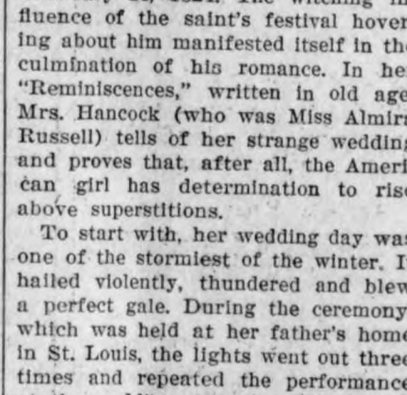
America's Noted Valentine.

America's most noted valentine was General Winfield Scott Hancock, born February 14, 1824. The witching influence of the saint's festival hovering about him manifested itself in the culmination of his romance. In her "Reminiscences," written in old age, Mrs. Hancock (who was Miss Almira Russell) tells of her strange wedding and proves that, after all, the American girl has determination to rise above superstitions.

To start with, her wedding day was one of the stormiest of the winter. It hailed violently, thundered and blew a perfect gale. During the ceremony, which was held at her father's home in St. Louis, the lights went out three times and repeated the performance at the wedding reception. The guests were filled with terror for the young bride who was beginning life under such suggestively evil omens. And by way of enhancing the evil influences that appeared to be abroad the crowd outside the house got the word that the bride was wearing a spun glass dress, and their curiosity reached the point of mob violence before the police could beat them back to make room for the passage of guests.

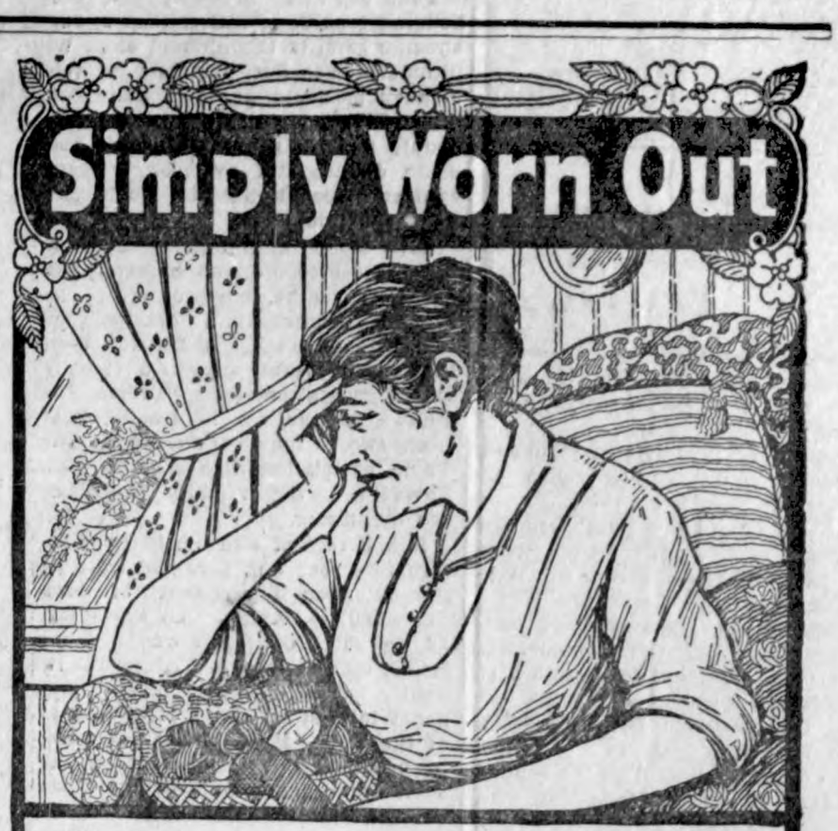
But the bride laughed in the face of these witches' pranks and lived to share the honors that her husband's career brought him.

St. Valentine's Mission.



When winter's at his oldest
And coldest
And boldest,
Then cometh good St. Valentine,
To show that love is burning
And sighing and yearning,
And breathe upon the wintry earth his tenderness divine.

When life is at its bleakest
And meekest
And weakest,
Then cometh good St. Valentine,
To show that love is rosy
And wistful eyed and cozy,
And breathe on every torpid heart his tenderness divine.



How Many Women Are Like This?

Can anything be more wearing for women than the ceaseless round of household duties? Oh! the monotony of it all—work and drudge; no time to be sick; tired, ailing, yet cannot stop. There comes a time when something "snaps" and they find themselves "simply worn out," and to make matters worse, have contracted serious feminine disorder which almost always follows the constant overtaxing of a woman's strength.

Then they should remember that there is no remedy like Lydia E. Pinkham's Vegetable Compound—the experience of these two women establishes that fact:

Cedar Rapids, Ia.—"After the birth of my last child I had such painful spells that would unfit me entirely for my housework. I suffered for months and the doctor said that my trouble was organic ulcers and I would have to have an operation. That was an awful thing to me, with a young baby and four other children, so one day I thought of Lydia E. Pinkham's Vegetable Compound and how it had helped me years before and I decided to try it again. I took five bottles of Vegetable Compound and used Lydia E. Pinkham's Sanative Wash and since then I have been a well woman, able to take care of my house and family without any trouble or a day's pain. I am ready and thankful to swear by your medicine any time. I am forty-four years old and have not had a day's illness of any kind for three years."—Mrs. H. Koenig, 617 Ellis Blvd, Cedar Rapids, Iowa.

Sandusky, Ohio.—"After the birth of my baby I had organic trouble. My doctor said it was caused by too heavy lifting and I would have to have an operation. I would not consent to an operation and let it go for over a year, having my sister do my work for me as I was not able to walk. One day my aunt came to see me and told me about your medicine—said it cured her of the same thing. I took Lydia E. Pinkham's Vegetable Compound and used Lydia E. Pinkham's Sanative Wash and they have cured me. Now I do my own housework, washing and ironing and sewing for my family and also do sewing for other people. I still take a bottle of Vegetable Compound every spring for a tonic. I recommend your medicine to others who have troubles similar to mine and you can use my letter if you wish."—Mrs. Paul Papenfuse, 1325 Stone St., Sandusky, Ohio.

Fiery Itching and Burning of Skin Is a Most Cruel Torture

Sure Speedy Relief in S. S. S.

Why suffer from these persistent tortures when it is so easy and costs so little to do as thousands of others have done and get relief through S. S. S.? It is now well known that eczema comes from the blood. By giving the blood a thorough cleansing you not only get sure and speedy relief but you also build up the system and renew your vigor and vitality.

This good medicine has stood the test of 50 years as one of the greatest blood cleansers known. It is guaranteed entirely free from minerals of any kind.

The experience of others has established the unfailing merits of S. S. S., and there's no question about the wisdom of your giving it a thorough trial. All reputable druggists sell it. If in doubt as to your case write to Medical Advisor, Swift Specific Co., Dept. 54, Atlanta, Ga.

Iowa News

Items of Interest Summarized for Busy Readers .:.

Rainy days are excellent times to put the tractor in shape for the next season.

Almost every farmer can plant and cultivate a larger acreage than he can harvest.

A. H. Refshauge has purchased the 300 acres known as the Porter Stock Farm near Riceville for a consideration of $72,000.

County Agent Maakestad of Kossuth county claims the largest farm bureau membership in Iowa with 2147 members and expects 150 more.

Iowa Cleaners and Dyers' Association, at convention in Waterloo, pledged funds to establish a cleaners' and dyers' school in connection with Iowa State College, at Ames.

The best practices of feeding the by products of the sugar-beet crop will yield a net profit equal to half the net profits usually had in growing and marketing the crop of beets.

Stock on farms in the United States was worth $8,443,000,000 on Jan. 1, the agricultural department announced as the result of a nation-wide survey. This is an increase in value of three per cent in which Iowa leads.

At the public sale held on the Henry Mathes place near Newton chickens brought the high price of $15 per dozen. Corn was sold at $1.25 a bushel. The farm implement and stock also brought high stock.

Forty farmers of the Keystone vicinity have signed the membership roll and paid the membership fees to the Keystone Live Stock Shipping Association and the organization for mutual live stock shipping is assured.

About forty Iowa teachers and educators depart for Cleveland, February 21. They will attend a conference of the National Education association. They will meet Wisconsin and Minnesota delegations in Chicago, Feb. 22, and go to Cleveland on special train.

A follow up drive for Farm Bureau members will be put on in Monona county. More than 90 per cent of the farmers of the county are already members of the Farm Bureau. Many farmers are voluntarily going to the office of the County Agent to sign up for membership.

The annual Delaware county farm institute held in Manchester recently brings to mind the fact that Delaware county organized the first farmers' institute held in Iowa in 1875. Miss Clara Sutter, home demonstration agent of Black Hawk county spoke on poultry. The program was very interesting and instructive.

The city council of Belle Plaine has bought first class fire equipment in an effort to safe-guard the property owner from loss by fire. The purchase includes 300 feet of bi-lateral hose with a new controlling nozzle. This added to the present apparatus for fighting fires, gives the city plenty of equipment.

That skunks will eat bees is the testimony of E. L. Denslow of Black Hawk county. He came upon one in the act of moving his hives enough to bring out the bees, and when they came out the skunk ate them. Denslow fired at the ahimal but missed. Later the skunk came back and repeated the performance, again getting away.

W. H. Lower has sold his farm of 109 acres to Seymour Grimes for $40,000 averaging $367 an acre, which is the highest price an acre paid for any farm in Fayette county except small acreage tracts. Mr. Lower bought the place thirty years ago for $6,000, and so on the advance of $34,000 made $1,100 a year by the increase in the value of the land during that time.

A credit balance of $1,207.92 is shown above the expense necessary to run the Sac county farm the past year. The invoice lists a 160 acre farm with improvements, valued at $27,200, or $170 an acre. In addition there is 2000 bushels of corn, 600 bushels of oats, 16 brood sows, 111 head hogs, 34 ewes, besides much other stock, the entire inventory totalling $41,020.35.

The sugar factory at Mason City has closed for the season, but fifty men are being retained to work on a remodeling job in the plant. 12,000,000 pounds of sugar was made this season as against 18,000,000 last year. The deficiency is said to be the result of a poorer quality of beets this year. During the operating season 300 persons were employed. Two shifts of twelve hours each were required to turn out the sugar this year.

Ben Pringle, well known Floyd county farmer, gave out some interesting figures to County Agent Dickinson recently on the cost of feeding his hogs. Mr. Pringle said: "During the feeding period of my hogs now on feed, the hogs gained 1050 lbs. They consumed 72 bushels of corn at $1 a bushel early in the fall, and 350 pounds of tankage, costing 55c per pound. This makes the cost of gain on these hogs $9 per hundred. Can you beat it? The tankage was 8.7 per cent by weight of the amount of the corn fed."

That hog "flu" is caused by poor housing conditions rather than by any specific germ is the opinion of K. W. Stouder, extension professor of veterinary medicine at Iowa State College. When farm animals get sick people make a great effort to find some disease and overlook ordinary sanitary precautions that would prevent the trouble.

Live stock shipping associations, organized over Monona county in the past few months, are prospering. The Blencoe organization, has shipped two cars of stock. A general meeting and program was held recently and a good attendance was had. The Onawa association is leading with from two to four cars a week. The Turin association also is doing well. Farmers in the vicinity of Soldier are organizing.

Rex Beresford and W. H. Lapp, instructors sent out thru the state by the extension department of Iowa State college, Ames, who are engaged in short course work in Black Hawk county were in Cedar Falls recently. These instructors report great interest on the part of farmers of the state. Many indicate a desire to profit by the experiments of the agricultural department of Iowa State college and are adopting the suggestions put out as fast as they come to them.

Word has been received in Boone of the death in Long Beach, Calif., of Rev. W. D. Weaver, a former resident of Boone. Mr. Weaver lived there for about seven years before moving to California and was pastor of several Baptist churches in various parts of the state, at Ames, Newton, Fort Dodge, Webster City, where he was ordained, Comanche and other Iowa cities. He served thruout the Civil war with the 125th Illinois volunteers and was educated at Shurtleff College, Alton.

County Agent Dickinson reports that he has met with considerable success in the organization of the Floyd County Boys' and Girls' Club, which was organized with the cooperation of the Security Trust of Charles City. He says: The calves cost from $155 to $400 each. I tried to get good individuals with good breeding. The Herefords were all purchased in one neighborhood in Cerro Gordo county and the Shorthorns in one neighborhood of Black Hawk county.

In some counties the recent farm bureau campaign made almost a clean sweep of the rural citizenry. Clay county is probably entitled to the banner in that line, as the record now stands, with a farm bureau membership of 1531 from the 1604 farms in the county. Benton County has 2291 farms and listed a total of 2010 members for the farm bureau. O'Brien County, with 1798 farms has 1358 members. Cherokee County has 1777 farms and 1675 farm bureau members. Many other counties show almost as high a proportion of farmers joining. In dozens of town ships over the state a clean sweep was made, every farmer in the township joining the organization.

It is interesting to study the different methods employed in handling feeding steers. Much informations is secured from studying how the other fellow does things. No stockman knows it all and some obscure under study may be able to give the best of them pointers in the handling of stock. This is as true with pure bred animals as it is with feeders. We gain much knowledge from absorbing from each other. That is why organizations of men in a similar calling are so helpful. In Jackson county near Maquoketa, lives John Mommsen. His neighbors call him "Little Johnny," but he has a national reputation when he goes to the great markets of the country with his finished product. Recently he marketed his fourth shipment of what he terms hand-fed steers. For these animals he received $19.65 per hundred, the top of the market. In fact, nothing sold higher and packers were anxious to get his animals.

Announcement is made by J. W. Coverdale, secretary of the American Farm Bureau federation, that nineteen states have now ratified the constitution of the national organization and are ready to assume full rights and duties of membership. To that end the secretary has issued an official call for a meeting of the directors and members of the executive committee of the American Farm Bureau federation to be held in Chicago March 3. A meeting of the executive committee of the Iowa Farm Bureau federation at the secretary's office in Ames approved a tentative budget submitted by the secretary to cover the coming year's activities and a constructive program of work formulated. The most important item of the budget, and one which marks a new departure in farm organization work, was the appropriation of $20,000 to establish a bureau or department of research work to cover crop production, transportation and marketing.

Farmers to the number of one hundred or more have organized a company and will use power and light from the municipal plant in Traer. An order has been placed for poles, wire and all necessary equipment.

If you figure on the installation of drain tile this spring, you will find it advisable to place your orders at once. This is the advice of Prof. A. W. Turner, Iowa State college, who spoke in Carroll recently on matters pertaining to soil erosion and agricultural engineering problems in general.

Local News Items Of Interest to Everybody.

Dr. R. W. Schultz, Osteopathic Physician, Masonic Bldg., Garner, Ia.

Minnie Blank returned Monday from a visit at Goodell.

See Welty's big half page ad, telling you about his wonderful cut-price piano sale. adv.

Mr. and Mrs. E. G. Ell attended the Mason City auto show last Thursday and Friday.

Mrs. Dutro went to Mason City on Monday for a few days' visit with her brother and sister.

C. W. Wiles attended the Auto Show at Mason City last Thursday and Friday.

H. W. Wilson returned to Titonka Thursday after visiting with his sister here a few days.

Nels Palmer was a business caller at the city of Goodell Monday between trains.

Welty, of Britt can save you money on a piano. See his ad telling about the big piano sale, Saturday, Feb. 21st. adv.

STRAYED away, a red sow weighing about 225 pounds, from my place week before last. Finder notify C. V. Marshall. adv-1

Henry Coobs came from McGregor, Iowa, last Friday to spend a week or so visiting at the W. F. Pavey home, and with other friends.

Miss Aravella Emerson returned from Spencer last Saturday where she went for a few days visit with her parents.

Mrs. George Fuller returned to Owasa, Iowa, after visiting with her children and grandchildren here for the past three months, in Klemme.

Mr. and Mrs. Buferd Meyers of Mason City, spent several days the past week with Klemme relatives and friends.

LuVerne Smith who is attending the Capital City Commercial College at Des Moines, came home to spend Sunday with his mother and sister here.

A few more members have been added to the Kemme band, all of whom were young men from the country. The band can use a few more beginners.

Thomas Berhow, of Kanawha, who is on the board of supervisors, was a Klemme caller Tuesday afternoon. While here he looked up some matters of business for the county.

E. S. D. Kahrs received his car load of household goods from Dolliver, Iowa, Saturday. Monday he and Mrs. Kahrs were busy unpacking and getting settled again.

Clarence Johnson spent a couple of days of the past week taking in the auto show at Mason City. Bernice Gimer accompanied him for a few days' visit at Mason City with Miss Hulda Johnson.

Harry Sandrey spilled a lot of printer's ink in this issue of the Times telling about the big sale he will pull off next Tuesday. Look over his half-page ad which you will find elsewhere in this issue.

Marlin Croner left Monday afternoon for Cincinnati, Ohio, on business. He will also make business stops at Chicago and other large cities while he is away.

Oscar Schuldt, of Garner, was an over Sunday visitor with his mother here. Oscar has charge of the battery work at the Bamman Bros. Garage at Garner.

August Barz was a passenger to Garner Tuesday morning on business.

Ernest Lewis came from Mason City last Friday to spend a week with Klemme folks.

Mrs. Raymond White and little son, went to Miller Tuesday morning. Mrs. White's parents held a public sale Tuesday and she went there to help out for a day or two.

C. C. Tessier came over from Garner Monday to see the farmers along the new electric line east of Klemme to take their orders for motors and other electric fixtures.

Henry Maitland, Jr., has been assisting at the Crystal Cafe the past week taking the places of members of the staff who are absent on account of sickness.

Carl Suckow left Tuesday noon for Des Moines to attend the Auto Show. Carl is interested in that line now as he is a traveling salesman for a new kind of carburetor.

When you think of a Piano, think of C. D. Welty, of Britt, he has over 1,000 pleased customers in Hancock County. Welty's Big Piano Sale begins Saturday, Feb. 21st. Read his ad. adv.

Mrs. Marlin Croner, who has been confined to her bed the past week, has so far recovered from her attack of pneumonia that she was able to sit up every day since Sunday, and is rapidly regaining her strength.

Henry Maitland moved in from the farm last Friday and the family are now quite comfortably situated in their new home in the north part of town. Mr. Maitland recently purchased this property from A. Wellemeyer.

John Johnson and family have moved to their new farm east of Klemme. The buildings are all new, being put up last summer. The house is as fine as any in town and has all the modern improvements.

C. D. Welty, the piano man of Britt will have a big piano sale on Saturday, Febr. 21st. All kinds of bargains. adv.

Miss Edna Smith left Monday evening for Des Moines where she will visit a while with her grandmother.

John Miller accompanied a shipment of live stock into Chicago last Saturday night.

R. E. Quintus and his helper came from Garner Tuesday morning to install the plumbing at the new Henry Freie residence and also to install a new water tank for our barber, G. P. McCullough.

Marie Blank visited with her sister at Belmond Saturday between trains.

Karl Kraus, who is well known in Klemme, has leased his hotel at Allison, Iowa, and is now bask as fireman with the Mason City Fire Department.

Mrs. Dutro accompanied by her son's little boy, went to Garner Saturday to meet the mother of the little boy who then accompanied her to Spencer. The little boy has been visiting with his grandparents here for the past four weeks.

Don't forget the home talent play which is put on by the Klemme Royal Neighbors and which they will give at the Idle Hour theatre Friday evening of this week. It is a three act farce-comedy, full of fun and wit from start to finish.

Herman Coobs never likes to have us say where he goes but we have learned that he made another of those frequent trips to Rock Island, Illinois, last Friday. Why don't you bring her here Herman, and introduce the young lady to your friends?

Mr. and Mrs. Alvin Heeren, of Foreston, Illinois, came last Thursday to spend a week or so visiting at the Ben Swalve home and with other Klemme relatives. The young couple are newly-weds and are spending their honeymoon here.

Clark Bredbenner believes in having a modern and up-to-date pool and billiard parlor. Stepping into his place of business is like stepping into any well arranged and well conducted store. He runs a good, clean place of amusement and does not tolerate any profane language or roughness. His latest addition to the business is a beautiful big temp-bar, of the latest design, which enables him to serve cool refreshing drinks to his patrons.

Iowa News

Items of Interest Summarized for Busy Readers .:.

The sweet elderberry crop never fails.

Few small towns in Iowa the size of Bellevue can boast of as modern and finely equipped hospital as the Moulton hospital in that city.

The Farm and Home week short course at Iowa State College to have been held February 9 to 14 has been definitely abandoned by the college authorities.

One thousand dollars an acre income from Iowa land is not bad and that is what A. Miller and sons of Creston have done with their celery land the past season.

Several hundred people of Haverhill, Gilman and Green Mountain, in Marshall county heard some excellent talks by Professor Rex Beresford of Iowa State College, on beef cattle feeding, recently.

Farmers in the vicinity of Bode, Humboldt county, have contracted with the Iowa Sugar Company to raise 385 acres of sugar beets the coming year. By raising this amount they are entitled to a dump for unloading them.

The recent tractor show and demonstration in Sac county was a decided success. Prof. Glass of Iowa State college had charge of the work. Local tractor men cooperated in the work. Eleven different makes of tractors were shown.

Dairymen from all parts of Iowa will assemble at Iowa State College, Ames, in February, for a two-day convention. This gathering is held under the auspices of the Iowa State Dairy Association, which is one of the oldest dairymen's associations in the United States and which has been engaged in dairy educational work in Iowa for the past ten years.

Professor R. T. Parkhurst of Iowa State College conducted successful poultry demonstrations on the farms of S. K. Clemmons and Joe Halter, Scott and Sharon townships, Clayton county, recently. The work met with great enthusiasm. It has been found as a result of the work done earlier in the season along similar lines that of all flocks culled 25 per cent were low producers.

When Harvey Strum, living north of Marshalltown, purchased a young pure-bred Duroc Jersey gilt at a swine show early in 1918 he paid $70 for the animal and thought he was paying a long price. That was little more than two years ago, but Strum sold at public auction recently twenty-six of the progeny of this animal for the sum of $5,355. Pretty fair record for one Iowa hog.

Petitions for the paving of the Des Moines-Ankeny and Des Moines-Carlisle roads are to be received by the Polk county board of supervisors on Feb. 16. This work will be of exceptional importance as the roads are the first in Polk county to be paved in the new hard surface program as authorized by the Iowa state highway commission. The paving is to start as early as weather conditions will permit.

That the efforts of County Agent Brant to interest the farmers of Benton county in the idea of growing better fruit another year have been successful, is evidenced by the number of fruit growers of the county who are planning on having their orchards sprayed another year. Great quantities of fruit are raised each year on the farms of this county but heretofore only a few have taken the necessary precautions to insure a harvest that is really worth while.

District conference for county agricultural agents and home demonstration agents in the 99 counties of the state will be held at the following named places on the dates designated. Albia, Monday, Feb. 23; Burlington, Tuesday, Feb. 24; Cedar Rapids, Wednesday, Feb. 25; New Hampton, Thursday, Feb. 26; Hampton, Friday, Feb. 27; Des Moines, Monday, March 1; Red Oak, Tuesday, March 2; Denison, Wednesday, March 3; LeMars, Thursday, March 4; Spencer, Friday, March 5.

The County Agent of Clarke county is highly elated over the results obtained from the Farm Bureau "Exchange" the first week. Several married men have already been placed on farms and considerable live stock has changed hands through the "Exchange". More and more of the members are becoming interested and making their wants known through the Farm Bureau "Exchange". They realize this is the best medium they have for exchanging their products in the county.

Officers of the Cass county Breeders' Association are as follows: President, Ray Bell, Grove; vice-president, C. A. Zellmar, Washington; secretary, H. P. Kelly, Atlantic, and treasurer, R. F. Neal, Grove. The first annual meeting will be held soon.

Marion county boys and girls who were winners in club work the past year will each receive $15 as a fund to be spent on a trip to Ames in February to the annual Short Course. Madison county banks generously donated to this fund last spring as did others interested in this county.

According to County Agent C. L. Wygle of Emmett county, a recent census of the stock car shortage reveals the fact that only 35 to 40 cars of stock had been shipped during the month of December, while 150 cars were really needed to handle the market demand. At present this shortage is being rapidly overcome," said Wygle, "but if it should occur again the Farm Bureau will be glad to take the case up with the state authorities."

Altho five Muscatine county dairymen and farmers are at present enrolled in the Davenport Cow Testing Association, a move is being started among the farmers of the county to organize a similar association. It is the plan to complete the Muscatine association some time in June. Miss Elnora Studer, an Iowa young woman, representing the dairy extension department of Iowa State College at Ames, is working in the interests of the new organization.

At the recent meeting of the Iowa Farm Bureau Federation in Des Moines, Carl N. Kennedy, county agent for Polk county and president of the National Association of County Agents gave an excellent talk on the viewpoint of the county agent toward salary, co-operation and the exact position and relation to the Farm Bureau. The talk was well received, and showed the purpose of the national organization of county agents and their purpose and ideals.

Topping the market twice in a week is some achievement, but that is what Arthur Wilkins, successful farmer and feeder of Dallas county did recently. Besides topping the market twice, Mr. Wilkins established new price records for January. He sold one flock of fed western lambs at $19.85; top that day, and two days later marketed a flock of 111 lambs averaging 77 pounds, at $20.45, extreme top for that day. He bought the lambs on the Chicago market.

If a cockerel was considered along the same line as a dairy bull, the result would be better layers. The season of the year is at hand when many people are ready to buy cockerels for their flocks. Too often people buy and introduce new blood into their flock, that gives them pullets of the non-productive egg class. Dairy men do not choose or buy a bull entirely on his looks, but he must have records behind him. A good cockeral should have records behind him. A good show bird and a good looker does not mean that he is going to reproduce good layers. Often times the contrary is true.

Mrs. R. E. Dunahue, of Decatur county, started the year with 200 chickens. She sold from the flock eggs and poultry amounting to around $1,000 and she has a fine bunch of pullets with which to begin another season. Mrs. Jesse Aikin, a daughter Gladys, of Union county near Arispe, started the last season with 275 hens. They sold during the year over $600 worth of poultry and eggs, had all of the eggs and chickens that both families could use, and have 275 husky pullets left that are now ready for the coming season. They culled out all of the old hens and begin this season with the same number they started with only they are pullets from last season's hatching.

One of the largest crops of corn produced in western Iowa this year is on the farm of Oliver Connor, seven miles northwest of Glidden and on land that was for years regarded worthless as a swamp. G. E. Connor bought the land when it was a swamp and drained it and sold it for a good price. Mr. Connor this year had 80 acres of it in corn and he estimates the yield at 22,000 bushels or an average of 65 bushels to the acre. He states that some of the corn has run as high as 100 bushels to the acre. Over 6,000 bushels of the new corn was shelled and delivered at Glidden in one day and it graded No. 4 at best and sold for $1.20 a bushel. Mr. Connor this was on land which was once considered worthless.

Members are solicited on a basis. The fee is $5 a year and titles to membership in the membership local county farm bureau organization and also in the state federation. The contract becomes void in case of death or removal from the county. If at any time a member becomes dissatisfied and wants to withdraw he can do so by making written application to his county secretary. This life membership plan is a new departure from the old order of things. Iowa is the first state to put it into effect. That it is proving popular has been amply demonstrated in the recent campaign. It does away with the annual scramble for members and funds with which to carry on the work that has been a bugbear in most localities. A number of other states have already inaugurated similar membership drives under the Iowa plan of life membership, and it is probably only a matter of time until it will be adopted thruout the country.

More than 200 sheep have been killed by dogs in Allamakee county this year. These animals are worth more than $5,000 and cost the county more than $2,000. Dogs are being killed every night by some of our citizen owners.

Although school consolidation was recently lost out in two special elections at North Liberty, Cosgrove has voted by an overwhelming majority to consolidate schools in its district. The vote was almost 3 to 1 in favor of the proposition—112 for and 41 against.

KLEMME TIMES

Twenty-fourth Year Number 25 | Klemme, Iowa, Thursday, February 26, 1920 | $2.00 In Advance. $2.50 Outside of County

HOME TALENT GIVEN FRIDAY NIGHT BY THE ROYAL NEIGHBORS A SUCCESS

Klemme Shows Up Some Real Stars

One of the biggest entertainments given this winter was the play "Safety First" by the Klemme Royal Neighbors.

To say that the play was good would not be giving the actors a square deal, the play was excellent from every stand point and showed that Klemme had some real actors. The play was full of humor all the way through, always someone getting into an awful mess and having a time to get out again, but everything was cleared up in the last act, which came all too soon as most everyone present would willingly have stayed and laughed all night.

The house was packed from front to back and was one of the largest crowds which have gathered at the theatre this winter. Over $90 was realized from the sale of tickets.

ODD FELLOWS HAVE BIG MEETING

Nine Initiated Into The Order Monday Night

The Odd Fellows lodge of this place had a big meeting and banquet Monday evening when they gathered at the hall for a special meeting in which they took in nine new members into their organization.

The Odd Fellows here are rebuilding their organization. At one time they had a large membership, but many have since moved away to other places, some who went to war ahve since located elsewhere so that there were not very many left here. They are now making a drive for more members and are succeeding well as they had nine "ride the goat" Monday evening, after which they were all given a real banquet at the Crystal Cafe.

The Odd Fellows degree team were over from Garner to assist in putting on the work and there were between forty and fifty present at the meeting Monday night.

Those who were iniiated into the mysteries of the I. O. O. F. were Wm. Busch, R. B. Irwing, Ulrich Heppin, M. O. Barr, Wm. Howard, Walter Schultz, Raymond White, Charles White and W. H. Trafford.

The Odd Fellows have about thirty members here now but hope to increase this number

INFANT SON OF MR. AND MRS. OTTO KLINGE DEAD

Mr. and Mrs. Otto Klinge, residing northwest of town, are mourning the death of their two year old son, Elmer, who died of pneumonia following an attack of influenza. The little fellow was laid At Rest in the Eli Township cemetery Tuesday. The famiy have the sympathy of the entire community in their bereavement.

"DETROIT-TO-DENVER" LATEST IOWA HIGHWAY

DES MOINES.—The Detroit-to-Denver Highway association perfected its organization at a meeting here yesterday afternoon. Michigan, Indiana, Illinois, Iowa, Nebraska and Colorado were represented. Plans were discussed for starting work immediately and establishing a reliable and permanent highway from Detroit to Colorado Springs.

According to the suggestions advanced the road will enter Iowa at Davenport, follow the river-to-river road across the state through Des Moines and leave the state at Council Bluffs.

A box of our type containing local news and others went astray and has not yet showed. It will be run next week if we can locate it.

A few years ago a young fellow and a bottle at a public sale would have caused no sensation, but times have changed. At the John Long sale last week a young man with a bottle protruding from his overcoat pocket attracted more attention than the auctioneer. This young man recently married could not understand why all eyes were focused on him until he reached in the said pocket and found that the bottle was sticking out i plain view. Disgusted at his own carelessness in permitting such an exposure, he took it out and threw it, nipple and all, as far as he could send it. The reason it went that far is because Charley Dawson showed good judgment in hastily getting out of the way.—Corwith Hustler.

HOWARD SPITLER AND SARAH THIEMAN MARRIED

This week we are pleased to announce the marriage of two of Klemme's popular young people, Howard Spitler and Miss Sarah Thieman. The ceremony was performed by Rev. A. H. Meyer at the First Methodist Parsonage on Wednesday afternoon at three o'clock, February 18th. Both of the young people are well known here and have a high standing in the community. They will for the present live with the groom's parents west of town on the farm formerly owned by H. J. Bailey, until a set of buildings can be erected on part of the farm. We wish them a long and happy married life.

SOCIAL PAYS OUT BIG

Miss Annetta Schuldt held a basket social at her school last week Thursday that brought perhaps the top price for any social held near here this winter. If someone had bid just twenty cents more on a basket the total amount would have reached $100. That is certainly a large amount but we will have to blame our young Klemme men for their liberal bidding. The highest price paid for a basket was $11.60, and quite a number were close to that amount. A fine program was also given in connection and all enjoyed a good time.

IT IS SOME SAUSAGE

Did you ever hear of a sausage that was eight feet long? No, you perhaps never did, neither did we and if anybody else but a preacher told us such a yarn we would call him a ——, well you know. But such is the case, the sausage case in which is located the sausage, the whole thing measures eight feet long and three inches in diameter in United States measure. John Tanner brought the sausage, or maybe hauled it to Rev. Meyer one day last week. A man could never think of making such a fine sausage, but Mrs. Tanner is the artist who constructed it and the Reverend gentleman says it is the best he ever tasted.

...ington arch in New York has ...dest recognition for merit of de... It had its beginning in Stan... White's temporary structure for ... Washington centennial in 1889, ... 100 years after Boston had built ...lfinch's arch of lumber and canopy ...bric beside the old state house. Four ...ars later it stood in mellow marble ... the foot of Fifth avenue. In straightforward construction, with no columns ... gables applied in merely decorative ...es, this centennial arch attests its ...signer's courage in breaking with ...most universal precedents. Except ... an occasional ancient arch like

A TOWN'S FUNERAL

A town that never has anything to do in a public way is on the way to the cemetery. Any citizen who will do nothing for his town is helping to dig the grave. A man that cusses the town furnishes the coffin. The man who is so selfish as to have no time from his business to give affairs, is making the shroud. The man who will not advertise is driving the hearse. The man who is always pulling back from any public enterprise throws bouquets on the grave. The man who is so stingy as to be howling hard times, preaches the funeral, sings the doxology. And thus the town lies buried from all sorrow and care.—News, Downs, Kansas.

INVENTOR OF WIRE FENCE IS DEAD

John Calvin Merrill said to have been the inventor of the wire fence in Dubuque, Iowa, 52 years ago, is dead here today. Merrill said his invention came about through his difficulty in keeping confined the pigs of his Iowa ranch. He is credited with laying out the town of Westphalia, Kansas.—Britt News.

FARM NEWS WANTED

We would like to have a correspondent in every farm locality in the vicinity of Klemme. Anyone can easily get together a few items each week of what is going on in your neighborhood. The only way we can get this news is to have a correspondent in each neighborhood. We will be glad to make arrangements with anyone who will volunteer to write news for us. Call at the Times office and see us. Editor.

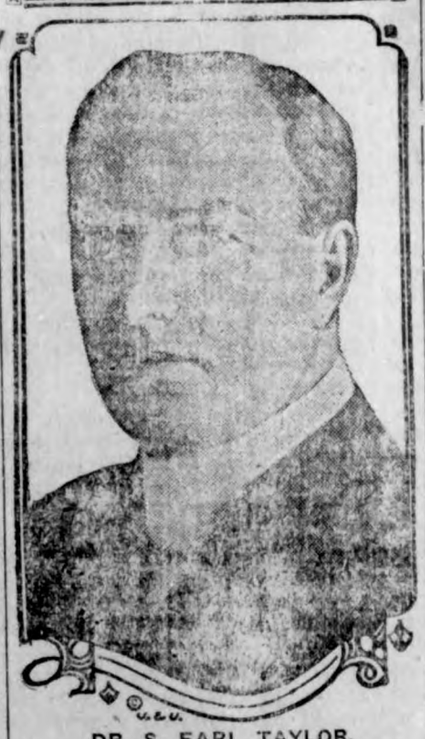
NEW WORLD PROGRAM DEVISED BY CHURCHES

By S. EARL TAYLOR.



DR. S. EARL TAYLOR, General Secretary Interchurch World Movement.

If Christ, on the day He was born, nad started on a tour to preach in every village in India, He would still have 30,000 more to visit.

We now believe we have found a way by which the leaders of the Protestant churches can sit around a common table and have the Christian program of the entire world laid before them. By means of the Interchurch World Movement we can see where the Methodists are, and where the Baptists are. We can see the general outline of their forces, their present status in this great world struggle, and may also have some idea of the anoccupied places, and what may be done by all of us to enter these unoccupied parts of the world field which Christ sent us to occupy.

CHURCHES TO AID LONELY SHEEP SHEARERS OF WEST

The bleat of the sheep on the backbone of the continent calls men to the mountains. On high uplands from the Canadian border to Mexico, in lonely and inaccessible places, one of the most romantic examples of the country's migrant worker — the sheep shearer—plies his trade.

Unheard of though he is to thousands of his fellow workers, it was for him that the immigration regulations of three countries—Canada, the United States and Mexico—were modified during the war. This permitted freedom of movement to many hundreds of this strange craft, and the means of employment to thousands in factories and stores.

Yet, for all his importance in the ranks of the nation's great Marching Army of the Employed, what sort of life does this man lead? The migrant fruit packer, or wheat harvester, or farmhand, or lumberman often roams inland through cities and the congested spots of civilization. But the sheep shearer, by the nature of his trade, is cut off from such influences.

Through a survey of the nation's migrant labor now being made by the Interchurch World Movement, it is suggested that for men of this class relief may be afforded through churches in outlying districts. For social and other purposes these men, with proper co-operation by church bodies, could make use of many of the facilities without which they are doomed to a life of isolation.

MINISTERS COST LESS THAN AUTOS

World Survey Figures Reveal How Badly United States Is Paying Its Pastors.

MANY LIVING ON $600 A YEAR

One of the Aims of Present Protestant Co-operation Is to End Disgrace of Underpaid Preacher—Pensions Also to Be Provided.

What are the chances of a young man who intends to be a lawyer of making $3,000 a year? What are the doctor's chances? What of the minister or the manufacturer?

The lawyer has exactly one chance in five. The doctor's chances are one in seven. It is ten to one against the manufacturer. The modern minister, however, who formerly ranked with the doctor and lawyer as a member of the "learned professions," has fallen hopelessly behind. He is a 100 to 1 shot.

These figures are part of a mass of astonishing facts brought to light by the world survey being made by the Interchurch World Movement and whose sources of information are such that many economists and statisticians are availing themselves of the results. This survey puts America's minister at the bottom of the ladder of the nation's income receivers—and with responsibilities which equal those of any captain of industry.

A worker in a silk mill, a laborer in a rubber plant, a paper maker, a worker in a shoe factory—all are getting higher average wages, the survey shows, than does America's minister, city or country. Nor does the city man receive the luxurious salary that many persons, including many country parsons, believe he does. Not four ministers in a thousand, according to the survey, receive $5,000 a year. In no instance, whatever the denomination, does a majority receive $1,000.

Cotton Pickers Better Off.

Are you a Congregationalist? In 2,783 churches the yearly pay to your ministers has been less than $1,000. Are you a Presbyterian? You are then on the less than $1,000 list with 6,415 ministers. In the event that you are a Methodist the charge is that 4,719 pastors are trying to exist on the $20 a week that you pay them. Episcopalians do a little better, yet half of their rectors receive less than the $1,500 a year which government economists regard as the minimum on which a family can be decently maintained.

The initial cost of the cheapest "flivver" on the market is less than $600, but a very good, conscientious pastor, it is shown, can be hired for a year for that sum.

Ministers in the South are preaching to fifty or more cotton pickers who individually are paid more for picking cotton than their entire neighborhood pays to the preacher in a year.

One of the aims of the present co-operation of the world's Protestant denominations is to end this disgrace of the underpaid minister. With universities, business houses and municipalities daily taking action to provide for the comfort of their workers, the church is to keep pace with the times, and to arrange not only for adequate pay for its workers, but to provide pensions for those no longer able to work.

It is to move the public to prevent unfavorable comparison of pastors and puddlers. Until then, as for a puddler swapping jobs with a pastor drawing an "ordinary" salary—never! The lowest salary paid to pastors is lower than any wages paid in the entire steel industry.

SOUND BUSINESS BASIS FOR CHURCH

Interchurch World Movement Natural Growth of Tendency to Eliminate Waste.

AVOID USELESS COMPETITION

Religious Financiering Revolutionized by Success of Men-and-Millions Movement and Co-operation Is Result.

The Interchurch World Movement of North America is an attempt by forward-looking leaders of the various evangelical denominations of the United States and Canada to co-ordinate the resources in men, money and material of Protestant America.

Historically it is the logical outgrowth of a tendency of the national boards in each denomination to form working alliances among themselves, in which each board shall preserve its identity and control its own personnel and treasury.

In former times, the home mission society, the foreign mission society, the church mission society and the various philanthropic and eleemosynary agencies of any denomination conducted their affairs independently of one another. Each surveyed its own restricted territory, prepared a budget of money and workers for its own purposes and made its own appeal to its constituency for support.

This could only mean that these agencies were more or less in competition with one another; that there were waste and duplication of work and money, and that among them all some work was neglected and some denominational resources were entirely overlooked. Because of their specialized training, the leaders of each agency regarded themselves as peculiarly fitted for their tasks, and jealously regarded attempts at outside interference.

Decide on Experiment.

After ecades of such haphazard methods, the leaders of one denomination decided on an experiment. They thought it would be possible for the agencies to get together for a common study of all the opportunities and resources of their brotherhood, to make out a unified budget of men and money, and to conduct a concerted appeal for funds. It was made clear that each constituent board should preserve complete autonomy.

When the board representatives met they found it possible to eliminate a great amount of organization expenses. They ultimately worked out a budget and plan of campaign that was satisfactory to all. This resulted in the famous Men-and-Millions Movement of the Disciples of Christ, which brought in what was then considered the staggering sum of $1,300,000 for a five-year program. The members of the communion were so pleased with this business-like method of conducting affairs that they contributed even more generously than had been expected.

The success of this enterprise revolutionized the whole business of church financiering. The other great denominations immediately adopted the plan. The denominational associations have come to be known as "forward movements," and some thirty of them are in existence today. Each one has clarified all the information in relation to the enterprise within the denomination, and has reduced the business of collecting and spending money to a science.

World-Budget Formed.

The Interchurch World Movement is simply a plan to do interdenominationally what the forward movements have done within the various communions. It means that every denominational budget will be made in the light of world needs instead of in the semi-obscurity of incomplete information. It means that contributions to one denomination will not be in wasteful competition with contributions to another, because all the fellowships will have worked out their program together.

The functions of the Interchurch World Movement are threefold. First, it collects, by means of world surveys, all the pertinent facts on which denominational programs may be built. Second, it sets up the practical machinery of co-operation. Third, it acts in an advisory capacity whenever its advice is requested.

The Movement has nothing to do with organic church union or matters of creed or doctrine. Each constituent unit preserves complete autonomy, and is bound only so far as it wishes to be bound. Financial appeals are issued by each denomination to its own constituency. Any surplus in undesignated funds over and above the actual cost of administration, will be prorated among the denominations engaged in a given financial undertaking.

An illustration of one thing the Movement can do is to be found in a western community of 1,600 persons in which thirteen denominations have been supporting separate churches with missionary funds, while an adjacent territory of 50,000 persons has only three churches. By seeing that all missionary boards are supplied with informaton in such cases, the Movement will make possible a wiser distribution of funds.

Its first goals are to reduce unnecessary duplication and overlapping to a minimum and to bring about an intelligent division of labor in unoccupied fields. The Movement is, at bottom, an attempt to put church business on the sound, business-like foundations on whicl the great commercial institution of Americn are built.

A shipping association was organized at Melrose in Monroe county about the 1st of December, and to date has shipped about a dozen cars of hogs, nearly all going to Burlington and St. Louis. The officers are Sterling B. Martin, president; S. M. Rairdon, vice president; J. S. Coughlin, secretary treasurer; J. E. Smith, director; P. R. Coady, director; John Knowles, director. This board met and employed S. M. Rairdon as manager and Neal McGee as assistant manager.

Fifty head of female Poland China hogs, the offering of F. G. Paul & Sons of just north of Marshalltown were sold at public auction for a total of $10,62[illegible]. The animals brought an average price of $212.50, the top being $500. The total and average although not being exceptionally high was very satisfactory to the seller. The sale attracted a very large crowd most of the buyers being from central Iowa and distant parts of the state and nearby states. Only a few of the animals went to county breeders.

F. J. Sedlacek becomes the owner of the 40 acres of land just south of St. Angsar, which formerly belonged to A. O. Gilbertson, the purchase price being $1,000 per acre for the land and was a cash deal. This piece of land is practically unimproved so far as buildings are concerned, but the land itself is in a high state of cultivation, being clean and well fertilized, onions and other truck crops having been raised there for a number of years. Mr. Sedlacek plans on continuing the raising of truck crops on this field and plans to have [illegible] held put into onions the coming year.

Iowa building tradesmen meet Des Moines at Hotel Fort Des Moines to organize a permanent association and to make plans for a state building congress to be held later this year in Des Moines.

LANSING QUITS WILSON CABINET

Secretary of State Charged by President With Usurping Power.

LETTERS ARE MADE PUBLIC

Executive Objected to Holding of Cabinet Meetings Without His Knowledge—Friction Between Pair Began at Peace Conference.

Washington, Feb. 16.—Robert Lansing resigned on Friday night as secretary of state.

Mr. Lansing left office because he was charged by President Wilson with assuming the prerogatives of the president during the period of the latter's illness in the past four months by calling and presiding over meetings of the cabinet.

His resignation, tendered in a letter under date of February 12, was accepted by the president Friday and became effective at once. Under-Secretary of State Frank Polk is the ad interim head of the state department and may be named as Mr. Lansing's successor.

The state department on Friday night issued a formal statement announcing the resignation of Secretary Lansing and giving the correspondence which passed between the president and his chief aid leading up to the reaking of relations.

Wilson to Lansing.

"The White House, Feb. 7.

"My dear Mr. Secretary: Is it true, as I have been told, that during my illness you have frequently called the heads of the executive departments of the government into conference? If it is I feel it my duty to call your attention to considerations which I do not care to dwell upon until I learn from yourself that this is the fact. Under our constitutional law and practice, as developed hitherto, no one but the president has the right to summon the heads of the executive departments into conference, and no one but the president and the congress has the right to ask their views or the views of any one of them on any public question.

"I take this matter up with you because in the development of every constitutional system custom and precedent are of the most serious consequence, and I think we will all agree in desiring not to lead in any wrong direction. I have therefore taken the liberty of writing to ask you this question, and I am sure you will be glad to answer.

"I am happy to learn from your recent note to Mrs. Wilson that your strength is returning.

"Cordially and sincerely yours,

"WOODROW WILSON."

Lansing to Wilson.

"The Secretary of State, Washington, Feb. 9.

"My Dear Mr. President: It is true that frequently during your illness I requested the heads of the executive departments of the government to meet for informal conference.

"Shortly after you were taken ill in October certain members of the cabinet, of which I was one, felt that, in view of the fact that we were denied communication with you, it was wise for us to confer informally together on interdepartmental matters and matters as to which action could not be postponed until your medical advisers permitted you to pass upon them.

"Accordingly I, as the ranking member, requested the members of the cabinet to assemble for such informal conference, and in view of the mutual benefit derived the practice was continued.

"I can assure you that it never for a moment entered my mind that I was acting unconstitutionally or contrary to your wishes, and there certainly was no intention on my part to assume powers and exercise functions which under the constitution are exclusively confided to the president.

"During these troublous times, when many difficult and vexatious questions have arisen and when in the circumstances I have been deprived of your guidance and direction, it has been my constant endeavor to carry out your policies as I understood them and to act in all matters as I believed you would wish me to act. If, however, you think that I have failed in my loyalty to you and if you no longer have confidence in me and prefer to have another conduct our foreign affairs, I am, of course, ready, Mr. President, to relieve you of any embarrassment by placing my resignation in your hands.

"I am, as always, faithfully yours,

"ROBERT LANSING."

Wilson to Lansing:

"The White House, Feb. 11, 1920.

"My Dear Mr. Secretary: I am very much disappointed by your letter of Feb. 9 in reply to mine asking about the so-called cabinet meetings.

"You kindly explain the motives of those meetings and I find nothing in your letter which justifies your assumption of presidential authority in such a matter. You say you 'felt that, in view of the fact that you were denied communication with me, it was wise to confer informally together on inter-departmental matters and matters as to which action could not be postponed until my medical advisers permitted me' to be seen and consulted, but I have to remind you, Mr. Secretary, that no action could be taken without me by the cabinet, and therefore there could have been no disadvantage in awaiting action with regard to matters concerning which action could not have been taken without me.

"This affair, Mr. Secretary, only deepens a feeling that was growing upon me. While we were still in Paris I felt, and have felt increasingly ever since, that you accepted my guidance and direction on question with regard to which I had to instruct you only with increasing reluctance, and since my return to Washington I have been struck by the number of matters in which you have apparently tried to forestall my judgment by formulating action and merely asking my approval when it was impossible for me to form an independent judgment because I had not had an opportunity to examine the circumstances with any degree of independence.

"I, therefore, feel that I must frankly take advantage of your kind suggestion that if I should prefer to have another conduct our foreign affairs you are ready to relieve me of any embarrassment by placing your resignation in my hands, for I must say that it would relieve me of embarrassment, Mr. Secretary, the embarrassment of feeling your reluctance and divergence of judgment, if you would give your present office up, and afford me an opportunity to select some one whose mind would more willingly go along with mine.

"I need not tell you with what reluctance I take advantage of your suggestion, or that I do so with the kindliest feeling. In matters of transcendent importance like this the only wise course is a course of perfect candor, where personal feeling is as much as possible left out of the reckoning. Very sincerely yours,

"WOODROW WILSON."

Lansing to Wilson.

"The secretary of state, February 12, 1920.

"My Dear Mr. President: I wish to thank you sincerely for your candid letter of the 11th, in which you state that my resignation would be acceptable to you, since it relieves me of the responsibility for action which I have been contemplating and which I can now take without hesitation, as it meets your wishes.

"I have the honor, therefore, to tender you my resignation as secretary of state, the same to take effect at your convenience.

"In thus severing our official association I feel, Mr. President, that I should make the following statement which I had prepared recently and which will show you that I have not been unmindful that the continuance of our present relations was impossible and that I realized that it was clearly my duty to bring them to an end at the earliest moment compatible with the public interest:

"Ever since January, 1919, I have been conscious of the fact that you no longer were disposed to welcome my advice in matters pertaining to the negotiations in Paris, to our foreign service, or to international affairs in general. Holding the views, I would if I had consulted my personal inclination alone, have resigned as secretary of state and as a commissioner to negotiate peace.

"I felt, however, that such a step might have been misinterpreted both at home and abroad, and that it was my duty to cause you no embarrassment in carrying forward the great task in which you were then engaged. Possibly, I erred in this, but if I did it was with the best of motives.

"When I returned to Washington in the latter part of July, 1919, my personal wish to resign had not changed, but again I felt that loyalty to you and my duty to the administration compelled me to defer action, as my resignation might have been misconstrued into hostility to the ratification of the treaty of peace or at least into disapproval of your views as to the form of ratification.

"Believing that the time had arrived, I had prepared my resignation, when my only doubt as to the propriety of placing it in your hands was removed by your letter indicating that it would be entirely acceptable to you.

"I think, Mr. President, in accordance with the frankness which has marked this correspondence and for which I am grateful to you, that I cannot permit to pass unchallenged the imputation that in calling into informal conference the heads of the executive departments I sought to usurp your presidential authority.

"I had no such intention, no such thought. I further believe that the conferences were proper and necessary in the circumstances, and that I would have been derelict in my duty if I had failed to act as I did.

"I need hardly add that I leave the office of secretary of state with only good will toward you, Mr. President, and with a sense of profound relief.

"Forgetting our differences and remembering only your many kindnesses in the past, I have the honor to be, Mr. President,

"ROBERT LANSING."

Wilson to Lansing.

"The White House, Feb, 13, 1920.

"My Dear Mr. Secretary: Allow me to acknowledge with appreciation your letter of February 12. It now being evident, Mr. Secretary, that we have both of us felt the embarrassment of our recent relations with each other, I feel it my duty to accept your resignation, to take effect at once; at the same time adding that I hope that the future holds for you many successes of the most gratifying sort. My best wishes will always follow you, and it will be a matter of gratification to me always to remember our delightful personal relations.

"WOODROW WILSON."

NEWS REVIEW OF CURRENT EVENTS

Director General Hines Refuses to Raise the Wages of the Railway Employees.

DISPUTE PASSED TO WILSON

Gompers Against Organization of Labor Party—Farmers' Representatives Deny Inherent Right to Strike—Renewed Hope for Agreement on Peace Treaty.

By EDWARD W. PICKARD.

Director General Hines and the heads of the railway unions failed to reach an agreement as to wages, and the whole matter was passed on to President Wilson for his decision of the final attitude of the government. The possibility of a general railway strike and consequent paralysis of industry loomed big, despite the assertion of the leaders of the four brotherhoods that no such move was being considered yet.

Mr. Hines, after many days of conference with the labor chiefs, came to the conclusion that, though the workers may be entitled to more pay under existing living conditions, it is economically impossible for the railway administration to grant the increases in view of the fact that federal control comes to an end on March 1. It was believed in Washington that the president would sustain Mr. Hines and appeal to the railway unions to submit their demands to the wage adjustment boards provided for in the pending railway legislation. The unions, however, do not seem to have any faith in such tribunals, and feel that they will have no chance after the roads have been returned to private ownership.

Everyone concerned in the matter directly feels that the union chiefs have been very courteous and have shown a genuine desire to avoid serious trouble. It is to be expected that some strikes will follow if the president decides against the workers, but there has been no threat of a general strike. One such strike already has been ordered. The maintenance of way employees and shop laborers have been directed to quit work on February 17. Their president, Allen C. Barker, said, however, that the submission of the controversy to President Wilson might avert this, as it was at Mr. Wilson's request that the strike plans made last August were held in abeyance while the government tried to lower the cost of living. Since it mainly failed in this, said Mr. Barker, he felt Mr. Wilson would afford the men the relief they had asked. This may be so, but official statistics do not bear out the claims of the maintenance of way workers. Since 1913 their wages have increased on the average 106 per cent, while the cost of living in the same time has gone up 83.1 per cent. It is not surprising, however, that the workers should join in the general grabfest. Since the war began there has been no greater profiteer than organized labor, but the capitalist, big and small, set the example and led the way.

In Kansas the maintenance of way men have been officially warned that their contemplated strike will be in violation of that state's new industrial court law.

The congressional conference committee fixed up a clever compromise railway legislation bill and its speedy acceptance was predicted. But formidable opposition developed. Representatives Barkley of Kentucky and Sims of Tennessee, both Democratic members of the conference refused to sign the report and announced they would fight the measure. Barkley objects to the provision for a 5½ per cent return on earnings with an equal division of excess earnings over 6 per cent between the roads and a government fund for the benefit of the weaker lines. Sims makes his fight especially against the rate-making provision; but he is opposed to the bill generally for he is an advocate of government ownership. The union labor leaders were waiting until they could study the compromise bill, but they were expected to join with the opposition to the measure. The sections dealing with wage adjustments do not please them.

Samuel Gompers, who several times lately has felt his throne tottering, has come out strongly against the organization of a political labor party and urges that organized labor devote its effort to the election of members of congress who will be friendly to it. The third party plan is especially favored by the Plumb plan leaders, but Mr. Gompers warns that it would be fatal to the interests of organized labor. His attack on congress was decidedly bitter, and called forth several vigorous replies, particularly from Senator Sherman of Illinois and Representative Blanton of Texas.

The antagonism between union labor and the farmers was accentuated last week when representatives of the National grange, the American Farm Bureau federation, the Cotton States board, and the Association of State Farmers' union presidents met in Washington and drew up a memorial to congress denying that any group of organized workers possesses an inherent right to strike. Allu especially to strikes of transport workers, the memorial says:

"Those who believe that labor an inherent right to organize a s believe that such organizations ha right to starve the people of the c to death, on the one hand, and to stroy the property of the farmer the other.

"No such right had ever existed no such right exists now.

"No set of men has ever had moral or legal right to destroy p erty or cause suffering by conspi together.

"What would be the verdict of people if the farmers of the Un States should suddenly decide to on a strike and refuse to supply the wants and needs of those who are not in a position to produce food and clothing for themselves? They would be condemned from one end of the country to the other and the fact would be pointed out that they, as the owners and tillers of the land, had no right, either moral or legal, to bring about such a calamity.

"If the farmers have no such rights, those who handle their products have no such rights."

Hope springs eternal, and it is now the turn of the peace treaty compromisers to hope that their efforts will be crowned with success in the near future. President Wilson's latest letter to Senator Hitchcock on the subject, apparently written before Viscount Grey's pronouncement but made public much later, was interpreted as showing a yielding spirit, and the maneuvering to reach an agreement was renewed. At this writing hope for early ratification rested largely on the report that the mild reservationists, Senator Lodge and a group of Democrats had agreed tentatively on a substitute for the Lodge reservation on article ten. This substitute declares the United States assumes no obligation to preserve the territorial integrity or political independence of any other country, and Senator Hitchcock indignantly asserted it was no compromise and that its acceptance would be a complete surrender on the part of the supporters of the president. Lodge also proposed a series of amendments modifying the language of his reservations. The president, it is stated, has so far recovered his health and strength that he has taken personal direction of the Democratic forces in the present fight over the treaty in the senate.

The council of the League of Nations opened its meeting in London on Wednesday, with Arthur J. Balfour in the chair. The nations represented were Belgium, Brazil, Great Britain, France, Greece, Italy, Japan and Spain. Both Mr. Balfour and Leon Bourgeois of France expressed regret that the United States was not represented. To M. Bourgeois was intrusted the preparation of plans for the organization of the permanent court of international justice, and other steps were taken toward carrying out th purposes of the league.

There was nothing new last week to indicate the course which the allie would pursue in the matter of the ex tradition of Germans accused of wa crimes, except an unofficial statemen that they would insist on the execution of the treaty clause. The Berlin government insists that delivery of the culprits is a physical impossibility and also would be an incredible violation of the nation's honor. The latter point may be disregarded, but the former may have some weight. The British, it is said, are willing to show leniency, but not so the French. The former crown prince got on the front page with an offer to the heads of the allied governments to surrender himself in place of the 900 whom the allies desire to put on trial—a spectacular play to the grand stand which will have no results.

Hungary's representatives went to Paris to present their country's answer to the peace treaty. It was understood they would protest especially against the financial clauses, on the ground that it would be utterly impossible for Hungary to make the payments demanded. As for Austria, starving and freezing, she is still begging some millionaires or wealthy na-

ity and that the "ring of fire" to crush bolshevism is a failure. At the same time Lloyd George and his colleagues said bolshevism was not democracy and civilized methods of government must be adopted before any nation will make peace with Russia.

The Democratic members of congress, disregarding the wishes of President Wilson, formally decided in caucus to oppose any legislation for universal military training. Mr. Wilson's letter to the caucus not only urged that the matter be not made a party issue, at least until the national convention passed on it, but also made it clear that he heartily favored a project for moderate military training. The resolution against the training legislation was supported, of course, by such men as Kitchin of North Carolina and was passed by a vote of 106 to 17. Since the big majority of the lower house has adopted the same attitude there seems to be small hope for universal military training at present. Representative Kahn and others of its supporters, however, have not yet given up. Approval of the system expressed by the American Legion may have some influence on congress.

Herbert Hoover and his possible candidacy for the presidential nomination continue to afford food for speculation. Mr. Hoover has issued a long statement in which he denies that he is seeking the White House job or has any organization. He repeats that he must vote for the party that stands for the League of Nations if that becomes a partisan issue, and adds that he does not believe in more than two great parties. He declines to pledge his vote blindfolded, and does not say that he would accept either the Republican or the Democratic nomination if the platform suited him.

Responding to questions from Senator Borah, General Wood says: "I believe that we should accept the League of Nations as modified and safeguarded by the existing Lodge reservations —reservations which Americanize it and safeguard our traditional policies —reservations which leave America absolutely free and untrammeled to follow the will of her own people in all questions of foreign and domestic policy."

At All Drug Stores

Acid-Stomach Makes 9 Out of 10 People Suffer

Doctors declare that more than 70 non-organic diseases can be traced to Acid-Stomach. Starting with indigestion, heartburn, belching, food-repeating, bloat, sour, gassy stomach, the entire system eventually becomes affected, every vital organ suffering in some degree or other. You see these victims of Acid-Stomach everywhere—people who are subject to nervousness, headache, insomnia, biliousness—people who suffer from rheumatism, lumbago, sciatica and aches and pains all over the body. It is safe to say that about 9 people out of 10 suffer to some extent from Acid-Stomach.

If you suffer from stomach trouble o... even if you do not feel any stomach distress, yet are weak and ailing, feel tired and dragged out, lack "pep" and enthusiasm and know that something is wrong although you cannot locate the exact cause of your trouble—you naturally want to get back your grip on health as quickly as possible. Then take EATONIC, the wonderful modern remedy that brings quick relief from pains of indigestion, belching, gassy bloat, etc. Keep your stomach strong, clean and sweet. See how your general health improves—how quickly the old-time vim, vigor and vitality comes back!

Get a big 50c box of EATONIC from your druggist today. It is guaranteed to please you. If you are not satisfied your druggist will refund your money.

Where Washington Sleeps

by T. C. Harbaugh

Where the lordly Potomac thro' vistas of beauty
Sweeps with a song to the faraway sea,
America's chieftain, the hero of duty,
WASHINGTON, rests in the shade of the tree;
His fame is still bright, tho' the cycles have vanished,
His valor is written in Liberty's tome;
His name is immortal and ne'er can be banished—
Forevermore cherished in heart and in home.

He sleeps 'mid the scenes that he loved in his childhood,
Spring covers the ground with her blossoms so fair,
He dreams where he play'd as a boy in the wildwood,
As free as the eagle from sorrow and care;
Let Trenton and Princeton weave chaplets eternal,
And Brandywine sing of his unclouded fame;
He rose to the height of a patriot supernal,
And Yorktown adds splendor to WASHINGTON'S name.

The stars shed their light where he camps in his glory,
Adored everywhere where his actions are told,
And millions to come will rejoice when the story
Is lisped of our wonderful struggle of old;
Whole-soul'd and great hearted he rode to the battle,
Right's paladin, armed in a cause that was just;
Undaunted he stood 'mid the roar and the rattle,
Forever beloved, tho' his body is dust.

Mount Vernon will guard the great soldier forever,
America's Mecca and Liberty's shrine,
And free men will flock to his tomb by the river,
And kneel in the sunburst of glory divine;
And brighter each day grows the name that we cherish,
As the first in our hearts it will ever find room,
Fame's carved it on high so it never can perish,
And Love lays her wreath upon WASHINGTON'S tomb.

Sleep, Champion of Freedom, beside the loved river,
Thy requiem 'twill sing to the ending of Time;
Thy soul's in the care of Our Father, its giver,
Thy glory as lasting as Liberty's clime;
The morn as it bursts in its beauty discloses
The Banner that floats where thy slumber is deep,
Thy sword we will laurel with summertime's roses,
Beloved by the Nation, sleep, WASHINGTON, sleep.

(Copyright, 1920, Western Newspaper Union)

MARYLAND FIRST IN FIELD

Residents of Boonsboro, in that State, Built Memorial to George Washington in 1827.

On the summit of South mountain, above Boonsboro, Washington county, Maryland, stands an interesting memorial to George Washington, which is, moreover, the first monument actually erected to his memory in this country, according to the Youth's Companion. Although work was begun on the monument in Mount Vernon place, Baltimore, some years earlier, that shaft was not completed until 1829, but the one on South mountain was virtually built in one day, the Fourth of July, 1827.

At 11 o'clock on the morning of that day all the people of the little settlement of Boonsboro—two years later it contained only twenty-nine houses—went in a body to the point then known as Blue Rocks. Some of the men had fought under Washington in the War of the Revolution. The result of the day's labor was a monument built of the stones found on the mountain. It measured fifty-four feet in circumference and was raised to the height of fifteen feet that day. Tradition says that that height was increased to fifty feet in the next few days.

A central stairway leads to the summit. The outlook is over three counties; it includes part of the route of Washington's historic trip up the Potomac, the scene of the John Brown tragedy, the Antietam battlefield and a part of the old National road. A white marble tablet was originally set in the side of the monument, on which was the inscription, "Erected to the memory of Washington, July 4, 1827, by the citizens of Boonsboro." The slab has disappeared and all efforts to trace it have been in vain.

In the course of half a century the monument fell into decay. In 1882 it was rebuilt by residents of Boonsboro; but a stroke of lightning has torn away a part of it. The people of Washington county believe that it would be a fitting tribute from the people of the whole country to restore it, and the matter has been brought before congress by the representatives of the 4th Maryland district. The fact that it is the first completed monument to Washington—except one in Paris—is settled by contemporary records.

Cause of Washington's Death.

George Washington probably died of diphtheria, instead of acute laryngitis, as is commonly believed, according to an article by Dr. H. B. Hemenway. Dr. Hemenway outlined briefly the means used to cure ills during the time of Washington.

"It is probable that Washington's life was cut short more by excess of treatment than by disease," the article reads. "It is sometimes said that he died of acute laryngitis, but we believe that it is now generally agreed his disease was diphtheria."

Prominent in Many Things.

A close study of the life, letters and documents of Washington will show that he was prominent also as a business man, a farmer, a philosopher and a statesman and in his knowledge of human nature.

NEW YORK'S FINE MEMORIAL

For Merit of Design, the Washington Arch in That City Has Been Given Universal Praise.

Of American arches already standing in permanent construction, the Washington arch in New York has widest recognition for merit of design. It had its beginning in Stanford White's temporary structure for the Washington centennial in 1889, just 100 years after Boston had built Bulfinch's arch of lumber and canopy fabric beside the old state house. Four years later it stood in mellow marble at the foot of Fifth avenue. In straightforward construction, with no columns or gables applied in merely decorative uses, this centennial arch attests its designer's courage in breaking with almost universal precedents. Except for an occasional ancient arch like

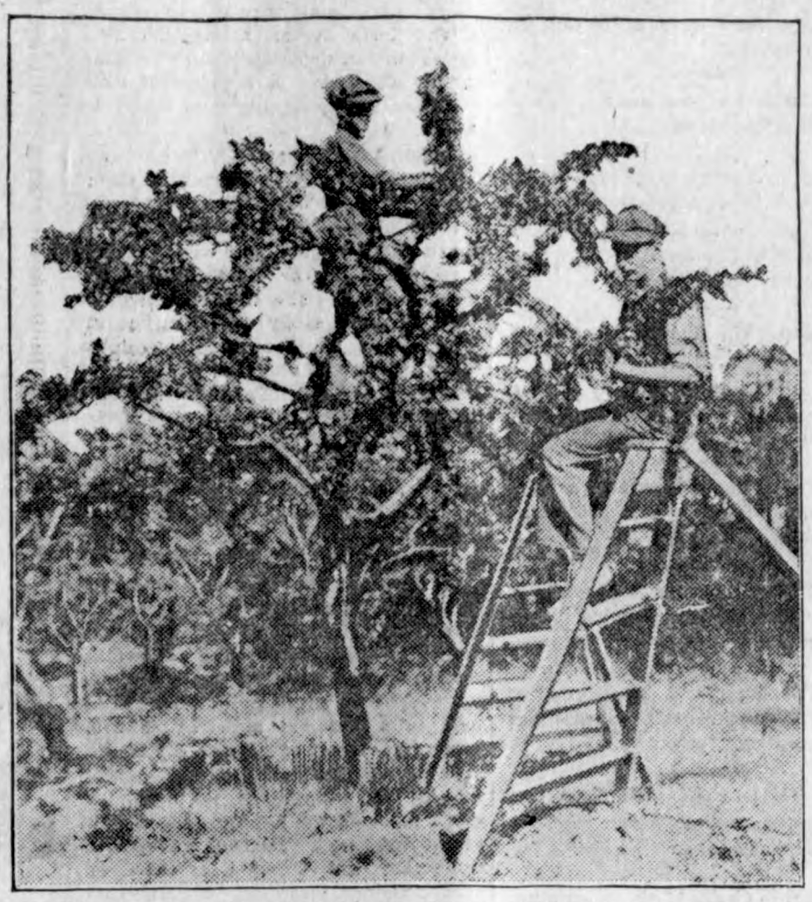
Washington Arch, New York City.

Trajan's on the Alcontara bridge, and an even rarer modern example like that of the colossal Arc de l'Etoile at Paris, whose architects indeed quarreled and wavered on this very point, the standard designs make use of pilasters and columns, engaged or detached, and carrying more or less orately broken entablatures. Stanford White's design shows two massive piers carrying with the help of a rather delicate arch between them, a decorated frieze and cornice crowned with an attic story whose broad wall panels bear the commemorative inscriptions.

Site of the White House.

The site for the president's palace, as the first maps name it, was selected by President Washington and Major L'Enfant when they laid out the federal city in 1792. They purposed to have the president's house and the capitol reciprocally close to the long vista formed by Pennsylvania avenue, and they also laid out a parklike connection between the two great buildings. The plans for the house, selected by Washington and Jefferson as the result of a competition in which L'Enfant took part, were drawn by James Hoban, a native of Dublin.

MORE FARMERS SHOULD GROW FRUITS FOR GOOD HEALTH AND PLEASURE OF FAMILY



To Scenes Like This—Paraphrasing Burns—Columbia's Memories Cling.

(Prepared by the United States Department of Agriculture.)

The middle-aged gentleman was downcast, not to say positively despondent. And it wasn't his nature—at lunch time. Something serious had happened, clearly. His young friend, who felt a duty of guardianship in a way, asked him what it was.

"Well," confessed the middle-aged gentleman, "I am apprehensive as to the future of the country. The home orchard is passing away—a specialist of the United States department of agriculture told me so. And I don't see how American institutions as we know them are going to survive such a blow. Why, all the memories that are worth while—all the sweet sentiments that tie us to the divine sufficiently to keep us from going wholly to the brute—connects in some way with the old home orchard. The thing that brings to me the spirit of Easter—the coming of life out of death—isn't sermons and lilies. It is the smell of plum blossoms, white on the trees and fragrant long before the leaves appear. Apple blossoms after a warm rain—peach blooms against a saffron sunset—apples hanging thick on the trees when the leaves are falling and frost is near, the visible proof of the faith that Nature will provide for her children through the frozen time! Why, there isn't a day but some memory of my playtime in the old orchard makes me kinder and more decent to the other human beings who have to live here with me. What's going to happen, I'd like to know, when we have bred a race that buys its fruit from commercial orchards and knows nothing of the humanizing influence of the little orchard that is a part of home, and if not actually a part of heaven, at least a bit of the path that leads to heaven?"

Reviewing the Home Orchard.

"Well," said the young friend, "other specialists of the department of agriculture besides the one you talked to have been thinking about it. I don't know that they had your particular phase of the home orchard in mind. I believe they were thinking more about saving money in the home, and about the greater comfort of the members of the household. But they have written a bulletin entitled 'Growing Fruit for Home Use.' It begins this way: 'A more general culture of fruits in gardens and in home orchards would contribute substantially to the health and pleasure of the average family, besides furnishing a supply of valuable food products at a relatively small outlay of money.' Something, you see, is being done to prevent the passing of the home orchard."

"I'm glad to hear it," said the middle-aged gentleman. "What else does the bulletin say?"

"Well, it has 40 pages full of sound advice about growing fruit in the home orchard. It outlines a plan for an orchard, tells what kind of site is best, how to obtain nursery stock, the relative advantages of large and dwarf trees, season of planting, preparation of the soil, handling the stock from the nursery, planting, cultural methods, maintaining soil fertility, pruning and training, control of insect pests and fungous diseases, varieties of fruit for different regions, description of the different fruit districts, comments on fruit varieties, age of bearing, and lists of varieties. It discusses apples, pears, quinces, peaches, apricots, plums, cherries, grapes, gooseberries, currants, strawberries, raspberries, blackberries, dewberries and, possibly, some others."

"That"—and the middle-aged gentleman let out a long breath and grew less tense—"is fine, as far as it goes. It tells a man how to grow fruit at home. But does it tell him why to grow fruit at home?"

"Yes," said the young man, "it points out that, in many localities, the difficulty of securing fruit in pleasing variety by purchase is a strong reason for its home production wherever possible. It says that, throughout a large portion of the country, a sufficient range in variety of fruits can be produced to provide a supply in the fresh state for the table during a large part of the year and for canning or otherwise conserving for use during the rest of the year. It calls attention to the difference in point of view of the commercial grower and the home grower. The commercial grower, it says, thinks and operates in terms of his orchard, carload shipments of fruit and market prices. The one who grows fruit for home use, it continues, thinks in terms of individual trees."

Fruit Trees Have Individuality.

"That's right," interrupted the middle-aged gentleman. "I remember apple trees—and pear trees and cherry trees, too—that had almost as much individuality as people—more, in fact, than some people I know."

"Or," continued the young friend, ignoring the interruption, "plants and works to secure a supply for family use. The commercial grower measures his success principally by the effect on his bank account. The man who grows fruit for home use measures success by the regularity and quality of the supply that comes to the table, and the satisfaction of having it fresh and tree-ripened and the product of his own efforts. In the home orchard, the bulletin says, large yields, good shipping quality and attractiveness in appearance may be made secondary to high dessert quality or special excellence for cooking purposes."

"That's right, too," said the middle-aged gentleman. "Now, I remember an apple tree that used to stand right by the spring branch at home. It bore the dingiest apples I ever saw, but they were—"

"Tell me that the next time," interrupted the young friend; "my 20 minutes' vacation for lunch is over. You get a copy of that bulletin and read it. It's free."

"All right, I will," agreed the middle-aged gentleman. "How do I go about getting it?"

"Write," called back the young friend over his shoulder, "to the division of publications, United States department of agriculture, Washington, for Farmers' Bulletin 1001."

NEED FOR STANDARD GRADES

Bureau of Markets Notes Increasing Interest in Uniform Grades for Various Vegetables.

Increasing interest in uniform grades for fruit and vegetables is noted throughout the country by the bureau of markets, United States department of agriculture, as a result of the work of the food products inspection service and the experience of the past two seasons, which demonstrated the necessity of establishing definite standards.

The need for national standard grades and their value is shown by the fact that the grades for potatoes, made compulsory during the war, are still in wide use, although the regulations making them compulsory were canceled after the armistice.

Investigations of the grading of tomatoes, cabbage and some other vegetable crops are now under way and the bureau of markets states that recommendations for grade specifications may be made in time for use next season.

GENERAL FARM NOTES

Is the manure pile growing? Get it onto the fields.

* * *

Don't burn the leaves, save them for use as fertilizer.

* * *

A workshop provides a place for employment during the winter days.

* * *

The pen is mightier than the sword—especially if there is a pig in it.

* * *

It's not how much we can produce but what we can save of the production that counts.

* * *

Cowpeas are a legume that should be grown on every farm. They do reasonably well on thin soil.

The DAIRY

REMEDY DEFECTS IN BUTTER

Use of Churn Numbers Would Enable Inspectors to Sort Out Various Churnings.

Some of the defects noted by butter inspectors of the United States department of agriculture are: Old cream flavor, wavy or mottled appearance, too much salt, and leakiness in the butter. These defects are reported to the shipper when the inspection certificate is sent him, so that he may know why his butter scores low and may remedy the defects.

The use of churn numbers, so that the receivers can more readily sort out separate churnings, is urged by food-product inspectors of the bureau of markets, United States department of agriculture. In one lot of butter, for example, the score varied from 88 to 92. As no churn numbers were shown, the only way the receiver could separate the butter was by examining every tub. If churn numbers had been shown it would have been a simple matter to separate the various churnings and sell them according to score.

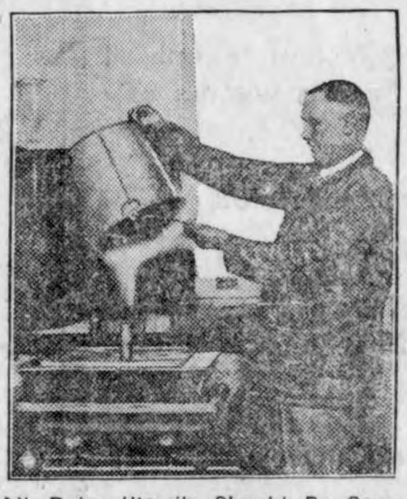
It is not possible to take time to examine every tub, so the butter is sold according to the samples taken, and at a discount if the samples vary much. If there should happen to be just one poor tub in the shipment and the sampler found it, the whole shipment would suffer; while if churn numbers were used, only the tubs in that churning would receive the lower score.

DON'T WASTE FUEL IN DAIRY

Exhaust Steam Can Be Advantageously Used in Pasteurizing Milk and Sterilizing Cans.

(Prepared by the United States Department of Agriculture.)

Many factory operations of the dairy industry require the use of heat, although they demand little power. As exhaust steam contains about 90 per cent of its original heat, it can be



All Dairy Utensils Should Be Carefully Sterilized for Use.

advantageously used in pasteurizing milk and cream and in sterilizing dairy equipment in the average commercial plant, according to specialists. They advise that all dairy factory men utilize this waste steam during the current winter, when fuel is scarce and high in price. Information on how to use steam effectively will be furnished free of charge when request is made to the United States department of agriculture, Washington, D. C.

VALUE OF BULL AS BREEDER

High Average in All His Daughters Is Final Measure—Four Years Are Needed.

The number of daughters a bull has in the advanced registry is not sufficient measure of his value as a breeder. Neither can his value be measured by a few high-producing daughters. High-average production in all his daughters is the final measure, and that cannot be determined by using the bull two or three years. Four years are needed to measure the value of any bull.

CARE FOR CREAM SEPARATOR

It Should Be Thoroughly Washed and Sterilized After Being Used—Particles Harmful.

The cream separator should be thoroughly washed and sterilized after each time it is used. Particles of milk or cream left in the separator act as a "starter" to hasten the souring of the cream.

SOME ESSENTIALS FOR COWS

Animals Will Do Better If Not Confined Too Closely—Warm Stables Necessary.

The cows will do a great deal better if not confined in too close quarters. They require above everything else plenty of exercise, fresh air, and good clean water. Good warm stables are a necessity.

BAKER'S COCOA

IS GOOD for Breakfast Luncheon Dinner Supper

Any time that *any one* wants a delicious drink with a real, satisfying, sustaining food value.

We guarantee its purity and high quality. We have been making chocolate and cocoa for nearly 140 years.

WALTER BAKER & CO. Ltd
Established 1780. DORCHESTER, MASS

Wealthy Pauper.

In a cheap lodging house in William street, New York, an aged man died, leaving a will showing that he was wealthy enough to live in a brownstone mansion in Fifth avenue. He was Edward Campion, aged sixty-five. Why he chose the habitat of the "down-and-outer" may remain a mystery. The house is one of those where the unfortunate can get "bath and bed" for 15 or 25 cents.

In his will, Campion disposes of several valuable parcels of Manhattan property, as well as real estate in other sections, in addition to considerable cash, to two daughters and three sons.

How's This?

New Luminous Paint.

The luminous paint of a recent British patent is made by heating sublimed sulphur with carbonates of strontium, calcium and magnesium, the strontium being preferably the predominant carbonate. A simpl mixture contains 26 parts of sulphur 19 of strontium carbonate, six of calcium carbonate and one part of magnesium carbonate. After heating in a crucible to about 1,500 degrees Fahrenheit the mixture is ground, and is then made into a liquid paint with a colorless varnish of mastic with turpentine spirit or drying oils.

For a disordered liver, take Garfield Tea, the Herb laxative. All druggists.—Adv.

Gone for Gowns.

Simpson—I see by the society journals that Mrs. Dashaway is going to Europe for her gowns.

Keene—Judging from her appearance I think she must have left her clothes somewhere.—Cartoons Magazine.

Don't linger at the bottom of the ladder. Either go up or down.

BACK GIVEN OUT?

There's surely some reason for that lame, achy back. Likely it's your kidneys. A cold or strain ofttimes congests the kidneys and slows them up. That may be the reason for that nagging backache, those sharp pains, that tired, worn-out feeling. You may have headaches and dizzy spells, too, with annoying bladder irregularity. Use *Doan's Kidney Pills*. They have helped thousands. *Ask your neighbor!*

An Iowa Case

C. Wall, plumber, 1410 S. 8th St., Council Bluffs, Iowa, says: "Three years ago I was troubled with my kidneys being weak. I couldn't bend my back. My kidneys were sore and weak and fairly beat with pain. My back felt as if I had a heavy weight across it. The kidney secretions were highly colored and passed too freely. After doctors' medicine had failed to help, Doan's Kidney Pills gave me relief. Three boxes cured me of the trouble."

Clarence Elder went to Garner Saturday forenoon.

Mrs. Chas. Ax was a passenger to Garner last Thursday.

Mrs. Baack went to Woden Saturday for a visit with relatives.

Miss Sarah Thieman went to Garner Saturday afternoon.

The Henry Glave family moved into the country the past week.

G. P. McCullough was at Garner on business Monday afternoon.

Ray Nelson from Garner, was visiting Klemme friends last Friday between trains.

Mrs. Henry Maitland went to Garner Saturday to have some dental work done.

Mrs. Behringer and daughter ,Florence, were passengers to Garner Saturday forenoon.

C. C. Tessier was over from Garner Monday looking after electrical business.

The Eighth Grade County examinations are being held today and tomorrow all over the county.

Mr. and Mrs. Curtis Luick of Goodell were shopping in Klemme Monday between trains.

John Henschen was a business caller at Belmond Tuesday between trains.

Mr. E. S. D. Kahrs was a business caller at the court house at Garner last Thursday between trains.

Henry Freie expects to move into his new house in Klemme the last of his week or the first of next.

Mrs. Thomas Johnson and daughter Bess, of Cedar Rapids, came last Saturday afternoon, being called here by the illness of her brother, Alvin.

Mr. and Mrs. Orville Johnson, of Garner, were shopping in Klemme on Monday between trains. These people are newy-weds and came here from their wedding trip to Des Moines.

C. W. Wiles sold his farm west of Klemme Tuesday to Frank Livermore, of Garner and a Mr. Johnson of Des Moines. The farm was formerly owned by L. H. Yost.

Rev. A. H. Meyer, accompanied by Dr. Brenner left for Des Moines Monday noon to attend the World Church Movement Convention. Rev. Meyer expects to return today.

Mr. and Mrs. Alvin Heeren who have been spending a week's honeymoon trip visiting with Klemme relatives, returned to Foreston, Illinois, Saturday, to begin housekeeping.

Mrs. A. L. Emerson came from Spencer last Wednesday to take care of her daughter, Arvella, who has been quite ill with pneumonia. She is very much improved at this time.

Mrs. O. R. White and Mary Nissen came from Miller last Friday to visit at the Raymond White home and also to take in the home talent play. They returned Saturday.

Geo. Post and family, of Nevada, Iowa, arrived in Klemme Monday with their car load of goods and will move to the Linden ranch east of Klemme.

Wm. Ax and family from near Garner, were visiting with Klemme relatives over Sunday. The Wm. Ax family will leave for Becker, Minn., this week where they will go on a farm for the coming year.

Mr. E. S. D. Kahrs and his father-n-law, Mr. H. Ludwig, went to Belmond last Thursday to bring home Mr. Kahr's Buick which he had left in storage there. The only bad place they found in the roads were near Goodell at the Carpenter farm.

Now is the time to subscribe for that daily or magazine. Let us send in your order when you get ready. We order magazines and papers practically every day in the week. No matter what periodical you wish to order, we can get it for you.

A farm near Humboldt sold the other day for $450 per care, possession to be given March 1st. Since then an 80-acre farm sold for $500 per acre. Possession of this farm will also be given March 1st. Iowa farm land continues to advance in price, and quite a few changes are reported every week, although March 1st is only a few days off—Fenton Reporter

Plans for the first drainage district in Fayette county have been filed with the supervisors. It is located in Smithfield township, and will embrace about 2,600 acres. The preliminary estimate of cost is over $60,000. This first project has been started by farmers thru the assistance of the farm bureau association and the extension department of the state college at Ames. A number of communities in the county are ready to follow.

Green bay bottoms which have defied the effort of man to redeem them, at last have yielded. The tractor did the business. The former river basin is shoulder high with weeds every season and horses could not get through them. The tractor, however, goes through easily and ploughs up the ground besides knocking down the weeds which obstruct the work of tilling the land. Farmers declare that when the river bottom is cleared the property cared for, it will increase land values in the vicinity of Fort Madison from 10 to 15 per cent. The soil is a rich loam and has never been used.

The $100,000 bull has arrived. It was born on the Waterloo Jersey farm, just in time to be a valentine. The calf weighs 75 pounds and each pound is the quintessence of wealth, for the animal is worth several times its weight in virgin gold. Really the calf is a $120,000 bull for it combines the blood of "Financial Sensation" and "Financial Beauty's King," and a half interest in both animals has been sold for $30,000, making the value of each $60,000. "Financial Sensation" is half owned by the Greystone Jersey farm; E. T. Meredith, secretary of agriculture, bought a half interest in Financial Beauty King.

While there has been considerable sickness among the hogs in many localities the fatalities have been few, the most serious feature in the situation being the set back in finishing for market, compelling a later shipment than originally intended. Colds, pneumonia or flu is the most prevalent trouble. The general believe is that the sickness is due largely to the poor ventilation in sheds. After being shut up in a close shed all night hogs coming out in the morning into the cold air steaming and in excellent condition to catch cold. Arange your shed in such a manner as to provide better ventilation and you will have no sickness of any kind to amount to anything in consequence.

Iowa had a net balance in her primary road fund January 1, 1920, for expenditure on construction and maintenance work on her 6,400 mile primary road system of $5,046,770.36. This very satisfactory showing is made in the December report on the activities of the State Highway Commission made by Fred R. White, Chief Engineer. Federal Aid funds to the amount of $120,000 were obligated during December leaving a balance in Federal funds still to be obligated before July 1 of $1,508,155.28. Plans and specifications now before the Bureau of Public Roads are sufficient to obligate all but $60,000 of this and by February 1, this additional amount will be entirely covered by the work in preparation.

Logan B. Urice, secretary of the Benton County Agricultural Association, is promoting a scheme which should greatly increase the pure bred poultry in Benton county. The directors of the Association are back of the plan and every farmer that has been spoken to has shown great enthusiasm. The plan is this: The association will furnish 200 settings of pure bred eggs of the four main breeds of chickens to the first 200 boys and girls making application. At fair time next year those who have received the eggs are to bring two chickens of the hatch to the fair to be exhibited and these chickens to become the property of the association. These chickens will be eligible to the regular poultry prizes and extra prizes for these classes. Rhode Island, Rock, Wyandottes and Leghorns are the four broods that have been decided on.

Iowa's best acre of corn in 1919 was grown by a Scott county man, LeRoy A. Haines of Prince, and yielded 111.6 bushels of dry shelled corn. On that record he was awarded the Raymond A. Pearson silver trophy cup, offered annually by the Iowa Corn and Small Grain Growers' Association. It was won in 1917 by F. G. Pinn of Humboldt county and in 1918 by Chas. D. Kirkpatrick of Keokuk county. Second place in the contest went to L. J. Meyer of Iowa county, whose acre yielded 106.3 bushels of dry shelled corn. The ranking of the other leading contestants was as follows. Chris Kinsell, Benton county, 103.2 bu.; A. E. Johnson, Pocahontas county, 101.47 bu.; J. O. Westrum, Hamilton county, 101.26 bu.; Emil Kroeger, Scott county, 95.89 bu.; G. V. Giffin, Palo Alto county, 94.72 bu.; Harold Nielson, Monnona county 92.84 bu.; Louis Schmitz, Plymouth county, 88.94 bu.; L. V. Carter, Hardin county, 84.27 bu.

F. L. Odell, well known to the buttermakers of Iowa, and who has been associated with the agricultural extension department of the Iowa State College, has resigned and will engage in the automobile business at Sioux Rapids, this state.

A $13,000 grain elevator will be built at East Fort Madison in the spring by the Farmers' Elevator and Supply Company. A motion authorizing the building of the elevator was unanimously passed at a meeting of the association, which also elected officers.

Woodman, woodman, spare that tree!

Don't try to chop expenses in furnishing your olothes tree and expect it to bear fruit.

To look good you must look to good clothes and since the prices of poor garments are so high you should be all the more careful.

All Wool——thats the stuff. Hand Tailoring—thats your style.

Clothes that combine the two cost more of course but they give more.

This store is still hanging ou to old standards and high qualities for dear life so don't you for goodness sake, let go.

A. G. Koerner returned from his trip to Des Moines yesterday marning.

Miss Mildred Johnson was a Garner caller yesterday.

C. W. Wiles had business at Garner yesterday.

Mr. John Peterson, of Chicago, has been spending a few days of the past week at the Joe Johnson home.

Dr. Missman has been having a driver the last week during the rush of sickness in the country.

Raymond Smith of Garner came Friday from Garner for a short visit at the Henry Medaus home.

Leafy Wilson went to Titonka Saturday for an over Sunday visit with friends.

Oscar Wenck came from Garner Saturday on business in Klemme between trains.

Mr. and Mrs. Art Kluckhohn, of Garner, were visiting with Klemme relatives between trains Saturday.

H. L. Suckow went to Prairie De Chein, Wisconsin, on business Saturday afternoon.

Mrs. Raymond White and son went to Miller Saturday afternoon for a visit with relatives.

E. C. Crotty was ill at his home at Britt last week so the band boys did not have a rehearsal last Friday.

Marlin Croner returned from his business trip to Ohio cities Wednesday morning.

The W. F. M. S. of the First Methodist church will meet with Mrs. Lou Sampson March 4th. You are invited.

The Independent School District of Klemme have a statement of their financial condition in this issue of the Times.

Mrs. Wm. Howard's mother, Mrs. Walters, was quite sick the past week with an attack of pneumonia, but at this writing is able to be up a little.

Ed. Jacobs, Gerald and Mildred McCullough drove to Garner Sunday afternoon in Ed's car, for a short visit with home folks.

Mrs. L. J. Doty, of Oelwein, Iowa, came last Thursday for a few days' visit with Klemme relatives and friends.

Mrs. I. B. Thomas came last Wednesday and remained until Saturday for a visit with her son, Dr. R. M. Thomas and family.

Mrs. Thayne Bailey and Mrs. Otto Hanson of Belmond, were Klemme shoppers last Wednesday between trains.

Mr. and Mrs. T. H. Hake and Mr. D. H. Hake, of Belmond, were Klemme visitors between trains last Wednesday.

Mrs. J. N. Day and son Dorance, and Mrs. Wm. Smith went to Garner yesterday morning to assist at the D. D. Ross farm sale.

Mrs. Schultz, of Garner, and daughter Mrs, Manuel and baby of Britt were visitors at the Walter Schultz home Tuesday night.

Mr. H. Ludwig, of Nevada, Iowa, came last Wednesday and remained until Saturday for a visit with his daughter, Mrs. Kahrs.

Henry Coobs, who has been visiting with Klemme relatives for a week returned to his home at McGregor last Saturday noon.

Are you one of the farmers who will use a wide track sled next winter? If so now is the time to make your arrangements. Get the material as soon as possible to widen your sled and avoid the rush next fall.

Mrs. A. L. Strieby and son went to Garner Tuesday afternoon for a few days' visit. Mr. Strieby is working in the meat market at Garner during the absence of one of the men who is sick.

The Wibur McGee family have moved into the John Johnson house. They have three children who will enter the Klemme school, Wayne, Gayland and Beatrice. We welcome the McGee family to Klemme.

The district superintendent of the Methodist Church, Dr. L. J. Brenner, conducted communion services at the First Methodist Church last Sunday. Dr. Brenner was to have preached at Fenton, Iowa, but as that little town was quarantined for flu, he came here.

Mr. A. L. Lake, of Mason City, was trnsacting business in Klemme last Thursday between trains. While here he stopped for a chat with the Editor and also to make arrangements to run an ad. Mr. Lake is a contractor and has the contract for a new brick building at Goodell.

Mr. and Mrs. Wm. Smith have moved in from the farm and are now residing on "Frog Slip Avenue," if you know where that street is located in Klemme. They intend to build a home of their own on the lots south of the C. W. Wiles residence, as soon as the weather will permit.

Henry Church has purchased a house and lot at Garner and will move there shortly. The residence which the Church's have acquired is located just one block west of the Rock Island depot. He is having some work done on the place and is a daily caller at Garner.

Mr. Lou Sherman, of Goldfield, Iowa, was transacting business in Klemme last Saturday between trains. Mr. Sherman is the foreman on the Goldfield Chronicle and while in town stopped at the Times Office to see how we were progressing. While in town Mr. Sherman made the discovery that h was a cousin of Frank Carpenter, one of our townsmen

A. G. Koerner, our telephone man, went to Des Moines Monday to battle with the Railroad Commissioners Mr. Koerner has the right of way for his telephone system along the Rock Island and the electrical line running along the same route is raising old Ned with his system and as he has the right of way it is up to the Commissioners to make a satisfactory adjustment in some manner.

The dance which the Garner Firemen gave cleared them $317.25. This amount they will use to buy a new fire whistle. They also intend to give another dance on St. Patrick's day to raise more money. Why wouldn't this be a good idea for the Klemme Fire Department to follow up? The fire company here needs a chemical cart, some kind of a good alarm besides the old cow bell which is now used. Boys, let's do something.

ph M. Edwards, of Belle Plaine, been elected county agent for Wright county.

A May festival of music will be given by the Simpson Conservatory, Indianola this spring.

Henry Wahle, Pottawattamie county, marketed two car loads of hogs at Omaha recently for which he received $14.80 per cwt.

With numerous automobile shows being held thruout the state, February is proving a red letter month for the motor trades men of Iowa.

E. A. Kurt, purchased the 126 acre farm adjoining Fisher's bridge north of Des Moines from Jerry Sayler. The consideration was $295.00 an acre.

Newspapers advertising to arouse public sentiment in favor of increased salaries for school teachers is being resorted to by a special committee of publicity of the Fort Dodge federation.

Frank N. Miller has purchased the four acre tract of land on Elm street, belonging to W. C. Schaefer, rural route No. 1, Davenport, for $8,200, or $2,050 per acre.

Fired with enthusiasm over the success of the recent poultry show held in Albia, managers are working on a plan to make the show permanent and to provide means for putting it on a sound financial basis. The recent show demonstrated that Albia people were raising standard bred fowls. A large number of prize birds were on exhibition from Jefferson county.

Hay is scarce in Humboldt and bringing about any old price which is asked for it, said Mr. S. Gilliand, well-known Humboldt county farmer, in discussing the farm situation.

The idea of consolidating the schools of Mendon township with the new building centrally located at North McGregor, will soon be brought before the patrons of the schools and the voters.

More than a half hundred farmers attended the West Point Township Farm Bureau meeting recently in Allison county. A. L. Surfus was elected Farm Bureal director and A. Boleman vice-director. The Clarksville meeting in the county was also well attended and W. C. Kimball elected director. A community Farm Bureau is to be organized at Clarksville to embrace part of Butler and Jackson townships.

Announcement is made by J. W. Coverdale, secretary of the American Farm Bureau Federation, that nineteen states have now raised the constitution of the national organization and are ready to assume full rights and duties of membership. To that end the secretary has issued an official call for a meeting of the directors and members of the executive committee of the American Farm Bureau Federation, to be held in Chicago, March 3.

DO ALL MY HOUSEWORK

Before I took Lydia E. Pinkham's Vegetable Compound I could hardly stand, says Mrs. Kwarcinski.

Chicago, Ill.—"I suffered with displacement and irregularities and I did not know what to do. My mother advised me to take Lydia E. Pinkham's Vegetable Compound and use the Sanative Wash so I took her advice and used these remedies and cured myself. I feel fine and do all my housework which I could not do before, as I could hardly stand up and I have three healthy children. You can use this letter if you wish, for your remedy is certainly wonderful for sick, run down women."—Mrs. A. KWARCINSKI, 3627 W. Oakdale Ave., Chicago, Ill.

For forty years Lydia E. Pinkham's Vegetable Compound has been making women strong and well, relieving backache, nervousness, ulceration, and inflammation, weakness, displacements, irregularities and periodic pains. It has also proved invaluable in preparing for childbirth and the Change of Life.

Women who suffer are invited to write for free and helpful advice to Lydia E. Pinkham Medicine Co. (confidential), Lynn, Mass. It is free and always helpful.

Vaseline

WOLVES OF THE SEA

By RANDALL PARRISH

Copyright, by A. C. McClurg & Co.

CHAPTER XXXII—Continued.
—20—

Haines was evidently reluctant, but sailor enough to follow as I lowered myself to the deck, clinging hard to keep my footing on the wet incline. A light spar had lodged here, and by making this a species of bridge, we crept as far as the companion, the door of which was open, and gained a view of the scene below. It was a dismal hole in the dim light, but presented no obstacle to our entrance, and I led the way down the stairs, gripping the rail to keep from falling.

The door of the captain's room gave, but it required our combined efforts to press it open against the volume of water, slushing about within. For a moment my eyes could scarcely recognize the various objects as I clung to the frame of the door and stared blindly about in the gloom. Then slowly they assumed shape and substance. Screwed to the deck, the furniture retained its place, but everything else was jammed in a mass of wreckage, or else floating about in a foot of water, deepening toward the stern. There were two chests in the room, one of which I instantly recognized as that of Roger Fairfax. The sight of this made me oblivious to all else.

"There's the chest we want, Haines," I cried, pointing it out. "Have the lads back the boat up to this port; then come down and help me handle it."

"Yes, sir," his voice trembling, "but—but isn't that a man over there—in the bunk? Good God, sir; look at him!"

The white, ghastly face stared at us, looking like nothing human in that awful twilight. I actually thought it a ghost, until with desperate effort the man lifted himself, clinging with gaunt fingers to the edge of the bunk. Then I knew.

"Sanchez! You! those cowards left you here to die!"

"No one came for me," he answered, choking so the words were scarcely intelligible. "Who are you, and what brought you here?"

"I'll tell you frankly, Captain Sanchez," and I stepped closer. "We risked coming aboard to save that chest—Roger Fairfax's chest—before it went down. This vessel has its back broken, and may slide off into deep water at any minute. We must get you out of here first."

"Get me out!" he laughed hideously. "To hell with your help. I want none of it. I am a dead man now, and the easiest way to end all will be to go down with the ship—'twill be a fit coffin for Black Sanchez. By God! I know you now—Geoffry Carlyle?"

"Yes, but an enemy no longer."

"That is for me to say. I hate your race, your breed. The very sound of your name drives me mad. I accept no rescue from you! Damn you, take your gold and go."

"But why?" I insisted, shocked at the man's violence. "Is it because I interfered between you and Dorothy Fairfax?"

"That chit; bah, what do I care for her but as a plaything. No, my hate runs deeper than that. How came you here—in the boat stolen from the Namur?"

"No, Captain Sanchez. The day after we left the ship we boarded a schooner found adrift; the crew stricken with cholera, with not a man left alive on deck, or below. She lies yonder now, the Santa Marie—a slaver."

"Merciful God!" and his eyes fairly blazed into mine as he suddenly forced his body upward in the bunk. "The Santa Marie adrift! the crew dead from cholera? And the captain—Paradilla, Francis Paradilla—what of him?"

"He lay alone on a divan in the cabin—dead also."

He tried to speak, but failed, his fingers clawing at his throat. When he finally gained utterance once more it was but a whisper.

"Tell me," he begged, "there was no woman with him?"

"There was no woman," I said gravely, "on deck or in the cabin."

"What mean you by saying that? There was one on board! Don't lie to me! In an hour I am dead—but first tell me the truth. Does the woman live?"

"No, she died before. We found her body in a chest, preserved by some devilish Indian art, richly dressed and decked with jewels."

"English?"

"I judged her so, but with dark hair and eyes. You knew her?"

"In the name of all the fiends, yes. And I know her end. He killed her—Paradilla killed her—because she was as false to him as she had been to me. Hell! but it is strange you should be the one to find her—to bring me this tale, Geoffry Carlyle!"

"Why? What is it to me?"

"You go back to England and tell the duke of Bucclough how his precious sister died."

"His sister! Good God, you cannot mean that woman was Lady Sara Carlyle?"

"Who should know better than I?" sneeringly. "Once I was called in England Sir John Collinswood."

He sank back exhausted, struggling for breath, but with eyes glowing hatred. I knew it all now, the dimly remembered story coming vividly back to memory. Here then was the ending of the one black stain on the family honor of our race. On this strange coast, three thousand miles from its beginning, the final curtain was being rung down, the drama finished. The story had come to me in whispers from others, never even spoken about by those of our race—a wild, headstrong girl, a secret marriage, a duel in the park, her brother desperately wounded, and then the disappearance of the pair. Ten days later it was known that Sir John Collinswood had defaulted in a large sum—but from that hour England knew him no more. As though the sea had swallowed them both, man and woman disappeared, leaving no trace behind.

The face I gazed dumbly into was drawn and white with pain, yet the thin lips grinned back at me in savage derision.

"You remember, I see," he snarled. "Then out of here, Geoffry Carlyle. Leave me to die in peace. The gold is there; take it, and my curse upon it. Hurry now—do you hear the bark grate on the rocks; it's near the end."

CHAPTER XXXIII.

Before the Governor.

The sound startled me; I imagined I heard the keel slipping, yet before we had reached the door opening on deck the slight movement ceased. My hand gripped the frightened Haines.

"Tell them in the boat to do as I said; then come back here."

"My God, sir, she's a goin' down."

"Not for some minutes yet. There are thousands of pounds in that chest; you've risked life for less many a time. Jump, my man!"

The boat lay in close, bobbing up and down dangerously, yet held firmly beneath the opened port. The box was heavy enough to tax the strength of two men to handle it, but of a size and shape permitting its passage. Sanchez had raised himself again, and clung there to the edge of the bunk watching us.

"Now let down easy, lads," I called. "No, place it amidships; get it even, or you go over. Fix it to ride steady, and stand by—we'll pass a wounded man out to you!"

I stepped across to Sanchez. He saw me coming, and drew back, his ghastly face like a mask.

"No you don't, Carlyle!" he snapped angrily. "Keep your hands off me. So you want me to die with my neck in a noose, do you? I was born a gentleman, and, by God! I'll die like one—and go down with my ship. Get out of here now! You won't? You will, or else die here with me! I'll give you a minute to make your choice."

He left no doubt as to his meaning. From beneath the blanket, the black muzzle of a pistol looked straight into my eyes. The hand holding it was firm, the face fronting me savagely sardonic.

"I'd like to kill you, Carlyle," he hissed hatefully. "By God, I don't know why I shouldn't. Every time I look at you I see her face. If you take a step nearer I pull the trigger—go!"

It was a hard pull back to the Santa Marie. Dorothy greeted me first, and we stood close together at the rail as the men hoisted the chest on deck. She said nothing, asked nothing, but her hands clung to my arm, and whenever I turned toward her our eyes met.

There was a sudden cry forward, and a voice shouted:

"There she goes, buckies! That's the last o' the Namur!"

I turned swiftly, my hand grasping her fingers as they clung to the rail. The battered hulk slid downward, the deck breaking amidships as the stern splashed into the depths; then that also toppled over, leaving nothing above water except the blunt end of a broken bowsprit, and a tangle of wreckage tossed about on the crest of the waves. I watched breathlessly, unable to utter a sound; I could only think of that stricken man in the cabin, those wild eyes which had threatened me. He was gone now—gone!

I yet held Dorothy's hand tightly clasped in my own, and the depths of her uplifted eyes questioned me.

"We will go aft, dear, and I will tell you the whole story," I said gently, "for now we are homeward bound."

* * * * * * *

I write these few closing lines a year later in the cabin of the Ocean Spray, a three master, full to the hatches with a cargo of tobacco, bound for London, and a market. Dorothy is on deck, eagerly watching for the first glimpse of the chalk cliffs of old England. I must join her presently, yet linger below to add these final sentences.

There is, after all, little which needs to be said. The voyage of the Santa Marie north proved uneventful, and, after that first night of storm, the weather held pleasant and the sea fairly smooth. I had some trouble with the men, but nothing serious, as Watkins and Haines held as I did, and the pledge of Dorothy's influence brought courage. I refused to open the chest, believing our safety, and chance of pardon, would depend largely on our handing this over in good faith to the authorities. Watkins and I guarded it night and day until the schooner rounded the cape and came into the Chesapeake. No attempt was made to find quarters below, the entire crew sleeping on deck, Dorothy comfortable on the flag locker.

It was scarcely sunrise, on the fifth day, when we dropped anchor against the current of the James, our sails furled and the red English colors flying from the peak. Two hours later the entire company were in the presence of the governor, where I told my story, gravely listened to, supplemented by the earnest plea of the young woman. I shall never forget that scene, or how breathlessly we awaited the decision of the great man, who so closely watched our faces. They were surely a strange, rough group as they stood thus, hats in hand, waiting to learn their fate, shaggy-haired, unshaven, largely scum of the sea, never before in such presence, shuffling uneasily before his glance, feeling to the full the peril of their position. Their eyes turned to me questioningly.

Opposite us, behind a long table, sat the governor, dignified, austere, his hair powdered and face smoothly shaven; while on either side of him were those of his council, many of the faces stern and unforgiving. But for their gracious reception of Dorothy and their careful attention to her words I should have lost heart. They questioned me shrewdly, although the governor spoke but seldom, and then in a kindly tone of sympathy and understanding. One by one the men were called forward, each in turn compelled to tell briefly the story of his life; and when all was done the eyes of the governor sought those of the council.

"You have all alike heard the tale, gentlemen," he said. "Nothing like it hath ever before been brought before this colony. Would you leave decision to me?"

There was a murmur of assent, as though they were thus gladly relieved of responsibility in so serious a matter. The governor smiled, his kindly eyes surveying us once more; then, with extended hand he bade Dorothy be seated.

"The story is seemingly an honest one," he said slowly, "and these seamen have done a great service to the colony. They deserve reward rather than punishment. The fair lady who pleads for them is known to us all, and to even question her word is impossible. Unfortunately I have not the power of pardon in cases of piracy, nor authority to free bond slaves, without the approval of the home government; yet will exercise in this case whatsoever of power I possess. For gallant services rendered to the colony, and unselfish devotion to Mistress Dorothy Fairfax, I release Geoffry Carlyle from servitude pending advices from England; I also grant parole to these seamen, on condition they remain within our jurisdiction until this judgment can be confirmed and full pardons issued. Is this judgment satisfactory, gentlemen?"

The members of the council bowed gravely, without speaking.

"The chest of treasure recovered from the sunken pirate ship," he went on soberly, "will remain unopened until final decision is made. As I understand, Master Carlyle, no one among you has yet seen its contents, or estimated its value?"

"No, your excellency. Beyond doubt it contains the gold stolen from Roger Fairfax; and possibly the result of other robberies at sea.

"The law of England is that a certain percentage of such recovered treasure belongs to the crown, the remainder, its true ownership undetermined, to be fairly divided among those recovering it."

"Yet," spoke up Dorothy quickly, "it must surely be possible to waive all claim in such cases?"

"Certainly; as private property it can be disposed of in any way desired. Was that your thought?"

"A Fairfax always pays his debt," she said proudly, "and this is mine."

There was a moment's silence as though each one present hesitated to speak. She had risen, and yet stood, but with eyes lowered to the floor. Then they were lifted and met mine in all frank honesty.

"There is another debt I owe," she said clearly, "and would pay, your excellency."

"What is that, fair mistress?"

She crossed to me, her hand upon my arm.

"To become the wife of Geoffry Carlyle."

THE END.

Orioles.

As for myself I am turned contractor of hammock netting for the orioles, taking my pay in notes. I throw strings out of the window and they snap them up at once. They sit in the cherry trees hard by and warble, "Hurry up! hurry up!" I never found out before just what they said. But if you will listen you will find that this is what they first say. A vulgarism, I admit, but native.—Lowell

YOUNGSTERS!

Need "Cascarets" when Sick, Bilious, Constipated.

When your child is bilious, constipated, sick or full of cold; when the little tongue is coated, breath bad and stomach sour, get a box of Cascarets and straighten the little one right up. Children gladly take this harmless candy cathartic and it cleanses the little liver and bowels without griping. Cascarets contain no calomel or dangerous drugs and can be depended upon to move the sour bile, gases and indigestible waste right out of the bowels. Best family cathartic because it never cramps, sickens or causes inconvenience.—Adv.

Children Challenge Churches.

I became well acquainted in the White mountains this summer with a layman from a large eastern parish, writes Dr. George Parkin Atwater in the Witness. As we climbed Mount Willard together he asked: "What do we need most? Could this church capture the child life?"

"It might," I replied, "if it would begin to train laymen for work among children, if it understood the meaning of the boy scout movement, if it poured its money into training men and women rather than into bricks and mortar; in other words, if it accepted the challenge of the children, as Doctor Gardner so finely puts it, and brought the training of children out of the basement into the chief place in the life of the church.

"Moreover, never forget this: The surest way to the heart and life of the parent is through an interest in the child."

Eases Colds

At once! Relief with "Pape's Cold Compound"

The first dose eases your cold! Don't stay stuffed-up! Quit blowing and snuffling! A dose of "Pape's Cold Compound" taken every two hours until three doses are taken usually breaks up a severe cold and ends all grippe misery.

Relief awaits you! Open your clogged-up nostrils and the air passages of your head; stop nose running; relieve the headache, dullness, feverishness, sneezing, soreness and stiffness.

"Pape's Cold Compound" is the quickest, surest relief known and costs only a few cents at drug stores. It acts without assistance. Tastes nice. Contains no quinine. Insist on Pape's!—Adv.

A Reconciled Face.

Tess—Why didn't you speak to her? She met you with a smile of reconciliation on her face.

Jess—Yes, her face was what you might call "reconciled," wasn't it?

Tess—Reconciled?

Jess—Yes. "Made up," you know.—London Tit-Bits.

Tell All The World "PAIN IN MY SIDE"

Davenport, Iowa.—"I wish I could tell all the world how much I owe to Dr. Pierce's Favorite Prescription. I was nearing middle life when my last child came and my health was miserable. I had continuous pain in my right side. I took nine bottles of 'Favorite Prescription' and can truly say that I suffered the least and my health afterwards was better than it had ever been before. Going thru the critical time of life, I depended solely upon 'Favorite Prescription' to keep me well and strong, and it did not fail me. I had none of the distressing symptoms most women have at this period, such as heat flashes and dizzy spells. I came thru in excellent health and am still just as strong and well as I was thirty years ago, thanks to this best of medicines, Dr. Pierce's Favorite Prescription."—Mrs. Alice Van Arnam, 1705 W. 4th St.

FOR ALL AILING WOMEN

Foley, Minn.—"Some years ago Dr. Pierce's Favorite Prescription cured me of a case of woman's weakness, and since that time I have become the mother of seven healthy children. I have always taken the 'Prescription' and not one of my children was ever puny or sickly. They have grown up strong, and I have been in the best of health these many years, due I am sure to the constant use of this medicine. I hardly know what I would have done without it. I feel safe in recommending it to all ailing women. There is nothing better.

"We also keep Dr. Pierce's 'Pleasant Pellets' in the house for immediate use."—Mrs. George Walbridge, Lock Box 318.

ASPIRIN—A Talk

Take Aspirin only as told by "Bayer"

The name "Bayer" identifies the true, world-famous Aspirin prescribed by physicians for over eighteen years. The name "Bayer" means genuine Aspirin proved safe by millions of people.

In each unbroken package of "Bayer Tablets of Aspirin" you are told how to safely take this genuine Aspirin for Colds, Headache, Toothache, Earache, Neuralgia, Lumbago, Rheumatism, Neuritis and for Pain.

Always say "Bayer" when buying Aspirin. Then look for the safety "Bayer Cross" on the package and on the tablets.

Handy tin boxes of twelve tablets cost but a few cents. Druggists also sell larger packages.

Aspirin is trade mark of Bayer Manufacture Monoaceticacidester of Salicylicacid

Christian Church History.

With much diversity of opinion on minor points, there is a general agreement in dividing the history of the church into three great periods: the first, from the birth of Christ to the time of Constantine; the second, from that epoch to the reformation, and the third, from the reformation to the present time.

Cannot Be Silent.

A politician must often talk and act before he has thought and read. He may be ill-informed regarding a question, but speak he must.—Macaulay.

Important to all Women Readers of this Paper

Thousands upon thousands of women have kidney or bladder trouble and never suspect it.

Women's complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder disease.

If the kidneys are not in a healthy condition, they may cause the other organs to become diseased.

You may suffer pain in the back, headache and loss of ambition.

Poor health makes you nervous, irritable and may be despondent; it makes any one so.

But hundreds of women claim that Dr. Kilmer's Swamp-Root, by restoring health to the kidneys, proved to be just the remedy needed to overcome such conditions.

Many send for a sample bottle to see what Swamp-Root, the great kidney, liver and bladder medicine, will do for them. By enclosing ten cents to Dr. Kilmer & Co., Binghamton, N. Y., you may receive sample size bottle by Parcel Post. You can purchase medium and large size bottles at all drug stores.—Adv.

LEFT WHEN OCEAN RETIRED

Californian Reports Finding Millions of Shells Far Above the Present Sea Level.

Orrils I. Kennedy, an attorney of San Bernardino, Cal., has returned from an exploration trip on Painted Rock, which is 40 miles east of San Bernardino. He brought with him samples of seashells from the great floor of a one-time ocean that is older than Mount San Jacinto and a story of seeing an old Spanish musket and Indian water vessels in an inaccessible place on the hill.

Mr. Kennedy plans to organize a party to return and get the musket, which, he believes, is at least one hundred years old. To obtain the relic some-body will have to be lowered from a cliff on a rope and then swung into a cave that probably is an old sea cavern.

Some of the shells, he said, were found 2,050 feeet above sea level. He stated there probably were millions of them imbedded in the rock formation.

Amber Beads Long Popular.

The superstition which clings to the wearing of beads is of ancient origin. The custom of wearing an amber necklace was immensely common, and is not yet extinct among old women in England. The amber when heated gives forth an agreeable perfume. In ancient times it was the present made by a mother to her daughter on her wedding eve.

NOSE CLOGGED FROM A COLD OR CATARRH

Apply Cream in Nostrils to Open Up Air Passages.

Ah! What relief! Your clogged nostrils open right up, the air passages of your head are clear and you can breathe freely. No more hawking, snuffling, mucous discharge, headache, dryness—no struggling for breath at night, your cold or catarrh is gone.

Don't stay stuffed up! Get a small bottle of Ely's Cream Balm from your druggist now. Apply a little of this fragrant, antiseptic cream in your nostrils, let it penetrate through every air passage of the head; soothe and heal the swollen, inflamed mucous membrane, give you instant relief. Ely's Cream Balm is just what every cold and catarrh sufferer has been seeking. It's just splendid.—Adv.

Mirror Part of Dress in 1600.

In the sixteenth century no lady was considered in full dress unless she had a mirror at her breast. It was oval in shape, about four inches in size.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

DOESN'T BELONG IN BIBLE

American Educator Explains Presence in Book of Myth of Jonah and the Whale.

Dr. R. G. Moulton, professor of literature at the University of Chicago, addressing a gathering of Wesleyans at Bath, England, where he received his education, insisted that Jonah was not swallowed by the whale and that the story forms no part of the real Bible.

The Bible, mighty in itself, said Doctor Moulton, had passed through the hands of commentators who had no knowledge, no understanding of literature, and who reduced it to a form which had little or no likeness to the real Bible. One of these numerous commentators had written into that most spiritual and beautiful book of Jonah the narrative of the whale, the only effect being one of distortion and disfigurement.

In actual fact the story, asserted Doctor Moulton, had been originally in the form of a mere footnote comment in manuscript, but by some blunder, due to careless, slipshod printing from which the Bible suffered more than any other book in the world, the fable of the whale had been included in the general text. And in this way had it come down through the ages to the modern world as pure comedy, or, what was worse, ribald satire.

Women may be vain without being pretty, but it's almost impossible for them to be pretty without being vain.

"There's a Reason"

LIVE STOCK

SHIP CATTLE FROM MONTANA

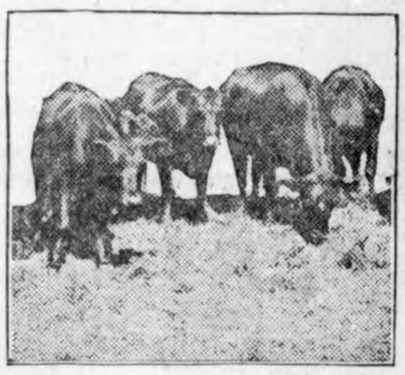
Estimated That Between 500,000 and 600,000 Head Have Been Shipped Out of State.

(Prepared by the United States Department of Agriculture.)

An unusually large movement of cattle out of Montana has taken place in 1919, according to the bureau of animal industry. Normally, the movement of cattle from this state is between 200,000 and 300,000 head annually. It is estimated that between 500,000 and 600,000 have been shipped out for all purposes. Figures are not available for a similar comparison in regard to sheep, but reports from representatives of the department in the field indicate that between 400,000 and 500,000 sheep of all classes of range stock were moved out of the Northwest for feeding and grazing in sections east and west of the drought area.

These animals went first into the available nearby pasture lands in the Dakotas and Nebraska. Later they were moved into the middle cornbelt states, into Minnesota, Wisconsin, and the upper peninsula of Michigan, and still later into Texas and New Mexico. The movement into the two latter states continued on into November. The heavy snowfall that occurred early in the season overtook some ranchmen who were taking chances on the weather and they found it necessary to move their herds quickly. It is thought that enough railroad cars were made available to fill all orders. Stock cars moving west were given preference over dead freight.

Information that has reached the department indicates that the movement of cattle into New Mexico and Texas has been satisfactory, and with certain exceptions, the same holds true with respect to Minnesota, Wisconsin, and Michigan. Reports indicate that a considerable movement of



A Farmer May Feel Independent When He Has a Herd of Cattle Like These.

sheep and cattle into Michigan and nearby territory for summer grazing is likely in future years. Feed supplies in the Northwest appear to be adequate for live stock remaining on the ranges and there is now no expectation of serious shortage.

PROVIDE SHELTER FOR SHEEP

Exposure to Wind and Storms Is Cause of Much Loss—Protection Is Not Costly.

Great sheep losses come through exposure to wind and storm. In all parts of the country farms that have sheep on them will do well to provide shelter from bad weather. These do not cost so much as to have the sheep die in the cold and wet. If we had all the money that is lost in sheep in any one year through exposure to storm we would be far richer than we are.

PROFIT FROM BABY BEEVES

Farmer With Pasture Land Could Raise Few Without Great Expense—Grain Needed.

Every farmer who has pasture land could raise a few baby beeves profitably without great expense. In addition to the pasture a silo will be needed and a single crop. It may be advisable in addition to plant soiling crops to supplement the silage and pasture. Some hay should be available and enough grain to finish the calves for market.

LIVE STOCK NOTES

Send the scrub sires to the butcher's block.

* * *

The water supply is of paramount importance in raising animals.

* * *

Pigs grow very fast when they have pasture and some grain as a supplement.

* * *

Beef cattle are able to convert coarse feeds such as hay, stover and silage into meat.

* * *

For a general farmer who raises animals and grows diversified crops a silo is almost indispensable.

* * *

Beef, pork, milk or mutton can be produced more economically by good pastures than by any other means.

FIND WEALTH IN WINTER

Canadian Farmers Turn Winter Months to Good Account.

Large crops and good prices for the wheat, oats, barley and flax from Canadian farms have made the winter resorts in California at times resemble a meeting of a Canadian farmers' institute, but the practice among successful farmers of spending their winters holidaying seems to be on the wane. After all, nothing can be more tiresome than having nothing to do, and the farmers of Western Canada are now finding winter employment right on their farms which rivals the attractions of the sunny South.

Live stock is the explanation, according to a six-foot Westerner who dropped into the Canadian Government Information Bureau at 311 Jackson street, St. Paul. He was on his way back to Western Canada with a carload of selected breeding stock which had carried off blue ribbons at several state fairs in 1919. "We have found," said he, "that there is just as much pleasure and a great deal more profit in developing a herd of prize stock as in listening to the murmur of the sad sea waves. Where we used to grow grain exclusively now we are raising stock as well. The fact that steers raised in Western Canada took the grand championship at the International Live Stock Show at Chicago two years in succession shows how well we are getting along. And instead of depleting our bank rolls we add a tidy sum to them."

"But don't you find the life monotonous?"

"Not in the least. You see, we have a rural club which meets in our school house, where we thrash out all kinds of problems. Here we exchange ideas and also have occasional talks from government experts, and the man who goes abroad for the winter only realizes how much he has missed when at a summer picnic he hears an address by a neighbor that would do credit to a college graduate.

"It was at one of these meetings that we decided to import a prize-winning stallion, and today our district is raising some of the best draft horses in Canada. The carload of breeding stock which I am now shipping to my farm is indirectly the result of our club meetings. We are going to make that little corner of Saskatchewan one of the big stock centers of America. Why shouldn't we? Everything is in our favor—climate, fertility, cheap land, free grazing land adjoining lots of farms, creameries, government supervision. You know how energetic the northern climate makes a man? Well, it's just like that with stock. They get to be great, husky fellows, hardy and big-framed—and that counts on market day.

"Come up and see me some time," were his parting words as he left to catch his train. "I'll show you some of the finest land and live stock out of doors, and treat you to a real farm meal—everything but the coffee and sugar grown right on my farm. That counts some in these days of high prices."—Advertisement.

WOULDN'T DO TO BE HASTY

Citizen Wanted to Be Sure Just Whose Dog Was Making All That Infernal Racket.

The suburban night was being made hideous by the howling of a dog whose soul was lonely, and the strolling police officer paused to speak to the citizen who, standing at his gate, was evidently listening to the canine wails.

"Awful racket," the officer observed.

"Fierce!" the citizen agreed.

"Want to make a complaint?" the officer suggested zealously.

"Why—er—not until I am sure," the citizen responded.

"Sure of what?"

"Why, whether that is my dog or Brown's. If it is my dog—oh, well, we have to put up with a few little annoyances in this life, you know; but if it is Brown's, why, by George, I don't propose to have my life made miserable by a nuisance like that!"

YOUR CATARRH MAY LEAD TO CONSUMPTION

Dangerous to Use Treatment for Only Temporary Relief.

There is a more serious stage of Catarrh than the annoyance caused by the stopped-up air passages, and other distasteful features.

The real danger comes from the tendency of the disease to continue its course downward until the lungs become affected, and then dreaded consumption is on your path. Your own experience has taught you that the disease cannot be cured by sprays, inhalers, atomizers, jellies and other local applications.

S. S. S. has proven a most satisfactory remedy for Catarrh because it goes direct to its source. Get a bottle today, begin the only logical treatment that gives real results. For free medical advice write Medical Director, 47 Swift Laboratory, Atlanta, Ga.

CO-OPERATION TO CURB THE RIOT OF UNWISE SPENDING

Savings Societies, Schools, Women's Clubs, Unions, Lodges and Churches Aid Savings Movement.

By Albert Boswell, Director Co-Operating Organizations, Government Savings Organization, 7th District.

Establishment of harmonious or reciprocal relations between the citizen and the government by giving the people an opportunity to acquire a stake in the government is one of the aims of the savings organization. Co-operation is the keynote of the 1920 thrift movement—the Treasury department and the people working together for the common good.

Purchase of Treasury Savings securities benefits the nation and the individual alike. It starts the saver on the road to independence and provides needed funds for the U. S. Treasury.

The business of the savings organization is to promote savings and the purchase, from the Treasury or in the market, of U. S. Government securities of all kinds and the continued holding thereof. In this, co-operating organizations play a large part in furthering the teaching of saving, not merely as an end in itself, but as a means of safe investment, which means government securities.

Co-operating organizations contributing toward the success of the thrift movement, and their varied activities, may be set down as follows:

1. GOVERNMENT SAVINGS SOCIETIES—These are formed in industries, mercantile and other establishments and are defined as "a group of men or women employing 'teamwork' for systematic saving." Their aims are:

To create community sentiment for saving.

To effect a change in the present extravagant standard of living.

To decrease the tendency toward convention in spending.

To provide a constant reminder, an incentive and the required suggestions for saving, and the purchase of government securities.

2. SCHOOLS—They are the means of achieving the object of inculcating the saving habit and of building up for the future a nation of thrifty citizens with a leaning to government securities for investment. The government asks the schools to:

Introduce thrift material into textbooks through enactments by state boards of instruction and legislature.

Distribute Treasury Department literature among pupils for family reading as well as their own use.

Make adequate arrangements for the regular sale of Thrift and War Savings Stamps.

3. WOMEN'S ORGANIZATIONS—Next to the schools, organized groups of women probably are the most important factors in advancing thrift education. They are expected to:

Establish classes in thrift and household economy through the use of the budget system.

Make appeals to women who, through inheritance or participation in industry, have money to invest and who may be convinced of the wisdom of investing in government securities.

Aid in carrying out the selling work in the schools in order to lighten the burden of the already overworked teacher.

4. LABOR, FRATERNAL ORGANIZATIONS, ETC.—Labor organizations, fraternal societies, commercial associations, agricultural bodies, churches and foreign language speaking groups offer means of general assistance, as follows:

Furnishing information on government war securities.

Making suggestions at regular meetings and at conventions on wise spending as the essence of true thrift.

Promoting the vigorous sale of government securities.

Encouraging the investment of idle organization funds in some form of government security.

The advantages presented by Treasury Savings Certificates, issued in denominations of $100 and $1,000, as investments for lodge funds, is being widely recognized by fraternal organizations. Labor unions and churches also are adopting this method.

Investment in government securities is being urged by experts in rural economics for farmers, who do not need to put the money back into their farming, as the best disposition for the farmers' surplus. They point out that investment of this surplus in land that must be leased or farmed by tenants usually will not pay as much net income as government bonds; also that bonds are useful as collateral for notes in banks to obtain temporary capital. The holding of government securities now owned and the buying of more is urged, therefore, as good policy for farmers.

THRIFT FINDS WAY TO SEA.

Along with the men of the navy the War Savings stamp is following the flag round the world. In the Mediterranean squadron the government savings securities are as much a part of the battleships and cruisers aiding in straightening out the tangled affairs of Asia Minor as the ammunition hoists.

A letter received by the savings division from Capt. David F. Boyd, commanding the U. S. S. Olympia at Constantinople, brings the information that the thrift campaign on that vessel has been placed in charge of Lieut. H. K. Koebig. Captain Boyd gave assurance of the co-operation of himself and his men.

Japanese Claim Credit for Fan.

Japan takes credit for the folding fan. The original kind was of the palm-leaf variety—an oval or round shape which could not be folded. But Japan conceived the idea, just when or how nobody knows, of fastening half a circle of paper on a frame made of sticks fastened together at one end—and the collapsible fan resulted.

Such It Was.

Twelve baldheaded men were jurors in a Massachusetts hair-restorer case. "Is this justice?" asked the Brooklyn Eagle. "It may be retributive justice," suggests the Albany Argus. Let's call it destiny.—Buffalo Times.

Peculiar Form of Dowry.

Leo Ugardi, a Naples hairdresser, married his sweetheart subject to an undertaking on the part of her father to spend $60 for tonsorial attentions within two years of the wedding in lieu of dowry, failing which the wife is to be returned to her parents.

IS 700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of ear corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us about it.

Dealer Klemme, Iowa

The Orange in Spain.

It is considered a very healthful thing to eat an orange before breakfast. But who can eat an orange well? One must go to Spain to see that done. The senorita cuts off the rind with her silver knife; then, putting her fork into the peeled fruit, she detaches every morsel with her pearly teeth and continues to eat the orange without losing a drop of the juice and lays down the core with the fork still in it.—Exchange.

We Have.

R. J. S. wants to know if we have ever met the people who never go to bed, but retire; who never sleep, but slumber; who never get up, but rise; who never eat, but dine; who never drink, but indulge; who never talk, but converse; who never read, but peruse; who never buy, but purchase, and who never get sick, but become ill?—Cincinnati Enquirer.

Boiling Cracked Eggs.

Cracked eggs can be boiled safely by placing a little vinegar in their water.

LEMME CREAMERY INSTALLS NEW CHURNS

The Klemme Co-Operative Cream- have just installed a New Per- tion churn of giant size to take e of the large business that is ex- ted for the coming season. Their churn was getting too small for ever increasing amount of busi- s and they at times had difficulty handling the cream, but with the churn now installed they can ily take care of the business and any large increase that may come the future. Besides installing the e churn they have also installed a al "Baby Size" churn, No. 3, which y will use for special work and ex- imental batches of butter. The amery has gained a goodly number new patrons recently, mostly from northwest district. They hope to ke the coming year the most suc- sful one since the organization of creamery and to strive to please the patrons.

UNDAY SCHOOL TEACHERS' TRAINING CLASS

A class for training Sunday School chers has been organized in Klem- with Dr. Buriff as leader. The ss is making rapid progress and ven members are now enrolled. e object of the class is as the title icates—to train teachers the bet- o fi them for their work in the bbath School. They are now study- "The Worker and His Bible." esday the class met at the home of s. Gimer. Monday is their regu- meeting night and they meet at ious homes.

GH SCHOOL STUDENTS HAVE PARTY

Last Wednesday evening a large thering of High School students d their teachers gathered at the nz home as a farewell party on ne of the pupils who are about to ve for other localities. Those who to leave the Klemme schools are lton and Clifford Lenz, Adna urch, Florence and Annabelle Carl- . Games of all kinds were played r which refreshments were served. had a most enjoyable time but re- t to have their companions leave school and classes.

GOODELL WILL BUILD

All indications point to the fact t Goodell will re-build to some ex- t this year. Contracts have been by Mr. Monaghen for a big fire- of garage building and Mr. Sand- has let a contract for a splendid dware store. The work will begin soon as the weather permits.

OLITICAL ADVERTISEMENTS

NEWS BY COUNTRY CORRESPONDENTS

Herman Schuldt, who lived west of own on a place that was practically roadless and poor school privileges, moved southeast of town on what is known as the Ross eighty. He purchased this land several years ago and last fall put up a new set of buildings where he now resides. It is so located that his children have our town school privileges, thus over coming the crime of keeping children ignorant, also on a good road, with easy access to a market. It is again proved that men who come into this world with nothing but their bare hand to fall back on, and their wife receives just as much as they, so they have nothing to quarrel about, if they work and save their money, soon own a home of their own and get the honor of having paid for it themselves.

Clarence and Elmer Arnold have been to Mason City to see their mother who is quite sick.

Charlie Bowsman and family were Sunday visitors at the Charlie Fritzel home.

Lulu Newburger was a caller at the Will Bachman home Saturday.

The William Bell family are on the sick list.

Mattie Gates was home over Sunday last week.

Elvin Stokesbary moved last week to the Joe Lawhorn farm near Klemme.

A. R. White and Henry Freie shelled corn this week.

After a two weeks' visit at the Chas. Fritzel home Gladys and Lynn Bowsman left for home Tuesday last.

Glen Francis returned home after a two months' visit in the southern part of the state with relatives.

Edior's Note—We would appreciate very much if the party who sent us the above news would kindly send us their name so we can furnish you with stamps and stationery.

We want news from every farm community. Anyone can write news for the Times. Send in your country news with your name at the bottom so we know who to give credit.

FAREWELL PARTY HELD

Last Wednesday afternoon about twenty-five ladies met at the home of Mrs. Trafford as a farewell surprise party for Mrs. Henry Church. The Chuches move to Garner where they have bought a residence. The afternoon was spent in a social way after which refreshments were served. The ladies also presented Mrs. Church with a gift as a remembrance from her many friends here.

NEW BUILDING FOR BELMOND BANK

The State Bank of Belmond will soon have a new home. They have made arrangements to have a new building erected of Bedford stone and brick construction two stories high, 41x50 feet. Although the building is two stories high outside, the interior will be one story, a high ceiling. A mezzanine floor will constitute a feature of the building to be used for business and social gatherings. The interior will be finished in marble and oak.

COMING EVENTS AT THE IDLE HOUR

Saturday, March 5th—"The High Sign," 5 reels, also "Babies is Babies" a one reel comic.

Tuesday, March 9th—"Elmo the Mighty," and 2 reels comic.

Saturday, March 13th—"Cleopatra" a 5 reel special attraction and it comes recommended by exhibitors who have run this feature.

Tuesday, March 16th—"Elmo the Mighty," and 2 reels comic.

Friday, March 19th,—The regular Saturday night picture will be run instead of Saturday night.

Saturday, March 20th—The fifth and closing number of the lecture course. "The War Players and Singers," all music.

BERNHART JENSEN BADLY INJURED

Bernhart Jensen, of the Upper Flat neighborhood, was badly injured Saturday when a horse on which he was rdngi, fell. One of his limbs was broken. His injury is all the more distressing at this time by reason of the fact that he was to have been married today to Miss Anna Peterson the invitations having been issued prior to his injury. The wedding has been indefinitely postponed awaiting Mr. Jensen's recovery.—Britt News-Tribune.

Rice Terraces Are World's Masterpieces

This is a photograph of the Ifugao igorrot rice terraces, which are among the most remarkable of their kind in the world. They are one of the many marvelous sights for the tourist to see in the Philippine Islands and are to be found in the Ifugao district of the Mountain province, Northern Luzon.

The height of these terraces, which are held up by stone walls, is from 4 to 18 feet, averaging 8 feet high. It is estimated there are 12,121 miles of eight-foot stone walls in the Ifugao terraces, which is approximately half the distance around the world.

These terraces are skillfully irrigated by water brought in troughs along the precipitous mountain sides over long distances.

CORRECTION OF MISTAKE

We made a serious error in last week's issue of the Times when we "got our wires crossed" in the write-up of Howard Spitler's marriage. We made a mistake in getting him married to the wrong party. Miss Alta Howard is the young lady whom Howard married and not the young ladies name whom we mentioned. Mistakes will occur and we sometimes make mistakes, so we ask that all concerned will cheerfully overlook the error and if you decide to throw a brick at us pease pick out a soft one and heave it gently. Editor.

LAKOTA IT SHALL BE!

The name of Lakota will stand, say the voters of that town when they held a special election last Wednesday to determine if hey should change Lakota back to the old name of Germania. It has been called Germania for the past fifty years o more but when war was declared on Germany the peopleo f Germania patriotically changed the name to Lakota. When the war was again over some of the old timers there wanted it changed back to the original but that was turned down by a vote of 75 to 49. Laktoa is the way it shall stand on the post office records.

THE DES MOINES CAPITAL AND THE KLEMME TIMES

Both One Full Year For $5.50

The Regular Price of The Des Moines Capital is $5.00 per year. The rate of the Klemme Times is $2. The Combined Rate of the two papers is $7.00. By taking advantage of this special offer you actually save $1.50.

During this campaign year more than ever you will want the Capital. It will serve you as it has in past years with TRUE NEWS and SANE OPINIONS concerning the campaign.

Call us by telephone or come into the office.

This offer expires March 15th.

We also take new subscriptions to the CAPITAL, and renewals. Leave your order with us and save money.

THE KLEMME TIMES

FARM NEWS WANTED

We would like to have a correspondent in every farm locality in the vicinity of Klemme. Anyone can easily get together a few items each week of what is going on in your neighborhood. The only way we can get this news is to have a correspondent in each neighborhood. We will be glad to make arrangements with anyone who will volunteer to write news for us. Call at the Times office and see us. Editor.

HUSBAND AND WIFE DEAD

It is a sad piece of news that the Hustler must chronicle this week concerning the John Daniels family of Crystal Lake. Mrs. Daniels died early last week and John passed away Saturday, death in both cases being due to influenza. By these deaths six children are left without father or mother John is a son of Mr. and Mrs. G. W. Daniels of Corwith. We will endeavor to obtain the obituaries for next week's paper.—Corwith Hustler.

BELMOND HAS SAW MILL IN OPERATION

The Belmond Construction Company own and operate a saw mill and are now turning out inch lumber from basswood and elm logs taken from the old Elder place in Franklin Grove. They have turned out about 30,000 feet of lumber and have shipped some. They will also saw out lath for local use. About nine men are employed on the mill.

ANNOUNCEMENT

Owing to the press of work due to the Flu and the usual acute winter diseases I will be unable to make my visits to Klemme until towards Spring. Patients from Klemme may come to Garner either on the morning or afternoon trains. Special calls will be attended to as usual.

Respectfully,
Dr. R. W. Schultz,
1w Osteopathic Physician

Returning from Klemme Monday night, Scoop Larson, his Ford and the party of four other Odd Fellows spent an hour or so about midway between here and Klemme ni an attempt to figure out some way that an automobile could be made to move without gasoline or physical exertion. Happy Arnold came along with plenty of gas, ripped a surplus piece of tin off his "Lizzie," bent it into a funnel and thus was Scoop's gas supply replenished and the journey home completed.—Garner Democrat.

KLEMME MARKET

Corn	$1.25 to 1.30
Hogs	$13.50 to 14.25

A. C. LAU

WHY DON'T FISH ADVERTISE?

The carp lays a million eggs, while the old hen lays one; but the carp does not cackle to inform us what she's done, and so we scorn the carp, but the thrifty hen we prize, which indicates to thoughtful minds that it pays to advertise. Don't be a carp.

ONE AT A TIME, PLEASE

Don't be disgusted with a newspaper simply because everything you read in it doesn't suit you. Perhaps what you don't like pleases the other fellow. Remember in all considerations that you are only one of many. —Clearfield (Pa.) Public Spirit.

More Local

Mrs. Chas. Ax was a Garner visitor last Thursday between trains.

R. W. Sinclaire from Garner was transacting business here Monday.

A. G. Koerner went to Garner Tuesday morning to make his appearance with the grand jury.

Rev. "Sunny Sam" McConnell, of Garner, was a business caller in Klemme last Friday between trains.

Otto Pringnitz was a passenger to Belmond last Friday where he enjoyed (?) dental work.

Mr. Charlie Wichman, of Red Oak, Ill., is here visiting at the Leonard Sampson home.

John Cantwell of Belmond, was in Klemme last Thursday selling nursery stock.

W. H. Ramsay, the attorney from Garner, was in Klemme on business last Thursday.

C. A. Arnold was a business caller at Mason City last week, returning Wednesday aftertoon.

Miss Sarah Thieman went to Minnesota last Thursday morning to assist the Yahnke family in moving.

R. A. Jorgenson was a business caller at Garner last Thursday afternoon.

Henry Lau received a shipment of a couple of car loads of farm machinery last week.

Ed. Jacobs was busy the past week delivering ranges to parties from far and near.

FOR SALE—8-foot Deering binder, in good shape. Emil Kraus, Klemme, Iowa. 1w.

Robert, Russel and Glethel Wilson came last Monday from Titonka to visit with their sister, Leafy Wilson. They left Wednesday afternoon for Garner, where they took the Milwaukee for their new home in Indiana.

Mr. John Suurbale, of Garner, was transacting business in Klemme Monday afternoon. Mr. Suurballe is candidate for the office of County Treasurer.

Mrs. McCullough and daughter, Maxine, came from Garner Friday evening for a visit with her son and laughter, Gearald and Mildred. Mrs. McCullough returned to Garner Saturday afternoon.

Rev. and Mrs. A. H. Meyer went to Dows Monday noon, being called there by the illness of Mrs. Meyer's sister. From there Mrs. Meyer accompanied her sister to Des Moines where she will enter a hospital.

J. P. Larsen & Sons have been doing some remodeing in their meat market. They have repainted the interior of the refrigerator with white ename and will also do more painting in the near future.

A baby boy, Edward Kennith, has arrived at the home of Mr. and Mrs. E. K. Diehl, of Cedar Rapids. Mrs. Diehl was a teacher in our high school las year and will be remembered as Miss Schaver.

Dr. Zinn and Dr. Reuber have moved their rooming place to the Joe Johnson home. They formerly roomed at the office but that place is undergoing many changes to accommodate new equipment, etc.

Mr. and Mrs. Chas. Keraus left on Saturday for Clear Lake where they will make their future home. We thought it was a little early for Charlie to move to the lake, fishing doesn't open until May fifteenth.

Miss Drusilla Stromer returned last Thursday from California where she hs been for the last eight months visiting and sight seeing. She traveled all over California while there and also visited with the Walt Bloom famiy a great part of the time.

Ray Nelson from Garner was in Klemme between trains Wednesday on his way home from Sumner, Iowa. Ray has a brother Earl at that place who is in the clothing business. Ray also stopped at Waterloo for the auto show.

Mr. Crotty, te band leader, is sick with pneumonia and has been unable to instruct the band here. Last Friday R. A. Jorgenson took charge of the band. We hope for Mr. Crotty's speedy recovery as do the other members of the band.

Monday, the first day of March, was a busy day in this locality as it seemed that everybody and everybody's daughter and son and brother were movnig to some other place. Quite a few farmers near here were moving onto new farms and all day long teams went thru the town.

Mrs. A. L. Emerson and daughter, Arvella, left Monday morning for their home at Spencer, Iowa. Miss Arvella has been ill with pneumonia the past two weeks and her mother has been here taking care of her. Arvella has been working at the hotel here since her folks left town.

Mrs. Ernest Palmby and children, of Eagle Bend, Minn., came last Friday morning to visit at the home of Henry Wille, and also to see her brother Elmer, who returned recently from the hospital at Denver, Colorado The Palmbys are moving to Garden City, Minnnesota.

Sylvan Johnson met with a rather serious accident one day last week. They were fixing up a pump at the farm and as we understand it they had some of the piping up. The hired man and Sylvan were holding the pipe but in some manner it fell, narrowly missing the hired man but striking Sylvan's arm which was badly cut and bruised by the weight of the pipe.

We understand that Carl Suckow has taken the position as census enumerator for Ell township. We have not interviewed Carl about the matter but hope the iem is true as none could be found who would undertake the job. Here's good luck, Carl, and don't miss anybody as we want to see how much our little city has grown since the last census.

Last year Ye Editor had a nice little flower bed in front of the office in which we had some pretty "Bachelor Buttons" planted. Our wife won't stand for it now that we are a married man so she has purchased some sweetpeas to plant where formerly the bachelor buttos thrived. We pass this along to the other bachelors —plant some flowers, they bring results.

Harry Ell was married a week or o ago to Miss Jessie Pearl Herman of Rudd, Iowa. Harry is a brother of E. G. Ell of this city. Mr. and Mrs. Harry Ell have the congratulations of their many Klemme friends who wish them all the joy and happiness to come their way. Mr. Ell conducts a garage at Mason City and he and his bride are now comfortably located in their own little bungalow at Mason City.

There are over 600 teachers short in the state of Iowa today. The reason for this iis that teachers salaries are far too low in comparison with other positions with the result that the teachers aare taking up other work wiith larger salaries. A teacher who finishes high school and then spends four years at a university is certainly entitled to more pay than the girl who simply goes to a business school ffor a few months and thendraws a large pay envelope. Until the state gives the teachers better pay they are going to be confronted with this problem of shortage of teachers each year.

First Milling Process.

The conversion of wheat into flour was one of the earliest developments of civilization, and even the primitive races in the dawn of history submitted the grain to a coarse pounding between stones. Perhaps the oldest flour "mills" in existence are the rude stones found among the remains of the ancient lake dwellings in Switzerland. By a mortar and pestle arrangement the wheat was reduced to a coarse meal. Crude as this method was, it contained the germ of the modern flour mill.

The Orange in Spain.

It is considered a very healthful thing to eat an orange before breakfast. But who can eat an orange well? One must go to Spain to see that done. The senorita cuts off the rind with her silver knife; then, putting her fork into the peeled fruit, she detaches every morsel with her pearly teeth and continues to eat the orange without losing a drop of the juice and lays down the core with the fork still in it.—Exchange.

CAME NEAR DYING

Finally Used Doan's and Was Restored to Health. Has Been Strong and Well Since.

"Malaria fever weakened my kidneys when I was a young man," says L. W. Garrison, 23 F St., Anderson, S. C. "Finally, ten years ago, I was in such bad shape that I expected to die. Medicine wouldn't help me any more. My back pained as if it were pierced with a knife. Many times I have fallen in the street and didn't have any strength to move until the awful misery was eased up. I couldn't sleep in bed for two years. The kidney secretions passed every few minutes and scalding hot water couldn't have burned any worse. I thought I was doomed to die, but a friend pleaded with me to try *Doan's Kidney Pills* and I owe my life to his visit. Doan's helped me from the start and eleven boxes made a permanent cure which has lasted eight years. I have not had one sick minute since, nor missed a day from work." *Sworn to before me.*

H. S. Shumate, Notary Public.

Tells Italians to "Tighten Belts"

No Hope of Better Food Situation Seen by Food Controller at Rome.

STILL EATING WAR BREAD

Strikes and Riots Are Bred by Steadily Increasing Cost of Everything—Causing Deep Anxiety to Government.

Rome.—Italy's food situation is worse now than it has been since the armistice and almost as bad as it was during the dark days of the war. The feeling that all is not well has weighed upon housekeepers for weeks, when life's prime necessities grew rarer and dearer. But now the country has been told the bitter truth by Food Controller Murialdi in a speech before the chamber of deputies.

This year's harvest of grain has yielded 200,000,000 hundredweight less than last year; the government must import 250,000,000 hundredweight for bread, which is sold at 20 cents for a two-pound loaf, and means $400,000,000 on hard grain alone; on soft grain the loss equals another $400,000,000; on olive oil the state loses several hundred million dollars.

Italy is the only allied country whose inhabitants must still eat war bread. Its price, the government says, must shortly be raised 5 or 10 cents for a two-pound loaf, because the budget cannot stand the loss of $800,000,000 a year on grain alone. The public must bear part of the burden in dearer bread.

Rice is scarce, too; this year's harvest shows a shortage of half a million hundredweight; the oil harvest is so poor the public has less than one-third the quantity doled out last year. There is less than half the quantity of cheese, lard, butter and milk of last year; there is a serious sugar shortage too.

No Prospect of Relief.

And the food controller has no remedy to suggest. The public blames him and his food ministry. He blames the food ministry too, saying that such chaos reigned when he took it over last summer that he has been unable to straighten things out and will resign as soon as possible. He told an astonished chamber that he found his ministry buying cheese at 50 cents a pound, to resell to wholesale dealers, who doled it out to the public at $1.50 a pound. He added that one great trouble is the lack of food experts to advise the government in buying foods, especially perishable kinds. And he said he saw no hope for a better food situation in the near future unless people eat less and pull their belts tighter over empty stomachs.

The perpetual upward flight of food prices in Italy causes deep anxiety to those responsible for the country's good order. Recent strikes and civil strife were almost wholly due to discontent caused by the still increasing cost of life's prime necessities and more trouble is yet to come unless the upward trend is curbed.

Sample Increases.

Cotton goods cost 300 per cent more than they did in 1916, woolen goods 250 per cent, hats and shoes 200 per cent, shoddy clothes 250 per cent, glass goods 360 per cent. Home-grown produce has increased more than foods imported from America. For instance, eggs are now 55 per cent dearer than three years ago, potatoes 450 per cent dearer, beans 426 per cent, fresh pork 370 per cent, Italian lard 286 per cent, beef 311 per cent, butter 279 per cent, cheese 250 per cent, milk 300 per cent, wine 525 per cent. The food control office reports that wine growers made such big profits this last year that they paid for the land their wines are grown on from the one year's gain alone.

The ever-growing cost of living in Italy, once the cheapest country in Europe, the paradise of the poor man, seems to be in a vicious circle. Dear food and discontent go hand-in-hand, breeding strikes, riots, bloodshed. They again react on local production and cause prices to rise higher than before. Then follow fresh strikes and disorders; the screw is turned yet again and the vicious circle must be rounded once more.

BRITAIN HAS BIG NEW SHELL

Projectile Is Said to Pierce the Heaviest Armor Without Shattering.

London.—The British navy may soon be given a new and "unsurpassed" weapon in a large caliber shell which will pierce the heaviest armor without shattering, said Sir Robert Hadfield, chairman and managing director of Hadfields, Ltd., steel manufacturers, recently. He indicated that possession of such a shell during the great war would have been of inestimable value to the British fleet.

Enemy Rattled by Five Tanks

Ruse That Kept Germans Guessing on Eve of Argonne Disclosed.

STAGE ONE-NIGHT STANDS

Their Bluff Attacks Divert Two German Divisions—U. S. Army Gets First Two of Improved Type of Battle Tank.

Washington.—The story of five little American tanks and the part they played in the great Argonne offensive is told as follows in a statement issued by the war department:

"Gen. Pershing with the first American army had just finished awakening the German high command to a healthy fear of the American soldier by reducing the St. Mihiel salient, and the plans for the Meuse-Argonne offensive were about to be carried into execution. In these days of the airplane and wireless telegraphy, it seems impossible to deliver a surprise assault. Nevertheless no pains are spared to deceive the enemy as to the exact point of attack. As a means of covering the true point of attack, the chief of tank corps presented a scheme which received the approval of the high command.

Cut Up Like an Army of Tanks.

"Accordingly, after the withdrawal of the tanks from the St. Mihiel sector, Lieut. Higgins with his platoon of the Three Hundred and Thirty-fourth battalion tank corps, was directed to proceed from this point in a northwesterly direction along the lines via narrow gauge railway. He was to stop each night and make a reconnaissance in front of our positions with his tanks and immediately load up and repeat the operation the following night further down the line.

"On Sept. 19, the five tanks and their crews were loaded and the expedition started. That evening they stopped in the rear of a little wood, many kilometers west of St. Mihiel. Off the little narrow guage flat cars tumbled the the tanks and nosed into the woods for concealment. About 11 o'clock all was ready and the miniature army started forward on its mission. Everything went off as scheduled. The tanks rolled through our positions and into No Man's Land.

"They were operated back and forth for half an hour. After this they were quietly withdrawn, crawled back on their little narrow gauges and started merrily on their way. They timed their work perfectly, and as they pulled out a terrific barrage hit the wood they had left.

"The following evening the procedure was repeated. Again the barrage descended too late to hurt the jaunty band. For six successive nights the troupe staged their one night stands, and the reports all along the sector showed that the Hun was up in the air. All day long the sky was full of planes searching for the army of tanks which the enemy was sure was concentrating on this front. All suspicious looking places were bombarded with the usual Hun thoroughness and intensity. All night long the darkness was dispelled by hundreds of flares and rockets, and all indications showed that Heinie was not going to be caught napping.

Diverted Two Divisions.

"Best of all, just as the little band was preparing to entrain to get into the big show in the Argonne there came a message from the intelligence section stating 'two German divisions withdrawn from Argonne front. Entraining for your sector.'"

The tank corps has just received at Camp Meade, Md., from the Rock Island arsenal two Mark VIII. tanks. This type, the largest yet placed in quantity production, was especially designed for use against the Hindenburg line and similar defenses. Not so fast nor so easily handled as the lighter types, it possesses the ability to cross much larger ditches, crush more formidable obstacles, and carries a much heavier armament.

The great difficulty with the large British tanks was that they were underpowered and, on account of the arrangement of the machinery within, did not afford the proper room for the crews. A commission of British and American experts has corrected faults largely through the adoption of the American Liberty motor.

KENTUCKY FOR VOTES FOR WOMEN

Photo by Western Newspaper Union

Edwin P. Morrow of Kentucky signing the joint resolution of the Kentucky house and senate in ratification of the Constitutional amendment giving women the right to vote. This ratification marked the end of the thirty-year fight for that right in the Blue Grass state.

Company Takes Back Man Who Stole $235,000

C. R. Woodward of St. Louis, is again a citizen of the United States after release from a two-year term in the penitentiary. Citizenship was restored by the governor. In addition, the Federal Lead company, for the embezzlement of about $235,000 of whose funds he went to prison, has agreed to put him on its pay roll again and give him a fresh start in South America as its agent.

Austrian Children to Italy.

Vienna.—Ten thousand Austrian children are now going to Italy as guests of various municipalities. They will remain for the winter. Many thousands more are in Switzerland, Germany, Holland and the Scandinavian countries.

TRIBE IS HIT HEAVY

Almost Wiped Out by Dance and Feast.

Famine Follows Fete Among Alaskan Indians—Forty-Two Are Dead.

Cordova, Alaska.—A play, a dance and a feast, winding up a season of plenty was responsible for the near-extinction of the Quigillingok tribe of natives last winter and spring, according to John H. Kilbuck, superintendent of schools for the Kuskokwim river district.

The famine following the feast, Mr. Kilbuck said in his annual report to the bureau of education, caused the deaths of at least 42 of the natives, and would have wiped out the entire clan had not missionaries come to the rescue with a supply of food.

The tribe, Mr. Kilbuck said, stored up great quantities of fish during the summer and fall seasons.

In celebration of their good fortune they invited other tribes to attend a "kuvgagyagagg," featured by a play, a "white man's dance" and the giving away of food. When it was all over the guests were millionaires in the currency of the section, while the hosts were paupers.

It will be years, Mr. Kilbuck declared, before the Quigillingoks recover from the effects of their generosity.

Fewer Horses, More Cows.

Washington.—Farm animals of the United States were valued at $8,561,443,000 on January 1, compared with $8,827,894,000 a year ago, the department of agriculture announced. Horses numbered 21,100,000, a decrease of 1.1 per cent. Mules numbered 4,995,000, a decrease of 1.1 per cent, but milk cows were 23,747,000, an increase of 0.5 per cent.

Where Can I Find Relief From Itching, Terrifying Eczema?

Question on Lips of Afflicted.

There is a harrassing discomfort caused by Eczema that almost becomes a torture. The itching is almost unbearable, and the skin seems on fire with the burning irritation. A cure from local applications of salves and ointments is impossible, because such treatment can only allay the pain temporarily. The disease can only be reached by going deep down to its source, which is in the blood, the disease being caused by an infection which breaks out through the skin. That is why the most satisfactory treatment for all so-called skin diseases is S. S. S., which acts by cleansing the blood. Get a bottle to-day, and you will see results from the right treatment. Medical advice free. Address Medical Director, 48 Swift Bldg., Atlanta, Ga.

DISTEMPER

SPOHN'S DISTEMPER COMPOUND

or Strangles in stallions, brood mares, colts and all others is most destructive. The germ causing disease must be removed from the body of the animal. To prevent the trouble the same must be done.

SPOHN'S DISTEMPER COMPOUND will do both—cure the sick and prevent those "exposed" from having the disease. Sold by your druggist. 60c and $1.15 per bottle.

SPOHN MEDICAL CO., Mfrs., Goshen, Ind., U. S. A.

Tired Out.

There are two young writers in Chicago who are given to chaffing each other with reference to the failure of their writings to sell.

Recently one asked the other: "Is the first edition of your novel exhausted yet?"

"Not yet. Why?"

"Oh, I thought it might be from standing so long on the counter."

Good health cannot be maintained where there is a constipated habit. Garfield Tea overcomes constipation.—Adv.

Mean Man.

Veritas—How many women do you suppose gave their real ages to the census takers?"

Cynicus—Oh, about a third of those under thirty.

YOUR COLD IS EASED AFTER THE FIRST DOSE

"Pape's Cold Compound" then breaks up a cold in a few hours

Relief comes instantly. A dose taken every two hours until three doses are taken usually breaks up a severe cold and ends all the grippe misery.

The very first dose opens your clogged-up nostrils and the air passages in the head, stops nose running, relieves the headache, dullness, feverishness, sneezing, soreness and stiffness.

Don't stay stuffed-up! Quit blowing and snuffling! Clear your congested head! Nothing else in the world gives such prompt relief as "Pape's Cold Compound," which costs only a few cents at any drug store. It acts without assistance, tastes nice, contains no quinine—Insist upon Pape's!—Adv.

NEW ENGLAND'S COLD SPELL

Period of Frosty Weather That Will Long Be Remembered by Those Who Endured It.

Three or four winters ago, when the whole of New England was buried in snow and gripped in ice, Nantucket had one of its worst ordeals. The cold was intense, ten below zero, in early February. For miles on all sides of the island the ice pack stretched, to old eyes as far as the horizon. Day after day passed and the Sankaty did not run. The harbor was choked with ice, like that of St. Anthony in Labrador. The main ship channel from Monomoy Point light to Nantucket was frozen over. No mails or supplies were received on the island for eight days. The Cross Rip lightship was forced from its moorings when the pack broke and the lonely ship with its tolling bell was carried out to sea and lost, ten men on board. It was a hard winter on the mainland, a season of deep snows and killing cold, and on Nantucket it is an ugly memory. The island is often no longer sea-girt, but ice-locked, and the most imaginative summer loiterer could not believe how dreary the "purple isle" of his summer dreams can be when the snow's blanket lies deep upon it and the gale rages from Tuckernuck to Wauwinet.

Twice Robbed.

The disgruntled householder reported to the police sergeant that some one had entered his house the night before and stolen a quantity of lead pipe.

"I wouldn't mind it so much," he explained, "only it is the second time I have suffered this week."

"When were you robbed before?" asked the sergeant.

"Last Tuesday by the plumber who collected his bill for putting that pipe in."—Boston Transcript.

Its Case.

"Why don't you break that old box up? It's an offense."

"Yep, and it's not even a bailable offense."

"CALIFORNIA FIG SYRUP" IS CHILD'S LAXATIVE

Look at tongue! Remove poisons from stomach, liver and bowels.

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless laxative or physic for the little stomach, liver and bowels. Children love its delicious fruity taste. Full directions for child's dose on each bottle. Give it without fear.

Mother! You must say "California."—Adv.

Not Very Far, in Some Cases.

"Pa, who was Darwin?"

"Darwin, my son, was the man who declared that if you climb far enough up into your family tree you will come face to face with a monkey."—Boston Transcript.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ½ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

SIMPLY NO DEMAND AT ALL

Comment Made by Pretty Girl Seemed to Explain the Situation Very Thoroughly.

The man shortage, due to the horrible slaughter of the world war, left President Lewis of the United Mine Workers to say in Indianapolis:

"If we licked the Germans, the world was to be a better place to live in, but it seems to become a worse place every day.

"Take the shortage of young men—and the young men that are left can't marry on account of the profiteer. Why, millions of pretty girls all over the world are never going to get married!

"A crowd of pretty girls were taking tea the other afternoon when a rag man passed.

"'Old rags!' he yelled. 'Old rags, old bones, old iron!'

"And then, as he trudged slowly along the street, he yelled again:

"'Old copper! Old tin! Old bottles! Old papers! Old shoes!'

"The prettiest girl in the group made a dramatic gesture of despair.

"'Girls,' she said, 'he wants everything but old maids.'"

Wasn't Going Into Society.

Winnifred came in from the playhouse one day with the dirtiest face one could imagine. Her mother was shocked and exclaimed: "Why, Winnifred, your face is so dirty!"

"That doesn't matter," said the baby, calmly, "I 'cided not to go anywhere today."

The Sweet Cereal Flavor of

Grape-Nuts

is not produced by adding sugar to this blend of wheat and malted barley.

The sweetness is due to actual grain sugar, self-developed by the processing and long baking of this great food.

"There's a Reason" for Grape-Nuts

END OF EIGHT YEARS MISERY

Used Lydia E. Pinkham's Vegetable Compound and Recovered.

Newark, N. J.—"The doctor said I had an organic trouble and treated me for several weeks. At times I could not walk at all and I suffered with my back and limbs so I often had to stay in bed. I suffered off and on for eight years. Finally I heard that Lydia E. Pinkham's Vegetable Compound was a good medicine and tried it with splendid effect. I can now do my housework and my washing. I have recommended your Vegetable Compound and your Blood Medicine and three of my friends are taking them to advantage. You can use my name for a testimonial." —Mrs. THERESA COVENTRY, 75 Burnett St., Newark, N. J.

You are invited to write for free advice

No other medicine has been so successful in relieving woman's suffering as has Lydia E. Pinkham's Vegetable Compound. Women may receive free and helpful advice by writing the Lydia E. Pinkham Medicine Co., Lynn, Mass. Such letters are received and answered by women only and held in strict confidence.

THE "BLUES"

Caused by

Acid-Stomach

Millions of people who worry, are despondent, have spells of mental depression, feel blue and are often melancholy, believe that these conditions are due to outside influences over which they have little or no control. Nearly always, however, they can be traced to an internal source—**acid-stomach.** Nor is it to be wondered at. Acid-stomach, beginning with such well defined symptoms as indigestion, belching, heartburn, bloat, etc., will, if not checked, in time affect to some degree or other all the vital organs. The nervous system becomes deranged. Digestion suffers. The blood is impoverished. Health and strength are undermined. The victim of acid-stomach, although he may not know the cause of his ailments, feels his hope, courage, ambition and energy slipping. And truly life is dark—not worth much to the man or woman who has acid-stomach!

Get rid of it! Don't let acid-stomach hold you back, wreck your health, make your days miserable, make you a victim of the "blues" and gloomy thoughts! There is a marvelous modern remedy called EATONIC that brings, oh! such quick relief from your stomach miseries—sets your stomach to rights—makes it strong, cool, sweet and comfortable. Helps you get back your strength, vigor, vitality, enthusiasm and good cheer. So many thousands upon thousands of sufferers have used EATONIC with such marvelously helpful results that we are sure you will feel the same way if you will just give it a trial. Get a big 50 cent box of EATONIC—the good tasting tablets that you eat like a bit of candy—from your druggist today. He will return your money if results are not even more than you expect.

NEWS REVIEW OF CURRENT EVENTS

President Wilson Blocks Plan of the Premiers to Settle the Adriatic Problem.

HIS PROTEST IS EFFECTIVE

Threatens Withdrawal of America From Peace Treaty—Decision Is Reached Concerning Turkey—Compromise Railway Bill Before Congress—Sale of Former German Liners Is Enjoined.

By EDWARD W. PICKARD.

The Adriatic in general and Fiume in particular provided the main topic of international discussion last week and there was much excited talk in the world capitals. Premiers Lloyd George, Millerand and Nitti thought they had arranged a neat settlement of the Adriatic trouble and had called on Jugo-Slavia to accept it, with the alternative of having the principles of the pact of London applied. But they were reckoning without President Wilson, probably because he seemed to have withdrawn himself to a great extent from the discussions over the subject. As soon as he learned what the "Big Three" had done, Mr. Wilson projected himself into the affair with a note that tipped over their apple cart and brought them to a realization that he was still to be considered. He declared that he could not consent to the solution reached by the premiers and called attention to the discrepancies between it and the settlement of the problem agreed upon in December at the London conference, in which the United States was represented. Then he added a postscript that was the real stinger. Despite denials in Washington, it is quite certain that in this postscript Mr. Wilson told the premiers that unless they receded from their position he would take into serious consideration the withdrawal of the United States from the treaty of Versailles and from the treaty between the United States and France.

Of course a considerable portion of the press in the allied countries was enraged by this note and roundly abused Mr. Wilson, but the statesmen and others well informed recognized the soundness of his position and the fact that the withdrawal of America from further concern in the peace settlement would be disastrous. The allied council sent a reply to Washington which, while it urged the difficulty of inducing the rival interests to consent to the December solution, was exceedingly conciliatory in tone and asked the president to indicate what practical steps can be taken to carry out the earlier agreement, under which Fiume was to be created into a free state under the League of Nations and the principle of self-determination was to be applied to the Dalmatian coast. The situation is extremely delicate and there are not a few who predict that the outcome will be another war, with Italy and Jugo-Slavia as the contenders. From the beginning Mr. Wilson has insisted that Jugo-Slavia should not be shut off from the sea by Italian territory, and in this country, at least, this contention is generally supported. There is no unfriendliness toward Italy, but a feeling that she has already enough seaports; and the sympathy with the new republic of the Serbs, Croats and Slovenes is marked.

The American government wished to make public the notes exchanged in this affair, and took steps to obtain the consent of Great Britain, France and Italy. This is in accord with the principle of "open covenants openly arrived at" which Mr. Wilson vainly tried to make effective when he went to Paris the first time.

It is known that the president holds that America, as a co-belligerent in the war, is actively interested in the settlement of the Adriatic dispute, despite the fact that it has not ratified the peace treaty. Also, he holds that we are equally interested in the questions concerning the breaking up of the Turkish empire. Consequently he may have something to say about the agreements reached by the supreme council last week that the sultan shall be permitted to retain Constantinople and to reside there, provided the massacres of Armenians are discontinued; and that the Dardanelles and the Bosphorus shall be internationalized. It is not known, however, that he opposes these arrangements. It is said that in the future all sessions of the supreme council will be attended by an American representative, who will keep Washington informed of developments.

The allies so far yielded to the protestations of the Germans against the surrender of war criminals as to tell Berlin that the accused might be first tried before the German supreme court in Leipsic. But the allies reserve the right to reject the results of such trials if they believe there is any miscarriage of justice and in such cases to enforce the terms of the treaty and themselves try the offenders. It is stipulated, also, that the verdicts at previous trials of German war criminals must be annulled and the cases remanded for retrial. This would reopen the Fryatt case, in which the verdict was that the murder of the British merchant ship captain was not a violation of international law. The conservatives in Germany declare this offer of the entente is quite unacceptable. It is inconceivable to the Germans that they could put on trial their national heroes.

The government of the Netherlands was put in a rather uncomfortable position by the reiteration of the demand for the extradition of the former kaiser, and though it prepared a reply repeating its refusal, there was much discussion of plans for the internment of the fugitive in some Dutch possession far from Europe. The place most favored seemed to be Curacao, an island in the Caribbean sea north of Venezuela. If Wilhelm intends to do any plotting in his retirement he would find a congenial atmosphere in Curacao, for it has long been the refuge of would-be revolutionists from the Latin-American republics. It may be, however, that Holland will merely intern the ex-kaiser in his new house at Doorn, keeping him under strict military guard.

Germany is having so much trouble with revolutionists and labor agitators that the entente has extended the time limit for the reduction of her army to 100,000. Minister of Defense Noske has issued an order applying to Berlin and Brandenburg province threatening imprisonment or heavy fine for inciting strikes that affect food production. In the Saar region, which is occupied by the French troops, fresh disturbances resulted in the proclamation of martial law.

If soviet wireless dispatches from Moscow are to be believed—and in this instance they probably are—the revolutionists are in full control of Vladivostok and most of eastern Siberia and are putting into effect a program which is in favor of union with soviet Russia. In southern Russia the volunteer army is reported to be ravaged by typhus and falling back in disorder to the Sea of Azov before the red troops. The bolsheviki are said to have proclaimed a soviet republic in the part of the Ukraine they occupy and the formation of an "eternal brotherly union" with soviet Russia. Petrovsky is president of the new state. Sevastopol, the great port of the Crimea, is panic-stricken fearing the fate of Odessa.

Poland while still maintaining the barrier against the bolsheviki is taking steps toward a general peace between the allies and the Moscow government, and in this it probably has the support of the nations of western Europe. The negotiations will be taken up deliberately and the results submitted to the peace conference in Paris.

In Roumania, where royalists and radicals are struggling for control, the conditions are not promising. The radicals are in secret accord with the Russian bolshevists, who already are creeping across the border, and the recent mobilization of the Roumanian army has not checked the peril. The monarchists of Hungary, who are numerous, would like to help those of Roumania, but cannot do so for fear of the bolshevists in their own land and also because of the national hatred of the Roumanians engendered by their looting of Hungary.

Somewhat disheartened by the international complications, the treaty compromisers in Washington attempted little last week and made less progress. But congress entered on another struggle that promised to be lively. This was brought on by the submission to both houses of the conference report of the railway reorganization bill. It came up in the house Saturday and a long and heated debate ensued. The measure was scheduled for consideration in the senate on Tuesday if the house should not reject it.

Opposition to the bill was led by the officials of the Federation of Labor and of the railway brotherhoods. They were against the whole measure in the first place because they favor government ownership and operation; and specifically they object to the section providing for compulsory investigation of wage disputes and decisions by a labor tribunal, which, while not binding, are likely to have the support of public opinion and to that extent will deprive strikes of public sympathy. They also object to the financial provisions which labor views as a validation of water stock and guarantee of abnormal profits. Representatives of railway investors said they were satisfied with the financial provisions.

Something of a jolt was administered to the war department by the report of the subcommittee of the house which had been investigating aircraft production and expenditures; but the department has had so many such jolts that it probably has become callous. The report finds that there was "woeful extravagance, total incompetency, utter failure and a wild riot of waste." Secretary Baker, Colonel Disque, who supervised spruce production, and Director Ryan are severely criticized. The subcommittee strongly recommends the creation of a separate air service. Virtually all of the facts of the collapse of aircraft production during the war have been known to the public for a long time. They do not make pleasant reading and the American people would like to forget them, since it seems impossible to punish those to blame; but they make fine campaign ammunition.

Disregarding the many and loud protests, the United States shipping board tried to pull off its proposed auction sale of 30 former German passenger liners. Bids were received for single vessels and for groups, but all of them were so low that they were rejected. Then a temporary injunction against the sale was granted by Associate Justice Bailey of the district supreme court in Washington. He said the statutes did not show an intention on the part of congress to place in the president or the shipping board the power to sell the ships. The board has asked congress for authority to offer the vessels for sale again. Vice Chairman Stevens is the only member of the board opposed to the sale. He says their true valuation has never been worked out and that they are worth $75,000,000, whereas less than half that amount was bid. Chairman Payne and the other members thought the ships should be sold to relieve the government of the expense of reconditioning them and also because the future market for ships is uncertain.

Senator Pomerene of Ohio has withdrawn from the race for the Democratic nomination for president, alleging important business in the senate and the impossibility of his obtaining a solid Ohio delegation. He never had much chance, anyhow. Mr. McAdoo has declared that he is not a candidate, but admits that if nominated he would be proud to accept. In many Indiana cities petitions are in circulation to have the name of Vice President Marshall placed on the Democratic presidential preference ballot. This is done without the knowledge and consent of Mr. Marshall who said he would not seek the nomination. On the Republican side about the only important development was the decision of the Lowden managers to keep out of the North Dakota primaries. This is at the request of the Republicans of the state, who fear that a party contest would help their enemies of the Nonpartisan League. Senator Johnson probably will follow Lowden's example, and General Wood may do the same.

Thousands of Happy Housewives in WESTERN CANADA

are helping their husbands to prosper—are glad they encouraged them to go where they could make a home of their own—save paying rent and reduce cost of living—where they could reach prosperity and independence by **buying on easy terms.**

Fertile Land at $15 to $30 an Acre

BELL-ANS FOR INDIGESTION

IN THE WRONG DIRECTION

Colored Soldier Just at That Time Was Not Living Up to His Announcement.

The company had fallen out for a rest on its hike into the Argonne. Nearby negro workers drowsed in the sun. A burly six-foot Numidian driving a big army mule hove into sight on his way to replenish the water supply at the front. For a whip he carried a five-pound hammer.

"Hey, there, Sam, where yo' goin' wid dat new-fangled whip?" called one of the roadside loafers.

"I'se on mah way to build me a bungalow on de Hin'enburg line," retorted the other without a smile.

Just then a shell exploded a few yards from the road. The mule instantly turned tail and proceeded to break all records in getting back where he came from, his driver hanging on for dear life.

"Man alive," mused a darky. "Dat ain't no way to arrive at the Hin'enburg line. Dat baby's done gone toward the Cunard line."—The Home Sector.

Desirable Kind.

"What a loud-looking woman?"

"Pity she couldn't use noiseless powder."

One should learn to talk well—also when it is well not to talk.

Crown Balm.

When General Pershing arrived in Washington after his return from France he had with him a trunk containing a mass of medals, citations and ribbons and the correspondence concerning it. Attaches of the war department were detailed to go through the material. They had not gone far when they ran across this memorandum which bore the signature of one of the general's aids and a date several months old:

"The King of ——— was here yesterday and left a couple of medals."

In one corner of the memorandum, over the initials of the C-in-C, was this penciled notation:

"Write him something pretty."

The Soft Answer.

"Is that gentleman your husband?" asked the stranger who shared the seat on the car.

"What d'ye mean by speaking to my wife?" demanded the gentleman in question.

"I just wished to ascertain if you are the lady's husband."

"Well, I am."

"In that case, I thought I'd let you sit together! that's all."—Louisville Courier-Journal.

Delayed News

The following items should have appeared last week but became lost in transit and did not show up for several days.

Crystal Lake will have a consolidated school.

Mr. Lemke, of Garner, was a caller i Klemme Tuesday.

The Chas. Ax family are moving to heir farm west of town this week.

Lee Ell of Mason City was in Klemne visiting this week Tuesday.

Clara Kirkwood went to Mason City Saturday for a visit with friends.

Electricians are here from Iowa Falls this week stringing wires on the farmers' line east of town.

Kanawha has lifted the quarantine on flu and everything was opened up again last Wednesday and are running on normal.

Four car loads of live stock left here Saturday night for the markets. Shipping has been light lately due to the slump in the markets.

Mrs. F. H. Clark, of Goodell, who has been visiting with her brother Lear Meservey, returned to her home Tuesday noon.

Herb Bailey and family expect to move to town next week Monday. They have bought the Henry Church place east of the park.

Mr. W. Bailey, father of Herb Bailey, left Tuesday for Iowa Falls where he will visit a while with his daughter. He also expects to visit at Dows before returning home.

Dr. A. E. Buriff eft for Des Moines Tuesday noon where he will attend the convention of the Inter-Church World Movement. He expects to remain in Des Moines for a few days.

Mrs. Wiley, who has been staying viht her daughter, Mrs. M. O. Hocum, and family this winter, leaves today for Grinnel for a visit and will then go to Gilman where she will visit with her two sons.

Bryan Menick is the new barber at the G. P. McCullough shop. He began work Monday. "Zip" says he has almost too much business to attend to alone and with two barbers at the shop he says he can give his customers better service.

Roy Schaefer left Tuesday noon for Eldora, Iowa. No, Roy does not intend to enter the Industrial school there but went there with the hopes that he might be able to secure a young man from the school to help him wiht his farm work this year.

For the benefit of some of our readers who reside in sunnier climes we will say that we have been experiencing "some" weather the past week. We have had a full variety and then some, but it has been "all" weather with plenty of cold mixed in.

Linn and Gladys Bausman left for heir home at Wellsburg, Iowa, after visiting at the home of their sister, Mrs. Chas. Fritzell and also to help the Fritzell family move and get settled in their new location. The Fritzell family are now on the Wm. Smith farm.

Art Kuck and Fren Henschen have had a wholesale business fixing up cisterns the past week. They have fixed up Hocum's, Croner's and Ye Editor's cisterns. First they cleaned them all out good and then washed them, set an oil stove in them until they dry out good when hey are ready to operate on the "inards of the brutes." They sewed up a few cracks in our old soft water jug and guarantee it to hold anything but hard cider.

Moving in Klemme still goes on every day. New changes which we noted this week are the following. The Raymond White family moved into the Mrs. Kirchner house where Mr. and Mrs. H. L. Suckow were living. They have moved into the Carl Suckow place in the north part of town, Carl moves into the Louie Knoke house Louie Knoke moves into the Barnabee place. There are perhaps several other changes which we have failed to note.

NO MORE ELEVENTH GRADE

The eleventh grade at the Klemme school is a thing of the past, or will be Friday. They still have the grade but lack the pupils to fill it because Annabelle Carson moves with her parents to Wisconsin; Adna Church will attend school at Garner as her folks are moving there, and Edna Smith has gone to Des Moines. The eleventh grade are without pupils temporarily with none to fill the place until next fal when the tenth grade will move in.

INCOME TAX RETURNS DUE

Business Men, Farmers and Wage Workers Must File Schedules of Income for 1919.

MARCH 15 LAST FILING DATE.

Net Incomes of $1,000 or Over, If Single; or $2,000 or Over if Married, Must Be Reported.

The Income Tax imposed by Act of Congress on earnings of the year 1919 is now being collected.

Returns under oath must be made on or before March 15 by every citizen and resident who had a net income for 1919 amounting to:

$1,000 or over, if single; or if married and living apart from wife (or husband); or if widowed or divorced.

$2,000 or over, if married and living with wife (or husband).

The status of the person on the last day of the year fixes the status for the year with respect to the above requirements.

Under any of these circumstances a return must be made, even though no tax is due.

Husband and wife must consider the income of both, plus that of dependent minor children, in meeting this requirement; and, if sufficient to require a return, all items must be shown in a joint return or in separate returns of husband and wife.

A single person with minor dependents must include the income of such dependents.

A minor who has a net income of $1,000 or more is not considered a dependent, and must file a separate return.

Personal returns should be made on Form 1040A, unless the net income exceeded $5,000, in which case Form 1040 should be used.

Residents of Iowa should file their returns with, and make payments of Income Tax to, Louis Murphy, Collector of Internal Revenue, Dubuque, Iowa.

How to Figure Income.

The best way to find out whether one must file a return is to get a Form 1040A and follow the instructions printed on it. That form will serve as a reminder of every item of income, and if a return is due it tells how to prepare and file it.

If in doubt on any point as to income or deductions, a person may secure free advice and aid from the nearest Internal Revenue office.

Guesswork, estimates and other hit-or-miss methods are barred when a person is making out his Income Tax return. Accuracy and completeness must be insisted upon. The return is a sworn statement. As such it must be thorough and accurate.

Salaried persons and wage earners must ascertain the actual compensation received. Overtime, bonuses, shares in the profits of a business, value of quarters and board furnished by the employer and other items which are compensations for services must be included.

It must be borne in mind that compensation may be paid in other forms than in cash. A bonus paid in Liberty Bonds is taxable at the market value of the bonds. A note received in payment for services is taxable income at its face value, and the interest upon it is also taxable.

Other Returns Due.

Every partnership doing business in the United States must file a return on Form 1065; and every personal service corporation must file a similar return.

Corporations must file annual returns on Form 1120.

Trustees, executors, administrators and others acting in a fiduciary capacity are required to file returns. In some cases, Form 1041 is used; in others, Form 1040; and still others, returns on both forms are required.

Information returns, on Forms 1099 and 1096, must be filed by every organization, firm or person who paid, during 1919, an amount of $1,000 in salary, wages, interest, rent, or other fixed or determinable income to another person, partnership, personal service corporation or fiduciary. These information returns should be forwarded directly to the Commissioner of Internal Revenue (sorting division), Washington, D. C.

INCOME TAX IN NUTSHELL

WHO—Single persons who had net income of $1,000 or more for the year 1919.
Married couples who had net income of $2,000 or more.

WHEN—March 15, 1920, is final date for filing returns and making first payments.

WHERE—Collector of Internal Revenue for District in which the person resides.

HOW—Full directions on Form 1040A and Form 1040; also the law and regulations.

WHAT—Four per cent normal tax on taxable income up to $4,000 in excess of exemption. Eight per cent normal tax on balance of taxable income. Surtax, from one per cent to sixty-five per cent on net incomes over $5,000.

FAIR PRICES

are not a recent development here that we organized overnight to smooth over a guilty conscience. We have been absolutely profiteer proof for the past 27 years and its going to take more then a World War to change our spots.

STATE NEWS

Gleaned from many fields and summered for busy readers

Clermont D. Loper died in Charles City recently. He was 100 years and 5 months old.

The water level of Spirit Lake is to be lowered about one and one-half feet below the average during the past year.

Contracts for a new cattle barn and sale ring at the state fair grounds has been let by the state fair commission.

Benton county has many successful livestock breeders and each year sees a decided increase in the stockmen who favor the keeping of only pure breeds.

The farmers of Orange township in Black Hawk county staged an institute and judging contest recently which was a success in every way and brought out a good crowd.

A forty acre tract of land near Twentieth and St. Joseph streets, Des Moines, has been chosen by the Polk County Tubercular commission as the site for the new tuberculosis hospital.

The Johnson County Farmers Institute elected officers at the recent meeting as follows: Preisdent, R. P. Adams, Solon; Vice President, C. M. Fountain; Secretary L. F. Morford; Assistant Secretary, E. F. Graff. The membership has increased from 40 persons to 100 and this entitles the society to state aid for $200 a year.

Nearly $3,850 worth of butter, eggs and chickens have been marketed by Mrs. John Jensen of the Arthur road near Humboldt during the past two years. These poultry and dairy natures have been kept by Mrs. Jensen for a number of years and the last two years have been the largest that she has yet recorded.

A series of sheep and wool demonstrations were held in Sidney recently, one demonstration on the Walter Savage farm and the other at the Delbert Willey farm near Farragut. There was a third demonstration at the R. Teachout farm. Prof. T. C. Stone of Iowa State College was present and addressed the farmers.

Two sheep clubs are to be organized in Davis county this year. Members are already enrolled in the Delaine club and a Shropshire club is being formed. Any boy or girl between the ages of 10 or 19 who wishes to enroll in these clubs can do so. Liberal prizes are being offered, beside those given at the county and state fairs.

Farmers of the immediate vicinity of Monroe have decided to erect a farmers' cooperative elevator. A meeting was held a few days ago with M. K. Culver of Iowa State College in attendance as the principal speaker. Committees were appointed to sell stock in the proposition and a personal canvass will be made over the entire territory.

At the recent meeting of the Farm Bureau of Union county the following men were elected to hold office for the ensuing year. Pres., W. J. Colbert; V. Pres., A. D. McGee; Secy., Leonard White; Treas., W. W. Morrow. Seven new members were elected from as many townships. A recent clean up campaign netted the bureau 150 new members.

The county treasurer has completed the work of registration of the automobiles in Winnebago County and 2,075 vehicles have been registered. All but seventy-five registrants have received number plates. A total of $21,168.50 has been paid in for registration and of this amount the county will receive a good share for road work to be done this year.

All officers of the Black Hawk County Farm bureau were re-elected at the annual meeting. J. W. Coverdale, Ames, secretary of the National Farm Bureau association, was the principal speaker and he explained the state and national movement. The yearly reports of Miss Clara M. Sutter, home demonstration agent, and A. A. Burger, county agent, were heard. Over 250 farmers were present.

According to Miss Florence McDonald, teacher of home economics, fifty of her pupils are keeping personal accounts. Record cards, supplied by Iowa State College, are being uesd. This form is in general use all over Iowa in high schools. Miss Ida Aherns, home demonstration agent of Poweshiek county recently gave a talk to Miss McDonald's class in home economics on budget making and account keeping, explaining in detail the record forms to be used.

The 73rd birthday of the University of Iowa, established in 1874, was celebrated as "Founders Day," Wednesday, Feb. 25. James B. Weaver of Des Moines, being the principle speaker.

Arrangements have been made by the Benton County Farm Bureau with the agricultural extension department whereby William H. Lapp a poultry expert, and R. S. Herrick, who needs no introduction to orchard men of Iowa, will spend two days in March in Benton county giving demonstrations.

Polk county real estate transactions for 1920 have exceeded by more than a thousand those of a year ago, for the first two months of the year, according to records at the office of the county recorder. The instruments recorded up to and including February 20 number 4,036 against 2,710 for the same period last year, an increase of 1,326. While these numbers include all instruments, the greater number of them are real estate transfers.

Nearly 2900 ministers of the Evangelical churches of Iowa attended the interchurch world conference held in Des Moines February 23, 24 and 25. This was the largest gathering of ministers ever held in the state of Iowa, and religious work of great importance was taken up at the meetings. The inter church world movement is one of the most important religious propositions ever placed before the evangelical churches of the world. The purpose is to bring about cooperation between all churches, to work out a program that will further Christianity in the entire world.

Ladora farmers can raise hogs too big for the Chicago packing houses to slaughter. Joe Cummings of Ladora sent a car load of hogs to Chicago, 32 head in all, which averaged 620 pounds, the largest of the lot tipped the beam at 850 pounds. When they reached their destination the stock yard officials took one look at them and decided they were too large to handle. The packing house had no slaughtering machinery large enough to take care of them and they were disposed of to the butcher shops over the city, who did their own butchering. They were the most remarkable lot of hogs for size ever received at the Chicago yards and they drew a lot of attention.

The Methodist general conference which meets in Des Moines in May have leased the Coliseum and Auditorium for the entire month. The committee also approved the signing of the bond required to bring the conference to Des Moines. The committee on entertainment have arranged four nights during the month on which there will be no convention sessions, and which will be left at the disposal of the local committee for some address or entertainment, the proceeds of which might go to defray local expenses. The four open nights will be used for two big concert numbers, one address by a bishop of prominence, and an address by some man of national or international note as a speaker.

C. P. Earle, poultry club agent, Iowa State College and in charge of poultry club work for Iowa, says that the enrollment in these clubs in the state the past year was over 1700 members and that of this number 1394 members finished their work. If the members of the Iowa State Poultry Breeders' Association could fully realize what the boys' and girls' poultry clubs mean to them, there is little doubt but that they would be more than anxious to lend it both their moral and financial support. More than 38,000 eggs were set last year by the members of these clubs, 26,338 cicks were hatched and 23,749 chickens were raised, and this was done in the first year of poultry club work. This year it is hoped to double the membership and this means that the breeders of Iowa will be called on to furnish more than 80,000 eggs for hatching for the boys' and girls' poultry clubs of the state.

The Democratic State Convention closed its session in Des Moines by electing the following delegates at large to the National Convention, which convenes in San Francisco. Wilbur W. Marsh, Waterloo; Edwin T. Meredith, Des Moines; Tom Steele, Sioux City; N. F. Reed, Ottumwa; W. D. Jamieson, Shenandoah; W. J. Casey, Knoxville; Dr. J. W. Reynolds, Creston; Louis Murphy, Dubuque. The delegation goes uninstructed as to presidential choice and the unit rule of voting will prevail. The convention was largely attended and it was the first state convention of either of the predomination parties where women delegates were present and participated in the deliberation of the assembly. The resolutions offered contained the following ten points: First—Indorsement of the administration and President Wilson's policies. Second—Readiness to submit the party's record to the people for a verdict. Third—Indorsed the league of nations. Fourth—Urge ratification of the treaty bringing universal peace and thereby dispensing with the need of universal military training. Fifth—Welcome to the women. Sixth—Indorsement of all measures whereby women will have equal suffrage rights. Seventh—Commends President Wilson for appointing Mr. Meredith to a cabinet position. Eighth—Laments the death of Fred E. White. Ninth—Points to the party and administration's achievements in peace and in war. Tenth—Resolved, That the Iowa delegation would go to San Francisco uninstructed and be bound by unit rule.

Iowa's consolidated rural schools, and particularly those operated in co-operation with Teachers college represent the best type of such schools, according to delegates to the recent national consolidated school conference held in Cedar Falls.

Otto Albert, Reinbeck, has sold 80 acres to Gus Treimer, for $18,000. He also sold 40 acres east of Reinbeck to Alfred Sieh for $12,000. August Strohbehn has bought the Albert Vittum farm, east of Morrison, for $350 per acre. He gets possession next year.

In All the World

No Grinding Plate Like the LETZ!

Here's one of the famous Letz Grinding Plates—one of those plates between whose thousands of whirling scissor-like edges the grain and roughage is ground powder-fine in one operation.

No other process so fine cutting, so fast cutting, so durable, so dependable. No other process so altogether desirable for the feeder who wants to grind his own feed.

9 Sizes 22 Styles **LETZ** 2 to 40 H. P.

America's Leading Feed Mill

Letz Mills are enabling hundreds of thousands of progressive farmers and feeders to cut down their feed costs one-fifth, to save the 20% of feed that goes to waste when fed *whole*, to raise their hogs and cattle for market quicker, better, more economically.

GARDENS AGAIN ARE IMPORTANT

Just as Essential This Year as During War Period, Say Federal Specialists.

MUST PRODUCE MORE FOOD

Several Hardy Crops Will Withstand Considerable Frost and Should Be Planted Early—Make Plantings at Short Intervals.

(Prepared by the United States Department of Agriculture.)

Gardens are going to be just as important the coming year as during the war period, United States department of agriculture specialists declare. High food costs, they say, are likely to remain until more to eat is grown and distributed. Farm gardens, village gardens, and city back yard gardens all will help. Food produced in the garden not only helps balance the family budget but releases that grown on farms for the use of people who are entirely dependent upon others.

With the lengthening of the days it will not be long until land can be worked, and such hardy crops as peas, onions, lettuce, radishes and beets planted, especially throughout the lower Gulf Coast region. The average date of the last killing frost of the winter in this section is not later than March 15. This zone includes the southern portion of South Carolina, the southern half of Georgia, Alabama and Mississippi, almost the whole of Louisiana and all southeastern Texas. Several of the more hardy garden crops, including those mentioned

When the Right Time Comes Let the Girls Be Shown How to Plant and Care for the Beds.

above, will withstand considerable frost and may be planted at least a month before the average date for the last frost.

Take a Chance on Early Planting.

Irish potatoes are easily injured by freezing, but they require about a month to come up and may be planted at about the same time as lettuce and radishes. It pays to take a chance on the early planting of certain of the more hardy garden vegetables. If they are killed or severely injured they may be replanted. A good method is to make about three plantings at intervals of two weeks, and if the first planting is killed the later ones take its place; if not killed, early vegetables will be produced and the second and third plantings provide a continuous supply.

Keeping up the gardening interest throughout the season is just as important as making an early start. About the time the more hardy vegetables are planted in the garden the seeds of tomato, eggplant, and peppers should be started in a window box indoors. By the time the ground and the air are warm these plants will be of good size and ready to set in the garden. In the meantime a few "frostproof" or hardy cabbage plants may be set out. Next will come the planting of snap or string beans. Then follows the planting of Lima beans, summer squashes, melons of all kinds, and other of the more tender vegetables.

Remember the Greens, Too.

And don't forget the greens. We all need more greens in our diet. Spinach, kale, and turnips will keep you supplied with greens during the late fall and early winter, but you should have a bed of spinach planted now, in the Gulf Coast region, for early spring greens. Early turnips and beets are excellent for use as greens and later you can have delicious Swiss chard. Bassella withstands heat and makes satisfactory summer greens. The main point in getting the most out of your garden is to begin early and keep going throughout the entire season, making every foot of land produce to the limit.

OBTAINING EGGS IN WINTER

Supply of Bone Meal or Beef Scraps Should Be Kept Before Hens at All Times.

The farmer who wants winter eggs should keep a box of bone meal or beef scraps before the fowls, or give them a feed of freshly-cut bones every few days. In addition, supply them with vegetables occasionally, make them scratch for all their grain feed, and keep the fowls warm at night.

EARLY PLANTING OF CORN IS ESSENTIAL

Larger Varieties Can Be More Profitably Grown.

Results of Experiments Conducted to Demonstrate Practicability and Value of Method—Better Yields Obtained.

(Prepared by the United States Department of Agriculture.)

Earlier planting of large, productive varieties of corn is frequently much more profitable than the normal planting of early maturing varieties. Proof of this has been obtained in many instances, announces the chief of the bureau of plant industry, in reporting on the results of experiments conducted to demonstrate the practicability and value of the earlier planting of corn. By much earlier than normal planting it has been found that larger varieties can be profitably grown for ensilage in northern localities with much better yields than can be had from the smaller native varieties planted at the usual date.

In the South, by planting small short-season varieties earlier than normal, much earlier maturity can be secured, affording a supply of corn for very early feeding. Many rather soft varieties that rot badly when planted late produce sound corn when planted early in southern localities. The planting of short and long season varieties in alternate rows has increased yields where moisture is a limiting factor.

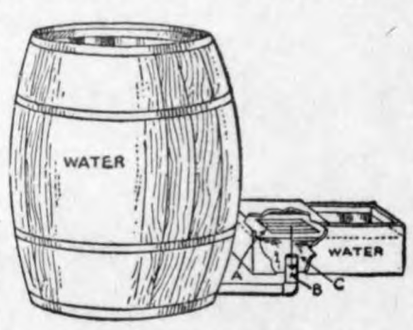
Varieties differ, it has been found, in their ability to adapt themselves and their grain production to varying stands. Prolific varieties, when given increased space, have shown ability to increase their grain production much more satisfactorily than have the single ear varieties, because of their ability to make up for deficiency in stand.

The studies made by the department specialists have resulted in isolating uniform types within a variety. It has been found that so-called varieties of corn are largely conglomerates of many distinct types, and to arrive at basic facts in breeding work it is necessary to segregate these uniform types.

BARREL FOUNTAIN IS HANDY

Outfit Will Save Lots of Work and Also Insure Constant Supply of Water for Fowls.

The diagram shown is of a homemade poultry fountain. The cistern is a common barrel that is watertight, connected to a drinking tank by a piece of pipe with one elbow as shown, says a writer in The Farmer. A big washer or something else of that shape is fastened on the end of the pipe at "C" in order to make a sort of rim on the inside of the pipe. "A" is a piece of board used for a float and connected to plunger, "B," by means of a wire. This makes a self-locking valve so that the water will flow in until the tank gets full when the float pulls the plunger up against the rim on the inside of the pipe and shuts off the water which flows in again as the water is consumed. It is well to have the part of the tank where the valve is boxed off by itself with a lid over to keep



Homemade Poultry Fountain.

the poultry from meddling with the valve. This outfit will save a lot of work and also insure a constant supply of fresh water if the cistern is kept replenished with a couple of pails of water once in awhile, according to the number of chickens.

CHICKENS NEED GREEN FEED

Greatest Value Is Succulence, and Salts it Contains are Great Assistance to Digestion.

In nutritive elements, green foods contain so little strength that if their only claim to poultry favor was on that account they would have been discarded long ago. Their greatest value is their succulence, and the salts they contain, which promote digestion.

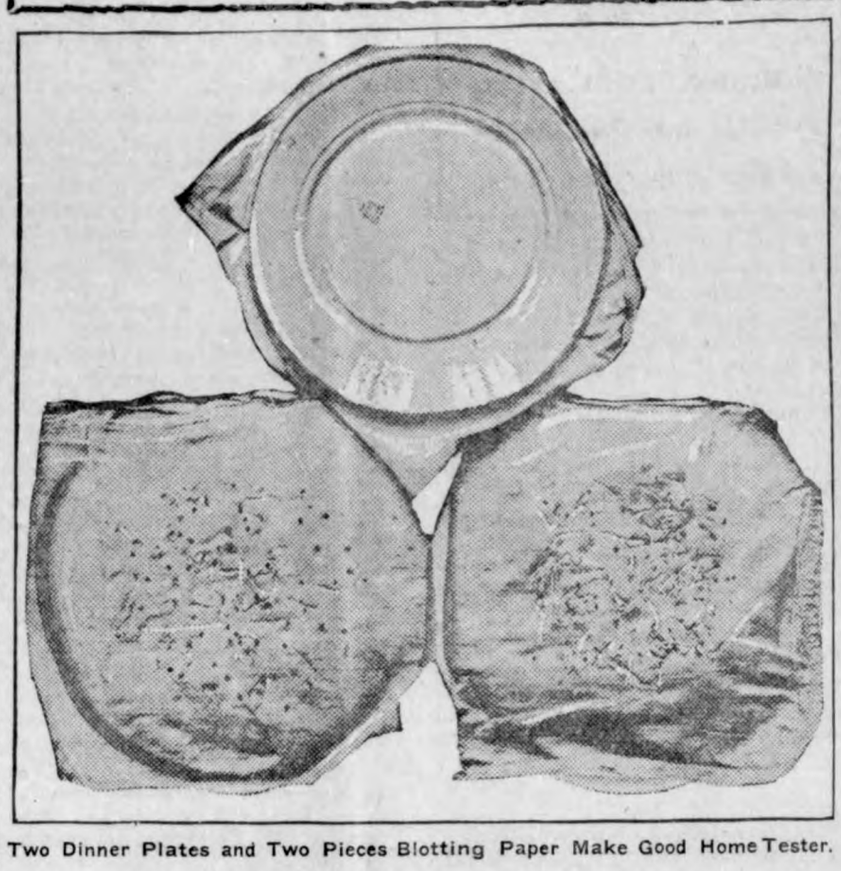
Green feed in the winter poultry ration helps to keep a laying stock in good tone. It assists digestion, and many poultry keepers use it for that reason and because it increases egg production.

SUPPLY MATERIAL FOR EGGS

No One Kind of Grain Will Furnish All of Different Food Elements Required by Hen.

There is no one kind of grain that alone will furnish all of the different food elements required to maintain the body of the hen in good condition and also furnish the material of which eggs are made. Certain kinds of food combinations are required to make the yolk of the egg, certain other kinds are required to make the whites, while still other kinds are needed for building the membranes which surround the yolk and the white and the shell which contains all.

FARMER CANNOT AFFORD TO SOW POOR SEED



Two Dinner Plates and Two Pieces Blotting Paper Make Good Home Tester.

(Prepared by the United States Department of Agriculture.)

Red clover seed is selling at approximately 50 cents a pound. At that price a farmer cannot afford to sow as clover seed anything that is not clover seed. Half a dollar a pound for weed seed, chaff, and dirt is too high a price to pay for the privilege of being careless—particularly as seed testing is comparatively an easy and wholly an inexpensive operation.

There is but one factor in crop production over which the farmer has absolute control. Sunshine and moisture are matters that are wholly beyond his power of influence. Measurably, he can control culture, but too much rain or too long a drought at a critical time may place even that beyond his power. But, no matter what happens, the farmer can be sure that he is planting good seed—the kind of seed that, given a fair chance, will produce a full crop. He cannot afford to handicap himself at the outset by planting adulterated or dead seed—the kind of seed that cannot make a full crop no matter how favorable conditions may be.

Labeling of Seeds Promised.

The sale of seeds, in many states, is regulated by law, the seller being required to make certain statements as to quality, but the law is not applicable to seeds that go into interstate commerce. In order to meet this difficulty so far as possible, the secretary of agriculture, in 1917, asked representatives of the seed trade to meet in Washington and secured the consent of most of them to a suggestion that seed men label all farm seeds sold in lots of 10 pounds or more, the label to show percentage of pure seed, percentage of germination, and date of germination test. In some cases the agreement was not lived up to, but the matter has again been called to the attention of seed men and many of them have again announced that they will label all seed they sell.

Practically all large seed houses now have facilities for testing the quality of all lots of seeds that they buy and sell. They have, therefore, the information that the farmer needs, and he should insist upon being given this information when he buys seeds. Few farmers are willing to buy low-grade seed, containing much chaff, dirt, weed seeds, and dead seeds—if they know how poor it is. The dealer, however, almost invariably makes his largest profit on the lower grade of seed he sells and is not always willing to put on a truthful label. The farmer's protection lies in buying only labeled seeds.

Farmer May Protect Himself.

The farmer, however, may do a great deal toward protecting himself by testing seeds at home. "Testing Seed in the Home and in the Rural School," published by the United States department of agriculture as Farmers' Bulletin 426, discusses the subject in detail. It will be furnished free on request.

All kinds of farm seeds may be subjected to one kind of test or another, but the seeds of the crops in most general use and which it is especially desirable to have tested are the true clovers, such as red, alsike, and crimson; alfalfa; such grasses as timothy, orchard grass, and the millets; cereals, rape, flax, vetch, and corn. Much of the seed of these crops, except cereals and corn, is imported and widely variable grades are on the market. Just now a great deal of clover seed is being imported from Italy, and specialists believe that much of it is poorly adapted to American conditions. The prevalence of foreign-grown seed in the market is probably not generally recognized, but it is one of the important elements in making testing necessary.

GETTING PROFITS IN FEEDING LIVE STOCK

Two Tests Conducted on Private Farms in Florida.

Herd of Native Steers Turned on Field of Velvet Beans Gave Better Results Than Those Fed on More Expensive Feeds.

Less gains in weight but greater profits resulted from feeding a herd of cattle in a velvet bean field, compared with another herd fed in a similar field for only a short time and then given more costly feed, including sorghum silage and cottonseed meal. These two feeding tests were conducted on private farms in Florida in co-operation with the bureau of animal industry, United States department of agriculture.

In one case 220 native steers, three to five years old and averaging 582 pounds per head, were turned into an 80-acre field of velvet beans early in November. After 28 days the animals averaged 590 pounds and the feed was changed to sorghum silage, velvet beans in pod and cottonseed meal. On the fifty-sixth day the weight was 589 pounds. On the eighty-fourth day, when the test ended, it was 644 pounds. The average daily grain per head was approximately three-fourths of a pound. The ration was not the typical fattening ration used heretofore but was one used to secure a comparable degree of finish. Had grain been fed in addition probably a greater gain would have been secured. There was a $2 margin and a profit of $4.02 per head.

In the second experiment 116 native steers similar to the first herd were pastured on an 85-acre field of velvet beans for 72 days, beginning at about the same time of year. They lost considerable in weight for a part of the second month, but there was a daily average gain for the whole period of a little more than one-fourth pound per steer. The pasture charge in this case was $9 per acre, and the profit $6.35 per head. The margin was $2, as in the other case.

BUILD HEN HOUSE IN SPRING

Building Then Will Have Chance to Dry Out During Hot Days—Avoid Danger of Colds.

The best time to build a poultry house is in the spring or early summer, for then it will have time to dry out during the hot days. Lumber is often rather damp and it must be thoroughly dried out before winter or the birds housed in the building will be in danger of contracting colds, says the United States department of agriculture. Cement floors and foundation walls, if made in the spring, will also have an opportunity to dry thoroughly, and most of the dampness often attributed to them will be avoided.

Spring or early summer is the busy time on the farm, so those who foresee the need of new poultry houses next winter will do well to build them during the slack time this winter before spring work starts. Do not put the birds into the new building, however, until it has been dried out.

GENERAL FARM NOTES

The livestock farmer owns his own fertilizer factory.

* * *

Mulching tomatoes with straw has been found to increase the yield of fruit.

* * *

Harness are very high in price, so don't forget that good oil prolongs the life of leather.

* * *

Neighborhood clubs for buying garden seeds and field seeds are a source of much saving.

* * *

Keep the vegetable cellar at an even temperature; between 33 and 35 is good for most crops.

* * *

Alfalfa shoots up quickly and makes especially good pasture in late summer—better than clover.

* * *

A few dollars spent in building a shed for your farm machinery will pay mighty good dividends.

DAIRY

BOYS AND GIRLS' CALF CLUB

Question for Farm People and Extension Workers to Think About, Say Dairy Experts.

(Prepared by the United States Department of Agriculture.)

Why shouldn't a boys and girls' calf club grow into a men and women's cow club? Or, more immediately speaking, a larger boys and girls' calf club—larger boys and girls, that is, not larger club. Or, getting nearer the meat—or the milk—of the thing, why shouldn't the club boy or girl who raises a calf milk that calf when she

Youngster Making a Good Start.

becomes a cow, watch her development, keep a set of books on her production, and, in a small way, learn the essentials of dairy farming, taking the figures to school and getting them interpreted, and incidentally teaching "the old man" a new trick or two?

That is the question, in one form or another, asked by the experts of the dairy division. It is a question that farm people and agricultural extension workers might think about. There may be more to say on the subject after a while.

GENTLE TREATMENT OF COWS

Unique Blotters Distributed by the Department of Agriculture Urging Kindness to Animals.

The following, printed on blotters, was distributed by a dairying agent for the United States department of agriculture and the Utah Agricultural college:

Our Domestic Animals Have Acute Hearing.
WHY YELL!

Show me a man who says "milking is a dirty job" and I will show you a man who will make a dirty job of milking.

DAIRYMEN!
SAFETY FIRST
Cleanliness Is Safety.

Gentle treatment of our cows, horses, hogs and sheep will put money in our pockets and peace in our hearts.

MORE MILK AND BUTTERFAT

Of Greater Importance Than Improvement in Breed Type—Purebred Bulls Essential.

Far more important than the improvement in breed type due to the use of purebred bulls, is the increase in milk and butterfat production of the daughters of purebred bulls from high-producing families. It goes almost without saying that a purebred bull, when introduced into a herd of scrub cows, will produce daughters that produce more milk and butterfat than their mothers.

DAIRY NOTES

Winter cow comfort means more winter profits.

* * *

A cow that ranks with the best of her breed is worth half a dozen average cows.

* * *

Good dairy cows are hard to find and high in price. The best way to get them is to raise them.

* * *

There may be some roughage the cows like better than silage, but the average dairyman hasn't discovered it.

* * *

It is becoming more evident daily that a herd of cows on the farm offers the owner an opportunity to increase his profits, and at the same time maintain the fertility of his soil.

"DANDERINE" STOPS HAIR FALLING OUT

Hurry! A few cents will save your hair and double its beauty.

A little "Danderine" cools, cleanses and makes the feverish, itchy scalp soft and pliable; then this stimulating tonic penetrates to the famished hair roots, revitalizing and invigorating every hair in the head, thus stopping the hair falling out, getting thin, scraggly or fading.

After a few application of "Danderine" you seldom find a fallen hair or a particle of dandruff, besides every hair shows more life, vigor, brightness, color and thickness.

A few cents buys a bottle of delightful "Danderine" at any drug or toilet counter.—Adv.

Prudent Arrangement.

"At a political banquet," said Senator Sorghum, "it's always best to wait until after the eating is over before bringing on the speakers."

"What's the difference?"

"If you started the speaking too early there would be a chance of having everybody's appetite spoiled by remarks from one source or another."

Thousands Have Kidney Trouble and Never Suspect It

Applicants for Insurance Often Rejected.

Judging from reports from druggists who are constantly in direct touch with the public, there is one preparation that has been very successful in overcoming these conditions. The mild and healing influence of Dr. Kilmer's Swamp-Root is soon realized. It stands the highest for its remarkable record of success.

An examining physician for one of the prominent Life Insurance Companies, in an interview on the subject, made the astonishing statement that one reason why so many applicants for insurance are rejected is because kidney trouble is so common to the American people, and the large majority of those whose applications are declined do not even suspect that they have the disease. It is on sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

Proposing by Telephone.

"Excuse me," said the telephone girl, "but I see the lady refused you."

"That's right," gloomed the young man. "Thank you."

"Pardon me. I think I can give you a number where you'd have better luck."—Louisville Courier-Journal.

PUT CREAM IN NOSE AND STOP CATARRH

Tells How to Open Clogged Nostrils and End Head-Colds.

You feel fine in a few moments. Your cold in head or catarrh will be gone. Your clogged nostrils will open. The air passages of your head will clear and you can breathe freely. No more dullness, headache; no hawking, snuffling, mucous discharges or dryness; no struggling for breath at night.

Tell your druggist you want a small bottle of Ely's Cream Balm. Apply a little of this fragrant, antiseptic cream in your nostrils, let it penetrate through every air passage of the head; soothe and heal the swollen, inflamed mucous membrane, and relief comes instantly.

It is just what every cold and catarrh sufferer needs. Don't stay stuffed-up and miserable.—Adv.

Wifey's First Thought.

Benham—I am fighting with my back to the wall.

Mrs. Benham—Well, don't get your head against it or you will grease the wall paper.

GREEN'S AUGUST FLOWER.

Constipation invites other troubles which come speedily unless quickly checked and overcome by Green's August Flower which is a gentle laxative, regulates digestion both in stomach and intestines, cleans and sweetens the stomach and alimentary canal, stimulates the liver to secrete the bile and impurities from the blood. It is a sovereign remedy used in many thousands of households all over the civilized world for more than half a century by those who have suffered with indigestion, nervous dyspepsia, sluggish liver, coming up of food, palpitation, constipation and other intestinal troubles. Sold by druggists and dealers everywhere. Try a bottle, take no substitute.—Adv.

Any young girl can tell you that her mother's only fault is the good advice she is constantly giving.

ME "BAYER" IS ON GENUINE ASPIRIN

e tablets without fear, if you see the safety "Bayer Cross."

you want the true, world-famous irin, as prescribed by physicians over eighteen years, you must ask "Bayer Tablets of Aspirin." he "Bayer Cross" is stamped on tablet and appears on each pack- for your protection against imi- ons.

each package of "Bayer Tablets Aspirin" are safe and proper direc- s for Colds, Headache, Neuralgia, thache, Earache, Rheumatism, mbago, Neuritis, and for Pain in eral.

Handy tin boxes containing 12 tab- cost but a few cents. Druggists sell larger "Bayer" packages. As- in is the trade mark of Bayer Man- cture of Monoaceticacidester of licylicacid.—Adv.

His Complaint.

Counter Man—What's the matter, ng feller? Shell shock?

Excited Young Man—Shell shock hing. I used to be a company clerk we always made out our requisi- ns in triplicate.—Home Sector.

T LESS AND TAKE SALTS FOR KIDNEYS

Take a Glass of Salts if Your Back Hurts or Bladder Bothers.

The American men and women must ard constantly against Kidney trou- e, because we eat too much and all r food is rich. Our blood is filled th uric acid which the kidneys strive filter out, they weaken from over- ork, become sluggish; the eliminative ssues clog and the result is kidney uble, bladder weakness and a gen- al decline in health.

When your kidneys feel like lumps lead; your back hurts or the urine cloudy, full of sediment or you are liged to seek relief two or three mes during the night; if you suffer th sick headache or dizzy, nervous ells, acid stomach, or you have rheu- atism when the weather is bad, get om your pharmacist about four nces of Jad Salts; take a table- oonful in a glass of water before eakfast for a few days and your dneys will then act fine. This fa- ous salts is made from the acid of apes and lemon juice, combined ith lithia, and has been used for enerations to flush and stimulate ogged kidneys; to neutralize the ids in the urine so it no longer is a urce of irritation, thus ending ladder disorders.

Jad Salts is inexpensive; cannot in- re, makes a delightful effervescent thia-water beverage, and belongs in ery home, because nobody can make mistake by having a good kidney ushing any time.—Adv.

Really Not Her Fault.

"Aunty," pleaded Lilly, "may I have saucer of milk for my kitten?"

"I just gave you a big saucer of ilk for her," reminded aunty.

"I know that, but she stuck her w in it and spilled it over the floor," id Lilly.

"She doesn't deserve any more; milk too expensive to waste," irately de- ared aunty.

"Oh, yes, she deserves it," indul- ntly decided Lilly; "I don't fink kit- is old enough yet to know the price milk."

The House of Whispers

By WILLIAM JOHNSTON

Copyright by Little, Brown & Co.

UP TO DATE GHOSTS

Fiction readers who like haunted houses and mysterious noises in the night, and ghost doings that baffle explanation, should stop, look, and read right here. For "The House of Whispers" is well named. It's even more fascinating than the old-time haunted house, because it's a mystery apartment in a big city building—the lovely heroine, for instance, can creep along a ledge from one window to another in the dead of night, and a wonderful pearl necklace can disappear from a wall-safe and find its way back again, and the superintendent and his employees can fasten a charge of murder on the hero, and there might be room in the walls for secret passageways. But there is nothing new-fashioned or queer about the loyalty and devotion of the heroine for her lover in trouble; it's the same glorious thing that has thrilled us all ever since true love ceased to run smooth. And of course she gets the reward that she deserves—and they live happily ever after.

CHAPTER I.
—1—

With an exclamation of annoyance I crumpled up the note from my great-uncle Rufus and flung it on the floor. My disappointment at its contents was the one thing needed to complete the utter misery of a wretched day.

Only that morning my roommates, Birge and Roller, fortunate fellows, had been informed that their applications for the ambulance service had been accepted. Our year of happy companionship had come to an abrupt end.

"Cheer up, old man," cried the optimistic Birge, "your luck will change some time."

"Right," said Roller, as he stooped to give a final tug to the straps of his new kit bag, "a chap as crazy about Adventure as you are is bound to meet her soon."

"Stop it," I cried in desperation. "It is you two who are to have the great opportunity. Soon you'll be seeing shrapnel burst, airplanes battling, regiments charging, heroes dying, and I—I'll be sitting here alone in a hall-room, eating my heart out with lonesomeness and envy, spending my days at an uncongenial desk, and my nights, God knows how, after you fellows have gone."

"You never can tell," chirped old Birge, "all kinds of strange things happen right here in New York. You may be the one that has had a bellyful of adventure before we return—if we do."

His last three words gave us all a sobering thought. There was a chance, more than a chance, that never again on this earth would we three be together again. Eight of our college mates had preceded Birge and Roller to the great battlefield. Already three of them lay in hero graves somewhere under the lilies of France.

The silence of a sad parting fell on us. The taxicab came and we drove together to the pier with hardly a word spoken.

As we shook hands at the gangplank old Roller spoke again, a glisten of tears in his eye, something almost prophetic in his voice.

"Nelson," he said, "I feel it in my bones that something is going to happen to you soon, something thrilling."

"I wish to God something would!" I answered bitterly.

Disconsolately I waved them a last adieu from the dock. In a black mood I railed against the fate that had left me behind, poignantly lamenting the lack of the eight hundred dollars that would have set me free to accompany them.

Two letters, thrust under the door in lodging-house fashion, awaited my homecoming. One of them I recognized at once as my mother's weekly billet of good advice, and tossed aside to be read when I was in a better frame of mind. The other was in a cramped, unfamiliar handwriting. As I studied the envelope curiously a suspicion as to the writer's identity flashed into my mind and eagerly I tore it open. My great-uncle, Rufus Gaston, was an old, old man. It must be from him. What could he be writing to me about? Rufus Gaston was rich—worth many millions.

It was merely an invitation to dine with him and his wife. Disgustedly I flung it aside. It capped the climax of my dissatisfaction with everything. Here were my two chums starting off to the war, and here was I, Spalding Nelson, twenty-six, strong in physique, save for a "football knee" that had barred me from military service, thirsting for excitement, left behind in the prosaic business world and now bidden to an uninteresting meal with two decrepit old relatives. I made up my mind not to answer the note. My great-uncle Rufus could go hang, for all of his millions. I would not go near him.

The sight of my mother's letter lying unopened on my desk served to recall to me that it was she who had prevented my going. Poor mother! She and I had been at cross-purposes ever since my father's death while I was a youngster. It seemed to me that always she had opposed everything I wanted to do.

After I left college she had found a place for me in the office of one of my father's friends in the little western city where our home was. I had been two years getting away to join Birge and Roller in New York. Most of all she had set herself against my going to France. She did not believe in war. I was the only man left in the family. She was far from well. If anything should happen to her, my young sisters had only me to look to. When these pleas had failed to move me she had not hesitated to remind me that I was in her debt.

Unfortunately this was true. My years at college had cost me more than my small patrimony. I had borrowed freely from her, expecting soon to be able to repay her. Like all young graduates I had vastly overestimated my earning capacity. Three years had elapsed and I still owed her eight hundred dollars.

"I do not see," she had written me, "how you can honorably feel free to go while you are in my debt. To furnish you funds at college your mother and sisters practiced many economies. The girls are now reaching an age when their expenses will be much greater. I need the money for them. The least you can do is to pay it back before you give up your position and go off on wild-goose chases."

For this argument I could find no answer. My obligation to her was a debt of honor that must be paid before I could be my own master. Each week I had been putting away five dollars, and as it accumulated had been sending her a money order.

While I was debating what to do I began to read my mother's latest letter. The first part of it repeated her many arguments. She wrote:

"Two days ago I received a letter from my father's brother, Rufus Gaston, upon whom you called when you first went to New York. He asked about you and made me a proposition concerning you. I did not venture to give him an answer. Your views and mine are so seldom in accord. I gave him your address and suggested that he write to you himself. Probably he has done so by this time."

Hastily I rescued my great-uncle's crumpled note from the floor and smoothed it out. If Rufus Gaston—with his millions and no direct heir—had made a proposition concerning me, his letter took on a vastly more interesting complexion. Carefully I reread it, seeking for some hidden meaning between the lines, but it gave no clue to what he had in mind. He merely expressed the hope that I would be able to dine with him and his wife informally next Thursday evening.

What could it mean? It was at least well worth looking into. Mr. Gaston was seventy-four. He had made a fortune in the South American trade, retiring at sixty-five. There was only himself and his wife. On the Gaston side, through my mother, my sisters and I were the only blood relations. I wondered if it could be that old Rufus was thinking of making me his heir—heir to the Gaston millions!

As I penned a cordial acceptance of his dinner invitation I determined to set myself to pleasing the old couple, whom I had met only once, on the occasion of my call. A few years ago I would have despised the thought of catering to wealth, but since I had discovered how difficult it was to earn money and how much more difficult to save it, my views had changed.

I could hardly wait for the day he had set for me to dine with them to arrive. I found myself approaching their residence fully three-quarters of an hour before the time named. When I discovered how early I was I decided to loiter in the park for a few minutes. Old Rufus recently had given up his Avenue residence and now lived in one of those stately apartment buildings erected in the East Eighties. I turned into Central park opposite my great-uncle's street and dropped into the first bench I came to, depositing beside me a bunch of roses I had purchased as my first move toward winning my great-aunt's affections. Lighting my pipe I gave myself up to pleasant reveries, from which I was aroused by finding my roses tossed suddenly to the ground at my feet.

"Pardon me," I said indignantly, "but those belong to me."

"Benches ain't for bundles," croaked an evil voice beside me.

Recovering my flowers, I turned to find seated beside me a rat-eyed young fellow, cheaply dressed, eyeing me with an insolent stare. As I looked at him he began crowding over toward me. Plainly it was his intention to oust me from the bench.

"There's plenty of room on those other benches over there," I suggested resentfully.

"Beat it yourself if you don't like it here," he retorted, blowing the smoke from a cheap cigarette in my face. "I got a date here, and I'm going to stay, see?"

I answered with an angry retort and hot words followed. We had almost come to blows when the bushes opposite us suddenly parted. I caught sight for just a second of a villainous face, that of a man about forty, an unforgettable face with a red scar across the left cheek. He raised one finger in an imperative gesture, signaling to my unwelcome companion on the bench. With a profane exclamation of dismay, the rat-eyed fellow sprang up and walked hastily away along the park path. Wondering what it was all about, I watched him out of sight around a turning of the asphalt and then glanced toward the apartment house where in a few minutes I was to be a guest.

As I looked a young girl came out of the house and walked slowly toward the park. At the corner she hesitated. She seemed to be debating whether to continue on down the avenue or to turn into the park. Apparently the lure of the greenery won her, for she came on slowly toward where I was sitting. As she drew nearer I observed her with interest, for she was one of the prettiest girls I ever had seen. Her slim figure, her dainty ankles, her carriage, everything about her suggested the patrician. Her face, rosy and youthful, was set off by a jaunty feathered toque, from under which a pair of soft, black, roguish eyes, shaded by long lashes, looked out above a dainty nose, just a bit tip tilted, on either side of which a fugitive dimple played.

To my great amazement she walked right up to me and stopped short. I

"You Were to Wear One, Too."

observed then that she seemed to be greatly agitated. Involuntarily I sprang to my feet and removed my hat, feeling certain that she had mistaken me for someone else.

She looked straight at me with an odd tightening of the lips. Into her great dark eyes came a look in which pride and fear seemed to mingle with utter loathing.

"I am here," she said.

In my confusion I mumbled something, I hardly knew what. She looked me up and down with a puzzled air and raised her hand to a red carnation she was wearing.

"You were to wear one, too."

"I don't understand," I answered.

"Didn't you," she asked hesitatingly, "didn't you come here about the papers—"

"What papers?"

"You know—"

"I don't know," I replied. "I know nothing about any papers. You must have mistaken me for someone else."

"But this was the place—this bench—the first bench?"

"I sat down here quite by accident."

"Oh!" she exclaimed with a sigh of relief. "And you're not wearing a red carnation, either."

I recalled then with misgiving that the ill-favored youth who just a moment ago had disputed the bench with me had been wearing a red carnation, and that he had muttered something about having a date. Yet it did not seem possible that a girl of this sort would be having a rendezvous with a scamp like him. I determined if possible to ascertain the girl's mission.

"I am merely waiting here," I hastened to explain, "until it is time for me to keep a dinner engagement with some relatives in the apartment house from which you came."

As I spoke I noticed that the fear and loathing had vanished from her eyes and that she was looking with relief at a little college pin I was wearing. She was blushing now from confusion at her mistake, and the rising red in her cheeks added greatly to her exquisite loveliness.

"I was to meet someone here," she faltered; "you quite understand, don't you?"

"I understand perfectly," I answered, and recalling the scar-faced man who had been lurking in the bushes, I hurried on to say, "but if I can be of any service—"

"No, no," she sobbed, apparently overwhelmed by whatever it was that was besetting her. "It's nothing—nothing anyone can help."

"Tell me about the man you were to meet here."

"Who are you?" she demanded, her suspicion suddenly rising at my question. "You're not a detective?"

"Far from it," I answered amusedly. "I'm just plain Spalding Nelson, on my way to dine with my great-uncle Rufus Gaston."

"Oh!" she said, relieved, "their apartment is on the same floor as ours."

"Tell me about the man you were to meet," I insisted. "I may have seen him."

"Did you? What was he like?" she demanded eagerly.

"Don't you know him?" I countered.

"No, I never saw him. I don't even know who he is. I only know that there was to be a man waiting here on this bench this evening. We were both to wear red carnations. I was to come here alone, to see him and to get the—"

She stopped abruptly and tearing off the flower she was wearing, trampled it viciously under her foot.

"Not so loud," I warned her, fearful lest they might still be lurking about and overhear us. "There were two of them."

"Two," she whispered, turning pale.

"Yes, one waiting here on this bench, and the other, a villainous scar-faced fellow, hiding in the bushes yonder."

"I dare not go on with it," she sobbed, "I dare not! I dare not! Oh, what shall I do?"

"The thing to do now," I replied, "is for you to let me accompany you back to your home. They will make no further attempt to meet you this evening, since my presence has spoiled their plans. Come, let me escort you, Miss . . ."

As I hesitated over the name she answered simply:

"Bradford—Barbara Bradford."

She pondered for a moment over my suggestion and then turned to walk with me toward the apartment house.

"What were the men like?" she asked.

I described them as best I could, though really the impression that the youth on the bench had left was vague. His voice, an insolent, hoarse, uncultivated one, was almost all I could recall about him.

"I wonder who they were? I wonder how they knew?"

"Knew what?"

Her lips tightened into a straight line.

"I can't tell you. I daren't. It isn't my secret."

By this time we had reached her home and the bowing doorman was swinging back the great iron door for us. It had been my intention to announce my arrival, but recalling that Miss Bradford had said that the Gaston apartment was on the same floor as hers, I stepped with her into the elevator. When it had descended, leaving us together in the corridor, she turned to me and offered her hand.

"Thank you so much, Mr. Nelson."

"I wish you'd let me help you," I cried.

She shook her head.

"Well, promise me one thing," I insisted.

"What is it?"

"That you never again will go alone to the park to meet those men."

A tremor shook her body, and once more a look of terror crept into her eyes.

"I can't promise that. I must meet them. I must! I must!"

I reached out and took her hand.

"Promise me, then, that before you go again you will let me know."

"You must not try to stop my going," she cried desperately and freeing her hand turned quickly and unlocking her door left me standing there alone, staring after her.

Perplexed beyond measure as to what I ought to do, after a moment I pressed the bell and was admitted to the Gaston apartment and to the presence of my aged relatives.

Under the same roof with the heroine.

(TO BE CONTINUED.)

Reached Its Destination.

A little boy was given a penny to give to the Lord at church. He returned home to report that not seeing God around he gave his penny to the man with a plate.

SAVED HER LIFE

Morrison, Iowa.—"Dr. Pierce's remedies and the professional advice received from the specialists at Dr. Pierce's Invalids' Hotel in Buffalo, N. Y. (which I followed to the letter), saved my life when I was a girl and I have had cause to feel grateful for more than forty years. When I was about sixteen years of age I fell from my horse and was terribly injured internally. A short time after this an immense bunch formed on my right hip which doctors neglected to lance and consequently my entire system was poisoned. I not only became terribly emaciated but my body was a mass of running sores and my right limb grew up under me and became helpless. I was in bed for more than six months and all hope for my recovery had been given up when someone told my father about Dr. Pierce's Invalids' Hotel in Buffalo, where they not only manufactured some wonderful remedies but also gave advice free, so he wrote for advice, and in a very short time we were very thankful that he did, because the first half bottle of 'Golden Medical Discovery' helped me so much that I was able to raise my head from the pillow, my appetite returned and I was able to sleep. Then the sores commenced to heal and I knew that I had started on the right track.

"It took five years to bring me back to my original good health but I took no remedies but Dr. Pierce's Golden Medical Discovery, 'Favorite Prescription' and 'Pleasant Pellets'—with the approval of my doctor all the time. This was forty years ago and I am still in the best of health. I have never had any sign of a blood disorder since or any ailment due to impurity left in my system, and I feel quite confident in recommending Dr. Pierce's Golden Medical Discovery as a blood purifier. The 'Favorite Prescription' I found equally as good in toning up the womanly organs, and I could not have kept house without the 'Pleasant Pellets.' Every member of my family has found them to be unequaled as a purgative and liver tonic, and we have often had to drive a good many miles from home to get them."—Mrs. N. P. Jensen, P. O. Box 100.

Mother Gray's Powders Benefit Many Children

TRADE MARK

Thousands of Mothers have found **MOTHER GRAY'S SWEET POWDERS** an excellent remedy for children complaining of Headaches, Colds, Constipation, Feverishness, Stomach Troubles and Bowel Irregularities from which children suffer at this season. These powders are easy and pleasant to take and excellent results are accomplished by their use. *Used by Mothers for over 30 years.* Sold by Druggists everywhere. Trial package FREE. Address, THE MOTHER GRAY CO., Le Roy, N. Y.

One and the Same.

Student, farmer, author, politician and reformer, Sir Horace Plunkett is one of the most versatile of Ireland's sons.

He is very witty also. On one occasion he delivered a lecture in Dublin on the best way to improve the conditions among the poor. At that time he was not exactly a finished speaker, and then, as now, a bachelor.

The day following his address he received from a lady a note which read: "What you need are two things—first a wife; second, lessons in elocution."

To this he replied: "These are only one."

CONVENIENT!

If Constipated, Bilious or Headachy, take "Cascarets."

Cascarets never gripe, sicken or inconvenience one like Salts, Oil, Calomel or harsh Pills. Feel bully! Be efficient! Don't stay sick, bilious, headachy, constipated. Remove the liver and bowel poison which is keeping your head dizzy, your tongue coated, your breath bad and stomach sour. Why not spend a few cents for a box of Cascarets and enjoy the nicest, gentlest laxative-cathartic you ever experienced? They work while you sleep. Adv.

Unruly.

Neverwed—Well, I suppose your wife obeys you as she vowed at the altar.

Justwed—Obeys me! Why, the poor girl can't even obey her own impulses.

Couldn't Wait.

"Did her husband die?"

"No, he resigned."—Boston Transcript.

We are peased to state that the mailing list of The Klemme Times is growing rapidly and that we have added a number of new names to the list the past week.

The afternoon train from the south was so late last Thursday that it did not get here until evening. The passenger from the north and the afternoon train passed here.

Miss Ethel Jacobs came from Garner Saturday noon to help her brother Ed balance his books for the month at the hardware store. She and Ed drove to Garner Sunday.

Mrs. O. P. Brooks returned to Clear Lake Monday afternon after an over Sunday visit here with her sister, Mrs. Henry Lewis. Mrs. Lewis accompanied her to Garner.

Patronize the merchants who advertise in the Klemme Times. They sell good goods at right prices. That's why they advertise, they always carry the best.

March came in "like a lamb" Monday, the first. We wonder if it will "go out like a lion" according to the old saying.

Frank Kluckhohn purchased the Charles Lenz place and moved into it the first of the week. The Lenz family move to Minnesota.

W. C. Keraus moved into the old Tom Mitchell residence the first of the week. It was formerly occupied by Frank Kluckhohn and family.

Saturday August Lau bought one hundred and ninety head of hogs which he shipped Saturday night to Chicago in three carloads. George Alberts and Wm. Johnson also shipped with him.

Chas. Lenz and two sons, Miilton and Clifford left with their carload of household goods for Spooner, Wisconsiin, Tuesday. The rest of the family will leave the latter part of the week.

FOREST CITY TO HAVE MEMORIAL BUILDING

Last Friday the voters of Forest City decided by a small majority to issue bonds for the construction of a $50,000 memorial building. The women were the ones who should be given credit for carrying the proposition as they carried the election. The men's votes were against the issue.

The memorial building will be erected in honor of the Winnebago soldiers, sailors and marines, as well as the Forest City young men who were in service. The building will be used as a city hall, library, rest room for all community gatherings.

IS 700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of ear corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us about it.

Tommy Is Out!

THOS. H. THOMPSON OUT FOR REPRESENTATIVE OF THIS COUNTY

We are indeed pleased to announce this week that Thos. Thompson has at last decided to run for the office of Representative from Hancock county after being urged by his many friends to make the run. "Tommy"is perhaps as well known a man as we can find in the county and stands ace high with the voters. Mr. Thompson we might say is a farmer by trade for he has farmed in this county fo a number of years. He came to Hancock county in 1881 fom Hamilton county and spent the greater part of his time on the farm. He took a business course at Humboldt College but went back to farming , mixing business ideas with farming and thus mak ing it a success. Later Tommy was given the post office at Kanawha, which trusty position he held for one term, or until the Democratic administraion put in a man of their. We almost forgot to say that before this, however, Mr. Thompson has always been active in the farmers' movement as he held the office of secretary for the farmers elevator at Kanawha and also the same office for their creamery. He was then elected to the office of Treasurer of Hancock county which position he filled most satisfactory as can be seen by the way he has been supported by the voters who gave him the office three terms a feat that no other man has done in this county for a good many years And now Mr. Thompson has been urged to make the run for the office of Representative and he has accepted the invitation to represent the people of this county. We believe Mr. Thompson will appeal strongly to the farmers especially but we also are sure that he will fulfill the office if elected, in a manner that will please all the voters. A man like Thompson is worth supporting, he should have the loyal support of every Republican voter in the county at the June Primaries.

COMING EVENTS AT THE IDLE HOUR

Saturday, March 13th—
THE LITTLE ORPAN—feature.

Tuesday, March 16th—"Elmo the Mighty," and 2 reels comic.

Friday, March 19th,—The regular Saturday night picture will be run instead of Saturday night.

FARM NEWS WANTED

We would like to have a correspondent in every farm locality in the vicinity of Klemme. Anyone can easily get together a few items each week of what is going on in your neighborhood. The only way we can get this news is to have a correspondent in each neighborhood. We will be glad to make arrangements with anyone who will volunteer to write news for us. Call at the Times office and see us. Editor.

FARMER'S INCOME SUBJECT TO TAX

Gains for 1919 Must Be Figured Under U. S. Law—Returns Due March 15.

LAND SALE PROFITS TAXABLE.

Necessary Farm Expenses May Be Deducted—Special Form for Farm Income—Cash or Accrual Basis for Computing.

A farmer, shopkeeper, or tradesman must figure up his net income for 1919; and if the farm or business income plus his other income was sufficient to require an income tax return a complete return must be filed with the collector of internal revenue by March 15.

A farmer should ascertain the gross income of his farm by computing all gains derived from the sale or exchange of his products, whether produced on the farm or purchased and resold.

Farm Expenses.

From his gross income a farmer is allowed to charge off all of his necessary expenses in the conduct of the farm during the year. These include costs of planting, cultivating, harvesting and marketing. In addition to these costs he may deduct money spent for ordinary farm tools of short life bought during the year, such as shovels, rakes, etc. Also, the cost of feed purchased for his live stock may be treated as an expense in so far as this cost represents actual outlay, but the value of his own products fed to animals is not a deductible item.

Other farm expenses allowable are the cost of minor repairs on buildings (but not the dwelling house), on fences, wagons and farm machinery; also bills paid for horseshoeing, stock powders rock salt, services of veterinary, 'nsurance (except on dwelling house), gasoline for operating power and sundry other expenses which were paid for in cash.

As to hired help, all the productive labor is a deductible expense, but the wages of household servants, or help hired to improve the farm, as in tree planting, ditching, etc., cannot be claimed against earnings. A farmer is not allowed to claim a salary for himself or members of his family who work on the farm.

Wear and Tear.

Purchase of farm machinery, wagons, work animals, etc., also the cost of construction or extension of buildings, silos, fencing, etc., should be considered additional investments in the farm and are not proper deductions against income.

A reasonable allowance may be claimed for wear and tear on farm buildings (except the farmhouse), fences, machinery, work animals, wagons, tanks, windmills and other farm equipment which is used in the conduct of the farm.

As to autos and tractors, the cost of these is not an expense, although the cost of their upkeep is an allowable deduction, if the machines are used exclusively for farm purposes and not for pleasure. Also, in such cases, a deduction for wear and tear is allowed.

Farm Losses.

The loss of a growing crop is not a proper deduction from income, inasmuch as the value of the crop had not been taken into gross income. The loss of a building or of machinery through storm, lightning, flood, etc., is an allowable deduction, but care should be used to ascertain the correct loss sustained, as restricted by income tax regulations.

No deduction is allowed in the case of loss of animals raised on the farm, but a loss is deductible from gross income if the animals had been purchased for draft or breeding purposes.

Shrinkage in weight or value of farm products held for favorable market prices cannot be deducted as a loss, for the reason that when such products are sold the shrinkage will be reflected in the selling price.

Sale of Farms and Land.

The value of agricultural lands has been jumping during the past few years, and during 1919 many owners sold out part or all of their lands at big profits. All such gains constitute income and must be taken into the net income for the year.

Any person who sold part of a farm or ranch, or part of a parcel of land, must also show any gains realized by the sale.

The method of figuring gains and losses on such transactions is prescribed in the Income Tax regulations, copies of which may be secured from Internal Revenue Collectors.

Forms for Returns.

The Internal Revenue Bureau has issued an improved Form 1040F for the use of farmers. This form, together with Form 1040A or 1040, will give the farmer explicit information as to how to properly figure his net income for 1919.

There are two methods of figuring a farmer's income tax return this year. He may make his return on the basis of the difference between the money and goods received for his products and the cash paid out for actual allowable farm expenses within the year. Or he may make his return on the accrual basis, which means computing the receipts and expenses that pertain to the taxable year, excluding income earned and expenses incurred in previous or succeeding years.

U. S. INCOME TAX EXEMPTS NOBODY

Every Person Who Had Income in 1919 Must Determine Own Liability.

MARCH 15 LAST FILING DATE.

Surest Way Is to Follow Form 1040A. Free Advice in Doubtful Cases. Severe Penalties in Law.

Nobody is exempt from Income Tax. An obligation is laid directly on the shoulders of each citizen and resident to consider his own case and to get his return in on time if one is due.

With each return showing a tax due a payment must accompany the return in the full amount of the tax or at least one-quarter of the tax.

All returns for 1919 must be filed on or before March 15.

Must Show True Figures.

In figuring up his earnings for income tax purposes a person must take into consideration all items of taxable income, and each item itself must be accurate in amount. Guesses and estimates must be avoided, for the return is made under oath.

Everybody who had an income during 1919 must now determine whether his or her net income was sufficient in amount to require an Income Tax return. The best way to find out is to get a Form 1040A and follow the instructions printed on it. That form will serve as a reminder ot every item of income; and if a return is due, it tells how to prepare and file it

One of the important points to keep in mind is that a person's net income is found by a computation prescribed in the law, and that each item of income from every source must be considered, unless specifically exempted.

Another thing to remember is that the personal exemption allowed taxpayers by law has no relation whatever to the requirement to file return. This exemption is not to be considered until a person has figured out his net income and determined whether it was sufficient to require him to file a return. Then, if a return must be filed, he should read carefully the instructions for claiming exemption, and complete his return.

If in doubt on any point as to income or deductions, a person may secure free advice and aid from the nearest Internal Revenue office. Many banks and trust companies are also furnishing similar service during banking hours.

Heavy Penalties in Law.

For failing to make a return on time the penalty is a fine of not more than $1,000 and an addition of 25 per cent to the tax, if any. For making a false or fraudulent return the penalty is a fine of not more than $10,000 or imprisonment not exceeding one year, or both; and, in addition, 50 per cent of the tax. There are other penalties for failing to pay tax when due and for understatement of the tax through negligence.

Many Sources of 'ncome.

Aside from what one may earn by his services, there are many other sources of income. If he sold any property during 1919 he must figure out the gain realized. If he rented buildings, land, apartments or rooms such rents must be considered taxable, and he may claim deductions for necessary expenses incidental to rents.

Bank interest is a common source of income and is taxable whether withdrawn or not. Any amount of interest credited to a depositor is income to the depositor.

Interest on mortgages and notes is taxable; also bond interest received from corporations.

A taxpayer who cashed his insurance during 1919 must report as income any excess received over the total of premiums paid.

Members of partnerships or personal service corporations or beneficiaries of an estate or trust must report their shares of income distributable to them whether or not actually withdrawn.

Dividends of domestic corporations must be reported. M ny other forms of income are taxable, unless specifically exempted.

LET PAVING CONTRACT

The contract for 90,000 square yards of paving at Garner has been let to a construction company at Des Moines. Paving will be a big improvement to their city.

Join The Post

THE GIFFORD OLSON POST AT GARNER INVITES KLEMME MEN TO JOIN

The Gifford Olson Post of the American Legion at Garner extend an invitation to all Klemme young men who hav served in the army, navy or marines to join with them. The initiation fee is two dollars and yearly dues are two dollaars. Of this amount one dollar goes to the Nationl orgnization, fifty cents to the state organization and fifty cents to the local organization for expenses. The National dues include subscription to the American Legion Weekly which will be sent Klemme young men who are interested in the Legion can communicate with Chas. F. Merten at Garner who will give further particulars. There are some in Klemme who have joined the post at Garner and others are urged to become members.

CROTTY WILL BE HERE FRIDAY

Mr. Crotty, the leader of the Klemme band will again be able to take up his work with the band here Friday. Mr. Crotty has had a siege of pneumonia but has recovered again which the Klemme band boys are glad to hear. If you have been taking private lessons from Crotty you can come in Friday afternoon and he will be here to help you.

Band rehearsal at the band room—Pres. Band.

PREACHER FINED $25.00

A minister at Waverly, Iowa, by the name of Bartels was recently hauled up before a Justice court on the charge of teaching German in a parochial school. He was tried found guilty and fined $25. Bartels has appealed to the supreme court. It is against the laws of Iowa to teach German in any school as we understand it.

SOME WEATHER LAST WEEK

Last week Monday and Tuesday the weather was like spring and Art Kuck claims he saw a cricket on Hocum's elevator. Wednesday it snowed, blew, rained, sleeted and raised Cain in genera. Thursday a heavy March wind bew a reguar blizzard. Friday it was the same. Saturday was no better. Sunday a little sunshine and still cold. Monday it was fine again. Looks like spring again.

RUNS SHOWS SUNDAY, PAYS FINE TUESDAY

Over at Eagle Grove the motion picture theatre runs shows every Sunday. Of course there was a lot of kick about running an amusement place on Sunday. The case was taken to the district court at Clarion and the jury returned a verdict of "guilty." The case will be taken to the supreme court now. Every Sunday the theatre is open and picturs run and then on Tuesday the manager plunks down $50 to the city as a fine for viloating the ordinance. The case is attracting a lot of interest in this part of Iowa.

MESERVEY WANTS PICTURE SHOW

The town of Meservey are assured of electric lights. With this improvement they can run a picture show. The merchants of Meservey want a picture show as they say many people go to other towns Saturday nights to trade and see a show. They are willing to help finance the proposition. It is a good idea and the Meservey business men seem to be wide awake.

School Election

A MOST EXCITING ELECTION HERE MONDAY

Monday aftrnoon the polls opened at one o'clock for the purpose of electing one director to succeed Arthur Wellemeyer on the school board. The election board consisting of Lew Lewis and John Gruetzmacher were kept very busy the whole afternoon—busy talking to each other mostly and occasionally handing a ballot to a voter—about one an hour. Lew would take his time writing down the voters name, John would adjust his spects and quietly slip the ballot into the box, re-adjust his spects on his forehead and "Well, Lew, as I was saying—," etc. When the smoke of battle had cleared away and the gentlemen had begun to count the ballots—with the assistance of an adding machine, (an up-to-date "Lewis & Gruetzmacher adding machine" of the latest type) it was found that Arthur Wellemeyer had seven votes cast in his favor. There was one other ballot cast and we will lay it to John Day voting for himself as his name was written in on the blank line but he forgot to put a cross ahead of it, so the ballot didn't count but Lewis said as it was such a close contest he would credit it to John's account. When John and Lew had discussed the matter fully and recounted the votes several times they found Mr. Wellemeyer in the lead by seven votes. It was the most exciting election ever held—for Lew and John, as they got a good chanc to "chin over old times." Yep, there were 8 ballots cast Monday, and Art is doomed to serve as director again.

More Local

The choir of the M. E. church met on Thursday evening at the home of Mrs. Platt, with Mrs. Sam Harvey as leader. After the regular practice all enjoyed their new player piano and also several selections by Mrs. Harvey. Refreshments were also served and all adjourned at a late hour.

Lester Stille took Rev. Meyer and Rev. Koerner in his car to Garner Tuesday morning where the two latter gentlemen took the train for Mason City to attend the funeral of Rev. Dulitz. Rev. Dulitz was at one time pastor of the First Methodist church here in Klemme and is well known among the older members of the church. They returned on the evening train.

Mr. and Mrs. G. A. Kahler who moved to Dexter, Minn., a few weeks ago spent a few days at the Chas. Velau home. Mr. and Mrs. Kahler were called to Grundy Center by the death of his brother-in-law and so on their way back stopped here.

The railroads are now back in the hands of the private owners as the government turned over their control March first. Perhaps we can look for better service in the future. Dwight M. Lewis, state railroad commissioner stated that September 1st, this year, the Iowa 2 cent railroad fare would again become effective. Oh, Boy! Guess we Iowans will do some traveling then.

How "Rubbers" Were Produced.

"Rubbers," as Americans have named them, were the invention of Charles Goodyear, father of the man who helped produce the Goodyear welt machine. In 1833 it was found that India rubber, dissolved in turpentine and mixed with lampblack, would give a waterproof surface to leather. But the leather so treated was subject to atmosphere changes, heat causing it to melt and cold to crack. Mr. Goodyear mixed sulphur with the other combination and produced rubber.

The Orange in Spain.

It is considered a very healthful thing to eat an orange before breakfast. But who can eat an orange well? One must go to Spain to see that done. The senorita cuts off the rind with her silver knife; then, putting her fork into the peeled fruit, she detaches every morsel with her pearly teeth and continues to eat the orange without losing a drop of the juice and lays down the core with the fork still in it.—Exchange.

BACK HURT ALL THE TIME

Mrs. Hill Says Lydia E. Pinkham's Vegetable Compound Removed The Cause.

Knoxville, Tenn.—"My back hurt me all the time, I was all run down, could not eat and my head bothered me, all caused by female trouble. I was three years with these troubles and doctors did me no good. Your medicine helped my sister so she advised me to take it. I took Lydia E. Pinkham's Vegetable Compound and the Liver Pills and used Lydia E. Pinkham's Sanative Wash and now I am well, can eat heartily and work. I give you my thanks for your great medicines. You may publish my letter and I will tell everyone what your medicines did for me."—Mrs. PEARL HILL, 418 Jacksboro St., Knoxville, Tennessee.

Hundreds of such letters expressing gratitude for the good Lydia E. Pinkham's Vegetable Compound has accomplished are constantly being received, proving the reliability of this grand old remedy.

If you are ill do not drag along and continue to suffer day in and day out but at once take Lydia E. Pinkham's Vegetable Compound, a woman's remedy for woman's ills.

SUFFERED TEN YEARS FROM INDIGESTION

Trouble Gone, Appetite Strong, and Eats Anything Without Distress.

"I had a case of catarrh and indigestion, of ten years' standing. I had been treated by the best medical men in Michigan. When I commenced taking Milks Emulsion, I was in bed. I improved so fast that I kept the neighbors wondering. I am now up and working every day. My cough is gone. My appetite is great, and I can eat anything without hurting me."—H. D. Lovelee, Rockford, Mich.

Indigestion is seldom cured by "helping" the stomach digest food. Digestives, like physic pills, usually make slaves of the stomach and bowels.

Milks Emulsion is a pleasant, nutritive food and a corrective medicine. It restores healthy, natural bowel action, doing away with all need of pills and physics. It promotes appetite and quickly puts the digestive organs in shape to assimilate food. As a builder of flesh and strength, Milks Emulsion is strongly recommended to those whom sickness has weakened, and is a powerful aid in resisting and repairing the effects of wasting diseases. Chronic stomach trouble and constipation are promptly relieved—usually in one day. It produces remarkable results in colds, coughs and bronchial asthma.

This is the only solid emulsion made, and so palatable that it is eaten with a spoon like ice cream. Truly wonderful for weak, sickly children.

No matter how severe your case, you are urged to try Milks Emulsion under this guarantee—Take six bottles home with you, use it according to directions and if not satisfied with the results, your money will be promptly refunded. Price 60c and $1.20 per bottle. The Milks Emulsion Co., Terre Haute, Ind. Sold by druggists everywhere.—Adv.

Poverty is no disgrace, but it is a terrible handicap nowadays.

Whenever there is a tendency to constipation, sick-headache or biliousness, take a cup of Garfield Tea. All druggists.—Adv.

This world owes every man a chance to make an honest living.

Use MURINE Night and Morning and Keep Your Eyes

The House of Whispers

By WILLIAM JOHNSTON

Copyright by Little, Brown & Co.

"SOMETHING WRONG HERE."

Synopsis.—Circumstances having prevented Spalding Nelson, clerk, from joining the American forces going to France, he is in a despondent mood when he receives an invitation to dinner from his great-uncle, Rufus Gaston. On his way to the house he meets, under peculiar circumstances, a young girl, apparently in trouble, to whom he has an opportunity to be of slight service. She lives in the same apartment building as Rufus Gaston, and he accompanies her home.

CHAPTER I.—Continued.

—2—

Although I tried to pretend an interest in their conversation and absently answered their questions about my family, my thoughts kept constantly recurring to the strange trouble of the girl across the hall, her plight interesting me far more than the purpose for which my great-uncle had sent for me. I had expected that he would broach that subject himself, but the coffee arrived and still the conversation had been limited to stilted family chat. As we returned to the living room, I decided to give him a lead:

"My mother wrote me—" I began.

"Oh, yes," said old Rufus, looking relieved.

"Yes, yes, of course," echoed Mrs. Gaston.

I waited for one or the other of them to proceed but for some reason they both seemed at a loss for words.

"You tell him, Rufus," said my great-aunt at last.

His tired old eyes studied my countenance carefully, searchingly, as if he was trying to read my soul.

"What is it?" I asked impatiently.

"It is this," said old Rufus, speaking slowly and with effort, as if he hated to disclose his intentions. "Three days from now—that will be Sunday morning—my wife and I are going to Maine to be gone for some months. We have leased a furnished cottage there and shall take our servants and our motor with us. We do not like to leave this apartment wholly untenanted, and it occurred to Mrs. Gaston that you might occupy it in our absence."

I am afraid my countenance at that moment must have betrayed my consternation. My great expectations vanished, blew up, disappeared. They did not want me for an heir but for a caretaker. What a fool I had been to imagine for one moment that this penurious old couple had contemplated doing anything for me. They wanted me to do something for them. A sarcastic refusal of their proffer trembled on my lips but was stayed by my great-aunt speaking:

"It will enable you to save your room rent. Mr. Gaston will pay the rent in advance before we go. There will be no one here to serve your meals so you will have to get them elsewhere, but I will arrange with my laundress to come in once a day to make up your room, and you'll be under no expense."

Her suggestion that I would have no room rent to pay decided me. Two other considerations also influenced me. It might be a plan on the part of the old people to try me out and see if I was trustworthy, and then, dwelling under the same roof with Barbara Bradford, I might have opportunities of seeing her again, and who knows, perhaps of assisting her out of her mysterious plight.

"I shall be very glad indeed to come," I found myself saying. "It was nice of you both to think of me."

"Something Wrong Here—in This House—I Tell You!"

"We'll consider the matter settled," announced old Rufus. "We are unused to guests here, so you had better come at ten on Sunday, an hour after we have started."

"Rufus," suggested my great-aunt apprehensively, "had you not better give him the combination of the wall safe? My jewels are there, and in case there should be a fire—"

"Why not take them with you?" I interrupted.

"A safe deposit box would be better, then."

"No," said old Rufus shortly. "Both my safe deposit boxes are full and there is no use hiring another one. The jewels will be all right where they are. In case of fire you can remove them to a place of safety. This is the combination—see that you remember it—six right, four left, two right, eight left, 6,428."

"I'll remember it," I replied, mentally repeating it over and over again.

"And now, my dear," said the old gentleman, "if you will get the keys from my desk, we can permit our nephew to depart."

My great-aunt left the room to do his mission. The minute she was safely out of hearing old Rufus' whole manner underwent a startling change. Into his deep-set gray eyes came a look of terror. His face became ashen, and the withered hand with which he clutched my arm was trembling violently.

"Listen, boy," he hissed, leaning forward that he might speak into my ear and looking about apprehensively as if he feared to be overheard. "Listen—there's something wrong here."

My first thought was that he had been suddenly stricken with senile dementia, but recalling his perfectly rational conduct throughout the rest of the evening, I dismissed the theory as absolutely untenable. His fear, whatever caused it, certainly seemed very real.

"Something wrong?" I repeated, wonderingly. "What do you mean? What is it?"

He clutched my arm in a still tighter grasp, and his voice, suppressed to a terrified whisper, became more insistent.

"I don't know," he breathed. "I wish I did." He glanced timorously about and went on. "There's something wrong! I sense it. I feel it. I cannot find out what it is. All kinds of queer things happen. I am always hearing voices—whispers, whispers, whispers! That is why we are going away. My wife thinks it is on account of my health. I don't want her to know. Please, please, Spalding, find out what it is before we return. I have no son. There is no one else but you to do it. Solve the mystery for me. Find out about the whispers. Promise me you will. Ssh—not a word to her! Not a word!"

He withdrew his hold on my arm and laid his finger on his lips as he heard his wife returning. With a visible effort he straightened up, and when she entered the room he apparently had entirely recovered his self-possession and was his natural self again, a dignified, world-weary old man.

"I can't find your keys, Rufus," said my great-aunt, "you had better get them yourself."

The minute he left the room she hastened to my side and she, too, began to whisper mysterious warnings, exhibiting a terror hardly less than her aged husband's.

"This is a house of mystery," she announced. "I'm always hearing strange sounds here. He doesn't know"—with a nod in the direction old Rufus had gone, "and I do not want him to. That is the reason I am taking him away. Solve the mystery of it before we return. I'll pay you. I'll make it well worth your while."

Her husband's shuffling in the passage warned her of his return, and she quickly dropped my arm. As he entered she was telling me in quite normal tones to be sure to remember her to my mother the next time I wrote.

Old Rufus handed me the keys, explaining which was which.

"And remember," said my great-uncle, as he escorted me to the door, "you are not to come until Sunday morning at ten, after we have gone. And remember the combination of the safe—Remember!"

The insistent way in which he repeated the word conveyed to me forcefully that what he most wanted me to remember was the strange warning he had given me, and as I clasped his hand in parting I tried by the firmness of my grip to let him know that I understood.

"Remember," repeated my aunt, too, as she stood there in the door a little behind him, at the same time giving me a significant look.

Yet, puzzling as had been the conduct of both of them, my memories that night were not of their warning nor of the combination of the safe nor of the hour at which I was to arrive. They were of the most beautiful eyes I ever had seen and of the haunting terror written in them.

CHAPTER II.

Sunday morning came at last.

It was hardly eight when I set out for my new quarters, taking with me only one small handbag and leaving my two trunks for the expressman. In the time intervening since my visit to the Gaston home I had done but little except speculate on the mysterious warnings that both of the old people had surreptitiously given me. It possible that there could be any inexplicable mystery about a home in a modern, up-to-date apartment house in the center of a civilized city. And if there was a mystery, why did they stay there? Why didn't they move?

Yet, as I pondered over the matter, I was convinced that both my great-uncle and his wife were rational. I dismissed without hesitation the theory that there could have been any supernatural happenings to affright them. It was probable, I decided, that their fears might have been played on by some conspiracy on the part of their servants to induce them to spend a season in Maine. Perhaps there was some specter from my great-uncle's past now rising to confront him that he was seeking to hide from his wife. It might be that she knew of it or had received threats and was trying to conceal the matter from him. There are few men of millions without some secret shameful pages in their lives. As I remembered that old Rufus Gaston's dollars had been made in South America, all that I had heard and read of plots and counterplots below the equator came buzzing into my brain. If such should be the case, that some betrayed conspirator now was seeking vengeance, more than ever I welcomed the unexpected chance that had thrown this opportunity for adventure in my prosaic path.

Yet maybe their warnings were justified. There was Barbara Bradford, who lived under the same roof, on the very floor with them. She seemed to be caught in the web of some plot, to be living in fear of some mysterious peril.

Was she, I wondered, in any way connected with the mystery that overhung the Gaston home? Did my great uncle and his wife know her? Her mission to the park had been to get some papers. Could they have been in any way involved with what was menacing my great-uncle's peace of mind? How I regretted now that I had not asked the Gastons if they knew Miss Bradford. How I welcomed the opportunity I was now to have of living in the same apartment house with her, close at hand if ever I could serve her. I was glad now that circumstances had prevented my going to France with Birge and Roller.

As I arrived at my great-uncle's corner, I saw Miss Bradford approaching from the opposite direction. She was in riding togs. I timed my steps to reach the corner as she did. Would she, I wondered, consider our strange meeting a few evenings before sufficient introduction to justify her speaking to me.

"Good morning, Mr. Nelson," she greeted me pleasantly. "Making an early call, aren't you?"

"I'm coming here to live for a while," I answered, falling into step with her. "The Gastons are going to Maine and have asked me to occupy their apartment while they are away."

As we chatted we had entered the building, and as before I went into the elevator with her. As I left her at the door, wondering if she had had any more encounters in the park, yet hardly daring to ask, she turned to me, half apologetically, and said:

"Mr. Nelson, since you've come to live here in the house, I must be careful. We have not been introduced, and my people will think it strange if they see me speaking to you. You understand, don't you? You must not speak to me or recognize me until—"

"Until what?" I cried eagerly.

"Until we can manage to be properly introduced."

"Yet," I insisted, "you promised to let me help you."

"I have not forgotten. I'm grateful, really I am. Perhaps I may call on your services. I may have to. If I do, I'll find some way of letting you know."

"Some secret way," I suggested, half sarcastically.

"Perhaps," she laughingly nodded as we separated.

As I took out the keys my great-uncle had given me and entered the apartment, I looked about me with a wholly new interest. That little word "mine" makes a vast difference in the way we regard things. Now that these luxurious quarters were to be my home, temporarily at least, I looked about curiously. Certainly at first glance there was nothing mysterious in the atmosphere. Setting my bag down I began an immediate inspection of the rooms.

The Gaston apartment, I discovered, occupied one whole side of the sixth floor of a twelve-story building. Around the elevator shaft that came up through the center was a small square court with four doors, two opening into the Bradford apartment opposite and two into the one I was occupying. The east apartments were known as Six A and the west as Six B. The door by which I had entered led into a lofty foyer, connecting by sliding doors with a great dining room, and beyond it, in the front of the house, with a reception or living room that ran the entire width of the apartment. Back of the elevator, with a separate door for the servants' use, were the kitchen, room and two bedrooms. From the foyer a long hall ran almost the length of the building. On the servants' side it was blank as to doors, save for the passage from the pantry to the dining room, but on the other side several doors opened into spacious sleeping rooms, each with its own bath. As I was wondering which of the bedrooms my great-aunt had expected me to occupy, I noticed still another door which I found led into a small bedroom on the servants' side of the house but unconnected with their quarters. While it was less elaborately furnished than the rooms opposite, it was comfortable enough, and it had a spacious bathroom adjoining. The fact that the bed here had been left turned down was evidence enough that it was intended for my occupancy. Returning to the foyer to get my bag and unpack it, I was startled by the ringing of the front doorbell.

I sprang eagerly to answer it. It must be Miss Bradford. Probably she had reconsidered and had decided to take me into her confidence. Who else could it be? There was no one else who knew I was in the apartment. It must be Miss Bradford!

With an exclamation of welcome on my lips I flung open the door. A man stood there—an utter stranger. In my disappointment I was almost closing the door in his face, but as if anticipating my thought he quickly advanced one foot over the sill and kept it there.

"Well," I demanded, almost savagely, "what do you want?"

"Oh, it is you, is it?" he replied, eyeing me with what seemed to me a most insolent stare.

"What do you mean?" I asked, bewildered. Certainly I never had seen this person before. He was short and stocky, with sparse nondescript hair and weak, shifty blue eyes. His face

"You Must Not Speak to Me or Recognize Me Until—"

had an unhealthy pallor, as if he had lived long away from the sunlight, and was sunken in as if from undernourishment, yet the breadth of his shoulders and his huge rough hands seemed to indicate physical strength beyond the ordinary.

"You're Mr. Spalding Nelson, aren't you?"

"That's my name," I answered shortly.

"Mr. Gaston's—" He paused, as if trying to recall the relationship.

"Mr. Gaston's great-nephew."

"I guess you are him, all right," he said, in a manner of evident relief. "I'm Mr. Wick, the superintendent of the house."

"Of course," I answered, feeling rather foolish at my own vexation.

"Mr. Gaston told me you were coming in this morning," he hastened to explain.

"He gave me a description of you," Mr. Wick went on, unperturbed, "and the boys in the hall were pretty sure it was you that came in, but—"

"But what?"

"I couldn't understand it. You didn't announce yourself. It seemed funny, your coming in with the young lady from next door."

"It just happened that way," I explained, now understanding his mystification. "I met her as I was coming in."

"Twice," he said, rather insolently.

"I can't see that it is any of your business," I retorted angrily, "if it happened a dozen times."

His manner at once became apologetic, and he hastened to offer obsequious explanations.

"Mr. Gaston asked me to take particular notice. The other evening when you were coming to dinner he told me to tell the hall boys to look at you closely so that they could identify you as the right party when you came in today. That was how it happened. You see, sir, in a house of this sort we have to be careful. It doesn't do to let strangers prowl about without finding out who they are and what they are doing."

The hero's troubles begin.

(TO BE CONTINUED.)

Rapid Communication.

A receiver which takes down dots and dashes on sensitized tape at the rate of 200 words a minute is the latest device in wireless telegraphy. As the human ear cannot interpret a message so rapidly delivered the transmission cannot be understood except at stations using this machine.

Foregt It.

A slang expression which ought to be applied like a sticking plaster to a large proportion of our schemes to

BACK-ACHE Pain In Side, Kidneys

St. Paul, Minn.—"I was troubled with disordered kidneys for about two years—my back ached terribly, side pained and I had frequent excretions. I let it run on until I read of Dr. Pierce's Anuric (anti-uric-acid). I took the Anuric but a short time when I was feeling fine. My side and back stopped paining, and kidneys acted normally. I could sleep well at night which I couldn't do before. I certainly advise anyone suffering from kidney disorders to use the Anuric Tablets."—Mrs. Louise Gilfillan, 289 State St.

The kidneys and bladder suffer from the wear and tear and we get chronic inflammations sometimes indicated by backache, painful voiding of water—dull, heavy feelings. Perhaps the uric acid is stored up in the system in excessive amount, and consequently when the urate salts are deposited in muscles and joints one suffers from lumbago (pain in back) rheumatic pains, gout, etc.

Nothing will act so nicely as "Anuric" (anti-uric-acid), a recent discovery of Dr. Pierce's which can be had at all drug stores. "Anuric" washes away the poisons, cleanses the bladder and kidneys—rendering them antiseptic—consequently one is soon cured of lumbago, rheumatism, gout, and the body is put into a clean, healthy state.

About the greatest drawback to a man's happiness is himself.

LIFT OFF CORNS!

Apply few drops then lift sore, touchy corns off with fingers—No pain!

Doesn't hurt a bit! Drop a little Freezone on an aching corn, instantly that corn stops hurting, then you lift it right out. Yes, magic!

A tiny bottle of Freezone costs but a few cents at any drug store, but is sufficient to remove every hard corn, soft corn, or corn between the toes and the calluses, without soreness or irritation.

Freezone is the sensational discovery of a Cincinnati genius. It is wonderful.—Adv.

A toothache will keep your mind on it more persistently than a heartache.

MAN'S BEST AGE

A man is as old as his organs; he can be as vigorous and healthy at 70 as at 35 if he aids his organs in performing their functions. Keep your vital organs healthy with

GOLD MEDAL HAARLEM OIL CAPSULES

The world's standard remedy for kidney, liver, bladder and uric acid trouble since 1696; corrects disorders; stimulates vital organs. All druggists, three sizes. Look for the name Gold Medal on every box and accept no imitation

Bad Sickness Caused by Acid-Stomach

If people only realized the health-destroying power of an acid-stomach—of the many kinds of sickness and misery it causes—the lives it literally wrecks—they would guard against it as carefully as they do against a deadly plague. You know in an instant the first symptoms of acid-stomach—pains of indigestion; distressing, painful bloat; sour, gassy stomach; belching; food repeating; heartburn, etc. Whenever your stomach feels this way you should lose no time in putting it to rights. If you do serious consequences are almost sure to follow, such as intestinal fermentation, auto-intoxication, impairment of the entire nervous system, headache, biliousness, cirrhosis of the liver; sometimes even catarrh of the stomach and intestinal ulcers and cancer.

If you are not feeling right, see if it is acid-stomach that is the cause of your ill health. Take EATONIC, the wonderful modern stomach remedy. EATONIC Tablets quickly and surely relieve the pain, bloat, belching, and heartburn that indicate a sour stomach. Make the stomach strong, clean and sweet. By keeping the stomach in a healthy condition so that you can get the strength from your food, your general health steadily improves. Results are marvelously quick. Just try EATONIC and you will be as enthusiastic as the thousands who have used it and who say they never dreamed anything could bring such marvelous relief.

So get a big 50-cent box of EATONIC from your druggist today. If not satisfactory return it and he will refund your money.

EATONIC FOR YOUR ACID-STOMACH

GRANDFATHER'S STORY

om $143 to a Competence in Three Years.

F. J. Chamberlain tells a story of his forts before moving to Canada in 16 to make a living. It was hard ork. He had so many "ups and wns" that he became dispirited be- re he learned of the success of for- r neighbors of his who were doing ll up in Canada. He sold his hold- gs for a song, and had a sale of what fects he had. When he straightened with his storekeeper and paid a w debts he found that he had $143 cash, a good constitution, a wife d five children. He had saved some w things from the sale. These he t into a car with the effects of a uple of others, who like him were ing to Canada. He went into the en Colony in Alberta in 1916, bought piece of land and commenced opera- ns. The money he placed in the nk, and started one of his boys out earn enough money to supply the ble. The older boy used his wages break up the sod on the 160 acres. t let Mr. Chamberlain tell the rest the story, which he has signed over s own signature. He says: "I rented acres and hired it put into wheat, rashed 23 wagon loads for my share. e lived in the granary two years.

"The first of December, 1918, I laid e concrete foundation for a twenty- e hundred dollar house and com- eted it the last of January. I have ne head of horses and mules, five ad of cattle, fifteen pieces of ma- inery, seven outbuildings paid for d half interest in a thrashing ma- ine. This is an old grandfather's ory, as my son-in-law came with four ildren from Idaho last March and ught 320 acres C. P. R. irrigated d and we helped him develop 200 es of it. They can't say around re, 'everybody works but father.'"

ncreased His Wealth Six Hundred Fold.

There are more stories of success Western Canada. There's that of lan Nicholson of Hazelbridge, Mani- oba. In speaking of it he says: "I all never regret coming to Mani- oba. I came here seventeen years ago. think it was in the spring of 1903. y old home was at Le Mars, Plym- uth county, Washington township. wa, where I had been farming for a ood many years. I had a farm of 8 acres, of which I owned 80 acres nd rented 160. When I left in 1903 sold my equity in the farm for $75.00 er acre. The nearest station to my lace was Dalton, and my old neigh- ors there will remember me very well.

"When I came to Canada I rented hree-quarters of a section at South ympton, near Springfield, Manitoba. fter a year or two's experience at enting I bought my present farm of 0 acres, and am now engaged in ixed farming. I have always had ood crops since I came here, and me of them have been bumper rops.

"If I went back to the United States oday I could take back $5.00 or $6.00 every $1.00 that I brought into e country. My land today is worth om $75.00 to $85.00 an acre, and in ddition to my grain growing I have ade a specialty of high-grade Per- heron horses, purebred Shorthorn attle and purebred Berkshire hogs, I ave had uniform good luck in con- ection with my stock, and today I ould not sell my farm for a cent less han $30,000.

"The older settlers of Le Mar, Iowa, ill remember me very well. I was reatly impressed with the country hen I made my first visit here in 903, and that impression has been trengthened all the time I have been ere.

"The climate agrees with us all. Be- ore I came here my doctor's bills ere something awful. I had no ooner got one paid than I was due or another one. Since we have been n Manitoba $50.00 would pay all our octor's bills for the last seventeen ears.

"I think I am doing my old friends a indness in letting them know how ell I have done since I came here. his is certainly a country of opportu- ities. I have had no more good luck han falls to the fortune of any ordi- ary person, and I am satisfied I could ever have done as well had I re- ained in the old home. I shall be leased at any time to give informa- ion to old friends who care to write e about my experiences in this ountry."

Mr. M. J. Johnston, Canadian gov- rnment agent, 202 W. 5th St., Des oines, Iowa, can give information oncerning all districts in Western anada.—Advertisement.

LAWFUL SEIZURES ARE FEW

Comes Across Line in All Forms Into State Which Was Pioneer in "Dry" Laws—Many Ways of Fooling the Sleuths.

Bangor, Me.—The rate at which Canadian and Scotch whiskies are flowing over the northern border into Maine proves that enforcement of the federal prohibition law hasn't got into its stride as yet, for never in all the history of theoretical droughts have oases been greener, more numerous or closer together in this pioneer dry state than right now, when there is more law than ever before, twice as many "enforcers" and increased penalties.

Trainmen who come down say that whisky of all grades and oceans of pure grain alcohol are flowing over the border at a hundred places, and that at four principal points the alcoholic invasion amounts to a flood. These four points are Van Buren, opposite the New Brunswick town of St. Leonards, on the St. John river; Fort Kent, which has easy access to the Canadian village of Clare via a suspension footbridge; Fort Fairfield, which is but nine miles distant from the New Brunswick town of Andover, and Houlton, which is a near neighbor of the provincial town of Woodstock.

Only Occasional Seizures.

Occasionally the revenue officers seize a wagon or sled load of whisky coming over the international bridge from St. Leonards or over the ice at some more obscure locality, but nothing is said about the great number of "booze" chariots that get by the government's lookouts and which keep the speakeasies of Aroostook or the barrooms of Bangor supplied. Also, the St. John river being frozen good and solid for its entire length, men and teams can cross anywhere in the river's 100-mile stretch along the border, so that, as the revenue men themselves admit, a standing army with sentinels every fifty feet would be required to shut out the flood.

There is so much more money to be made in bringing in "booze," even a few bottles at a time, that hundreds of woodsmen have quit swamping roads and chopping trees for the rum-running business, and ninety-nine in 100 of them, knowing the country thoroughly, get by with their goods.

Price of Canadian Whisky.

Canadian whiskies that can be bought at $3 a "short quart" on the New Brunswick side of the line sell in Aroostook county at $6 and in Bangor at $8, while genuine Scotch is $4 in New Brunswick, $8 in Aroostook and $12 to $15 in Bangor. Pure grain alcohol, to be had in New Brunswick at $4 a quart, is "split" with water on this side of the line, so that every quart yields about $16. With the addition of a little prune juice and burnt sugar, this alcohol is transformed into "American rye," supposed to have been brought in from Boston or New York "before the lid went on."

Whatever the outcome of the war on "booze," the enforcement of the law will be hardest in Maine, both on account of the state being cheek by jowl with Canada and on account of the seventy years' experience that the people here have had in devising ways and means of fooling the sleuths.

Finally Got New Golden Eagle.

Phoenix, Ariz.—Two years ago a fire destroyed the only golden eagle of the Rhizomanians, a distinguished society of the Pacific college, California.

Remembering the Phoenix that rises out of its ashes every 500 years, Milnes, secretary to Governor Campbell, decided it would be appropriate to present his old accomplices with a brand new eagle bird from Phoenix just as soon as it could be obtained. It took him two years to do it, but the bird has at length been caught and prepared for shipment.

It is declared to be the most gigantic bird ever stuffed for museum purposes.

Jump Rails, Ride Ties and Jump Back Again!

Sharon, Pa.—Jumping the track on the Hilliards branch of the Bessemer railroad, a locomotive, pulling a freight train, traveled along the hard packed snow for a distance of 400 feet and then mounted to the rails again.

An Erie freight locomotive east-bound on the Bessemer road jumped the track in the Shenango (Pa.) yards and after proceeding 200 feet, again regained the rails.

And to prove their stories, railroad men will show the locomotives.

Plan Chain of Landing Fields

Army Air Service Officers Cover 300,000 Miles in Making Aerial Survey.

IS LIKE HARBOR TO LINER

Thirty-two Southern Cities Invited to Provide Stopping Places for Planes —Must Be Fit to Handle All Forms of Aircraft.

New York.—Plans for establishment of a chain of airplane landing fields have been worked out by officers of the army air service and the Manufacturers' Aircraft association, it was announced here.

Army flyers have covered more than 300,000 miles in an aerial survey of the country and made exhaustive reports on the facilities offered to cross-country flyers.

Representatives of 32 southern cities already have been invited to establish landing fields under army direction. Many others will receive like invitations during the next few months.

These must be laid out according to specifications given by the army, and in return the government gives steel hangars to the municipalities. Operation of the "air harbor" is assumed by the municipality.

Since the armistice the number of army fields has been reduced from 50 to 16, and the naval air stations from 17 to 9.

Like Harbor to Liner.

"The landing field," says the aircraft association, "is to the airplane what the harbor is to the ocean liner and the railroad terminal is to the train. It is not merely a flat piece of land on which a flyer can bring his craft to earth. Such a piece of ground bears the same relation to a real landing field as an unimproved water inlet to a harbor like New York or Liverpool.

"A landing field should have, first of all, dimensions which fit it to handle all forms of aircraft. It should be drained to permit its use even in the wettest weather. It should have shelter and supplies for flyers and their craft and should be accessible to the trade center it is meant to serve.

"This feature is of supreme importance because commercial aerial navigation will develop only in proportion to its commercial value. The field should be identified with markings visible from great heights and with radio apparatus so flyers may be aided in finding their way in spite of the fog or failure to identify the country over which they are passing.

Haven if Mishap Occurs.

"Fields at frequent intervals means that cross-country flyers can come to the earth for rest, replenishment of supplies and adjustments to their machines without inconvenience or unnecessary delay. In the event of a mishap in the air, such as a stalled motor, the near-by landing field permits the pilot to glide to it without damage to the machine or to himself.

Thousands of Rabbits Killed.

Walla Walla, Wash.—More than 11,000 rabbits were killed in a drive near Burbank the other day, thousands of the bunnies escaping because the shooters ran out of ammunition. Forty thousand shots were fired. Within the last few months 25,000 rabbits were killed in drives in counties bordering the Columbia river.

BREATHE ROCK DUST

Millions of Particles Taken Into Lungs With Air.

Hygiene Experts Devising Means of Removing Dust and Fumes From Air in Factories.

Niagara Falls, N. Y.—Over 200,000,000 tiny particles of dust, as sharp as ground glass, are breathed into the lungs and air passages with every cubic foot of air in some of the factories in the United States, according to a survey made by the public health service here.

Such dusts breathed into the lungs are never expelled. Photomicrographs show the tiny particles to be exceedingly sharp and jagged and chemical tests prove them to be practically insoluble. Work under such conditions invites respiratory diseases and makes a real health hazard. Similar investigations in chemical factories showed that laborers were frequently exposed to poisonous fumes and gases.

The investigation was made at Niagara Falls because plants were engaged in the manufacture of abrasives, chemicals, gases, electrodes, carbons, metals and alloys. In all of the factories the laborers were found to be exposed to dangers which would eventually incapacitate them for further work. Fortunately over 60 per cent of the labor in these plants seeks new employment monthly and the result of exposure to such dangers is not evident as it would be if the workers remained at the same work for longer periods.

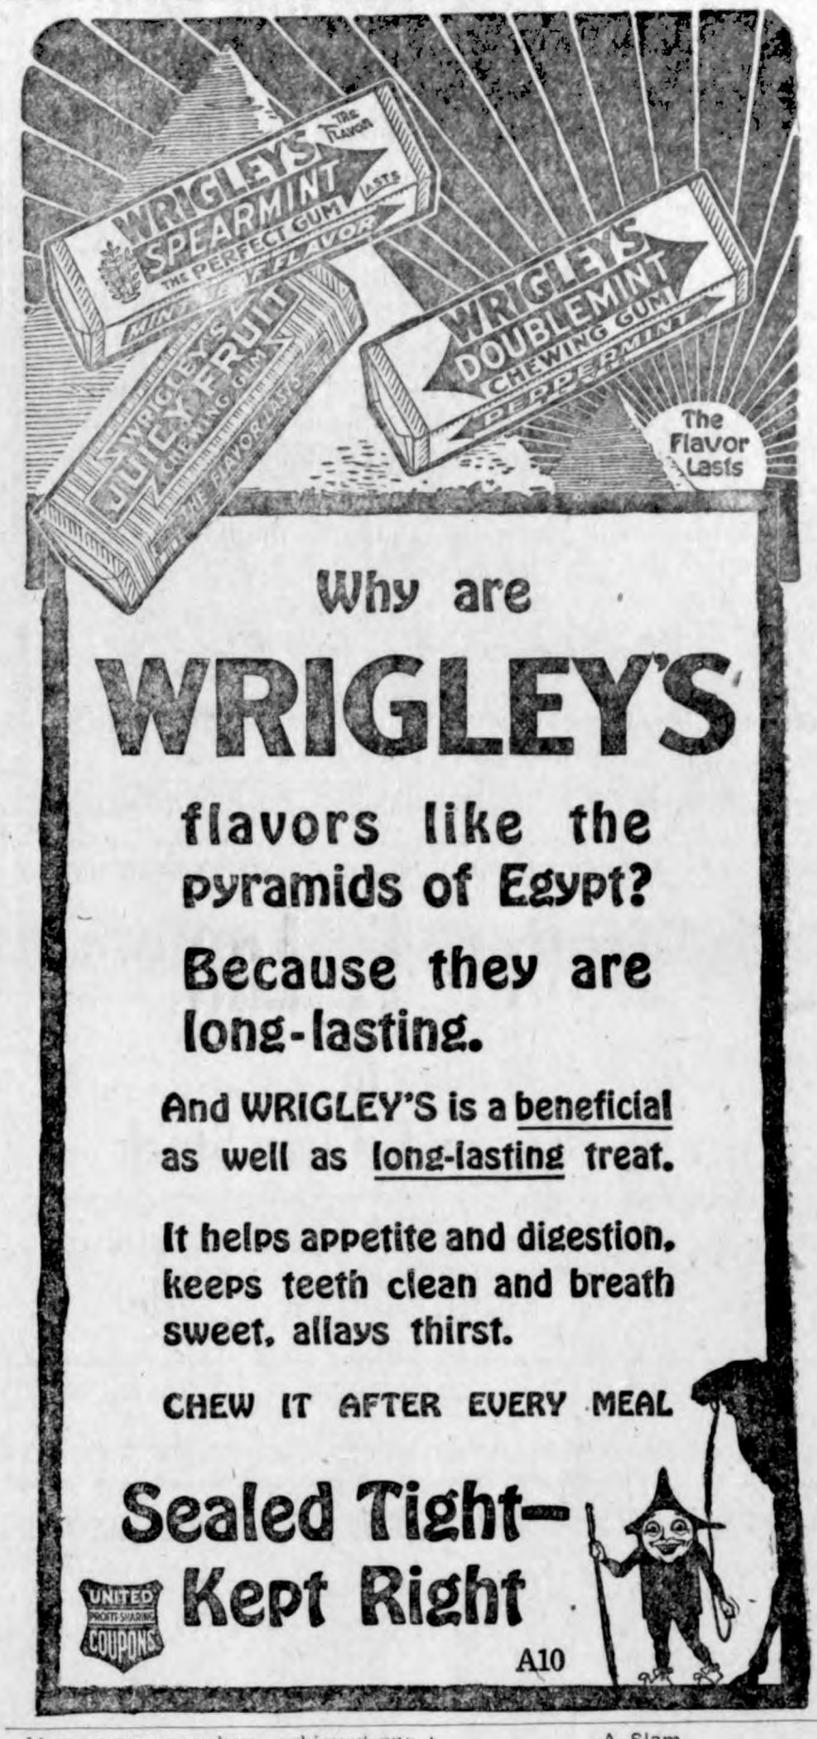
As a result of the survey industrial hygiene engineers devised means of removing the dust from the air and minimizing hazards from fumes and poisonous gases. In spite of the fact that the installation of such devices was expensive, factory managements immediately put them into use.

Lighthouse Keeper Uses Motorcycle

South Norwalk, Conn.—Performing a feat without precedent in government annals here, Capt. Richard G. Hendricks, supervisor of United States lights in this portion of Long Island sound, has been making his rounds for the last few days on his motorcycle, taking a supply of oil in the side car.

The ice has been so thick that he could not get to them with a boat, nor could he, on foot, carry a sufficient supply of oil. It is the first time in this state that a motorcycle has been used for such a purpose.

Eskimo women and children catch most of the birds and fish to be stored away for the six months' winter food supply while the men hunt walrus and polar bear.



More young men have achieved success in life with grit as capital than with money capital to start with.

WOMEN NEED SWAMP-ROOT

Thousands of women have kidney and bladder trouble and never suspect it.

Womens' complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder disease.

If the kidneys are not in a healthy condition, they may cause the other organs to become diseased.

Pain in the back, headache, loss of ambition, nervousness, are often times symptoms of kidney trouble.

Don't delay starting treatment. Dr. Kilmer's Swamp-Root, a physician's prescription, obtained at any drug store, may be just the remedy needed to overcome such conditions.

Get a medium or large size bottle immediately from any drug store.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

Three hundred thousand children die annually in this country of preventable disease.—Coffman.

NEW DRESS FOR OLD WITH DIAMOND DYES

Women Can Put Bright, Rich Color in Shabby, Faded Garments.

Don't worry about perfect results. Use "Diamond Dyes," guaranteed to give a new, rich, fadeless color to any fabric, whether it be wool, silk, linen, cotton or mixed goods,—dresses, blouses, stockings, skirts, children's coats, feathers—everything!

Direction Book in package tells how to diamond dye over any color. To match any material, have dealer show you "Diamond Dye" Color Card.—Adv.

If it weren't for the few the multitude would still be burning candles and driving ox teams.

Pure blood is essential to good health. Garfield Tea dispels impurities, cleanses the system and eradicates disease.—Adv.

He that keepeth a cold hath his steps turned toward an early grave.

A Slam.

Algy—"My dog knows as much as I do." Miss Keen—"How odd you are! Most men brag about their dogs."

BOSCHEE'S SYRUP.

A cold is probably the most common of all disorders and when neglected is apt to be most dangerous. Statistics show that more than three times as many people died from influenza last year, as were killed in the greatest war the world has ever known. For the last fifty-three years Boschee's Syrup has been used for coughs, bronchitis, colds, throat irritation and especially lung troubles. It gives the patient a good night's rest, free from coughing, with easy expectoration in the morning. Made in America and used in the homes of thousands of families all over the civilized world. Sold everywhere.—Adv.

Its Class.

"The English baronet who is visiting here has a horse which is a dream."

"I see. A regular knight mare."

KNEW AND LOVED STEVENSON

Old Resident of Tahiti Proud of His Association With the Famous Romanticist.

In the town of Papeete, on the island of Tahiti, lives an old man named Donat, a former comrade of Robert Louis Stevenson when the famous romanticist was journeying through the South Sea islands. Donat loves to tell of the days when the writer used to rest in his home and listen to the weird ghost tales which the old man told and which Stevenson wove into some of his stories.

Their friendship began when the writer rented a house to rest in after a trip through the Marquesas islands. On Donat's grounds were the only vegetable gardens in the island, the formation of which was mostly coral, sand and rubble. Each morning the old man would send to Stevenson's house a great basket of fresh vegetables, fruit and coconuts, and later when the author came to thank Donat for the gift the two would sit in the shade and talk for hours.

Nothing delights Donat more than to talk of his gentle friend and the days when they were together. He gives an intimate picture of Stevenson's simple life on the island, of his rambles on the beach among the coconut groves, of his friendly associations with the natives. When Stevenson left the island he invited Donat aboard his ship for dinner and presented him a valuable ring as a souvenir of their friendship. "He was a good man, a great gentleman," is Donat's tribute.

FOUGHT "REDS" WITH CUSTER

"Devil" Devlin, Veteran of the Plains, Now Sells Apples on Streets of New York.

It is a long jump from selling apples from a little sidewalk stand in West 43d street to pumping a carbine during the height of Custer's last fight, but there's an old man in town who does it daily, if any one comes along to encourage him to make the journey. He is Frank Devlin, a little gray-haired, wrinkled apple man, who sits daily with his stock of apples. Yesterday, writes the New York correspondent of the Pittsburgh Dispatch, he met a modern warrior wearing the Croix de Guerre who had just returned from overseas. The newly made veteran listened with respectful attention while the apple man showed him the way to handle a rifle. For years the withered old man was "Devil" Devlin, crack rider of the Fifth United States cavalry, and one of the twenty best horsemen in the United States army. It was "Devil" Devlin who rode from Prescott, Ariz., to Dodge City, Kas., which took a matter of nearly three months, 1,110 miles in the saddle. Devlin was present at Custer's last fight and he declares that the Indian fighter of the plains could tell some things to the heroes of the A. E. F. about hard work and harder fighting, long hours and scanty rations.

Many Raise Peppermint.

Peppermint probably occupies one of the most honorable places on the list of drug plants, for the distillation of oil from its leaves is an important industry to which thousands of acres are devoted, principally in Michigan and New York. Their oils are extracted also from wintergreen, pennyroyal, tansy and a number of other well-known plants. To be salable the leaves must be dried in a place where there is plenty of air but no dampness, and in the shade, for this keeps the bright color. They must be looked over with care that no other leaves are mixed with them and packed in boxes or barrels to be shipped. Bulletins on this subject may be obtained from the superintendent of documents, Washington, D. C., at a cost of 15 cents apiece. Uncle Sam warns us that there are risks in these crops as well as in others, but all enterprises are risks in this uncertain world.

Make Gas From Straw.

A Canadian inventor has worked out a new application of thrift in the form of a gas which can be made from straw. The invention will be of special value in farm communities, as it will enable the farmers to utilize straw that now goes to waste. The gas is made in a three-cylinder retort. Each cylinder holds a bale of straw seven feet long, two feet wide and six inches thick. With the chambers closed the straw is ignited and allowed to burn from 30 to 40 minutes. It is said that 12,600 cubic feet of gas can be generated from a ton of straw, in addition to which there will be by-products of six to eight gallons of tar and 640 pounds of carbon from which lamp black can be obtained.

Awful Thought.

It was Dora's first trip on the ocean and the water kept on going see-saw and slipside and heaveho, and all sorts of uncomfortable, disagreeable things; so that Dora began to get a little giddy and dazed and tired and hazy.

Clasping a large doll in her arms, she stood upon the deck by her mother's side.

"Mamma!" she suddenly exclaimed, and her face turned to a delicate pale green.

"Yes, darling; what is the matter?"

"Oh, nothing, mamma! But I—I don't fink the rabbit I had for dinner could have been quite—quite dead!"

The Best He Would Say.

"Does your wife believe every thing you tell her?"

"I'm not quite sure about that. All I know is that she patiently listens to everything I tell her."

THEIR LAST DANCE TOGETHER

Mrs. Castle Tells a Pretty Story of Her Final Performance With Her Husband.

Irene Castle's memories of her late husband, Capt. Vernon Castle, conclude in Everybody's with the following account of their last public appearance:

"Our last dance together was while he was instructing up at Camp Mohawk, Canada. He had been given permission to come to New York especially to dance with me at a British recruiting benefit which was held at the New York hippodrome. Because of the nature of the occasion, he had been given permission to dance in uniform. It had been long since we had danced our old dances together, and it had been necessary the day before to work quite hard in brushing up. I had expected that Vernon would have forgotten altogether a lot of the steps or that he would be a little stiff from lack of practice, but on the night of the benefit he danced divinely. At the close of the performance many beautiful flowers were handed to us over the footlights. We bowed and bowed again our thanks. In the wings Vernon nervously kissed my hand and there were tears in his eyes. I wonder if he guessed we had danced our last dance, and the last ring of applause for us was still.

"The world had been very good to us. We had lived well and lavishly because of that same applause. Together we tasted success, fame and money. Thank God that at no time during that night did I dream it was the end."

SIMILAR TO SHELL SHOCK

Malady Affecting Those Unfortunate Enough to Be on Ships That Were Torpedoed.

Cases have lately come to the attention of the military surgeons where the fright and fear due to ships being torpedoed have given rise to symptoms suggestive of shell shock. Doctor Clunet, in a communication to the Neurological society of Paris, has described the mental effect observed when on board a ship which was torpedoed.

After the first stupefaction following the attack it was observed that several passengers discharged guns into the air or into the sea. In other words, the pent-up nervous energy found release in letting loose the immense energy concentrated in explosives. Similarly, it was well known at the front that a long day of waiting in the trenches was productive of more cases of shell shock than a day of active engagement with the enemy. Next there were a few cases of suicide among the passengers. These passengers were on the whole calm enough, even on the life rafts. It was only when they were on the rescuing ship that psychoneurote phenomena began to develop, including mutism, spasmodic weeping, laughter, tremors, spasmodic movements of the limbs, etc.

The Versatile Carrot.

There is nothing like a war to change the status of things. Look, for example, at the humble carrot. Before the war it was one of the lowliest of all the vegetables, seldom used except for stews or New England boiled dinners, but it certainly has been doing its bit in the culinary line recently. It has become a past master in the art of camouflage. Grated raw, it is said to be a very good substitute for eggs in certain things. Little slices dried become raisins and currants, and other bits, treated a little differently, masquerade as candied orange and lemon peel. Orange marmalade and certain kinds of jam are made of them, and large chunks of them boiled and sugared make wonderful candied fruits of every kind—pineapples, pears, apricots, cherries—and are used by many caterers to give their war cakes and puddings a prosperous and festive look.

Work for East Indian Women.

The thought of Mohammedans fighting for Christian ideals, of dark age heathenism taking up arms for the cause of civilization and humanity, opens a vista that would be staggering were it not that the idea has long been dreamed of.

As one result of the war, the women of India have for the first time worked in the government departments in Delhi, and the question is being debated as to giving women equal representation with men in the plans of the India National society. In all the battle for larger things India has met the problems common to all lands with the most modern, efficient and self-sacrificing methods.

The women of India can henceforth be counted on as a factor in the larger problems of reconstruction.

Exports Increase.

American dairy products are more favorably received in Europe than ever. Exports of condensed milk to Europe rose from 16,000,000 pounds in 1914, to 530,000,000 in 1918, and there were notable increases in the export of other dairy products. Most of this was due to war demands, but there seems an opportunity to expand in dairy exports. A normal increase in dairying in this country is justified providing there is the necessary increase in field crops.

The Installment Method.

"I see we can pay our income tax in installments."

"At last the government has hit upon a plan with which I am perfectly familiar."

The officers of this Bank realize that its continued success and growth must result from the co-operation and friendship of its customers, gained through earnest attention to their interests.

STATE NEWS

Gleaned from many fields and summered for busy readers

In Decorah during February there were thirty-two births reported, twenty-one being boys and eleven girls.

The Fairfield Building company, with $200,000 capital, has bought eleven acres of land and will build homes for Fairfield people.

A costly fire visited the farm of William S. Uhler, one-half mile south of Tipton, burning his hog house, the total loss being near $6,000.

Grinnell has been chosen as the place of the interchurch convention to be held during the third week in March by the churches in Poweshiek county.

Of the 114 farmers in Cedar township, Black Hawk county 99 own automobile, asccording to farm crop statistics reported to the county auditor for 1919 by H. Steimel, assessor.

The dual orchard and poultry meeting in Mt. Ayr was crowded to capacity by interested orchard and poultry enhtusiasts. Mr. Kochren of Iowa State College spoke on orcharding.

Bids will be opened on March 17, by the board of supervisors of Cerro Gordo county for the paving of 28 miles of the primary road system of the county. This project is expected to cost about $1,000,000.

Mrs. John H. Jorgenson of Stuart is building a hatchery of concrete, 14x30, and is installing an incubator holding 3,200 eggs. The machine weighs 2,500 pounds. Mrs. Jorgenson has been selling baby chicks since 1913.

Another $80,000 farm was sold by William A. Johnson, of Mahaska county, to Raymond L. Van Metre and Bryon A. Smith, in Liberty township. The farm consisting of 240 acres, in section 24 and 13, sold for $335 an acre, or a total of $80,400.

In the wildest rush of business ever transacted about March 1, in Webster county, more than $9,500,000 changed hands in land deals. Two deeds listed with County Recorder carried considerations of $120,000 each. Of the sixty-five deeds recorded the average consideration was approximately $30,000, while $50,000 and $75,000 were common.

An old deed, yellowed by age, was offered for refiling with the county recorder. It was given 66 years ago for 160 acres of land in section 4, Mt. Vernon township. It evidences the transfer of the land from Asa T. Webster and wife to Solomon Webster and the price was $1,650, or $10.31 an acre. Can you remember Black Hawk land selling for this amount?

Poultry this year is of more importance than ever before. Higher prices have been received during the past year than ever before in the history of the industry. The supply must be met largely by the farm flocks. How to select the highest producing hens and pick out the unprofitable ones is something of great importance. Unless the poultry house is comfortable and well ventilated and dry the birds will not do well.

Acording to C. S. Terwilliger, a well-known farmer of Hancock county sugar beets are a most profitable and paying crop. Mr. Terwilliger says. At this time we say that 12 tons to the acre is a fair crop, but in three years we can raise this yield to 15 and 18 tons to the acre. The past season where I had beets on rich ground and where the beets were planted from eight to 10 inches apart, I got a yield of 20 tons to the acre.

The annual corn and small grain show of Polk county will be held at the courthouse in the lower corridor March 10 to 13, under the auspices of the Polk County Corn and Small Grain association and the farm bureau. A liberal premium list is offered, and the show will end with a large auction sale of seed corn on Saturday, March 13. The scarcity of good seed corn this year leads the board to believe that the sale of all thirty ear and bushel exhibits will bring excellent prices.

The farmers of Winnebago county are making a vigorous campaign against tuberculoiss in cattle. More than 150 farmers have applied for the free federal test and the creamery associations of Rake, Scarville, Vinji, Leland and Forest City have voted at their annual meeting to have all cattle of their patrons tested for this dread disease. This is a wonderful movement and in the end will mean more than $100,000 saving in loss of stock to the farmers to say nothing of saving in human lives.

According to Neal S. Knowles, state leader of home demonstration agents for Iowa, eight Iowa counties are asking for home demonstration agents. There are now 25 of these women in Iowa. The work has been explained in a total of 25 communities in these counties. In some cases the meetings were joint meetings with men and women and were in all cases called with the sanction of the local Farm Bureau. A total of 55 communities have been visited the past month with a total of 5600 persons reached.

Only mature birds should be used in th breeding pens. Hens are more desirable than pullets because they produce stronger chicks and because the hens can be more accurately judged for laying ability than can pullets. If the breeders were not picked out last fall they can be successfully chosen this month. The birds which lay best during the winter are the ones which will make the best record for the year, and at mating time the best winter layers can be easily distinguished.

A large number of Ringgold county farmers will use acid phosphate the coming season on their farms. The use of this fertilizer has proven very profitable in the past. In almost every community in the county there have been farmers who have wanted to try the application of lime to correct the acidity of the soil in order to secure more easily a stand of clover. Clovers are about the only legumes raised in Ringgold county that will take nitrogen from the air and store it in the soil to be used by other plants. Prices for limestone are ranging from $2 to $2.45 per ton laid down at any station in the county.

The Contract to pave twenty-two and one-half miles of hard surfaced roads in O'Brien county will be let on March 19. It will involve about $1,000,000, and is said to be the largest contract to be let in Iowa this year. The road to be paved is what is known as the North Iowa pike, and extends along the northern half of the county, connecting the towns of Sheldon, Sanborn and Hartley. The pavement will be eighteen feet wide, eight inches thick in the center and seven inches at the sides. In connection with the paving project eleven miles of tile will be used. The plans call for bids on brick, concrete and reinforced concrete.

County Agent Chas. W. Martin says that Clay county farmers should take a preliminary test of their seed corn at once as word comes from surrounding counties that seed corn is not as good as was expected. Woodbury, Sac, Allamakee and other counties report poor seed corn as a result of the early freeze in November. There was not enough moisture in the corn when the early freeze came, the reports say, and tests have shown that it will make poor seed. The county agent says Clay county farmers should look over their seed before it is too late and his office will lend any assistance in making the tests and determining the quality.

One of the most important and essential factors in the successful management of the brood sow at the time of farrowing is proper feeding and plenty of exercise. It is important to feed right. The high price of tankage is keeping farmers from feeding this protein feed to their sows. Corn alone is not sufficient because it is low in protein and mineral content. The experiments at Iowa State College go to show that where ¼ pound of tankage is fed along with corn, the pigs weighed .4 of a pound more at birth and were stronger than the pigs from the corn-fed sows. Alfalfa or clover hay are good feeds to furnish protein and bulk. A liberal supply of mineral matter must also be supplied in the form of salt, soft coal, lime or wood ashes.

Benton county, according to last year's assessor's reports, has roughly, about 6,000 sheep and markets each year about four carloads of wool worth $30,000. With a good Wool Growers' association, this wool could be assembled at three or four points in the county and shipped in carload lots and marketed through the Iowa Wool Growers' association. The association operates on a straight commission basis and the wool is sold direct to the woolen mills. The association marketed 1,250,000 pounds of Iowa wool in 1919. The average price received was 59 cents net the grower. Seventy-five percent of the money is advanced to the grower as soon as the wool reaches the warehouse; the balance is paid when the wool is sold.

The farm bureau movement has resulted in the organization of most counties by townships. A force of farmers have been going over the state taking charge of this phase of the work. It is planned to work through the township organization in reaching conclusions touching all farm activities. It is evident that marketing is going to have greater attenton than ever before. The co-operative shipping idea is growing and in every county it will be possible for the farmer to obtain the Chicago market for his live stock less freight and a small per cent for handling. The exchange features so popular in many counties will be extended so that it will be possible for farmers to know where certain breeds of stock can be secured, certain varieties of seeds and other commodities. It oftimes happens that the farmer in an adjoining township can supply the needs of his neighbor. The trouble in the past has been getting the fellows together.

A number of county agents are planning spraying demonstrations this spring. The success of these demonstrations in the past has led to a large demand upon the extension department at Ames for the coming season. Spraying and pruning are doing wonders for Iowa orchards. People who are paying ten cents each for apples grown in the Rocky Mountain regions see the need of a greater interest in apple growing right here in Iowa where with the same care and expense better quality and larger yields can be secured.

In All the World
No Grinding Plate Like the LETZ!

Here's one of the famous Letz Grinding Plates—one of those plates between whose thousands of whirling scissor-like edges the grain and roughage is ground powder-fine in one operation.

No other process so fine cutting, so fast cutting, so durable, so dependable. No other process so altogether desirable for the feeder who wants to grind his own feed.

9 Sizes 22 Styles **LETZ** 2 to 40 H. P.

America's Leading Feed Mill

Letz Mills are enabling hundreds of thousands of progressive farmers and feeders to cut down their feed costs one-fifth, to save the 20% of feed that goes to waste when fed *whole*, to raise their hogs and cattle for market quicker, better, more economically.

RAILROADS GO BACK TO OWNERS

Return to Private Control After Being Run by U. S. For Two Years.

FRENCH RAIL STRIKE GROWS

Orders for General Walkout Issued by Union—Strong Military Forces Are Guarding Tracks in Paris.

Chicago, March. 1.—At midnight Sunday the railroads of the United States pass back to private ownership after more than two years under federal administration.

In Chicago the different systems are announcing that their individual ticket offices will reopen at once. During the governmental direction the entire office personnel of the roads, as well as the general administrative forces, were gathered in the Insurance Exchange building at Jackson and Wells streets in the interests of economy and centered control.

The Northwestern announces it will open its city ticket office at its former location, Clark and Monroe streets, beginning Monday.

French Strike Perils Nation.

Paris, March, 1.—Orders for a general railroad strike have been issued by the National Federation of Railroad Men.

Railroad strike conditions throughout France were considered near a crisis and belief was expressed that a breakdown of the strike movement or paralysis of the nation's railroad system would ensue.

Operating conditions on the Paris, Lyons & Mediterranean line and other roads affected by the walkout of employees seemed slightly improved.

Traffic was shown to have increased, and it was believed that mobilization orders sent to men of the Paris, Lyons & Mediterranean and state roads would bring a sufficient force to carry on normal traffic.

Strong military forces are guarding tracks inside the city limits of Paris and a law authorizing the requisitioning of automobiles, motor trucks and airplanes in case of interruption of railroad traffic was passed by the chamber of deputies.

Spreading Hourly.

"Owing to the attack by the Paris, Lyons & Mediterranean Railroad company on the exercise of union rights," the strike order begins, "the railroaders of that system and of the Paris region, influenced by solidarity and dignity, have begun a movement of protest which is spreading hourly."

Although the strike had extended to the Orleans system, main line service continued during the day. Suburban trains, however, had been annulled. At the St. Lazare station the company promised that trains would be run to Cherbourg, Havre and Dieppe, some civilians having offered their services. At the station of the Paris, Lyons & Mediterranean railroad mobilized men were reporting for duty and a limited service was operated.

CENSUS FOR THREE CITIES

Population of Lima, O., 41,306; Paducah, Ky., 24,735; and Hazleton, Pa., 32,267.

Washington, March 1.—The announcement of the population of Lima, O., 41,306; of Paducah, Ky., 24,735, and of Hazleton, Pa., 32,267, was the second issue of statistics of the fourteenth census, the enumeration of which began January 2. Washington and Cincinnati were the first cities to complete the work, their population having been announced a week ago. Of the cities announced Hazleton showed the largest growth in the thirteenth census with an increase of 78.9 per cent from 1900 to 1910; Lima's increase was 40.4 per cent, and Paducah's 17 per cent. In the twelfth census Paducah's increase was 52 per cent over 1890, Lima's 35.9, and Hazleton's, 19.9, while in the eleventh census their increase over 1980 was: Lima, 111.2 per cent; Hazleton, 71.2 per cent, and Paducah, 59.2 per cent.

FOUR KILLED IN MINE BATTLE

Forty Others Wounded When Striking Native Miners in South Africa Clash With Troops.

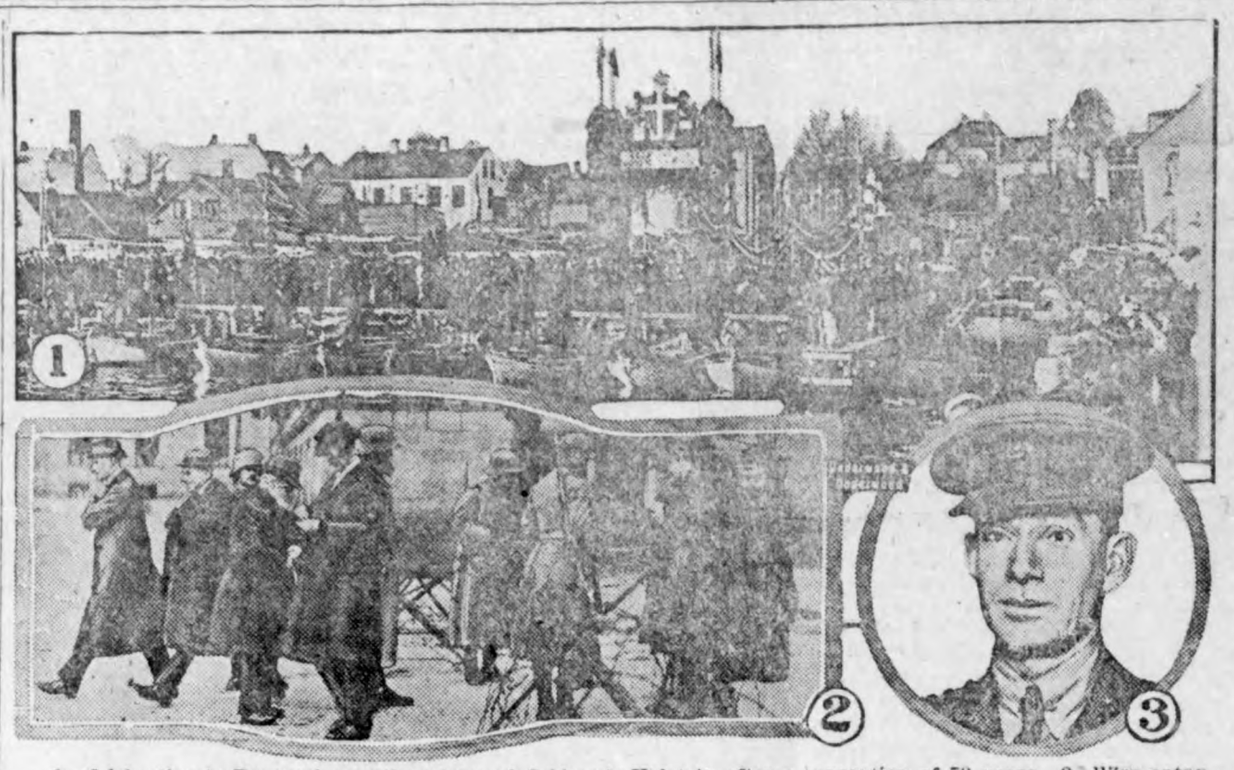
London, March 1.—Several hundred striking native miners attacked white miners who were about to descend into the mine shaft at Johannesburg, South Africa, according to a dispatch to the Central News. A pitched battle ensued in which the military was employed. Four natives were killed and 35 injured and six Euorpeans were wounded.

Two Killed, 20 Injured on Ship.

Valencia, March 1.—Two sailors were killed and 20 others injured when 700 tons of naphtha exploded aboard the ship Llovet Peres at the port of Villa Neuva del Crao, near Lere. The vessel was completely destroyed.

Police Stop Anarchist Fete.

Rome, March 1.—Police authorities here have prohibited a proposed socialist and anarchist demonstration on Sunday in favor of Hungarians who failed to establish a soviet form of government.



1—Celebration in Denmark over the return of Schleswig-Holstein after a separation of 50 years. 2—Wire entanglements and troops protecting the foreign embassies in Berlin. 3—Capt. G. H. Williams, who will have charge of the airplane to be used by the Cope expedition in exploring the regions about the south pole.

NEWS REVIEW OF CURRENT EVENTS

Railway Reorganization Bill Is Passed Despite Opposition of Organized Labor.

COLBY TO SUCCEED LANSING

Selection of Former Bull Mooser Is a Surprise—Peace With Soviet Russia Coming Nearer—"Rum Rebellion" in Northern Peninsula of Michigan.

By EDWARD W. PICKARD.

Organized labor lost its fight against the Cummins-Esch railway bill, for the conference report on the measure, after being approved by the house, was adopted in the senate by a vote of 47 to 18. The debate was unexpectedly brief, the opposing senators confining their remarks to explanations of their vote. The result was made only the more certain by the efforts of the labor leaders to prevent passage of the bill. Senators of both parties expressed their resentment of the tactics employed, and Myers of Montana made an especially bitter attack on Gompers and his allies and on those who would cater to the labor vote.

The measure went at once to the president, and so did the arguments and appeals of the labor leaders. The latter urged the president to veto the bill, and then prepared an elaborate brief presenting their side of the controversy. Their request for a veto was seconded by the Farmers' National council, though other farmers' organizations approved the legislation. The general belief was that Mr. Wilson would sign the bill after it had been passed on by Attorney General Palmer, to whom he submitted it. The heads of the railway brotherhoods and other labor leaders were calm in their discussions of the measure and expressed the belief that there would be no general strike of the rail workers, though they were confident of their power to call a walkout that would tie up the transportation systems of the entire country. What they seem to want most is the creation of a tribunal on which the workers and management shall be represented, independent of the wage adjustment machinery provided by the bill. They believe the men and their employers can come to agreements without the intervention of the public.

With the roads going back to the owners on March 1, the government's statistical experts spent the week in estimating the advances in freight rates and possibly passenger fares necessary to put the railways on a sound footing. Opponents of the bill said the public, through increased rates, would be made to pay at least 5½ per cent on the old watered stock, but the experts assert that the increased value of properties has squeezed out the water, and that, anyway, the rates will be based not on inflated book values but on real valuation.

The whole matter of railroad legislation, with government ownership in the background, will be injected into politics this year, according to the labor chiefs. Under the leadership of Gompers, they will endeavor to secure the election to congress of candidates of either party who will be favorable to labor and who will agree to push amendments to the Cummins-Esch measure.

President Wilson sprung another of his surprises on the country Wednesday with the announcement that he had selected Bainbridge Colby of New York to succeed Mr. Lansing as secretary of state. The wise ones had predicted that the place would go to either Secretary Baker or Undersecretary of State Polk. The friends of both those gentlemen were active, and when their efforts failed they were somewhat resentful. Mr. Colby's name was not submitted to the senate at once, and there was a good deal of talk of opposition in that body to his confirmation. Senator Calder of New York said he would fight against it because he considered Mr. Colby no better fitted for secretary of state than for the shipping board, for which he was confirmed several years ago after a hard fight in the senate. Mr. Colby is a native of St. Louis, a graduate of Williams college and a lawyer by profession. Until the organization of the Progressive party he was a Republican. He followed the fortunes of Colonel Roosevelt until the latter came out for Hughes in 1916, and then Mr. Colby joined the ranks of the Democrats. It is reasonably certain that Mr. Wilson will not have any serious differences with his new adviser concerning international affairs. Mr. Colby is an ardent advocate of the treaty of Versailles and the League of Nations covenant. Incidentally, he is opposed to national prohibition.

Hope of early ratification of the peace treaty faded last week and the senate deadlock seemed tighter than ever. The predicted revolt of Democrats against the president's policy failed to materialize, and on the other hand, Senator Hitchcock admitted that he had been deceived in expecting a break in the ranks of the Republicans. Senator Lodge let it be known that he was determined to force another vote on ratification or rejection and to put the Democrats on record. He believes if all minor matters were adjusted an agreement could more easily be reached on article 10. Some friends of the Egyptian nationalists must have been busy in Washington, for it is asserted that a majority of the senators now favor the reservation refusing to recognize the British protectorate over Egypt.

The soviet government of Russia appears to be doing everything it can think of, short of ceasing to be a soviet government, to bring about peace with the other nations; and by one route or another most of the nations of Europe are moving toward the same goal. Lenine, who admits that Russia must have peace and that the rest of the world must have peaceful relations with Russia, last week sent an offer of peace to the United States, Japan and Roumania. The council of the allies declared its position in the matter earlier, as follows:

"The allies cannot enter into diplomatic relations with the soviet government, in view of their past experiences, until they have arrived at the conviction that the bolshevik horrors have come to an end and that the government at Moscow is ready to conform its methods and diplomatic conduct to those of all civilized governments.

"Commerce between Russia and the rest of Europe which is so essential for the improvement of economic conditions, not only in Russia, but in the rest of the world, will be encouraged to the utmost degree possible without relaxation of the attitude described above."

It is recognized that this policy is a compromise forced by the French, for Lloyd George and Nitti, and perhaps the Japanese, were rather in favor of recognizing the soviet government and concluding a speedy peace. The American diplomats, it is believed, have sided with the French, and there are rumors of a growing split in the entente. The compromise is regarded by many as an unworthy evasion. The Poles, on the other hand, are inclined to open peace negotiations with the bolsheviki at once and are formulating their conditions.

The military successes of the soviet government continue. The government of northern Russia has collapsed entirely and has surrendered Archangel and all the Murmansk coast to the reds. Earl Curzon on its behalf urged the victors to abstain from violence and severe repressive measures, and there has been nothing to indicate that his plea was in vain. In the south the Kuban Cossacks at last reports were trying to come to an understanding with General Denikine, insisting that the people must rule, though they are heartily opposed to the Lenine regime. They have a well-grounded distrust of Denikine's reactionary tendencies. The general insists he is fighting for a united Russia, whereas the Cossacks had planned a semi-independent state.

The supreme council's plans concerning Turkey are attacked from various directions. In England Lord Robert Cecil declared that the Turks must be removed from Constantinople because the maintenance of Turkish sovereignty there would be a menace to tranquility. He added that the danger of offending Musselman opinion in India was "very gravely exaggerated." His views are supported by other public men there. Prince Feisal of the Herjaz has warned the allies that the independence of Syria must be recognized or war with the Arabs will follow. Lenine, it is reported, has jumped into the controversy with a demand that Constantinople be given to Russia in fulfillment of a promise given by the allies in 1915 as recompense for Russia's war effort. Premier Millerand of France, who is not in accord with some of Lloyd George's plans, says he will not consent to any important decisions regarding Turkey that have not been approved by President Wilson.

President Wilson's rejoinder to the supreme council rejecting its reasons for revising the Adriatic settlement was well received by the premiers, and it was predicted they would yield after further argument. The president's note gave in detail his reasons for objecting to the new concessions to Italy and for insisting on his solution of the problem as modified by the agreement of December 9 last. Great Britain and France, it was said in London, would answer the note, as Italy is now standing aside as an interested spectator, taking the position that if the compromise fails, the pact of London will be put in force. Presumably Mr. Wilson never would agree to this, and probably he would have the support of the present French government.

Some very interesting events in British politics are impending. For one thing, the Irish home rule bill has been presented to parliament and is certain to stir up things. The Labor party is planning to oppose it on the ground that it will not lead to a settlement of the Irish question. After its introduction the measure was changed by the cabinet in two important particulars. First, as a concession to Sir Edward Carson, the Ulster area was defined as a homogeneous Protestant area instead of the whole province; by the second change the bill, instead of reserving indefinitely the control of customs and excise to England, states clearly that control of all taxation will be transferred to Ireland the moment the two Irish legislatures demand it. This, it is believed, may gain for the bill the support of many of the Sinn Feiners.

Another event of importance in British politics was the return of Asquith to parliament from Paisley with a majority of nearly 3,000 over the Labor candidate. It was assumed the former premier would resume active leadership of the opposition, and troublous times for Lloyd George were predicted.

Mention must be made of the "rum rebellion" that broke out last week in Iron River, in the northern peninsula of Michigan, although it was really a tempest in a wine jug. The local authorities, resenting the attempt of the government liquor inspectors to seize and destroy some home-made wine owned by certain influential citizens, defied the federal forces which were rushed up from Chicago, threatening their leader with arrest. He succeeded, however, in pouring the offending wine into the gutter and returned by orders from Washington without punishing the recalcitrant district attorney and his aids. Then a joint federal and state inquiry into the circumstances surrounding the "revolt" was started in Iron River.

Because of the widespread opposition to the universal military training feature of the army bill, the Republican leaders agreed to sidetrack it for the present, and the measure was presented to the house with that section omitted. A special subcommittee will draft a separate training bill, which will be given the right of way at the next session of congress in December. Meanwhile both parties will have the opportunity of putting training planks in their platforms if they deem it wise. Chairman Kahn is as earnest an advocate of the system as ever, and almost as hopeful of final success, but he admitted separate legislation was the only practical course now.

NAME "BAYER" ON GENUINE ASPIRIN

"Bayer Cross" on Aspirin like "Sterling" on silver.

"Bayer Tablets of Aspirin," marked with the safety "Bayer Cross," can be taken without fear because you are getting the true, world-famous Aspirin, prescribed by physicians for over 18 years.

Always buy an unbroken package of "Bayer Tablets of Aspirin" which contains proper directions to safely relieve Colds, Headache, Toothache, Earache, Neuralgia, Lumbago, Rheumatism, Neuritis, Joint Pains, and Pain generally.

Handy tin boxes of twelve tablets cost but a few cents. Druggists also sell larger "Bayer" packages. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.

Not So Well.

"I understand your wife treats you like a dog." "Oh, no! She pets and feeds the dog."

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

Make this resolution every morning: I am going to make this day count as never day counted before.

Nothing to Lose.

Pat (after losing an empty pocketbook)—"There, begob, I ain't got nothin' in' be jiggered if I don't lose that."

How's This?

We offer $100.00 for any case of catarrh that cannot be cured by HALL'S CATARRH MEDICINE

HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous Surfaces of the System.

Sold by druggists for over forty years. Price 75c. Testimonials free.

F. J. Cheney & Co., Toledo, Ohio.

Explained.

"Why do they want to try a play on the dog?" "To see if it will be a howling success."

You Can't Cure Rheumatism With Liniments and Lotions

If you are afflicted with Rheumatism, why waste time with liniments, lotions and other local applications that never did cure Rheumatism, and never will?

Do not try to rub the pain away, for you never will succeed. Try the sensible plan of finding the cause of the pain. Remove the cause, and there can be no pain.

You will never be rid of Rheumatism until you cleanse your blood of the germs that cause the disease. S. S. S. has no equal as a blood cleanser, scores of sufferers say that it has cleansed their blood of Rheumatism, and removed all trace of the disease from their system.

Get a bottle of S. S. S. at your drug store and get on the right treatment to-day. If you want special medical advice, address Medical Director, 49 Swift Laboratory, Atlanta, Ga.

OBEYED VOICE OF COMMAND

Safe to Say That Adolphus' Schoolmates Will Not Let Him Forget That Episode.

Dr. A. F. Hughes, president of Evansville college, and Lucy Jenkins Franklin, dean, who spoke recently at Henderson, Ky., before a large audience of high school boys, tell an amusing story of their experiences.

Mrs. Franklin was giving a reading, in which a mother was talking to her young son. Pointing her finger point-blank at the first row, she exclaimed: "Adolphus come to your mother." As though paralyzed by fear, a young man of high-school age, in the first row, arose from his seat to obey the command. It was five minutes before the house was quiet. The boy's name was Adolphus, and evidently one who was used to doing what he was told. As Doctor Hughes and Mrs. Franklin left they heard the young man's schoolmates addressing the youth: "Adolphus, come to your mother."—Indianapolis News.

Evicted.

Mrs. Moringcall—Where is your magnificent big dog? You don't mean to tell me you've sold him?

Mrs. Nickelpinch—Yes, we sold him. It seemed a shame for a dog to occupy that commodious doghouse this winter when so many people will be homeless, so we disposed of him and rented his house to an artist.

More Mechanical Zoology.

Not long ago the Youth's Companion published an item about mechanical tools that bear the names of animals. Several readers promptly wrote to explain the origin of some of the curious names that the article left unaccounted for.

The monkey wrench, one correspondent informs us, got its name by corruption from that of its inventor, a Pole named Moncka. Another writes that when Samuel Crompton contrived a spinning machine that combined the best qualities of Hargreaves' spinning "jenny" (named for his wife) and Arkwright's spinning frame he named the new machine a mule in reference to its mixed parentage.

Fate's Irony.

"Did you read in the papers about that eccentric man who made all the arrangements for his funeral, having every detail just the way he wanted it, and then attended the exercises with evident enjoyment?"

"Yes; I read about that fellow. He thinks he's smart, no doubt, but some of these days he's going to die and his obituary will be printed in his home town paper, and it will be full of typographical and other mistakes that he will never be able to correct."—Birmingham Age-Herald.

Both Have Grown Since.

In 1701 the population of China was what that of the United States is today.

GOOD RECORD IN "T B" DRIVE

Official Tuberculin Testing in October, 1919, Greater Than Any Previous Month.

More official tuberculin testing of cattle was conducted during October, 1919, than in any previous month of any year, according to a summary just issued by the bureau of animal industry, United States department of agriculture. During the month 57,270 cattle were tested by state and federal veterinarians engaged in co-operative tuberculosis-eradication work. Herds or lots tested numbered 3,251, and the total number of reactors found was 2,821, an average of slightly less than one reactor for each.

From the standpoint of the number of animals tested the drive against tuberculosis was most vigorous in Minnesota, where 6,269 cattle underwent the test. Vermont was second with 4,035 and Washington third with 3,855 cattle tested.

The figures, live stock specialists of the department point out, indicate the nation-wide extent of the campaign to stamp out the disease. At the end of October the total number of herds officially accredited as free from tuberculosis after a number of tests was 1,324, more than double the number at the beginning of the year.

PROVIDE WATER FOR CATTLE

Ponds, Springs, Troughs and Other Facilities Should Be Cleaned and Put in Shape.

(Prepared by the United States Department of Agriculture.)

Before turning cattle that have been kept in the barn or lot during the winter onto a pasture a good water supply should be carefully provided for. Ponds, springs, watering troughs or other facilities for watering should be cleaned and put into shape. It is frequently thought that the water supply is abundant early in the season and therefore that no attention need be given to it. This is a mistake, as springs and ponds fill up during the winter and troughs become damaged

Water Supply for Live Stock Is of Greatest Importance.

so they fail to hold sufficient water for the needs of the cattle. In most cases the water supply cannot be materially increased, so care must be taken to conserve what is available. It is advisable to fence around springs to prevent the cattle from tramping the earth and polluting the water. The maximum use of water from a spring can be obtained by providing two or three troughs set so that the overflow from one will run into the next one. This arrangement not only makes the water more accessible to the stock but keeps it cleaner and better.

COLLAR FOR MATURE HORSES

Where Animal's Weight Does Not Vary During Year Leather Is Most Suitable.

The best collar for the mature horse, whose weight does not vary much throughout the year, is the leather collar. But for most horses the best collar is one stuffed with hair and covered with ticking.

LIVE STOCK NOTES

Breeding hogs should have lots of exercise.

* * *

Every man who is using a scrub bull knows he ought to be using a purebred.

* * *

With the present high prices of feeds and the good prices being paid for hogs, no farmer can afford to neglect his pig crop.

* * *

Animals should be sheltered in wet weather. On cold days they will do better if confined in the barn than if turned on pasture.

INSPECTORS AID SQUARE DEALING

Growers, Shippers and Buyers Can Profit by Certificates From Federal Agents.

UNFAIR RATING ELIMINATED

Food Products Inspection Service Maintains Offices in 30 of Larger Cities—Wholesome Effect on Marketing.

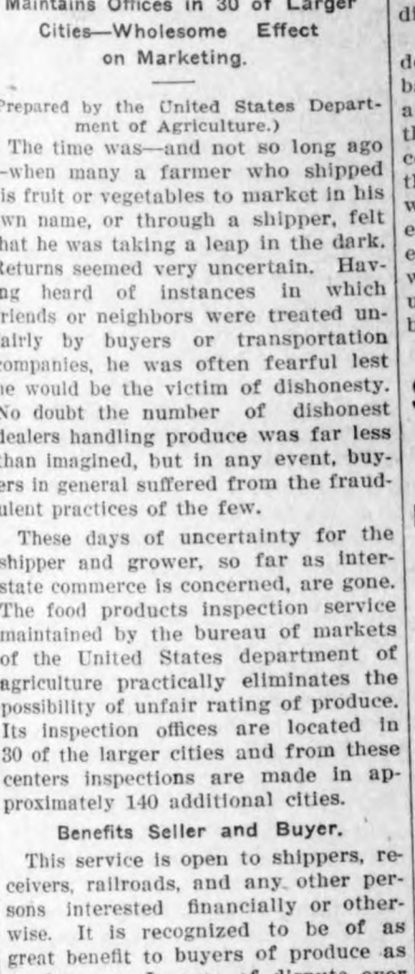
(Prepared by the United States Department of Agriculture.)

The time was—and not so long ago—when many a farmer who shipped his fruit or vegetables to market in his own name, or through a shipper, felt that he was taking a leap in the dark. Returns seemed very uncertain. Having heard of instances in which friends or neighbors were treated unfairly by buyers or transportation companies, he was often fearful lest he would be the victim of dishonesty. No doubt the number of dishonest dealers handling produce was far less than imagined, but in any event, buyers in general suffered from the fraudulent practices of the few.

These days of uncertainty for the shipper and grower, so far as interstate commerce is concerned, are gone. The food products inspection service maintained by the bureau of markets of the United States department of agriculture practically eliminates the possibility of unfair rating of produce. Its inspection offices are located in 30 of the larger cities and from these centers inspections are made in approximately 140 additional cities.

Benefits Seller and Buyer.

This service is open to shippers, receivers, railroads, and any other persons interested financially or otherwise. It is recognized to be of as great benefit to buyers of produce as to shippers. In case of dispute over a shipment any party concerned can



Federal Inspector Ascertaining Condition of Carload of Sacked Potatoes.

call on the inspector at the market in which the car is located to make a thorough examination and issue a certificate stating all the facts regarding the quality and condition of the goods. This certificate will be received as prima facie evidence in all United States courts.

The service has been in operation since November, 1917. It is in no sense a regulatory or police organization. The inspector examines a shipment and makes a report on it only when requested to do so by some one having financial interest in the transaction. He has no authority to do anything more than to issue a certificate showing the exact condition of the shipment at the time of inspection. He has no authority to act as a mediator in making adjustments.

Request Inspections by Wire or Letter.

Those in charge of the work aim to give immediate, effective service. Anyone interested can secure from the bureau of markets, United States department of agriculture, Washington, D. C., a list of the 26 cities in which inspection offices are maintained and from which neighboring cities are served. Requests for inspection may be made to any of these 26 points by wire or letter and should be addressed to "Food Products Inspector," stating the kind of products, the car number, the receiver, and the delivering carrier, as well as any particular feature regarding which special information is desired. At present butter inspections are made in only five markets.

A fee of $2.50 for any quantity from half a carload up to a full carload, and $1.50 for less than half an ordinary carload, is charged for each inspection. For inspections made in the smaller markets the applicant also pays the expenses of the inspector in making the trip. Only shipments that have moved in interstate commerce are eligible for inspection.

Since the food products inspection service was established more than 30,000 inspections have been made. Large as this number is, it does not measure the full effectiveness of the service. The very fact that some 45 federal inspectors are available at any time has had a wholesome effect upon the entire business of marketing fruit, vegetables, and butter. The dishonest few now know that they are taking big chances if they make fraudulent claims regarding shipments. The honest differences which inevitably arise between buyers and sellers at times are settled more speedily and with less friction and misunderstanding.

Special Advice for Farmers.

The service employs five plant pathologists who specialize in diseases that affect fruits and vegetables in transit. From their reports more than one farmer has learned of some disease that has been injuring his crops, and has been able to remedy the condition.

The inspectors are particularly in demand when the market condition is bad. When buyers are reluctant to accept shipments that are doubtful, they are only too glad of a government certificate which shows conclusively the exact condition in which the goods were received. Likewise, the service enables shippers to procure conclusive evidence of the soundness of products which otherwise might be subject to underrating because of an unfavorable market.

STANDING OF DEALER OF MUCH IMPORTANCE

Rating of Any Dealer Is Not Difficult to Obtain.

Chambers of Commerce and Similar Bodies Are Often of Much Assistance in Giving Information —Bankers Also Help.

When much produce is to be shipped, it will pay the shipper to look up a dealer's commercial standing very carefully before consigning in his care. Marketing experts of the United States department of agriculture call attention to the fact that the rating of any dealer may be secured through firms which make a business of rating the financial and general credit standing of men in different kinds of business. They publish regular reports which give a general idea as to a dealer's standing, though, as is perhaps inevitable, in many specific instances they have been found to be inaccurate. This general credit standing is of prime importance, as a man with a rather low financial rating may be one of the most reliable. Firm letterheads, giving trade references, should not be accepted at their face value without verification.

The chambers of commerce, boards of trade, and similar bodies are often of assistance in giving information as to dealers specializing in different commodities. Local bankers may also help in determining the responsibility of a particular firm. Limited lists of dealers in various commodities are sometimes supplied by the Bureau of Markets, United States Department of Agriculture, Washington, D. C., in response to inquiries.

Once a satisfactory representative or customer is found, it should be the aim of the shipper to maintain his connection with this one firm, as by so doing mutual confidence will be fostered and better results secured than where the shipper jumps from one connection to another in quest of slightly higher prices.

ICE HOUSE LOCATION VITAL

Of Much Importance on Dairy Farm That Site Should Be Placed Close to the Milk House.

Selection for a site for an ice house is very important. Other conditions being suitable, the ice house on a dairy farm should be placed as near as possible to the milk house, in order to reduce the labor of handling the ice, according to the United States department of agriculture. On a general farm the ice house should be located near the residence. To facilitate drainage the ground on which the ice house stands should be porous and slope from the building. Advantage also may be taken of the nearness of hills, trees, or buildings, which often afford protection from hot winds, thus saving ice.

BEET-TOP SILAGE OF VALUE

Comes Out of Silo Warm in Winter and Is Appetizing—Stimulates Assimilation of Food.

Beet-top silage comes out of the silo warm in the winter, and it is appetizing, according to the United States department of agriculture. It seems to stimulate the assimilation of food and to aid the animal to appropriate the maximum values from all the feeds consumed.

GENERAL FARM NOTES

Save all of the straw, manure, leaves and other rubbish that will make fertility for land.

* * *

Unless alfalfa or soy bean seed is inoculated it cannot be depended upon to be a reliable crop.

* * *

The potato plant first grows its top, and later moves the materials from the tops into the roots to form the tubers

The DAIRY

TOM GOT ANOTHER GOOD COW

Members of New Hampshire Boys and Girls' Club Chip in and Help Out Unfortunate Boy.

(Prepared by the United States Department of Agriculture.)

Tom Jenkins—that isn't his real name, but it will do—was very proud of his cow. He used to go out to the barn and curry her, like a horse, and "doll her up," and tie a blue ribbon around her tail. He was figuring on her being the best cow owned by any of the Boys and Girls' club members in Merrimack county, New Hampshire. But once in a while Tom Jenkins would grow solemn.

"Crickets," Tom would say to himself; "suppose something happens to my cow."

Something did happen. The cow became sick and died, while she was still dry, and without returning a cent. That took all the joy out of life for Tom. He moped around, and once or twice he went out to the barn and looked at the place where she had stood.

"I'm in for it," he said. "My cow is gone, and I owe the bank every cent she cost. It'll take a million years to pay it back. Just my luck. I ought to have known better than to join that club."

Tom wasn't so far wrong at that. When a boy loses a cow these days it means something. Older people would feel just as bad, especially if, like Tom, they still had to pay for the cow, with no way of doing it.

But Tom's club leader heard about it. He knew that none of the club members was rich, but he told them about Tom's bad luck. And somehow, Tom's plight appealed to them, for many had borrowed money to start them in club work. They began to send in little contributions. A garden and canning club sold popcorn at the farm bureau field day and turned over $6.80 to Tom Jenkins' cow. In a month there was enough money to buy Tom a new cow—one that would return enough money to pay for the cow that had died. And she's doing it.

LULU IS A LULU OF A COW!

Jersey Yearling Breaks All Records for Production of Butter—Way Above Average.

All records for the production of butter are believed to have been broken by the registered yearling Lulu Alphea of Ashburn, which produced 13,669 pounds of milk from which 1,000 pounds of butter was made in the year

Lulu Alphea.

ending November 1, according to an announcement made by the American Jersey Cattle club.

The butter produced from the cow's milk is 100 pounds in excess of her weight and is said to be five times as much as the average production from dairy cows. The milk tested 5.85 per cent butter fat, or more than 50 per cent above the amount required by law.

COW TESTING LESSENS COST

Stimulates Farmers to Do Better Dairying and Develops Higher Community Spirit.

Cow testing lessens the cost and increases the profit by co-operative buying and selling of feeds, live stock and their products. It stimulates farmers to do better dairying and develops community spirit. By paying cash and purchasing feeds in carload lots, members have been able to reduce their feed bills materially. The association also results in bringing the members together into closer union on all matters affecting their farms. The regular meetings of the association, occasional farm tours and picnics give opportunity for discussing topics of particular interest and profit.

APPEARANCE OF DAIRY COWS

Animal With High Head and Mean, Vicious Look in Her Eye Should Be Carefully Avoided.

One can usually judge by the appearance of a cow whether or not she has a good dairy temperament. The cow with a high head and a vicious, mean look in her eye should be avoided. The reliable dairy cow will have eyes that are placed wide apart, with an expression showing a meek and gentle temperament.

Any time of day
BAKER'S COCOA
is welcome

DO not make the mistake of thinking that cocoa is only an occasional drink. It is so valuable a food beverage, so rich in the elements of nutrition, so delicious in flavor, and so wholesome that it should be used regularly and often.

What She Writes.

"What do you hear from your wife?" "Not much, except that she needs money again."

DRUGS EXCITE YOUR KIDNEYS, USE SALTS

If Your Back Hurts or Bladder Bothers, Drink Lots of Water.

When your kidneys hurt and your back feels sore, don't get scared and proceed to load your stomach with a lot of drugs that excite the kidneys and irritate the entire urinary tract. Keep your kidneys clean like you keep your bowels clean, by flushing them with a mild, harmless salts which removes the body's urinous waste and stimulates them to their normal activity. The function of the kidneys is to filter the blood. In 24 hours they strain from it 500 grains of acid and waste, so we can readily understand the vital importance of keeping the kidneys active.

Drink lots of water—you can't drink too much; also get from any pharmacist about four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast each morning for a few days and your kidneys will act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean and stimulate clogged kidneys; also to neutralize the acids in urine so it no longer is a source of irritation, thus ending bladder weakness.

Jad Salts is inexpensive; cannot injure; makes a delightful effervescent lithia-water drink which everyone should take now and then to keep their kidneys clean and active. Try this, also keep up the water drinking, and no doubt you will wonder what became of your kidney trouble and backache.—Adv.

Oh, yes, pitiless publicity is for everybody except the people you like very much.

STOP CATARRH! OPEN NOSTRILS AND HEAD

Says Cream Applied in Nostrils Relieves Head-Colds at Once.

If your nostrils are clogged and your head is stuffed and you can't breathe freely because of a cold or catarrh, just get a small bottle of Ely's Cream Balm at any drug store. Apply a little of this fragrant, antiseptic cream into your nostrils and let it penetrate through every air passage of your head, soothing and healing the inflamed, swollen mucous membrane and you get instant relief.

Ah! How good it feels. Your nostrils are open, your head is clear, no more hawking, snuffling, blowing; no more headache, dryness or struggling for breath. Ely's Cream Balm is just what sufferers from head colds and catarrh need. It's a delight.—Adv.

There would be fewer spinsters if girls would be more careful about their makeup.

Important to Mothers

Examine carefully every bottle of CASTORIA, that famous old remedy for infants and children, and see that it

Bears the Signature of *Chas. H. Fletcher*

In Use for Over 30 Years.
Children Cry for Fletcher's Castoria

Suicidal tendency is three times as pronounced in men as in women.

Irritating Coughs

Promptly treat coughs, colds, hoarseness, bronchitis and similar inflamed and irritated conditions of the throat with a tested remedy

Mrs. Ralph Elder and son Clarence, were visiting at Garner Saturday between trains.

Ed Chistensen came from Woden last Monday to work for Rudy Baack this coming year.

John C. Larsen has moved from a farm 2 miles east of Garner to a farm two miles south of Klemme.

Mr. and Mrs. Henry Suckow, Sr. were visiting at Garner Tuesday between trains.

Frank Terhufen is a daily passenger to Garner as he is putting in the new refrigerator for the J. P. Larsen shop there.

Mr. D. D. Ross from Garner was here Monday helping to shell corn on his farm and while here spent the night with the J. N. Day family.

The English M. E. church at Garner have a new pastor, Rev. M. B. Phillips. The gentleman comes from Sumner, Washington.

The Belmond Foundry is doing business. The foundry is another new institution in the rapidly growing little city of Belmond.

Mrs. Richard Bamman of Garner, was visiting with Klemme relatives and friends Monday. Mrs. Bamman was formerly Miss Ella Schudlt.

Mr. and Mrs. Merkle and family, of Miller, have moved onto the Walt Bloom place east of Klemme. Abe Scott formerly lived on this farm.

The Misses Warnock and Bryson went to Garner last Wednesday afternoon. The train was just late enough to make it and they wanted to go "just for fun." Perhaps they had just received their pay envelope and were out right away.

Mrs. R. A. Jorgenson was a Garner visitor between trains Saturday.

Joe Johnson was at Garner Tuesday on matters pertaining to business

Mrs Frank Quigley, Jr., of Goodell was shopping in Klemme last Wednesday.

G. B. Lawhorn of Garner was transacting business in Klemme Saturday.

Mrs. Maude Hummel and family came last Thursday from Elliot, Iowa. They will farm near Klemme.

Mrs. S. J. Kirkwood was a passenger to Mason City Monday where she went to have some dental work done.

Helen Gates went to Garner last Wednesday afternoon for a few days visit with her sister while her sister while her folks were moving to their new home in Wisconsin.

Rev. Fred Grieve returned to his home at Rudd last Wednesday after visiting at the home of his folks here a few days. Rev. Grieve is the Methodist minister at Rudd, Iowa.

Mr. Thos. Burhow, one of our supervisors was a Klemme business caller Thurday. He was here selling stock in a new cement factory to be erected in Des Moines.

Miss Katherine Wille was down from Garner last Wednesday between trains for a visit with relatives and friends.

The State Checkers are at work on the county books at the court house. It will take them from thirty days to six weeks to go over the county records carefully.

Mr. and Mrs. Grant Dutro left Tuesday morning for Aberdeen, South Dakota, being called to that place by the death of Mr. Dutro's brother S. B. Dutro.

Marlin Croner and Wallace Pavey went to Garner last Thursday afternoon and returned Frday noon. They were there on matters of business, so they say.

Miss Myrtle Schoenwetter who is teaching school near Klemme closed her school Friday for a two week's vacation. She went to Garner to visit with her parents.

Chris Anderson, who resided on the Melvin Whitesal farm last year has moved to the Dr. Zinn farm northeast of Klemme. Dirk Mossel was the former tenant but we have changed his address to Thornton. He lives near Meservey now.

H. J. Theiman and Herman Schuldt went to Garner Tuesday morning to occupy chairs in the jurors' box. The court was to have opened last Tuesday but the judge postponed it a week. Judge Kelly is holding down the bench this session.

We have a very complete list of periodicals, some of which will soon raise in price. If you have a magazine or newspaper which you would like to order we can get it for you. leave all your orders for reading matter at the Times office.

Don't overlook the Des Moines Capiital bargain which we are offering to our readers until March 15th. Better come in and subscribe today for the Des Moines Capital and the Klemme Times both one year for $5.50.

On account of several requests from those who desire osteopathic treatment Dr. Shultz will be at the Klemme Hotel as formerly, from 11:30 A. M. to 2:00 P. M. on Mondays, Wednesdays and Fridays.—Advertisement-1

Mrs. W. A. Montgomery returned to her home at Dows Saturday after spending two weeks at the Owen Neuhring home. She was here assisting in the care of Mrs. Neuhring and three children who had been ill.

The time has come at last when you can hang up the old snow shovel and grease up the lawn mower. Yes, and we will soon hear of the guy who claims he saw a robin perching on his back fence picking cooties off his hind legs.

W. M. Baack returned last Thursday from Coldwater, Ohio, where he went the previous Saturday night with a large number of other Iowa implement dealers. The New Idea Manure Spreader company furnished them with free transportation and special coaches. Mr. Baack says the visit was well worth while as they were shown all thru the factory and saw how various parts of the New Idea spreader were constructed. The implement men thoroughly enjoyed the trip.

Mrs. A. H. Meyer returned from Des Moines Saturday where she had accompanied her sister from Dows, who went to the hospital there for treatment.

Leppo Blank and family, who formerly were on the Britt route, are now living on the Henry Freie farm, to which place they moved last week.

Mr. A. G. Ludwig returned to his home at Zearing, Iowa, after visiting about a week at the E. S. D. Kahrs home here. He is a brother of Mrs. Kahrs.

Mr. and Mrs. Nels Nelson from Forest City were here to attend the funeal of his nephew, Clarence, which was held Monday afternoon. They returned to Forest City Tuesday morning.

Mr. A. E. Rankin, superintendent of the Garner schools has been reelected for the coming year with a liberal increase in salary. He will receive $3,000 the coming year.

Mr. H. J. Schlichting left Tuesday morning for Minneapolis from which city he will go to Morris, Minn., on business for a few days. He expects to return the latter part of the week.

Mr. Hod Lawhorn was down from Garner last Wednesday afternoon. Hod moved to Garner last Monday but was tempted to take another look at the old burg here. We expect to see him here quite often, as he is in the real estate business now.

We were right last week when we said that Carl Suckow was the census taker for Ell township. Carl is doing remarkably well at the job and gets over the territory in a hurry. He was rather up against it last week on account of the bad weather but went out nevertheless.

Clarence and George Johnson have gone to farming on their father's farm east of Klemme and are quite conveniently settled there now. Frank Glanville was the tenant las tyear but he has moved to the Fred Ax farm. The Johnson boys are just starting out and we wish them all kinds of good success.

Mr. H. B. Stohbehn of Traer, Iowa was in Klemme Monday buying cattle and left Tuesday morning. We asked Mr. Stohbehn if he was acquainted with J. W. Berggren our former restaurant man and he replied that he knew him. He says Mr. Berggren enjoys a very good business and runs a fine restaurant at Traer. He also stated that Miss Eleanor Duffy, niece of the Berggrens was married now, which news will interest our young people here as Eleanor was quite popular with the young people of Klemme.

We wish all who are moving about would notify the Times office at once so that we can change your address and you will not miss any numbers of the paper. We have received a number of new subscriptions from people moving into this neighborhood. The want to get the Klemme news and get acquainted with the people. If you know of any new neighbor in your locality hand them the Times after you are thru reading it and by so doing you will also help us to reach new people. We endeavor to give all the news and also the advertising of the Klemme merchants.

IS 700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of ear corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us a bout it.

THE KLEMME TIMES

Twenty-fourth Year Number 28 Klemme, Iowa, Thurssday, March 18, 1920 $2.00 In Advance. $2.50 Outside of County

The Beginning Of A Future Public Library

FREE PUBLIC LIBRARY

The Win One Class of the Methodist Sunday School have ararnged with the State Library Commission to lpace a circulating library at the service of this community. By the courtesy of Postmaster Waterman and his assistant, Miss Lenz, the library has found a place in the post office, and Mr. Watermn and Miss Lenz will have charge of the issuing of the books.

The books are issued absolutely free of charge under the usual rules. But one book at a time is issued to each person; a book may be retained two weeks with privilege of reissue for two additional weeks; a fine of one cent a day is collected for each day over two weeks that a book is retained; minors must fill out an application card and secure the endorsement of a responsible guarantor. There are sixty books in the library and it is hoped that this number may be increased by donations from local people.

These traveling libraries are retained in each community for three months and then shipped back to Des Moines and exchanged for another. All expenses of the local library are borne by the Win One class and this with the public spirited co-operation of the postmaster and his assistant makes the services of the library free to the patrons. Sixty books are comprised in the present assortment and are now available to all who care to use them. The list comprises some forty books of fiction with some of the newest titles, a number of children's books and books of religion, poery and essays.

BOOKS WANTED

Have you any good books that you are willing to donate or lend for use in a public library. If so, please inform Rev. A. E. Buriff, and a messenger will call for them. It is hoped by means of such co-operation to build up a local free public library around the nucleus of the loan from the State Library Commission, an account of which will be found in another column

Some Wind!

HIGH WIND CAUSES DAMAGE

This part of the state was visited by a terrific wind storm Monday night It was a regular hurricane in it's performance. Farmers around Klemme report that a lot of damage was done to their barns and other buildings when the high wind tore off doors, shingles and wrecked orchards and groves. Many places small sheds were turned over and blown to pieces. Nearby towns also report loss by plate glass being blown in by the wind. No rain or snow accompanied the storm, although it was quite cold.

ADDRESS AND PAGEANT

The Womans Foreign Missionary Society of the Methodist Episcopal church will hold its annual thankoffering service next Tuesday evening, March 23rd. The address of the evening will be given by Miss Lulu Golish, a missionary home for furlough after several years in North China. A pleasing feature of the program will be the presentation of the pageant, "The Challenge of the Cross," by a number of the young ladies of the church. The general public is invited.

Coming Soon

"The Birth of a Race" is a photoplay staged on a stupendous basis. The theme compasses a vaster subject than anything ever attempted before for the screen, for it follows the high lights of history from the Garden of Eden to the present day. The larger part of the picture, however, deals with American subjects. The big events of American hstory, from the landing of Columbus on, are pictured vividly. The modern story deals with an American family. There is humor as well as pathos in this part of the picture. At the Idle Hour Theatre, Saturday, March 27th. Nine Reels. Don't miss this one.

—Advertisement

Goodell News

—Special to the Klemme Times:

Mr. Henning Sandberg is moving into Roy Bockman's house.

Mr. O. Sandberg is laid up for a few days with a bruised leg which he hurt last Saturday while repairing a disc.

Harold Savogue is improving very nicely.

Grandmother Carpenter is on the sick list, but is improving as fast as can be expected for one of her age.

Mrs. Cunningham joined her husband and son last Friday. Mr. and Mrs. Cunningham have lately moved o to the Wm. Rhodes farm.

Last Thursday Mrs. John Savogue and son Arthur visited at the Gertrude Galbraith home.

The U. B. Church Ladies' Aid will serve luncheon for the people at L. W. Wesenberg's Spring opening. Mr. Wesenberg has a fine line of up to date machinery and the ladies are anticipating a large crowd if the roads and weather are favorable.

Church services are as follows:

Sunday School at 9:45.

Preaching at 11:00 a. m. and 7:30 p. m.

Prayer meeting Thursday evening at the parsonage at 7:30.

Passion Week March 28 to April 4.

Communion service and reception of members April 4th.

FIRST METHODIST EPISCOPAL CHURCH

Preaching service Sunday morning at 10 o'clock.

Sunday School at the close of the preaching service at 11 o'clock.

Epworth League Sunday evening at 7:30. Preaching service at 8 p. m.

Mid-week prayer meeting each Thursday evening at 7:30.

Preaching service in Liberty township Sunday morning at 11:30.

A. H Meyer, Pastor

COMING EVENTS AT THE IDLE HOUR

Friday, March 19th,—The regular Saturday night picture will be run instead of Saturday night.

Saturday, March 20th—The fifth and closing number of the lecture course. "The War Players and Singers," all music.

Saturday, March 27th—"The Birth of a Race," as pecial big feature picture in nine reels, don't miss this one.

FARM NEWS WANTED

We would like to have a correspondent in every farm locality in the vicinity of Klemme. Anyone can easily get together a few items each week of what is going on in your neighborhood. The only way we can get this news is to have a correspondent in each neighborhood. We will be glad to make arrangements with anyone who will volunteer to write news for us. Call at the Times office and see us. Editor.

Are there any Bolsheviki in Klemme? Well, we'll say so, at least there was one here Monday. A Bolsheviki invaded our office Monday afternoon and we wondered who had left the gate open and let the be-whiskered Russian in, but somehow his voice seemed familiar and upon close examination we found that the man behind the bush was none other than John Suckow hidden by a three weeks' growth of natural timber. We asked John what was the idea of the disguise and he informed us that he had been sick and confined to the house for three weeks and Monday was his first trip up town, and that he was headed for the barber shop to have the whiskers mowed down before the dog catcher got him.

Make Haste Slowly.

Remember that some training is necessary before a man can become a farmer. Even potato raisers have to know how to drill.

More Local

Mrs. Karl Kraus and Lucile have moved to Mason City after spending the winter here with her mother, Mrs. Henry Schuldt. Karl has a position on the Mason City Fire Department now. Formerly they conducted a hotel at Allison, Iowa.

A. D. White and wife who formerly conducted a general store at Goodell, have moved to Klemme to live. They will move to his son's place south of Klemme and intend to build a new home on the place to live in. We welcome M. and Mrs. White to this community.

Algona in their recent home talent play for the benefit of the local post of the American Legion, cleared over $800. A basket social cleared $600 and a Catholic priest presented them with a piano. Also the G. A. R. donated the boys the use of their hall for meetings and other doings.

E. C. Crotty, after three weeks absence from Klemme, returned last Friday to give the band boys private instructions and rehearsal. They were mighty glad to see Mr. Crotty with them again after his recent battle with pneumonia. The band is making rapid progress under his able supervision.

The school election at Goodell last week was uneventful as the voters unanimously elected Dr. Geo. Snearly, E. P. Hetland and F. C. Dominy as directors and O. Conwell for treasurer. Exchanges from over the state show that school elections were rather quiet and that in most cases the old board were re-elected.

Last week it was necessary to pump water into the city mains about four hours extra each day. There was a leak some place which could not be located. However, the search was kept up and it was found that the water meter in Rev. Depping's cellar had frozen during his absence and a continuous stream of water was running into the tile. The meter was fixed and the trouble ended.

Tuesday was a fairly good day for the Greiman Ditcher Company. They sold two machines that day to Charles City parties. One of these machines will be loaded within a few days. The other is to be shipped the 15th. Two in one day. That will be about the regular gait when the company hits its stride.—Garner Democrat.

Fort Dodge will be an airplane center for this section of Iowa. A large field has been laid out and buildings are being erected. An airplane school will also be a feature as will also a a distributing point for Curtis machines. Hereafter we will ride the train to Fort Dodge and return driving our own airplane.

Plans have been completed for a new bank at Hayfield and we understand that the work of building the same will begin in a few weeks. The bank will be of stone and brick and the most up-to-date arrangements of the interior. The ground plan will be 28 by 55 feet, one story high. The new building is being erected by the First National Bank at Garner.

The nine-months-old baby of Mr. and Mrs. Ben F. Greiman of Liberty township, died of pneumonia Friday last and was buried Sunday afternoon in the Reformed church cemetery. The little one contracted influenza from whcih it recovered, but when pneumonia set in its little body was unable to withstand the strain, and it returned to the God who gave it.—Garner Democrat.

Pay the teachers for twelve months is the pace set by the Clinton school board for the rest of the state to follow. This is done in order to keep teachers from going into other lines of work. The pay will be added each time to the regular salary for the nine and one half months the teachers are employed. This should solve the question of shortage of competent teachers.

The Times office further improved the printing plant by installing a Horton variable speed pulley on one of the presses. With this machine the press can be run at any speed by simply stepping on a foot pedal. It is especially useful when a job must be run at a slow speed to get the best result and can also be speeded up for jobs that will stand a high speed on the press.

SOME FACTS AND FANCIES ABOUT THE PHILIPPINES

There Has Been Much Misrepresentation in America About People and Conditions.

By MAXIMO M. KALAW,
Secretary of the Philippine Mission.

Maximo M. Kalaw.

A certain lady at the St. Louis Exposition saw at a ballroom a brown complexioned man in faultless evening dress and accosted him with the inquiry, "I suppose you are Japanese, sir?"

The man addressed replied, "No, madam."

"Then you must be Chinese," she said.

"No, I am not. I am a Filipino," he replied.

"How's that?" asked the lady. "I thought they were all savages living in the woods."

"Well, I'll tell you how I came here," he said. "A month before I left the Philippines I was living in the woods, but the American Governor decided to catch as many wild men as possible, train them and send them over here. So here I am, just as you see." And the St. Louis lady actually believed him.

That is what you would call fancies about the Philippines. The fact is, however, that the 11,000,000 Filipinos and their ancestors have been civilized and Christians for 300 years; that the non-Christian population, according to the census of 1918, is only 500,000, and even these are not all uncivilized.

Another fancy is that not until the coming of the Americans were school buildings seen in the Islands, roads built, or substantial houses erected. Do you know that for hundreds of years the Filipinos have had colleges and schools and that the University of Santo Tomas is only twenty-five years older than Harvard? That as early as 1866, out of a population of 4,000,000 people, there were 841 schools for boys and 833 for girls? That in 1892, eight years before the coming of the Americans, there were 2,137 schools?

"To grant self-government to Luzon under Aguinaldo would be like granting self-government to an Apache reservation under some local chief." Thus spoke a former President of the United States during the Filipino-American war. Exaggeration could be an excuse at a time when the dignity of the American people demanded the extinction of Filipino opposition, but do you know that the Philippine Republic, before the American occupation of the Islands, had the approval of prominent Americans who were on the spot—like John Barrett, Director of the Pan-American Union, who compared it favorably with the Japanese government? That Admiral Dewey considered the Filipinos better fitted for self-government than the Cubans? That they had drafted a constitution at Malalos which elicited the approval of distinguished Republicans like the late Senator George F. Hoar? That before the coming of the Americans they had produced national heroes like the martyred Jose Rizal, pronounced by a Republican congressman, Representative Cooper, as the noblest victim that has ever fallen into the clutches of tyranny?

And do you know that the Filipinos have not had for hundreds of years any caste system, blood distinction or royal families, and that, unlike their oriental sisters, they are the only Christian people in the orient?

People have pictured an ignorant mass of Filipinos, illiterate, poor, living a life of servitude for a few wealthy land owners and foreigners, with no houses or farms or property of their own. Do you know that 70 per cent. of the people above ten years of age can read and write and that this percentage of literacy is almost as high as some of the states of the Union? That it is higher than in any country of South America, higher than the literacy of the Spanish people, and unquestionably above that of any of the new countries recognized in Europe? Do you know that there are a million and a half farms in the Philippines and that 96 per cent. of these farms are owned by Filipinos. In other words, that out of the 11,000,000 Christian Filipinos, 8,000,000 of them at least live on their own farms, with houses of their own, independent of any absentee landlord or foreign master? That 91 per cent. of the urban property consisting of houses and lands is owned by the natives of the Philippines, and only 9 per cent. is in the hands of foreigners? Yet these are facts cabled by Acting Governor Charles Emmett Yeater to the War Department from the recent census estimates.

Having solemnly promised the Filipinos their independence and having gone before the world as the champion of self-determination, the Filipino people cannot understand how America can consistently refuse to make good these promises.

CLIMATE OF THE PHILIPPINES.

The Philippine Islands have a mildly tropical climate. The nights are cool and sunstrokes are unknown. The temperature record for the past thirty years shows an average of 80 degrees.

Last Number on Course Sat'day

DON'T MISS THE LAST NUMBER OF THE LYCEUM COURSE

Saturday evening of this week will be a grand musical wind-up of the winter entertainment course. The War Players and Singers was the number which was scheduled to appear here but the Lyceum Company are sending us a better number in its place as so many towns have requested that a war number be cancelled, so the Lyceum Company have re-arranged the number and in its place they have changed this number of the course by discontinuing the trench scenes and the quartette appear in dress suits. Also the quartette have been strengthened by more experienced entertainers who give both vocal and instrumental numbers in their evening's entertainment. Don't miss this big musical treat, it is the last big event of the winter's entertainment. Come, also bring your family and friends.

Where Water Is Precious.

In Cape Town, where water—especially in the hot summer months—is a very precious fluid, it is the custom to shut off the supply at night, in order to eliminate waste as far as possible. The authorities complain that persons frequently go to a tap to draw water after the supply has been shut off for the day, and finding no water, thoughtlessly leave the tap open. Consequently the next morning when the supply is turned on a large quantity of water runs to waste unnoticed.

Master of Circumstance.

We are forced to accept circumstances, to take them into account in our planning. No one is big enough to disregard them, but everyone should be big enough to refuse to be mastered by them. A creature of circumstance is always a poor creature. We have no right to allow the chance of today, the accident of tomorrow, to decide our future.—Exchange.

Division to Two-Mile Trench.

A division, which is the largest body known in the organization of the American army, will fully man two miles of trenches. The regulation distance in the manning of a trench is a yard to a man. There are three lines, however, needed to fully man the defenses—the firing line, which is down in the trench, a yard behind each man; the support, which is back a short distance, and the reserve.

Turns Eyes Inside Out.

The garden snail's eyes are on the very tips of a pair of very long tentacles and it has an additional pair of shorter tentacles with which it smells. When any danger approaches the eyes are drawn down within the tentacles and the tentacles themselves are pulled into the body in exactly the same way as you would pull a glove finger inside out."

Road to Wickedness.

The many prove the wisdom of Hesiod, who says that the road to wickedness is smooth and very short and there is no need of perspiring. But before virtue the immortal god have placed the sweat of labor, and long and steep is the way thither, and rugged at first; but when you have reached the top, then, however difficult, it becomes easy.—Plato.

Water-Loving Trees.

Water-loving trees along streams often consume more water than they save. Estimates are that a beech forest will transpire nearly 50 per cent of an annual precipitation of 20 inches, while a coniferous forest but eight per cent of the same or like precipitation.

RURAL ROUTE QUESTION

A GREATLY NEEDED IMPROVEMENT

For some time the problem of having a mail route or two out of Klemme has been agitated by both the farmers and business men of Klemme. We have heard more about rural routes since new farmers have moved into this locality in the past few weeks. Farmers who have always been accustomed to having mail delivered to their farm each day dislike the idea of moving into a place where they get their mail from some other near by town and not from the town where they do their trading. We are up against this proposition in Klemme. Farmers who live but a few miles out of Klemme receive their mail from Goodell, Garner, Britt, Kanawha and Ventura routes, which at times causes a great deal of confusion

Postmaster Waterman wants rural routes from Klemme and is doing all in his power to see the problem solved The farmers near Klemme are also in favor of having a route or two from Klemme and they have gone so far as to get a petition started, have mapped out a route to take in the territory east of Klemme. It is also hoped that a suitable route can be laid out to take in the farmers north and west of Klemme, and eventually perhaps we can slice some territory from the other routes that bring mail to Klemme farmers.

It will take some time to get the routes thru as they must be approved of by the postal department and there is all kinds of red tape connected to the matter, but it is hoped that all can be overcome and that routes can laid out in a most satisfactory manner and approved by the postal department. We may yet seet the day dawn when Klemme R. F. D. men will drive out each morning from Klemme with the farmers' mail.

POLITICAL ADVERTISEMENTS

FOR REPRESENTATIVE

I am a candidate for state representative for Hancock County subject to the decision of the republican voters at the June Primary.

THOS. H. THOMPSON.

I hereby announce myself a candidate for the office of County Treasurer, subject to the decision of the Republican Primaries to be held June 7th, 1920. Yours very truly,

1-1-20 JOHN SUURBALLE

I hereby announce myself a candidate for the office of State Senator from the district composed of Hancock, Cerro Gordo and Franklin counties, subject to the decision of the Republican voters of said counties at the June, 1920, Primaries.

Dated at Garner, Iowa, this 12th day of January, 1920.

1-22-tf. J. E. WICHMAN

I hereby announce myself a candidate for the office of Sheriff for Hancock County, subject to the decision of the voters at the June, 1920, primaries.

1-29-p. E. PECK HANSON

I hereby announce myself a candidate for the office of sheriff of Hancock county, subject to the decision of the Republican voters of said county, at the Primary election to be held in June.

W. C. ZIESEMER,

1-22-tf Garner, Iowa

I hereby announce myself a candidate for re-election for Supervisor, subject to the will of the Republican voters at June Primary.

G. B. LAWHORN

I am a candidate for re-election, subject to the will of Republican voters at Primary Election next.

Very truly yours,
Chris Jacobs, Auditor

I hereby announce myself a candidate for the office of State Representative from Hancock County, subject to the decision of the Republican Voters of said County, at the June 1920, Primaries.

Dated at Britt, Iowa, this 26th day of January, 1920.

E. P. Healy

DEPENDED UPON IT 20 YEARS

Lydia E. Pinkham's Vegetable Compound Has Been This Woman's Safeguard All That Time.

Omaha, Neb.—"I have used Lydia E. Pinkham's Vegetable Compound for over twenty years for female troubles and it has helped me very much. I have also used Lydia E. Pinkham's Sanative Wash with good results. I always have a bottle of Vegetable Compound in the house as it is a good remedy in time of need. You can publish my testimonial as every statement I have made is perfectly true."—Mrs. J. O. ELMQUIST, 2424 S. 20th Street, Omaha, Nebraska.

Women who suffer from those distressing ills peculiar to their sex should be convinced by the many genuine and truthful testimonials we are constantly publishing in the newspapers of the ability of Lydia E. Pinkham's Vegetable Compound to restore their health.

To know whether Lydia E. Pinkham's Vegetable Compound will help you, try it! For advice write to Lydia E. Pinkham Medicine Co. (confidential), Lynn, Mass. Your letter will be opened, read and answered by a woman, and held in strict confidence.

DAIRY

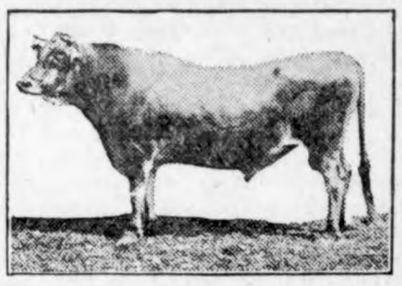
BULL ASSOCIATIONS TO STAY

Every Dairyman in Community May Have Use of Animals of High Producing Ancestry.

(Prepared by the United States Department of Agriculture.)

Bull associations are here to stay. Figures furnished by the United States department of agriculture show that there were 78 co-operative bull associations in operation in this country on July 1, 1919, which represents a gain of 34 associations over the previous year when records showed that there were 44 associations active on July 1, 1918.

Bull associations have proved especially popular in sections where dairying is a comparatively new industry. Many dairymen have been anxious to increase the productivity of their cows, but due to the fact that their herds were small and their resources limited, it was often impossible for them to buy and maintain sufficiently good purebred bulls to accomplish this purpose. It is in cases of this kind that the bull association has proved most valuable, says the department. By organizing the dairymen into an association and working co-operatively



The Average Dairyman Cannot Own This Kind, But the Community of Dairymen Can.

the purchase of proved bulls of high producing ancestry is made possible. By using these animals co-operatively a few good bulls can take the place of all the inferior bulls formerly found in the community.

An example of what the bull association can do in improving the type of sires is found in the South Gibson Bull association of Susquehanna county, Pa. This association has 20 members who own a total of 382 cows. Before the bull association was formed there were 13 bulls in the community with a total valuation of $7,300. After organizing, only four bulls were needed and these were purchased at a total cost of $4,800. The average investment in each of the 13 bulls in use before organizing was $561.54, but after the association was formed the average investment was $1,200 for each of the good bulls. In this way each dairyman had the use of bulls that were twice as valuable as the bulls used formerly, and at the same time his investment was $125 less.

The southern states have been found especially well adapted to bull association work. Dairying in these states is making rapid strides, and producers have shown great interest in improved dairy cattle. Twenty of the associations organized during the past year are credited to the South, six associations having been formed in Mississippi, four in North Carolina, three in South Carolina, two each in Alabama, Georgia and Tennessee, and one in Louisiana.

DISEASES OF DAIRY CATTLE

Careful Observation Detects Approaching Illness and Simple Remedies Avoid Trouble.

The caretaker of a dairy herd must be able to recognize and treat some of the common diseases affecting cattle, since they are likely to occur at any time. In many cases it may be advisable to employ the services of a trained veterinarian, but often helpful home treatment may be given. Careful observation at all times usually results in detecting approaching illness, and frequently simple remedies may be applied in time to prevent further development. Prevention is far better than cure and less expensive.

It is well to keep on hand some of the simple and well-known drugs such as Epsom salts, saltpeter, gum camphor, ginger, tincture of iodine and alum water, and such apparatus as a milk-fever outfit, trocar and canula, fever thermometer, hose and funnel and drenching bottle.

DAIRY NOTES

The bull should be well cared for.

* * *

It takes a mighty good cow to hold her own with 25 average hens.

* * *

Milk production is very largely a matter of proper feed induction.

* * *

Whitewash is one of the best and cheapest barn interior decorations.

* * *

It is worth as much or a little more to feed and care for a bull a year than for a cow.

* * *

It is important that the calf pens be so placed as to avoid too great variations in temperature.

* * *

Milking is a dirty job these cold mornings, but don't slight the precautions to keep the dirt out of the pail.

MANY FARMERS OVERLOOK OPPORTUNITY TO SECURE SWEET MAPLE SUGAR AND SIRUP

Collecting Sap in Forest Near Burlington, Vt.

(Prepared by the United States Department of Agriculture.)

Many thousands of American farmers throughout a region comprising more than a score of states are overlooking opportunities to secure delicious maple sugar and sirup for home use, as well as for sale, at very little cost. This statement, of peculiar interest because of the present sugar shortage, is based on data compiled by experts of the United States department of agriculture who have made a special study of the maple sugar industry. While Americans commonly think of this industry as being confined largely to circumscribed areas in New England and New York, there are, as a matter of fact, many potential "sugar bushes" throughout eastern and northeastern United States; in other words, throughout a region extending south to include North Carolina and Tennessee and west to include northern Missouri, Iowa and Minnesota. There are also a considerable number of maple trees of a sugar-yielding species in Washington and Oregon.

Some Experience Necessary.

While some experience is necessary to boil the sap down to sirup and sugar properly, the process is not complicated and may be learned readily. A United States department of agriculture bulletin, "Production of Maple Sirup and Sugar," gives the necessary information, and will be sent free to any person addressing the department at Washington.

A clump of 10 to 15 trees usually will yield enough sirup for family use to make the tapping worth while, and in many cases will afford a surplus which can be sold at a remunerative price. The flow of sap depends upon the age, condition and habit of growth of the tree, also upon the character of the weather and condition of the soil during the sap-flowing season. In a good season a tree 15 inches in diameter will yield sufficient sap to make from one to six quarts of sirup, which in turn can be concentrated into two to ten pounds of sugar. Larger trees under the same conditions will produce correspondingly larger yields of the sirup and sugar. All hard maple trees, eight inches or more in diameter, may be safely and profitably tapped for sirup and sugar production.

Cutting Sugar Trees for Lumber.

Recently an investigator of the United States department of agriculture in North Carolina discovered many groves of sugar maples that were not being utilized for sirup and sugar production. One of these groves is probably larger than any now to be found in New England. The owners, not being aware of the value of these trees from the maple-sugar standpoint, had begun cutting them down for lumber on an average return of less than one dollar a tree. At the suggestion of the federal representative the groves were spared further cutting in many instances and the owners last year began tapping the trees and making sirup that sold for four dollars a gallon. This revelation of the potential value of these groves has induced the owners to plan more extensive operations for this coming spring, so that instead of destroying the groves they will become a source of permanent and larger income. It is expected that the flow of sap will be even more satisfactory than last year, since the warm weather of last winter was not favorable to producing the best grade nor the highest yield of sugar and sirup.

The maple sirup and sugar industry is distinctively American and offers good commercial opportunities for those who engage in it systematically. No countries besides the United States and Canada produce this much-prized product on a commercial scale, which is at once a delicacy and a highly nutritious article of diet. The demand for both sirup and sugar is far beyond the supply.

Because the sugar content of the sap varies from time to time, uniformity of quality cannot be secured throughout a season. Warm days and cool nights are essential to a satisfactory flow, and the sugar content may vary considerably from day to day. However, this is not a feature that materially affects the success of one's operations.

Does Not Injure Tree.

Tapping of sugar trees, if done properly in no way injures the tree. Trees have been tapped for more than 100 years, and are still in good condition.

It is a good policy to tap early in the season to obtain the earlier runs, which are generally the sweetest, and therefore the best producers. Makers have lost half and even more of their crops by not being prepared for the first run. In general, it may be said that the season is ready to open during the first or middle of February in the southern section, and later in the northern regions when days are becoming warm (when the temperature goes above freezing during the day and at night below freezing). If the days are very bright, warm and sunny, the sap will start with a rush, but soon slacken, or if wind starts the flow is checked. Protracted warm weather or a heavy freeze with nights and days of even temperature stops the flow altogether, to start again when weather conditions are right.

Methods of Tapping.

Considerable difference of opinion exists as to the best method of tapping a tree. A thirteen thirty-seconths of an inch (13-32) bit is often used. Its direction should be slightly upward into the tree, the slant allowing the hole to drain readily. With an ordinary tree the hole should not be over one and one-half to two inches deep at best.

The equipment required for sirup and sugar-making does not necessarily represent a large outlay. A number of sap spouts, either wooden or metal, are needed. The sirup is usually gathered in buckets, and if the grove covers a considerable area a wagon or sled is used to carry barrels into which the buckets are emptied. For a small grove a big iron kettle, such as most farmers possess, is ample for boiling the sap over an outdoor fire. For large production a more elaborate equipment, such as a pair of pans set over a brick framework of various patent evaporators, may be employed. When sirup is made as a side issue or in small quantities, it is customary to make the extra concentration, essential to producing sugar, in pots over the kitchen stove, but where made on a large scale homemade or factory-made apparatus can be employed.

Commercial Possibilities.

While the possibilities of immediate returns from maple trees now standing are of chief interest at this time, the United States department of agriculture experts call attention to the large commercial possibilities in maple sirup production which could be developed in a comparatively few years by extensive planting. There are large numbers of tracts now unfruitful and considered almost worthless, but well suited to growing maple trees. These tracts are to be found throughout the regions referred to above, and could be planted to sugar maple at small cost.

CHEAP SEED MAY BE COSTLY

Special Stress Placed on Necessity for Testing Because of Low Germination of Clover.

With all kinds of seed as high as they are, the use of inferior seed is a most expensive form of carelessness. Careful testing of practically all kinds of seed has long been urged by the United States department of agriculture, and special stress is being placed on it, now that prices are so unusually high. In the matter of clover seed, for instance, attention is called to the fact that comparatively cheap seed may be actually higher than that which costs more money, because of low germination. The department, at various times, has issued advice in bulletins and other forms of the best methods of testing seeds. This information may be had free on application.

GENERAL FARM NOTES

A good hired man is worth all he gets.

* * *

Russian thistles, if cut green, make excellent fodder.

* * *

Most farm machinery is more worn by rust than by use.

* * *

Kohlrabi is related to the cabbage and should be grown about like that vegetable.

and take cold easily, are feverish and constipated, have headaches, stomach or bowel trouble.

MOTHER GRAY'S SWEET POWDERS FOR CHILDREN

Used by Mothers for over 30 years

Are pleasant to take and a certain relief. They tend to break up a cold in 24 hours, act on the Stomach, Liver and Bowels and tend to correct intestinal disorders and destroy worms. 10,000 testimonials like the following from mothers and friends of children telling of relief. Originals are on file in our offices:

"I think MOTHER GRAY'S SWEET POWDERS FOR CHILDREN are grand. They were recommended to my sister by a doctor. I am giving them to my little three year old girl who was very puny, and she is picking up wonderfully."

"We have used MOTHER GRAY'S SWEET POWDERS FOR CHILDREN at different times for past nine years, and always found them a perfect children's medicine and very satisfactory in every case."

Get a package from your druggist for use when needed.

Do Not Accept Any Substitute for MOTHER GRAY'S SWEET POWDERS.

The Right Way

in all cases of

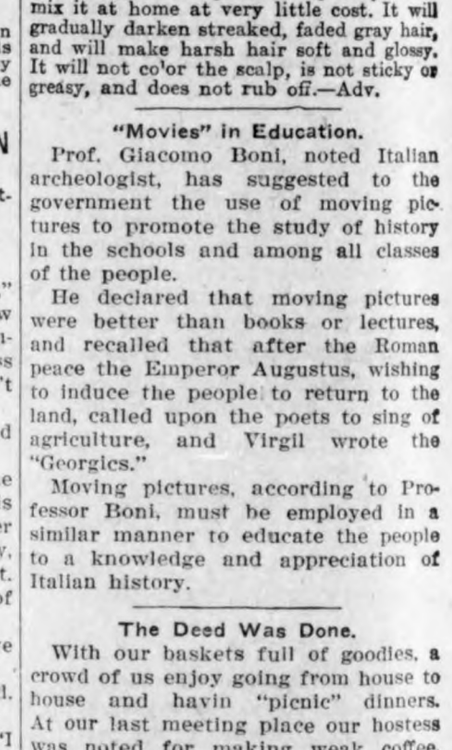
DISTEMPER, PINKEYE INFLUENZA, COLDS, ETC.

of all horses, brood mares, colts and stallions is to

"SPOHN THEM"

on the tongue or in the feed with

SPOHN'S DISTEMPER COMPOUND



Give the remedy to all of them. It acts on the blood and glands. It routs the disease by expelling the germs. It wards off the trouble, no matter how they are "exposed." A few drops a day prevent those exposed from contracting disease. Contains nothing injurious. Sold by druggists, harness dealers or by the manufacturers. 60 cents and $1.15 per bottle. AGENTS WANTED.

SPOHN MEDICAL COMPANY, GOSHEN, IND.

A spinster says that dying an old maid is easier than living one.

Before retiring, a cup of Garfield Tea. For good digestion and continued good health.—Adv.

Late hours may tell on a man, but his wife doesn't have to be told.

Stop the Pain.

The hurt of a burn or a cut stops when Cole's Carbolisalve is applied. It heals quickly without scars. 25c and 50c by all druggists. For free sample write The J. W. Cole Co., Rockford, Ill.—Adv.

TOO QUICK IN CONDEMNATION

Billy Grimes Might Have Been a Little Less Hasty in "Bawling Out" the Doctor.

"The opponents of strong drink," said a politician at a dinner in New York, "are too ready with their accusations—accusations of drunkenness and what not—against all who don't share their views.

"Sometimes I think they are as bad as Billy Grimes.

"Billy's doctor had bought a fine new pair of acetylene lamps for his automobile, and one evening the water reservoirs of both lamps got empty, and so, of course, the lights went out.

"The doctor, halting in front of Billy's shack, shouted:

"'Hi, Billy, can you let me have some water for my lamps?'

"Billy came forth. 'Water?' he said. 'I guess ye mean oil, don't ye, doc?'

"'No, I don't,' said the doctor; 'I mean water.'

"Billy looked at the doctor, then he shook his head sadly.

"'Better go right off home, doc,' he said. 'Go home and sleep it off. Ain't ye ashamed of yerself—at your age—and all the lives of the community dependin' on ye.'"—Washington Star.

The Locality.

"Experts say it takes fully fifteen minutes to shear a sheep by hand."

"Not if it is done in Wall street."

As the inventor of strenuous games it's queer the Romans overlooked football.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Apply to the hair twice a week until it becomes the desired shade. Any druggist can put this up or you can mix it at home at very little cost. It will gradually darken streaked, faded gray hair, and will make harsh hair soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off.—Adv.

"Movies" in Education.

Prof. Giacomo Boni, noted Italian archeologist, has suggested to the government the use of moving pictures to promote the study of history in the schools and among all classes of the people.

He declared that moving pictures were better than books or lectures, and recalled that after the Roman peace the Emperor Augustus, wishing to induce the people to return to the land, called upon the poets to sing of agriculture, and Virgil wrote the "Georgics."

Moving pictures, according to Professor Boni, must be employed in a similar manner to educate the people to a knowledge and appreciation of Italian history.

The Deed Was Done.

With our baskets full of goodies, a crowd of us enjoy going from house to house and havin "picnic" dinners. At our last meeting place our hostess was noted for making weak coffee. This worried my husband, who likes his strong. To please him I promised to go early and offer to make the coffee. Luck was against me, for when I arrived, she had already made it. My husband, thinking of course, that I had done the deed, looked across the table at me, and bellowed before them all: "This coffee is simply rotten."—Exchange.

Many a man has accidentally lost his best umbrella by coming in contact with the owner.

Beautiful—Sanitary—Durable—Economical

for Homes, Schools, Churches and all Interior Wall Surfaces

Alabastine can be applied to plastered walls, wallboard, over painted walls that have become soiled, or even over soiled wallpaper solid on the wall and not printed in aniline colors.

Alabastine is a dry powder, ready to mix with pure, cold water, full directions on each package. Alabastine is packed in white and beautiful tints. These, by combining and intermixing, enable you to carry out individual color plans in matching rugs and draperies. Alabastine is used in the finest residences and public buildings, but priced within the reach of all.

You will readily appreciate the economy of Alabastine over paint or wallpaper, and its results will be most gratifying.

New walls *demand* Alabastine, old walls *appreciate* Alabastine.

If your local dealer cannot or will not supply you, take no substitute but write for Alabastine designs and we will give you name of nearby dealer.

Harvest 20 to 45 Bushel to Acre Wheat in WESTERN CANADA

Think what that means to you in good hard dollars with the great demand for wheat at high prices. Many farmers in Western Canada have paid for their land from a single crop. The same success may still be yours, for you can buy on easy terms,

Farm Land at $15 to $30 an Acre

located near thriving towns, good markets, railways—land of a kind which grows **20 to 45 bushels of wheat to the acre.** Good grazing lands at low prices convenient to your grain farm enable you to reap the **profits from stock raising and dairying.**

Learn the Facts About Western Canada

—low taxation (none on improvements), healthful climate, good schools, churches, pleasant social relationships, a prosperous and industrious people.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan and Alberta, reduced railroad rates, etc., write Department of Immigration, Ottawa, Canada, or

QUEUE IS SIGN OF BONDAGE

Remarkable That Chinese Have Come to Look Upon It With a Degree of Pride.

If the Germans had won the war, would they have made us wear pigtails—in order that they might have something to yank us around by? And would they have applied their efficiency to a new system of punishment, perhaps with a different number of yanks for each offense against our conquering masters? The zeal with which patriotic Chinamen cultivate the queues that they consider a sort of national distinction, and the fact that those Chinamen in other countries who discard them are forever considered outcasts is indeed paradoxical. For the pigtail is a sign of bondage, the earmark of a conquered race. Centuries ago ancient China had a civilization all its own. But on every side she was surrounded by warrior hordes that coveted the riches and luxuries of the more advanced people and harassed them continually. Finally overcome by a barbarian host, the Chinese were reduced to a state of servility. One of the exactions of the conquerors was that the men grow long queues, by which, as they flew by on their horses, they actually took hold of the helpless creatures to swing them before them to the saddle or to cut off their heads.

So It Is.

BELIEF IN "LUCKY PIECES"

Superstition That Seems More General Now Than in the Days Before the Great War.

"That is my luck piece," a veteran said, as he pulled a shapeless little bit of metal out of his pocket with his regular small change. "That's a bullet that just grazed my ear and burrowed into a wall right behind me." "What sort of luck has it brought you?" He laughed. "Six months in hospital from another bullet the very next day. . . . But I married the nurse, and she's a bit of good luck, you bet! I got into the habit of carrying this about; most all the boys carry a pocket piece of some kind for luck whether they believe in luck or not." One man always carries a half-dollar in an inside pocket by itself, so that if his spending pocket happens to get empty he would not be altogether destitute. There is another who sews a $10 bill in the fob pocket of every pair of trousers he buys. In that way he can never have the bad luck of forgetting to change his money when he changes his clothes. True, he might have the bad luck to forget to remove it when he sent the trousers to be pressed, but—as he philosophically expresses it—that would be good luck for the tailor.

If a married man thinks he is the head of the house that's all that is necessary.

"There's a Reason"

DAIRY COWS FED TOO MUCH GRAIN

Greatest Quantity at Lowest Cost for Production Makes Dairying Profitable.

HOLSTEIN COW MADE RECORD

Produced More Milk and Butterfat on Pasture, Silage and Roughage Than When Fed Grain—Feed Stuff Grown on Farm.

(Prepared by the United States Department of Agriculture.)

Profitable dairying does not consist in producing the greatest possible quantity of milk.

It does consist, however, in producing the greatest possible quantity of milk at the lowest possible cost.

To produce more milk, many dairymen feed too much grain, and pile up stupendous feed bills. But the grain does not always increase the flow of milk above what it would have been without grain, enough to pay the difference in the feed bill. Dairy specialists of the United States department of agriculture believe that in many cases more grain is fed to dairy cows that can be justified by the results in milk and butterfat.

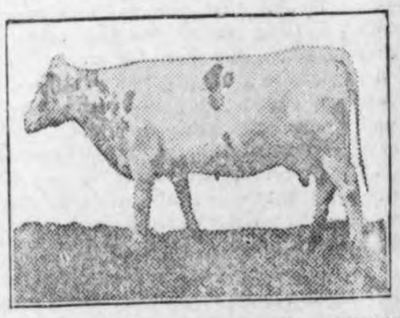
If your neighbor told you that his cow, that had not eaten a pound of grain for a whole year, produced 3,000 pounds more milk and 90 pounds more butterfat than she ever did when fed the regular grain and roughage ration—well, what would you believe if your neighbor told you that? And yet, that has actually happened. At least, that is substantially the story that the United States department of agriculture tells about its Holstein cow, Helen Uilkje Calamity 145857.

Up to the time Helen was eight years old, she had always been fed a grain, silage, and roughage ration, and the best she had ever done was 11,778.2 pounds of milk and 368.39 pounds of butterfat. When she was eight years old, that being in the spring of 1918, it was decided to feed her no grain for a year. She lived for a full 12 months on pasture, silage, and roughage. And that year she produced 14,210.1 pounds of milk and 470.24 pounds of butterfat. The experiment was carried out at Huntley, Mont.

A Revolutionary Cow.

Helen may properly be referred to as a revolutionary cow. Some other cows, in cow-testing associations and elsewhere, have shown similar tendencies. And the result is that the dairy specialists are urging dairymen to see if it is not possible to produce milk and butter without feeding so much grain as is commonly fed.

The basis of successful dairy feeding is now said to be to feed the cows on the stuff that the farm produces instead of buying a great deal of grain and other concentrates. The dairyman should plan his feeding and crop growing to take care of the herd he has, instead of buying as the need arises for more feed. He should devote special attention to having the right kind of pasture and the right kind of roughage. If he cannot grow



She Produced More Milk Without Grain Than With It.

alfalfa, say, he should see what can be done toward growing soy beans or cowpeas or some other roughage crop that will supply the protein needed.

Caring for Pasture Pays.

In the old days, when a cow could be fed on grain and roughage at $5 or $6 a month, there was no great inducement to take care of pastures. But today it costs from $15 to $30 a month to feed a cow on grain and roughage. Attention devoted to pasture, therefore, pays bigger dividends than formerly. Dairymen used to figure that they must get $15 a year from every acre of land in pasture, and this meant that the acre had to pasture a cow for three months. Now, if the same acre pastures a cow only one month, it produces its $15. If it pastures a cow for three months it is producing $45 a year. And the price of pasture land has not increased in that proportion. Therefore, every day that the cow is kept on pasture means a saving of money to the dairyman. It pays, nowadays, to take care of the pastures. And it pays equally well to take care of the roughage. Pasture, forage, silage—these things are the essentials in dairy production.

SOLVE WINTER EGG PROBLEM

Commercial Breeders Have Discovered Importance of Green Food in Ration of Fowls.

The most important discovery the commercial breeders have made in the past few years towards solving the winter egg problem has been the discovery of the value of green food in a tender, succulent form in the ration.

DISINFECT SEED BED TO PREVENT DISEASE

Before Planting Be Sure to Destroy All Fungi.

Sterilization by Heat in Form of Steam Is Most Effective—Formalin Treatment May Be More Practical for Majority.

(By OTIS REINKING, Colorado Agricultural College, Fort Collins, Colo.)

Be sure to disinfect your seed beds, cold frames or hot house beds before planting. The purpose is to kill all fungi which cause damping off, stem rot, black rot, and other diseases. Sterilization by heat in the form of steam is the most effective; however, the formalin treatment may be more practical for the majority.

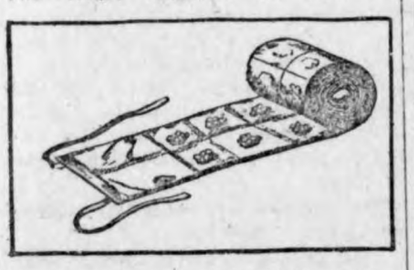
The formalin solution is made up by using 4 quarts of formalin (40 per cent formaldehyde to 50 gallons (1 barrel) of water. Apply at the rate of 2 quarts per square foot of ground. One barrel, at this rate, will cover a piece of ground one rod long by six feet wide. Apply the solution gradually to the soil with a sprinkling pot. It is well to cover the bed for 24 hours with sacks disinfected in the formalin solution.

Do not plant until the third or fourth day after disinfecting, or until the ground is in a suitable condition. This will allow all formalin fumes to escape so that the seed and young growing plants will not be injured.

SEED TESTER QUITE SIMPLE

Inexpensive Contrivance Comprises Envelope Enfolding Pad Which Retains Moisture.

The Scientific American in illustrating and describing a seed tester invented by A. F. Esslinger of Ypsilanti, Mich., says: The object of the invention is to provide a simple, and inexpensive contrivance for testing seeds. The tester comprises an envelope



Showing Manner in Which Seeds Are Enclosed in Tester.

formed by folding longitudinally the outer member and stitching it at one of the edges, this envelope enfolds a pad which absorbs and retains moisture for a period sufficient to cause germination of the seeds. The envelope is stitched longitudinally and transversely, to form sections each of which is numbered for identification purposes.

SOIL FERTILITY IS LACKING

Many Unprofitable Pastures Need Reseeding or Liberal Application of Plant Food.

Many pastures gradually prove unprofitable not from overgrazing or seasonable conditions but from lack of soil fertility. This is especially true where cattle, sheep, etc., graze in an open field and then run into some shady spot to rest, so conditions should be carefully studied. In some cases it will be found that the pasture needs reseeding, though in many cases it will be learned that it is overgrazing or lack of available fertility in the soil that causes the decline, in which case removing the stock for a time if from overgrazing or the application of the necessary plant food if the latter will prove profitable.

CONFINED FOWLS NEED GRIT

Conditions, in Winter Season Are Vastly Different From Summer When Hens Are Free.

When the hens are running in the field in summer they pick up and eat small sharp pieces of gravel which serve as grit to grind the food in the gizzard and keep the digestive organs in good shape. When the hens are confined to the houses during the winter they must have plenty of grit, and the commercial grit to be given in boxes and hoppers is the best, because it is the right size and is sharp.

LIME IS GOOD DISINFECTANT

Scattered About Henhouse It Has Tendency to Keep Fowls in Thrifty Condition.

Air-slaked lime is one of the best things known to scatter about in the henhouse, over the walls, roosts and floor, and in the nests, as a disinfectant. It keeps fowls in good health. It is also excellent to use in fighting roup and mites.

MORE FERTILIZER IS NEEDED

Every Shovelful of Manure Should Be Saved and With Rubbish Plowed Under.

More fertilizer is needed on many farms. Every shovelful of manure should be saved and all rubbish turned under when possible to improve the fertility of the soil. It takes plant food to yield crops. Poor land should be improved.

CHUMS OF BOYHOOD RALLY TO LOWDEN

Sunrise, Minn., Birthplace of Illinois Governor, Backs Him for President.

THE LOWDEN SWIMMING HOLE

Early Friends of Governor See Village Famous as Cradle of President —"Born in Sunrise and Been Awake Ever Since."

Sunrise, Minn., a sleepy little village with a population of 200, has found a place in the political sun. Politics has put the village on the map and it expects to stay there. For Gov. Frank O. Lowden of Illinois, one of the leading candidates for the Republican presidential nomination, was born in Sunrise fifty-nine years ago. His boyhood chums and neighbors are conscious of the fame thrust upon them. Perhaps the most enthusiastic Lowden-for-president club in the country is the one that meets in Sunrise, now in the village hall, now in Andrew Lind's general store.

It is many years since the Lowdens made their home in Sunrise—more than half a century, in fact—but the village has never forgotten the family, least of all "little Frank." The old shed where Lorenzo Lowden, the governor's father, had his blacksmith shop, still stands. It is the property of the Lowden children, used only for storage purposes—and for the ghost games which, the folk say, were started by Frank Lowden. The Lowden home still stands, too. It is an old-fashioned dwelling that occupies a rise of ground two miles from the village. There is a third building in Sunrise that figured in the governor's boyhood. That is the schoolhouse. Lorenzo Lowden helped to build it so his boy could have a schooling. The one-room structure is but a stone's throw from the blacksmith shop. It is no longer a school, having been succeeded by a more modern building, but is now the village hall. A picture of the Illinois governor hangs on the wall, and under its roof the Lowden club holds meetings.

The Sunrise folk are full of stories about Frank Lowden.

"He was a studious child," said Henry Voss, one of the governor's schoolmates. "After he had learned to read he used to walk back and forth between the school and home, a distance of two miles, carrying a book before his face. The boys would speak to him and he wouldn't answer. If we annoyed him when he was interested he would stop and trounce us. Or," Voss added, with a twinkle, "at least he'd try to."

In a bend of the river near town is the swimming hole where Frank's career was almost cut short. The boy was passionately fond of the water and in the spring could scarcely wait for the ice to go out.

"See right over there in the center?" asked Voss. "That's where Frank nearly drowned. Trying to do what the older and stronger boys did he got up on the springboard and plunged off in ten feet of water. Theo. Voss saw his head bob up, go down, come up a second time and again disappear. Theo dived in, a few feet down the current, caught him by the hair and dragged him ashore. We poured the water out of him and in a few minutes he was as right as ever."

"Lowden's swimming hole" is still popular with the boys of the neighborhood.

Many of the governor's old friends are now at North Branch, ten miles from Sunrise. Among them is S. W. Runyan, who had something to do with Frank's education.

"I taught Frank to hunt squirrels," said Runyan. "We covered many a mile of this country with our gun and dogs."

The Lowdens left Sunrise in the late sixties. The last picture of Frank's boyhood that remains with the old residents is that of a sturdy little chap, dressed for travel, marching off down the road behind the "prairie schooner" that bore all the Lowden effects to their new home in Iowa. There was nothing forlorn about the picture. The boy was cheerful, wideawake and on the lookout for something to do. Alertness was characteristic of him.

Said Henry Voss, the village philosopher, speaking of his old friend:

"Frank was born here in Sunrise, and it kind of appears that he has been awake ever since."

FARMERS TO PUSH LOWDEN

Harvey J. Sconce Quits Agricultural Post to Work for Governor.

Harvey J. Sconce, a former baseball star of the University of Illinois, has resigned as president of the Illinois Agricultural association to devote his entire time to organization work among the farmers of the middle West in the interest of Gov. Frank O. Lowden's candidacy for president. He will make a tour of North and South Dakota, Minnesota, Wisconsin, Michigan, Iowa, Nebraska, Colorado and other states, talking to the farmers.

GOV. LOWDEN REAL FRIEND OF FARMER

Record in Offices Proves His Interest in Measures to Benefit Agriculture

MANAGES HIS OWN FARM

Illinois Governor Is Cotton Planter, Stock Raiser and General Farmer —Fosters Bills to Make Rural Life More Attractive.

Gov. Frank O. Lowden of Illinois, one of the leading candidates for the Republican nomination for president, is a practical and successful farmer. Born on a farm near Sunrise, Minn., of sturdy American parentage, he moved to Hardin county, Iowa, when he was 7 years old, where he worked his way through school later by teaching. When he came to Chicago, he purchased a large farm near Oregon, Ill., which he now calls his home.

This farm is one of the finest in Illinois. In addition to this he owns and operates two cotton plantations in Arkansas and has extensive stock breeding interests in Texas. Although he has been successful as a teacher, lawyer, business man and statesman, Lowden prefers to be known as a farmer. He has a way of succeeding in everything he undertakes and his experience as a farmer is no exception to this rule.

The governor's interest in farming has at no time been more forcibly shown than during the four years he has governed Illinois. In his inaugural address he laid out a broad policy which he has consistently followed for fostering every phase of agriculture. He said, on taking office:

"Agriculture is our most important industry. It is the source of our greatness. Its continued success is the condition of any permanent prosperity within our borders. The conservation movement must concern itself with the soil, for even our brief history shows that fertile fields may become abandoned farms through other causes than lack of rainfall. The raising of live stock seems necessary if we are to preserve the fertility of the soil. We should foster this industry in every way we can.

"We should encourage co-operative farming. Wherever you find agriculture in its highest state you find that co-operation has made its greatest advance."

One of the most notable measures taken by Gov. Lowden to foster agriculture was the civil administrative code. This act consolidated in the state department of agriculture various commissions and bureaus, created from time to time to aid the farming interests. The efficiency of administration was vastly enhanced by this centralization of responsibility, and the benefits to the rural population have been increasingly evident during the two years since the code was adopted.

Moreover, through Gov. Lowden's active interest, a number of bills have been put through the legislature directly bearing on the farmer's lot. These include the bill for establishing a tenancy commission, for regulating commission merchants, the pure seed law, the revised dog law, compensation for the slaughter of tubercular cattle, appropriation of $125,000 for a limestone plant, appropriation for a live stock biological laboratory, establishing a veterinary college, and regulating the spread of plant disease.

The governor likes not only farms but farmers. In a speech recently he said:

"In these troublesome times I often wish I were governor of a state whose only citizens were farmers. The farmer is the greatest stabilizer in the country and if it were not for our 6,000,000 farmers I would despair of the future of America."

LAST LINCOLN PALLBEARER LOOKS TO LOWDEN TO LEAD

Simeon W. King, Friend of Emancipator, Expects Illinoisan's Record to Make Him Party Choice.

Simeon W. King, active in Illinois Republican politics for 70 years and the last surviving pallbearer who officiated at the funeral services for Abraham Lincoln held in Chicago, has declared his intention of supporting Governor Frank O. Lowden for president.

"I have voted for every Republican president since Lincoln and I expect to cast my ballot for Lowden next November," said Mr. King. "I have known Frank Lowden for thirty years, and he is just the type of man the country needs for president in this crisis of the country's history. He is able, honest, progressive, experienced and efficient. I remember when he first came to Chicago as a poor young man to study law. I saw him admitted to the bar and later enter public life and rise to fame, and I feel proud of his great success.

"He has proven the best governor Illinois has ever had, and we have had some great executives in the history of the state.

STATE NEWS

Gleaned from many fields and summered for busy readers

Kossuth county has a membership in its Farm Bureau of 2145.

Fred C. Schmitt has sold his farm, one mile south of Holland, for $35,000. There are 110 acres in this tract.

Sheep in Iowa have increased four per cent during the past year. This is a greater increase than any of the neighboring states.

John Carman of Rockford trapped a mink, the pelt of which was 36 inches long and 3¾ inches wide, the largest ever caught in Iowa.

The Supreme Court of Iowa has convened for the March term. The biggest case under consideration is the Bettendorf case of Davenport, involving $4,000,000.

For the past two years Belle Plaine school children have ranked high among the 100 cities and towns of Iowa where gardening classes have been maintained.

Sioux City is to have an aerial police force. Captain Sanford Willits and Lieutenant Paul Hoerr have been employed. They will be used to pursue escaping criminals.

The Wright and Franklin County Breeders Associations are backing a pig club project for the children whose parents are stockholders in the big sales pavilion recently constructed at Rowan.

The farmers of Iowa have lost in the last eight months $3,000,000 in the reduction in the price of products on the farm. The farmers of the state are just beginning to realize that it is just as necessary to get a market for their products as it is to produce them.

Every high school in Des Moines is now maintaining a completely organized Y. M. C. A. of its own, developing community service, social work and the regular physical training features of the adult institution.

One of the largest single sales of land in Iowa during the past year was that of the J. C. Phillips farm of 800 acres, bordering Wayne and Appanoose counties, at $112,000. This farm is mostly unimproved land. Besides this, a 290-acre farm near Humeston, in Wayne county, sold for $92,000, or $317.25 an acre.

At the meeting of the quadrennial session of the Methodist church to be held in Des Moines during the month of May a vigorous effort will be made by the Iowa representatives to secure a resident bishopric in Des Moines. This state is now in the Omaha area. It has been many years since Iowa was favored by a resident bishop. The late Bishop J. F. Hurst was the last one.

New Hampton has an unusually successful municipal electric light and water plant. The electric plant was purchased by the city in 1907 for $5,600. At that time there was a broad minded council of business men who had a vision of the future. Three thousand six hundred dollars were received from customers the first year. This year the same plant with two more men at work turned in $21,000.

Money spent in ornamental planting of trees and shrubs about the country school is money well spent. The results of the early training the boys and girls receive in practical and ornamental values of planting of shrubs and trees will be shown in the homes of the children. Later on more of the homes of those who remain in the community will be benefited in being more beautiful places in which to live.

Blackhawk county claims the smallest pair of twins of which there is any record in this country. The combined weight of the twins is only eight pounds, Julia weighing three pounds and 13 ounces and Michael tipping the scales at four pounds and three ounces. They were born February 19 and have been placed in a baby incubator, where they appear to be thoroughly contented. They are said to resemble animated dolls rather than real babies.

Recent county agent district conferences held in several counties of the state demonstrated the fact that the scope of work to be performed by county agents in Iowa in the future has been widened considerably by the organization of township farm bureaus. Much of the activities of the various counties in the state will be handled through these township organizations, leaving the county agent free to work in an advisory and supervisory capacity.

R. G. McDuff of Monroe disposed of his famous Duroc boar, Royal Pathfinder, to Hankes & Bishop, New London, for $20,000. He also sold ten sows to the same parties for $10,000.

After declaring a dividend of 7 per cent, the Farmers Shipping Co. of Kimballton has a surplus of $4000 in the treasury to show for its $400,000 business transacted during 1919. The company also successfully operates a feed store in connection with its operations. During last year it shipped 130 car loads of stock and 25 cars of feed.

In the 1919 demonstrational work over Iowa the sprayed trees produced two and one-half times as many bushels of apples as the unsprayed ones. To secure the best results from fruit trees it is as necessary to spray them as it is to do any other important work on the farm. Spraying is culminative in its results, as not only large yields of better fruit are obtained, but the trees are in better condition to produce fruit buds for the next year's crop. During the growing season the trees must, first, feed the insect pests and diseases that live on them; second, mature if possible a crop of fruit; third, produce fruit buds for the next year's crop.

Professor R. T. Parkhurst, Iowa State College visited Mahaska county recently to look into poultry conditions. Professor Parkhurst gives his report on conditions as follows: "I found conditions very poor. Five out of seven flocks visited were mongrel. One flock was a mixture of five breeds, so mixed that it was impossible to tell what varieties previously existed. There was one bird in this flock with a blue back and body, blue wings and red hackle. Four out of the seven flocks had tuberculosis. Most of them also had roup. There was not a single house that was properly ventilated. Most of them could be made over with little labor and expense into ideal semi-monitor type houses."

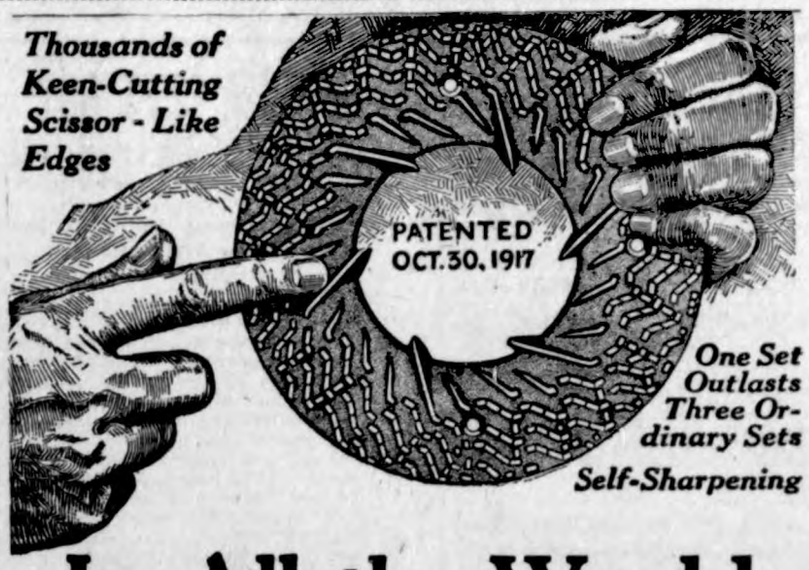
Near Peru, Madison county, in the Hiatt orchard, still stands the apple tree from which the famous "Delicious' variety was obtained. The quality of the fruit produced from this particular tree attracted attention and an enterprising nurseryman down in Missouri heard of it and he proceeded to obtain scions from its branches and by grafting it was not long until a start was made toward the development of the most popular apple grown in the west. Millions of bushels are marketed every year and by the time the choice specimens reach Boston, they readily sell for 25 cents each. As fine apples of this variety as are grown anywhere are produced from orchards right here in Iowa. In an early day near Peru was located the largest sugar camp in the west. A great grove of hard maples, the original sugar-tree, provided sweetness for the people of that section before refined sugar as we now know it had been evolved.

The Presbyterian church in Sioux City has quite a history. It was the first church in Sioux City, organized in 1859. The first pastor was a missionary named Chestnut. He was going down the Mississippi river one time and remarked to the captain of the steamboat that he was planning to build a church at Sioux City, then a mere village out on the frontier. The captain told him when he got ready for a bell he had the very one that was needed, and so an order was given for the bell and in due time $250 was raised to pay for it. Before the church was completed the bell was placed on a pole and served to call worshippers to the school house where services were being held. Since that time three different church edifices have been erected by the Presbyterians, each an improvement over its predecessor, but the same old bell is still doing duty. It is patterned after a steamboat bell, but is much larger and is made from a combination of metals of which bell makers of the present have no knowledge. The bell was brought to Sioux City on a steamboat up the Missouri river in 1861.

Iowa farmers are starting the new farm year with 35,000,000 more bushels of corn in the crib than they had on March 1 of last year, a total of 166,500,000 bushels of corn being on hand, according to figures issued by the Iowa co-operative crop reporting service. While 40 per cent of the total crop for 1919 is still on the farms, only 28 of the remaining 60 per cent has been shipped from the state. About 39 per cent of the oats crop last year, or nearly 26,800,000 bushels less than last year, are now in the bins. Of the remaining 61 per cent, about two-thirds will be shipped out of the state. Wheat and barley are not kept over the winter in large amounts for only 17 per cent of the wheat and 27 per cent of the barley is still in the possession of the farmer. About 67 per cent of the wheat and 45 per cent of the barley will be sold outside of the state. The increase in farm values during the last year, show for poor plow lands an average of $129 to $157 an acre. Good plow lands jumped from $196 to $257 an acre, and the average from $169 to $219. Improved lands showed an increase from $192 to $255 and unimproved lands from $156 to $205.

Contestants from the high school in Goldfield won the three firsts in the declamatory contests of Eagle Grove, Clarion, Belmond, Dows, Rowan and Goldfield. Clarion was second, Eagle Grove third.

One of the biggest meetings of its kind ever held in Iowa was that which called together the members of the County Wool Growers Association and their friends recently, for an all-day meeting. It was decided to ship cooperatively another year and all seemed well satisfied with the results of last year.



In All the World
No Grinding Plate Like the LETZ!

Here's one of the famous Letz Grinding Plates—one of those plates between whose thousands of whirling scissor-like edges the grain and roughage is ground powder-fine in one operation.

No other process so fine cutting, so fast cutting, so durable, so dependable. No other process so altogether desirable for the feeder who wants to grind his own feed.

9 Sizes 22 Styles **LETZ** 2 to 40 H. P.
America's Leading Feed Mill

Letz Mills are enabling hundreds of thousands of progressive farmers and feeders to cut down their feed costs one-fifth, to save the 20% of feed that goes to waste when fed *whole*, to raise their hogs and cattle for market quicker, better, more economically.

FLOODS IN EAST DESTROY HOMES

Many Houses Swept Away and Occupants Are Rescued by Boats.

BLIZZARD PILES UP SNOW

Towns Along the Schuylkill and Susquehanna Rivers Worst Sufferers —New York City Hit by Another Blizzard.

Philadelphia, March 8.—Freezing temperatures, which came on the heels of a raging snow, wind and rain storm, are expected to check the floods which broke over eastern Pennsylvania and Delaware, causing heavy damage and driving many persons from their homes.

Driven by a strong northwest gale, the snow piled up in big drifts and brought the trolley service in this city to a standstill. Hundreds of night workers living in outlying sections were forced to pass the night at hotels.

Virtually every stream in this section of the state overflowed its banks Thursday, and ice gorges broken by the high water swept away bridges and railroad tracks. Telegraph and telephone service was put out of commission in many places and a number of towns and cities were in darkness at night by the flooding of power plants.

Scores of Homes Washed Away.

Trolley service was badly crippled and several lines were forced to cease operations entirely because of washouts. Scores of houses along the banks of the swollen streams were washed away, and many mills and factories had to shut down because of flooded boiler rooms. Men, women and children, marooned in their homes, were rescued in boats, some of them being taken from second story windows.

Towns along the Schuylkill and Susquehanna rivers appeared to be the heaviest sufferers. Reading, Lancaster, Harrisburg, Williamsport and Wilkesbarre reported heavy damage. Parts of all these towns were inundated and much of the surrounding lowland was under water.

The breaking of two ice gorges in the Schuylkill river above Reading caused all of the industries in that city using electric power to close down. Bridges and houses were swept away at Lancaster and the city's filtration plant was threatened. All the streams in the Wyoming valley overflowed and low-lying sections of Wilkesbarre and suburban towns were under water.

Many Families Marooned.

At South Wilkesbarre all traffic except by boats was suspended, and scores of families were marooned in their homes.

Entire blocks were inundated to the second story at Wilmington when the Brandywine overflowed its banks. Occupants of the houses were rescued by the police, fire department and volunteer workers. The refugees passed the night at the fire houses and police stations.

New Storm Damages New York.

New York, March 8.—Another unwelcome storm visited New York just as the city was commencing to recover from the effects of the $5,000,000 blizzard of a month ago. Within 12 hours the metropolis struggled with a pelting rain, a driving sleet storm and a biting snow squall. As the temperature dropped steadily during the night the wind increased in velocity until during the early morning hours it had reached an unofficial velocity of sixty miles an hour, which bodes ill for shipping off the coast.

The rising wind whistled through the canyons of narrow streets in the skyscraper district, making walking well nigh impossible. It unloosened signs, toppled over chimneys here and there and smashed great plate-glass windows in fashionable shops along Fifth avenue, causing thousands of dollars damage.

AWAKEN TONG WAR MEMORIES

Murderers of Chinese Restaurant Keeper in New York Fail to Mark Dead Body.

New York, March 8.—Memories of murderous tong wars in Chinatown in past years were revived by the first murder in that picturesque quarter in the last five years. Lee Wing, a restaurant keeper in Doyers street, was found dead yesterday with a fractured skull. As the body was not mutilated in the peculiar manner customary in tong slayings, the police believe the tongs were not connected with the murder.

Steal $8,000 in Whisky.

St. Louis, Mo., March 8.—Whisky valued at $8,000 was stolen by four unidentified men who broke into the government bonded warehouse at Valley Park, Mo., seventeen miles west of here. The thieves were fired on as they drove away in a truck, but escaped after returning the fire.

Blizzard Rages in Montana.

Helena, Mont., March 8.—Snow, wind, and below zero temperatures are reported in the portion of Montana east of the Rocky mountains. Traffic on roads leading to Bozeman, Mont., is impeded by the deep snow.

PNEUMONIA LEFT BOY WEAK AND SICKLY

Parents Were Almost Hopeless, But He Is Now Well and Strong.

"Our little boy's health was so poor we were afraid we were going to lose him. He is ten years old, and has had weak lungs ever since he was eight months old, caused by pneumonia. We have been very careful with him and doctored him continually, but we had almost despaired of ever having a strong, well boy.

"But since giving him Milks Emulsion all his trouble is gone, and he is in perfect health."—Mrs. G. W. Smiley, 20 Maple St., Dayton, O.

For restoring appetite, health and strength in sickly children, mothers will find Milks Emulsion the thing they have always sought. Most children like to take it, because unlike many emulsions and tonics, it really tastes good.

Milks Emulsion is a pleasant, nutritive food and a corrective medicine. It retores healthy, natural bowel action, doing away with all need of pills and physics. It promotes appetite and quickly puts the digestive organs in shape to assimilate food. As a builder of flesh and strength Milks Emulsion is strongly recommended to those whom sickness has weakened, and is a powerful aid in resisting and repairing the effects of wasting diseases. Chronic stomach trouble and constipation are promptly relieved—usually in one day.

This is the only solid emulsion made, and so palatable that it is eaten with a spoon like ice cream.

No matter how severe your case, you are urged to try Milks Emulsion under this guarantee—Take six bottles home with you, use it according to directions, and if not satisfied with the results your money will be promptly refunded. Price 60c and $1.20 per bottle. The Milks Emulsion Co., Terre Haute, Ind. Sold by druggists everywhere.—Adv.

Slighting the Description.

Mr. Justwed—Here's my discharge from the army. Nice, isn't it?

His Bride—Let's see. "Had gray eyes, brown hair, light complexion—" Why, Edwin, that's horrid. It doesn't say a word about those dear amber glints in your eyes, nor that soft, tempting wave of your hair, nor your simply adorable complexion.

"DANDERINE" PUTS BEAUTY IN HAIR

Girls! A mass of long, thick, gleamy tresses

Let "Danderine" save your hair and double its beauty. You can have lots of long, thick, strong, lustrous hair. Don't let it stay lifeless, thin, scraggly or fading. Bring back its color, vigor and vitality.

Get a 35-cent bottle of delightful "Danderine" at any drug or toilet counter to freshen your scalp; check dandruff and falling hair. Your hair needs this stimulating tonic; then its life, color, brightness and abundance will return—Hurry!—Adv.

Fly's Frugality.

"The philosopher who told us to 'go to the ant' for our lesson in frugality, should have said, 'Go to the fly.'" "But the fly is not a frugal insect." "Yes, it is. Why, they simply swarm into the cheap eating houses."—Wichita Eagle.

A Feeling of Security

You naturally feel secure when you know that the medicine you are about to take is absolutely pure and contains no harmful or habit producing drugs.

Such a medicine is Dr. Kilmer's Swamp-Root, kidney, liver and bladder remedy.

The same standard of purity, strength and excellence is maintained in every bottle of Swamp-Root.

It is scientifically compounded from vegetable herbs.

It is not a stimulant and is taken in teaspoonful doses.

It is not recommended for everything.

It is nature's great helper in relieving and overcoming kidney, liver and bladder troubles.

A sworn statement of purity is with every bottle of Dr. Kilmer's Swamp-Root.

If you need a medicine, you should have the best. On sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to try this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

Much Appreciated.

"They say an hour early in the morning is worth two in the afternoon." "So it is, if you can have it in bed."

There is no excuse for the dyspeptic with Garfield Tea accessible at every drug store.—Adv.

Yes, Stanley, it takes a lot of ice cream and candy to decorate love's young dream properly.

USE MURINE FOR YOUR EYES

NEWS REVIEW OF CURRENT EVENTS

Mr. Wilson Eliminates Himself From the Race for the Democratic Nomination.

PALMER IS AFTER THE PRIZE

Various Attacks on the Prohibition Amendment and the Volstead Law —Supreme Court Puts O. K. on Steel Trust—Peace and War Moves in Europe.

By EDWARD W. PICKARD.

President Wilson got out twice last week. For the first time in five months he was taken out for an automobile ride, surprising all who saw him by his robust physical appearance and gleefully exchanging greetings with the people of Washington. Two days earlier he took himself out of the race for the Democratic nomination for the presidency. This long-awaited event occurred Monday after William G. McAdoo had a confidential talk with his father-in-law. The news of the conference was speedily communicated to Attorney General Palmer and he, in turn, got into touch with Mr. Wilson through his adherents in the White House. The president let Mr. Palmer know he had told Mr. McAdoo he would not be a candidate for renomination, and also gave express permission to the attorney general to announce his own candidacy. Mr. Palmer lost no time, telegraphing authority to file his petition in Georgia, where Tom Watson and former Senator Hardwick are boosting Senator Reed as an anti-administration candidate. Palmer hopes to rally the administration forces there to his support and believes McAdoo can scarcely afford to split them by entering the contest in that state. The president let it be known that he will keep his hands off the pre-convention campaign, not favoring McAdoo, Palmer or Hoover, any one of whom presumably would be a nominee satisfactory to him.

Mr. Palmer, according to his spokesman, stands with the president on the question of the treaty and League of Nations and is willing to make that an issue of the campaign. He is against universal military training because he thinks the League of Nations will make it unnecessary. He holds that the Sherman anti-trust law must be modified. He favors the enforcement of the prohibition law and does not believe it will be a real issue in the campaign. Despite the fact that he is a dry, one of his chief lieutenants will be former Congressman Carlin of Virginia, a leader of the wets.

Which brings us neatly to consideration of the late John Barleycorn and the rumblings from his grave which are causing perturbation among the drys and also among many of the politicians. The first of these ominous noises last week was the decision of Federal Judge Geiger at Milwaukee legalizing the manufacture and sale of 2.5 per cent beer in Wisconsin on the ground that each state has the sovereign right and police power to fix its own standard as to what constitutes an intoxicating beverage. The prohibition amendment providing for concurrent power of congress and the several states to enforce the amendment. Judge Geiger held that state legislation in the matter could not be overturned by an act of congress; he found section 1, title 2 of the Volstead act unconstitutional.

New Jersey's legislature got into action the same day, and after an exciting debate the senate passed the house bill legalizing the manufacture, sale and transportation of beverages containing not more than 3.5 per cent alcohol by volume. In order to avoid complications the measure was altered so that it does not go into effect until the termination of the state of war with Germany, and severe penalties were fixed for its violation. In this shape it was signed by Governor Edwards, who issued a statement that he approved it not because he was against prohibition but because he sought to defend the ancient American liberty.

In the New York legislature a bill was introduced to legalize beverages containing 6 per cent alcohol, and a resolution was adopted providing for an investigation of the Anti-Saloon league by the judiciary committee.

License was the issue in elections in Massachusetts and Vermont, and in both states many towns that had been dry for years voted wet.

On Thursday New Jersey came to bat again with a suit filed for the state by its attorney general in the United States Supreme court, attacking the constitutionality of the prohibition amendment on the ground that it was improperly drawn, that in 21 states the legislatures have not ratified it as provided for by their state constitutions and that there is no power in congress to propose a constitutional amendment regulating the habits and morals of the people.

Politics of course is entering into the prohibition fight. The wet Democrats of Illinois already have launched the presidential boom of Governor Edwards of New Jersey and have filed the necessary petition that puts his name on the April 3 direct primary ballot. The real leaders of the party in that state, however, say this movement will not amount to much and that the delegates to San Francisco probably will not be instructed.

The New York state Democratic convention adopted resolutions condemning prohibition by constitutional amendment and calling for the restoration of states' rights.

By the close vote of 4 to 3 the United States Supreme court has given legal sanction to the United States Steel corporation, the biggest of industrial combinations. The majority opinion dismissed the government's suit for dissolution of the corporation "without prejudice" so that the proceedings can be reinstituted if the concern does not behave in the future. The opinion was based on the two main points that the size of a corporation is not in itself a violation of the antitrust laws, and that the Steel corporation has not exerted its admitted great power to stifle competition, especially since 1911, when the suit was instituted. No precedent was found in the tobacco and Standard Oil cases; but neither is it assured that this latest decision will furnish a precedent for decision of the suits against the American Sugar Refining company and other trusts that are pending in the Supreme court.

Transfer of the railroads back to private hands was accomplished smoothly and so far nothing has happened that would make the traveling public aware of the change. Officials of some of the roads are hoping that the interstate commerce commission will permit a considerable increase in freight rates to take care of the evident needs of the companies, so that it will not be necessary to ask for higher passenger rates. The government guarantee holds good until September 1, so there may be no boost in rates for several months. The railway brotherhoods wisely concluded to give the new railway legislation a fair trial before talking of strikes, though they did not pretend that they liked it at all. President Wilson has asked the rail executives and the brotherhood leaders to pick their representatives on a board that will at once begin work on pending wage disputes.

International interest is still centered largely on Russia and on the peace offers made by the soviet government. Sentiment in favor of coming to an agreement with the Moscow government seems to be growing stronger, and all the entente nations have been given the tip that they may trade with the Russian co-operatives, whose chief representative has $500,000,000 in gold to pay for the things Russia most needs. The race for this trade is lively among the British and some of the continental nations, including Germany. The representatives of Finland, Latvia and Roumania, and perhaps of other countries, are in Warsaw discussing peace conditions to be submitted to the soviet. Lenine, while apparently striving for international peace, is not letting up on his domestic enemies and at latest reports had General Denikine's Cossack armies cornered in the Kuban peninsula east of the Sea of Azov. In northwest Russia the bolshevik front was advanced almost to the Finnish frontier.

The settlement of the Fiume controversy still lags and discussions of it were transferred from London to Paris. The Jugo-Slavs naturally are pleased with President Wilson's notes, and Premier Nitti of Italy seems to be in conciliatory mood.

Hungary, which has not accepted the peace treaty offered it, has elected Admiral Horthy regent governor of the country, and the adherents of the old regime were hopeful that this presaged its restoration. But the supreme council, it is said, is determined that no Hapsburg shall be placed on the throne of either Austria or Hungary. Premier Nitti, it is reported, has demanded of the supreme council a revision of the Hungarian treaty because as it stands it places 3,000,000 Magyars in the Jugo-Slav, Roumanian and Czecho-Slovak states.

The peace treaty with Turkey is in the hands of experts for completion, its main details having been determined by the allied council. Besides the features already mentioned in these columns, it was decided that the Turkish warships shall be broken up, and that the army shall be reduced to such a point that it will be ineffective against another country. There is great disorder in Turkey, and on Thursday the cabinet resigned, Izzet Pasha being called on to form a new ministry. In connection with the disturbed situation, the British naval forces in the eastern Mediterranean are being largely increased, and French troops have been dispatched to Constantinople.

Both France and Portugal have been having serious labor troubles, and the latter is still so afflicted. In France the rail workers declared a general strike, but the government took drastic measures and, with the aid of thousands of volunteer railway men, broke up the strike and forced the workers to accept a compromise. The disturbance in Portugal also began with a rail strike which spread to tramways and postal and telegraph lines. It was reported the workers had proclaimed a soviet form of government, but this was not confirmed. Of course the Portuguese monarchists, who are always on the lookout for such chances, became active and complicated matters.

Organization of the American Farm Bureau federation was completed at a meeting in Chicago which was attended by representatives of more than 1,000,000 farmers. The organization has raised $500,000 for its 1921 program, and $1,000,000 is promised for 1922. Part of the money will be used to establish national headquarters and to pay officers and experts, some of whom will receive salaries as high as $25,000 a year.

The directors drew up the following tentative program:

National legislation that will prevent strikes and unnecessary suffering.

Investigation of the tariff in relation to farm products.

Fight reciprocity with Canada.

Investigation of marketing, live stock prices and foreign competition.

Lower freight rates.

Investigation of foreign trade relations.

More businesslike relations with packers and consumers.

Investigation of credits and foreign exchange.

Establishment of a Washington office, with experts to watch and report on legislation.

All decent American citizens—and that includes the vast majority of the population—rejoiced over the results of the municipal election in Seattle, Wash. Maj. Hugh M. Caldwell, a former member of the A. E. F., was opposed for the mayoralty by James A. Duncan, leader of the radical element in labor circles there. The issue was clear cut—Americanism against the I. W. W. and extremists in general—and Americanism won, the final count of the vote being 50,850 for Caldwell and 34,849 for Duncan. Seattle has been a center of potential rebellion, but the city feels that it has now removed the blot from its fame.

THE GASTON PEARLS.

Synopsis.—Circumstances having prevented Spalding Nelson, clerk, from joining the American forces going to France, he is in a despondent mood when he receives an invitation to dinner from his great-uncle, Rufus Gaston. On the way to the house he meets, under peculiar circumstances, a young girl, apparently in trouble, to whom he has an opportunity to be of slight service. She lives in the same apartment building as Rufus Gaston, and he accompanies her to the house. Gaston and his wife are going to Maine for a trip and want to leave Nelson in charge of the apartment. He accepts. Gaston and his wife tell their great-nephew of mysterious noises—"whispers"—which they have heard in the house. On his way to the Gaston apartment next Sunday Nelson again meets his accidental acquaintance of a few days before, Barbara Bradford. She urges him not to allow the fact of their being acquainted to be known. The hero takes an instinctive dislike to the superintendent, Wick, of the building.

CHAPTER II.—Continued.

—3—

"Quite a proper precaution," I admitted.

"The elevator boy reported your arrival," he continued, "but he wasn't quite sure it was you. The fact that you were chatting with the young lady bothered him, and me, too. Mr. Gaston told me you were a stranger in the city, and I didn't expect to find you knowing one of the Bradfords."

It was on the tip of my tongue to say, "Well, you see I do know her," when I recalled her request that I would not recognize her until we had been introduced in some fashion. I contented myself with saying merely: "Well, I hope you are satisfied now."

"Of course, Mr. Nelson, of course," he answered, though his looks belied his words. Manifestly he was still puzzled over my acquaintance with Miss Bradford.

"I hope you will find it comfortable here," he said, plainly trying to continue the conversation. "If there's ever anything the matter, just call me on the house phone; Mr. Wick, the name is."

"I will," I said, and he unwillingly withdrew.

"If there's ever anything the matter . . . " Was there something sinister in the superintendent's parting remark? Once more the warnings of my relatives flashed into my mind. What was wrong in the house? Why did he anticipate that I might be calling him up? Why did he exhibit such an interest in me and in my acquaintance with the girl across the hall? Somehow the man's whole aspect had impressed me unfavorably.

I carried my bag back to my bedroom and unpacked it. The various attachments in the bath looked so inviting that I stripped and amused myself for half an hour testing the variety of showers and sprays provided. Donning my bathrobe I leisurely smoked an excellent cigar from a box old Rufus had thoughtfully—or perhaps thoughtlessly—left open on his desk, and then returned to the inspection of my new quarters.

As it was Sunday, I had a whole day of leisure before me, and I felt that if I was to clear up the mystery that had driven the old couple out, it was incumbent on me to make a minute study of my surroundings. Only in the little rear sitting room was there any atmosphere of hominess. All the rest of the place was done in the best department store style, even to the richly bound sets of standard authors which lined the walls of the living room, most of which I found had their pages uncut.

My search of the place—and it was thorough, extending even to the empty canisters in the pantry and kitchen—revealed nothing whatever that gave any hint as to the cause or explanation of old Rufus' fears. The place seemed the least likely of all places in the world to hide any mystery, just a great, modern, luxurious apartment, equipped with every possible device for the comfort and convenience of its occupants. It would have to be an up-to-date ghost to find itself at home here.

But wait! Perhaps the safe held some clue to the problem they wanted me to solve. But where was the safe? I had not noticed it anywhere in my repeated journeys through the rooms. I made another tour looking for it. More than likely it had been located in some inconspicuous place purposely. But where? At last I located it, behind a faded crayon portrait of Mrs. Gaston, in the little sitting room.

I lifted the picture to the floor and stood hesitant before the safe. Should I, or should I not, open it? The fact that they had given me the combination seemed to imply that I had a perfect right to inspect its contents.

"Six to the right, four to the left, two to the right, eight to the left."

As I turned the knob I repeated the combination to myself. There was a little click, and the steel door came open. Reaching in I drew forth two old-fashioned jewel cases of leather, both securely locked. I took from my pocket the keys my great-uncle had given me and toyed with them thoughtfully. Among them were two tiny keys that undoubtedly belonged to the jewel cases. Had I the right to use them? I decided that I had.

The first case I opened contained, so far as my limited knowledge of precious stones enabled me to judge, nothing but a bunch of cheap junk, bits of finery from another century, coral earrings that Mrs. Gaston may have worn when she was a little girl, combs of jet, amber beads, quaint hoop earrings and a ring or two, merely the trinkets of a vain old woman, treasured from the time when the money to buy them was scarce. There was nothing in the lot that any self-respecting thief would take, precious as they may have been to their owner. I locked up that case and returned it to the safe and opened the other.

As I raised the lid an involuntary exclamation of amazement and admiration escaped me. There, nestling in the center of a velvet-lined tray, lay gleaming the most wonderful mass of iridescent pearls I ever had laid eyes on, surely worth a vast fortune. Turning them over and over admiringly in the light, at last I laid them back in the tray and began to investigate the other treasures the casket contained. In other traps in the box I found diamonds galore, a great solitaire that must have been all of seven carats, dinner rings, bar pins, crescents, stars, earrings, and in a compartment all by itself, a tiara of rubies and diamonds. There was also a variety of other gems, pins and rings wrought in curious designs with rubies, diamonds, sapphires, and pearls, some unset diamonds and loose fragments of pieces that had evidently been torn apart to add to other settings, the collection of a woman with unlimited money to spend.

With trembling hands I restored the jewels to their hiding place, twice testing the knob to make sure that the combination had set. The unexpected sight of such a vast fortune in gems had filled me with strange emotions, with thoughts so evil I hardly dared admit them to myself. There must have been nearly half a million dollars' worth of precious stones in that one casket. The Gaston pearls in themselves were a fortune.

If only they were mine!

To every honest man at times come temptations as great as come to any criminal. No man knows whether or not he is honest until he has been put to the test. I knew! I was tempted, strongly tempted, to take my great aunt's jewels. What was to hinder? The old couple were to be absent for months. They had left me in charge and had given me their keys and the safe combination. There would be abundant time for disposing of the jewels before their theft was discovered. With the money they would bring I could satisfy my craving for adventure. I could travel the world over.

Yet, as I look back at it, all the time I was thinking these thoughts, I knew I would not take the jewels. A normal man cannot steal. Even when his desires lead him to theft, his mind points out the folly and his conscience the wrong.

Resolutely I put the thought of the jewels out of my head—or tried to—

There, Nestling in the Center of a Velvet-lined Tray, Lay Gleaming the Most Wonderful Mass of Iridescent Pearls I Ever Laid Eyes On.

and stretching myself out on a couch gave myself up to pleasant reveries about my delightful new acquaintance, the girl who lived just across the hall. I pictured myself finding some way of winning her confidence and of helping her out of her mysterious trouble. And what if eventually old Rufus should make me his heir? Surely I would need a mate with whom to share the joys of having a fortune. With visions of Barbara Bradford bedecked with my great-aunt's choicest jewels, I fell asleep.

It was almost dusk when I was awakened by the arrival of the expressman with my trunks. After I had receipted for them and had unpacked, I suddenly realized that I was hungry, for I had eaten nothing since breakfast. Hastily I donned my clothes, stopping only to count my money. With a week's salary in my pocket and no room rent to pay for several months, surely I could afford a good dinner to celebrate the change in my fortunes.

As I went out I stopped in the lower hall to chat with the telephone girl, ostensibly to ask her to take any messages for me, though I was expecting none.

"You're Mr. Nelson, ain't you?" she asked, eyeing me with curious interest.

"Yes," I replied, "Mr. Spalding Nelson. I am occupying the Gaston apartment while they are away."

A flicker of amusement crossed her face, with just the suggestion of a sneer.

"I hope you'll enjoy living here."

"Why not?" I replied carelessly. "If any one calls, say that I will be home by ten, Miss—"

"Nellie Kelly," she added.

As I chatted with her the elevator had descended again, and three persons emerged, one of them being she for a sight of whom I had been intentionally loitering. One of the two persons with her was plainly the mother and the other I took to be an older sister. She resembled Barbara strongly, but there was a world-weary look in her face, and her beauty seemed to me to be marred by a weak, sensitive, passionate mouth. But I had no eyes for her, so absorbed was I in the appearance of the girl I had met in the park. If I had thought her beautiful then, she was ravishing now. Her raven hair was piled high and caught back with a great Spanish comb. An ermine-trimmed evening coat of brocade swathed her figure, opening at the front just enough to give me a glimpse of her bared white neck. Involuntarily my hand went to my hat, but into her eyes came a haughty look and one hand went to her lips for just a second, as if she were warning me again not to recognize her. I stood there abashed as she swept by me to the waiting motor. The telephone girl's voice jarred me back to my senses.

"I thought you was a friend of the Bradfords," she said sarcastically.

"Sure he is," said the voice of Mr. Wick behind me. "Didn't you hear the boys telling me he came in twice with Miss Bradford?"

"Well, what of it?" I answered lamely and fled from the house, indignant at this open prying of the employees into my affairs, yet entirely at a loss to know how to stop it. How could I tell them I knew Barbara Bradford, when she had just cut me dead?

Feeling vaguely dissatisfied with my first day in my new home, I boarded a 'bus and rode downtown to a little French cafe, where my comrades and I had been accustomed to go when we were in funds. All about me were merry Sunday evening dinner parties, and I was alone. Birge and Roller had gone, and Miss Bradford had refused to recognize me. I hurried through my dinner, paid my check, and was leaving the restaurant when at a corner table I spied the scar-faced man whom I had seen in the park a few evenings before.

He looked up and caught my glance. Into his face came a strange expression, a look of malignant hate, not unmingled with fear. Boldly I returned his gaze. I was tempted to walk right up to him and ask him what he had been doing in the park, and why he had warned his mate away when he saw me there. Yet I had no right to interfere. Miss Bradford had not taken me into her confidence. I had only suspicions to go on that the two men had been there to attempt some wrong on the girl.

Slowly I left the restaurant, puzzled more than ever by the malevolent glance he had given me, and perplexed as to how I was going to serve Miss Bradford, when she would not even recognize me.

CHAPTER III.

My great-aunt's pearls were gone—stolen—vanished from the wall safe!

Still discrediting the evidence of my own eyes, I lighted a match and peered into the steel-lined recess. It was empty. On the table beside me was one of the two jewel boxes it had contained, the one filled with worthless trinkets. The other, which had contained the priceless Gaston pearls and the other rich treasure, had vanished.

Today was Saturday. Six days before I had arrived in the apartment. There had been two jewel cases then. With my own hands I had put them both back safe in their hiding place. I recalled having tested the knob to make sure that the combination had set. Yet since that time someone had opened the safe. Someone had removed the jewels. Who could it have been?

To the best of my knowledge there had been but two persons in the rooms, old Mrs. Burke, my aunt's trusted laundress, and myself. Certainly I had not taken the jewels, and it seemed absurd to suspect Mrs. Burke, who had been in Mrs. Gaston's employ for years and had long been entrusted with a key to the servants' entrance. Yet who else was there to suspect?

Recovering a little from my bewilderment I hastened to the telephone. I must notify the superintendent and also the police that the apartment had been robbed. I decided, too, that I should wire my great-uncle Rufus of the robbery, and then it dawned on me for the first time that I did not know the old couple's address. They merely had said that they were going to Maine. Never mind, there was nothing that they could do in their absence. Probably I could get their address from the superintendent, or from Mr. Gaston's bankers. The first thing to do was to notify the superintendent.

But wait! With my hand on the telephone, I stopped short. It dawned on me that in all likelihood I would be the one most under suspicion.

If detectives were called in, I could see that their first move would be to lay the theft to my door. They would investigate everything about me, and I remembered with distress that I, Spalding Nelson, just now was out of a job—and far worse, stood discredited at the only place of employment I had had in New York.

My discharge had come that very morning like a thunderbolt out of a clear sky. The reason for my peremptory dismissal I had not been able to fathom. In some mysterious fashion my employer's wrath had been roused toward me. Why, I could not imagine. Certainly my life, especially since my two comrades had gone away, had been circumspect enough.

Even though I was living in a seven-thousand-dollar apartment I was unemployed, all but penniless, just recently dismissed for some unexplained reason, and now more than likely to be accused or at least suspected of theft.

This Letter Is Enough. It Exposes You for What You Are."

Yet only this very morning I had been taking an optimistic view of life. Delighted at having cut my living expenses in two, I had decided to take twenty dollars of the thirty-five I drew that day and add it to the one hundred and eighty dollars I had in the savings bank. I would mail a registered letter to my mother and reduce my indebtedness to her. On my way to business I stopped at the bank and drew out every penny I had there. It was my intention to go to the post office at lunch time to register the letter. Just before twelve, Mr. Wood, the head of the firm, had sent for me.

"Mr. Nelson," he had said wrathfully, the minute I entered his office, "here is your week's salary. You will leave our employ at once."

Stunned both by his manner and his words, I gasped out something about not understanding what he meant. I knew of no reason that would warrant my discharge.

"I can't put it in any plainer English, can I?" he roared at me. "Get out!"

I held my ground.

"Surely I am entitled to some explanation," I protested. "If there's been anything wrong with my work—"

"Your work's all right," he bellowed. "It's this," he cried, waving at me a letter that had been lying on his desk. "This letter is enough. It exposes you for what you are."

Dumfounded at his amazing statement, I demanded to see the accusing document. Angrily he refused.

"You know as well as I what's in it."

In vain I protested. Every word I uttered only seemed to add to his wrath. In the end he almost hustled me out of his office. Blindly I found my way to the street, still clutching in my hand the week's pay he had rudely thrust on me.

That letter to which he referred—who could have written it? What could have been in it that had so inflamed my employer against me? I racked my brains in vain, puzzling to account for it. I had not been aware that I had an enemy in the world, yet who but an enemy could have written a letter that would have such dire effect?

The mystery of my dismissal was too great for me to solve. The one thing I felt thankful for was that it had come before I had sent off my money. At least I had two hundred and fifteen dollars in my pocket. Under my present mode of life that would last me quite a while, surely until I found another position. Well, there was nothing to do but make the best of it.

Barbara's sister with a "past."

(TO BE CONTINUED.)

Strategic Retreat.

"O'Shea," said the captain sternly, "I saw you running from a boche this morning as if the very devil were after you; you had thrown away your rifle and—"

"Yis, sor, Oi know it, sor; but you see Oi had just slipped a live hand grenade in his pocket—"

"I see," said the captain.

BILIOUSNESS Caused by Acid-Stomach

If people who are bilious are treated according to local symptoms they seldom get very much better. Whatever relief is obtained is usually temporary. Trace biliousness to its source and remove the cause and the chances are that the patient will remain strong and healthy.

Doctors say that more than 70 non-organic diseases can be traced to an Acid-Stomach. Biliousness is one of them. Indigestion, heartburn, belching, sour stomach, bloat and gas are other signs of acid-stomach. EATONIC, the marvelous modern stomach remedy, brings quick relief from these stomach miseries which lead to a long train of ailments that make life miserable if not corrected.

EATONIC literally absorbs and carries away the excess acid. Makes the stomach strong, cool and comfortable. Helps digestion; improves the appetite and you then get full strength from your food. Thousands say that EATONIC is the most effective stomach remedy in the world. It is the help YOU need. Try it on our money-back-if-not-satisfied guarantee. At all druggists. Only 50 cents for a big box.

One Box of Dodd's Kidney Pills Relieves Mrs. Frey's Rheumatism

Mrs. Ira Frey, of Le Mars, Ia., suffered for six long months with the agonies of rheumatism. Then she heard of Dodd's Kidney Pills and bought a box. Here is what she writes:

"For six months I had rheumatism. I had swelling of the limbs, stiffness in the joints and cramps in the muscles. I suffered greatly from backache. My limbs felt heavy, and I had a dragging sensation across my loins. I had a great deal of pain in the top of my head, was often dizzy and had flashes of light and floating specks before my eyes. I had heart flutterings and could not sleep well. My appetite was fitful and I felt heavy and sleepy after meals. I suffered from shortness of breath. After taking one box of Dodd's Kidney Pills I was much improved."

Mighty few people realize in time that Kidney Trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip. Result: Bright's Disease, hospital treatment, doctor's bills—often death.

If your druggist does not carry Dodd's, order direct, sending us 60c in stamps and mentioning your druggist's name.

Fred Gates and family left Monday for Wisconsin where they will make their home in the future. They intended to leave sooner but were delayed on account of sickness.

Stock shipments were light the past week. Last week there were but three cars shipped from the local yards, th week before there were fifteen cars shipped out.

Bert Markel has been suffering a little inconvenience during the past week on account of blood poisoning which set in one of his fingers. Infection started from a slight cut.

J. D. G. Houghton has accepted the job of taking the census at Goodell and Avery township. Much difficulty was experienced in getting a man at Goodell to take the position.

Mr. and Mrs. Hod Lawhorn from Garner came Thursday. Hod returned to Garner Thursday afternoon but Mrs. Hod Lawhorn remained until Friday for a visit with her many friends.

Fred Arnold, C. A. Arnold and Rev. A. H. Meyer were called to Mason City Saturday by the illness of Mrs. Mary Arnold, mother of the Arnold men. They returned to Klemme Monday.

LuVerne, Iowa, have voted to build a $10,000 home for the teachers of their school. This is certainly a step in the right direction and assures the teachers of a good modern place to room and board.

Billy Keraus who has been helping out at John Day's store for some time during the winter rush of business, has "jumped his yob, by yimminy," and hereafter he will be with G. W. Kluckhohn in the real estate business.

A few may not know it but H. L. Suckow is hte Justice of the Peace in Klemme. He took over the office some few weeks ago. If you get in a scrap with your neighbor Henry can perhaps settle the difficulty.

Howard Doyle left Saturday for Chicago where he will visit at the home of his aunt, Mrs. Roche. Howard expects to remain in Chicago for about two weeks before returning to Klemme.

Miss Sarah Thieman returned last week Tuesday from Elkton, Minnesota, where she has been to assist the Henry Yahnke family move. The Yahnkes formerly lived near Austin, Minn., to which place they moved from Klemme about a year ago.

The first case called before the court last week was that of E. C. Knapp vs. Joe Johnson. Mr. Johnson was on hand to defend the case but Knapp's attorney failed to show up and the judge dismissed the case and charged the costs to the plaintiff.

Frank Terhufen and Wes Schuldt who have been working ta Garner, installing a new refrigerator for J. P. Larsen & Sons, completed the job the fore part of this week. The Larsens are also installing a new cooling system in the market.

Dr. Reuber was at Mason City several days the past week doing surgical work.

Patronize the merchants who advertise in the Klemme Times. They sell good goods at right prices. That's why they advertise, they always carry the best.

IS 700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of ear corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us about it.

W. F. PAVEY
Dealer Klemme, Iowa

The Misses Blanche Pollock and Hattie Guttermann of Garner were Klemme shoppers last Friday.

Mrs. A. Ahrenkiel of Goodell was a visitor at the T. Blank home last Wednesday.

The Klemme Fire Department held a meeting at the city hall last Friday evening.

Miss Mildred Johnson went to Mason City Saturday for a few days' visit with her sister, Hulda.

Mrs. Ludwig returned to her home at Nevada Wednesday after a few days visit here with her daughter Mrs Kahrs

Governor Harding says there will be no special session of the legislature in March for Code revision purposes.

Troubles of a Lazy Man.

"A lazy man ain't likely to be happy," said Uncle Eben. "He generally gits a bad disposition tryin' to scare other people into doin' de work."

NATURALIZATION NOTICE.

To Soldiers who have been discharged from the U. S. Army.

I am in reciept of a notice that Ira ton A. Balmer, U. S, Naturalization Examiner, will be at my office on Tuesday, March 23, and that all honorably discharged soldiers in the county who desire to be naturalized be present at my office at the hour of 9 A. M. on said day mentioned, to permit of the petitions for naturalization of said candidates being prepared under the supervision of Mr. Bolmer. Bring your witnesses with you.

A. E. BAUMGARTNER
Clerk of the District Court

Can't Dodge That.

"De man dat dodges work," said Uncle Eben, "generally gets hit by trouble."

Uncle Pennywise Says:

I've often heard a man offer to whip another with one hand tied behind him—but I've never seen it tried —Kansas City Journal.

Come in and hear
The New Edison
"The Phonograph with a Soul"

We have just received several more Edisons in Oak and Mahogany finish. Come in and let us play this instrument for you—or better still let us bring one to your home for your trial, play it and compare it with other machines and you will find that the Edison is the ONLY phonograph which actually re-creates the natural tone of voice or instrument.

We now have 500 records in stock to select from

ORN ANNOUNCES FOR SUPERVISOR

Lawhorn was in Klemme last ay looking over the political egard to his coming out for erm as supervisor. The ed- es that the people here are sfied with the present board visors as they are doing as nybody can. So it would be et a good board remain and whorn for another term. The Signal has the following to rding Lawhorn:

s issue of the Signal appears uncement of G. B. Lawhorn lection as supervisor. He is his first term and his term next January. The other sup- were elected for three years, le they will come up for re- this year, their terms do not ntil January 1st, 1922. Mr. n is one of the best super- Hancock county has ever had, uld be elected without op- and we believe he will be. He f the best men in the county, horoughly versed in the duties ffice. He is absolutely square way, and bears a reputation eproach. The other supervis- enry Meyers of Britt and erhow of Kanawha—are also onally good men, and should o opposition. They are each their first term. The board as is today is as good a board as expect to ever have. They located that the entire county esented as well as it could be nly three members, and we ey will all be re-elected with- position. They are doing good nd why not show our appreci-

owardliness and Couarge.

real secret of cowardliness is ove of life—that is, the pleas- f living; the secret of courage tempt of life. The secret of lliness is love of one's self; the of courage is love of others.

"SWEDE" NEWMAN NOW A MARRIED MAN

The following clipping will be of some interest to the people of Klemme, as Walter Newman, now of Wing, N. D., is well known here:

Friday, the fifth, Walter Newman and Bertha Wilkinson left town on the westbound passenger for Bismarck, where they were married. If they had hopes of surprising anyone they did nto succeed, as the bunch was waiting for them on their return Monday and noisily escorted them up town, where the groom had an opportunity to treat. Walter Newman is of the Newman Brothers firm in the dray and transfer business. Friends join in wishing them a long, happy wedded life.

KANAWHA WILL HAVE BAND AND BALL TEAM

Kanawha is assured a band and ball team this season.

At a special meeting of the Booster Club, held Tuesday evening, final steps were taken to secure a band leader and one will be contracted for within a few days.

The committee in charge of the baseball team is also negotiating for a catcher and have practically closed contract with a gentleman from Dayton, this state.

With a good band and ball team in Kanawha this summer we can offer the people tributary some real live entertainment.

Street concerts will be given by the band just as soon as the boys can get in shape to give them.

Another pleasing announcement is that the ball team will play week-day games during the season . An effort will be made to get the business houses to close during the games and give everyone a chance to get out and not only enjoy the games but to boost for the home team.—Kanawha Reporter.

LAST NUMBER OF COURSE WELL ATTENDED

Saturday night wound up the winter entertainment course and a large number of people turned out to hear the quartette. The company seemed to give universal satisfaction and their numbers took well with everyone. They gave both vocal and instrumental selections and their humerous work was especially appreciated by the audience.

The winter lyceum course was not a success from a financial standpoint as the men who were back of it had to dig down into their pockets to make up for the loss. This is hardly a fair proposition. If the people would have packed the house at all the numbers as they did at the last one then a little money could be laid up in the treasury to take care of the next winter's entertainment. However, we understand that the company coming next winter are to sell their own tickets and will take their chances, all but on the rent of the house and minor expenses. But even then, the backers of next year's course stand a fair chance to lose if the people do not attend.

METHODIST EPISCOPAL CHURCH

Palm Sunday (March 28) will be commemorated in appropriate services, both morning and evening.

Passion Week, the anniversary of our Lord's last week in the flesh, will be observed by special services beginning with the Palm Sunday services and continuing every evening throughout next week except Saturday evening. The general public is invited and will be very welcome at these services.

Morning worship at 10:30 a. m., Sunday. Sunday School at 11:30 a. m. All evening services at 7:30 p. m.

A. E. Buriff, minister

BRITT HAS FIRE

The Princess theatre at Britt suffered a heavy fire loss last Friday evening when the films caught fire from the picture machine. Fortunately the accident which caused the fire did not happen until the second show and as there were but few people in the theatre at the time all escaped without injury.

From reports received the fire did not do a great deal of damage but an explosion of gasses which formed from the machine and smouldering film caused the heaviest loss as it forced the front out of the building and the water also played a heavy part in ruining the interior of the place. The lodge hall above and the Welty music store also suffered considerable damage from water and smoke.

Mr. Bandy, proprietor of the play house, is also owner of the coliseum and we understand will use it as a show house until the theatre can be repaired.—Kanawha Reporter.

MRS. LIZZIE STANLEY

Mrs. Lizzie Stanley, a sister of Mrs. Asa Gibbs, passed away at Garner and the remains were brought here for burial. The funeral services were conducted from the Gibbs home here by Rev. Buriff. The deceased was quite well known here and she leaves a number of relatives to mourn her death.

AVERY TOWNSHIP ITEMS

E. A. Zeidler and Chas. Velau are building a fine new hog barn for Henry Helps. Mr. Helps believes in having everything up-to-date so he thought a new barn for his hogs would be just about right.

John Bachman was called out to Henry Help's place last Friday to fix the pump which had gone on the bum. John developed some speed for he had the pump fixed in thirty minutes. (Contributed.)

Simplicity and Wisdom.

To maintain oneself on this earth is not a hardship but a pastime, if one will live simply and wisely.—Thoreau.

POLITICAL ADVERTISEMENTS

FOR REPRESENTATIVE

I am a candidate for state representative for Hancock County subject to the decision of the republican voters at the June Primary.

THOS. H. THOMPSON.

I hereby announce myself a candidate for the office of County Treasurer, subject to the decision of the Republican Primaries to be held June 7th, 1920. Yours very truly,

1-1-20 JOHN SUURBALLE

I hereby announce myself a candidate for the office of State Senator from the district composed of Hancock, Cerro Gordo and Franklin counties, subject to the decision of the Republican voters of said counties at the June, 1920, Primaries.

Dated at Garner, Iowa, this 12th day of January, 1920.

1-22-tf. J. E. WICHMAN

I hereby announce myself a candidate for the office of Sheriff for Hancock County, subject to the decision of the voters at the June, 1920, primaries.

1-29-p. E. PECK HANSON

I hereby announce myself a candidate for the office of sheriff of Hancock county, subject to the decision of the Republican voters of said county, at the Primary election to be held in June.

W. C. ZIESEMER,
1-22-tf Garner, Iowa

I hereby announce myself a candidate for re-election for Supervisor, subject to the will of the Republican voters at June Primary.

G. B. LAWHORN

I am a candidate for re-election, subject to the will of Republican voters at Primary Election next.

Very truly yours,
Chris Jacobs, Auditor

I hereby announce myself a candidate for the office of State Representative from Hancock County, subject to the decision of the Republican Voters of said County, at the June 1920, Primaries.

Dated at Britt, Iowa, this 26th day of January, 1920.

E. P. Healy

More Local

Henry Church from Garner, was in Klemme Monday looking over his old haunts and chatting with friends. "Hank" likes Garner alright, but we notice he makes frequent trips to Klemme.

Ed Jacobs, John Opsal and Bert Mathews autoed to Mason City Sunday. We also hear they enjoyed a regular four course dinner at the Cerro Gordo hotel—the fourth being a glass of water and a tooth pick, as the country is now dry.

A number of the local Odd Fellows went to Garner Tuesday evening to attend the Garner lodge. The Klemme men who were initiated here a few weeks ago took their second and third degrees at Garner Tuesday night also. The men all report a good time.

Mike Haskins of Garner was in town last Friday to fix up the lights in the south part of town as the houses there were out of light for a couple evenings due to a short circuit He was then back again Monday reading the meters.

The Woman's Foreign Missionary Society of the First Methodist church will hold its April meeting on Thursday, the 1st. Each one of the members should prepare for the Mystery Box and we'll see who will be at the head of the class. All are invited to an interesting meeting.

The old churn which had been in use at the Klemme Co-Operative creamery for the last six and a half years and which did fairly good service but was getting too small for the increased business, has been sold and shipped to the creamery company at Clarksville, Iowa, where it is now grinding out butter for that town. The new churn which has been installed here is far superior to the old one and turns out a much better grade of butter, as well as handling a larger quantity with less work.

The public library acknowledges with thanks a donation of nineteen volumes from Drs. Zinn and Reuber. Who else has books that you are willing to donate or loan? Inform Rev. A. E. Buriff and a messenger will call for them. Put your books where they will do good. Have you some books for children, clean fiction ,interesting books of travel, biography, etc., that are lying idle on your shelves? Give the young people and the readers generally in the community a chance to use them.

Monday night a number of the Klemme Masons, some with their wives and some without, went to Garner to hear a lecture by Robert D. Graham, of Denver, Colo., on "The Mission and Purpose of Free Masonry." A large crowd was in attendance including wives of Masons and also men and women who were not connected with the organization, but were invited to attend. The lecture was very interesting and instructive as well, and was illustrated with lantern pictures. These meetings are being held all over the United States to explain to the people the real purpooe of Masonry and what the organization teacnes.

NEW SCHOOL FOR BUFFALO CENTER

Buffalo Center will have a new $125,000.00 school building soon. At a recent election bonds were voted to build the school and carried by a majority of 94 votes. There were 171 ldies who voted and 245 men.

FILIPINAS GET BALLOT BEFORE AMER. SISTERS

Senora de Veyra Describes Status of Women in the Philippines.

The Filipino woman is destined to be in the world's spotlight more than ever before as a result of the news just received by cable from Manila to the effect that the Philippine senate has passed the equal suffrage bill giving women full political rights with men. This would indicate that the Filipina may beat her American sisters to the ballot box.

The Filipina has many admirers who predict she will make good if she gets the vote, just as she has made good in the very important role she has occupied in the family and business life of the Philippines ever since the introduction of Christianity in the islands three centuries ago.

"America's advent in the Philippines discovered a wonderfully interesting, responsive little being, the Filipino woman," writes one American concerning

MRS. JAIME C. DE VEYRA,
A Filipina who is doing important work for her people in the United States.

the Filipina. "Mothering the only Christian people in the far east, she holds a place of authority, love and respect in family and social life that is not accorded to women in countries neighboring the islands, or in India, China or Japan."

A Filipina who is doing an important work for her people in the United States is Mrs. Jaime C de Veyra, wife of the resident commissioner from the Philippines. Not only has she frequently addressed the wives of members of Congress in Washington as to conditions in the new Philippines, but she has visited various cities, speaking before women's clubs. The senora wears, in giving her talks, one of the beautiful gowns of her home land, a delicate pineapple fabric, hand-woven and hand-embroidered, shaped like a gauzy-winged butterfly.

"In many ways the path of the women of the Philippines is easy," says Senora de Veyra. "Laws made by her have combined the best of American and Spanish precedents, and she has come into her own with far less struggle than either her American or her Spanish sisters. Married women may hold property in severalty. They are guardians of their own children. These are vested rights and cannot be taken away from her.

"Professional opportunities are as good for women as for men in the land from which I come. The Filipina is by custom the dictator in the home. She is usually the keeper of the family treasure. Practically all of the small shops in Manila are conducted by women. Women are already members of the Philippine Bar Association—a thing still impossible in Great Britain. They are also successful as physicians."

Life is really a fifty-fifty proposition for women in the Philippines, according to the senora, who has taken such a prominent part in women's work there that she has sometimes been referred to as "the little mother of them all." She was the assistant matron of the Normal Hall Dormitory for Girls when she married. She speaks English fluently and puts her little talks "over" with real tact. She has four children. An evidence of her enterprise was her action last year in mastering shorthand so she might be "useful to her husband at home in the evenings in case he wishes to dictate a few letters or a speech."

KILLED BY TORNADO

MISSOURI TWISTER TAKES LIVES OF FOURTEEN PERSONS.

SEVERAL TOWNS DAMAGED

Number of People Injured—Seven Children of Two Brothers Meet Death; Wives of Both Hurt.

Springfield, Mo.—Eleven persons were killed outright, two are missing and eight were injured as the result of a tornado which swept through the valley of Turkey creek near Branson and Mollister, of Taney county, last Thursday. Seven of the dead are minor children of Ran and William Box, brothers, living a' Melva, a small town five miles south of Branson. In addition the wives of both men received injuries from which it is believed they cannot recover.

Mrs. Alva Howard and child, living at Melva, were killed instantly, and William Jockson, living five miles southeast of Branson, is dead. John Gross and his wife, living on a farm north of Branson, were blown away with their home and no trace has been found of either the house or its occupants.

Because of the rains, roads were impassable, and there was no school in most localities. Consequently many children who were playing away from home and were caught unawares by the storm were injured.

The storm was not confined to Melva alone. Homes were carried away, buildings destroyed and children injured at Melva, Kirbyville, Taneyville, Mildred, Oasis, Forsyth and Branson.

The entire area is well known to thousands of tourists who annually visit the Ozark region, which is known as the "Shepherd of the Hills" country.

Tornado Wrecks School House.

Dry Ridge, Ky.—Forty persons, including thirty school children, were injuured when a tornado blew down a school house, a general store, three stock barns and damaged other buildings at Sherman, Ky., three miles from here. No one was killed. Damage was estimated at $50,000.

Roofs were blown off several houses and all telephone and telegraph wires are down. The tornado was about 100 yards wide and came from the west.

Tornado in Mississippi.

Greenville, Miss.—Five negroes were killed, between twenty-five and thirty-five injured, and twenty-five tenant houses were destroyed by a tornado in Washington county, near Percy.

NO MORE ALLIED LOANS.

U. S. Government States Sufficient Funds Already Advanced.

Washington, D. C.—Secretary Houston has announced that no further loans would be made to the allies. Under authority granted by congress to extend $10,000,000,000 credits to the allied nations, the treasury has made loans amounting to $9,659,834,649.. Secretary Houston said that the remainder of the credits authorized would not be granted, as it was thought sufficient advances had been made. Discussing the question, treasury officials said that in view of the exchange situation and the unsettled economic conditions of the European nations during the reconstruction period, it would seem advisable to permit them to postpone interest payments for at least three years.

Blame U. S. for Turk Muddles.

London.—Blame for the troubles that are being experienced in settling the Turkish problem was laid at the door of the United States by Earl Curzon, the foreign secretary, in explaining the peace conference's negotiations to the house of lords. "The difficulty in framing the treaty is largely due to delay, and America is responsible for the delay," Lord Curzon said. The foreign secretary added that the peace conference hoped that when the new states were set up in Asia Minor, however, the United States "would help materially in asssisting the new Armenia."

West Virginia Ratifies.

Charleston, W. Va.—The West Virginia legislature ratified the federal suffrage amendment by a vote of 15 to 14 following a dead lock of several days.

The vote of Senator Jesse A. Bloch of Wheling, who made a hurried trip from California to Charleston, to vote on the amendment was effectual in breaking the deadlock between pro and anti-suffrage forces.

Will Impair Pact.

Washington, D. C.—President Wilson has re-stated for democratic senators his opposition to any peace treaty reservations which would weaken the full force of Article 10 or materially impair provisions of the league covenant.

May Boost Price of Coal.

New York.—Demands which anthracite mine workers of Pennsylvania have asked operators to incorporate in the new wage agreement to be drafted to take effect April 1, and formally presented to the mine owners recently, and a sub-committee of practical men was named to negotiate the new contract. Unofficial opinions were expressed by operators that the increase in wages asked by the miners would mean a rise in the price of coal to the consumer, if granted.

FAIL TO SETTLE COAL ISSUE

Conference of Operators and Miners Brought to Close With No Agreement.—Now Up to President.

Washington, D. C.—Representatives of the bituminous coal miners and operators, whose differences, which reached a climax in the disastrous strike last fall, remain unsettled, following a lengthy conference here called by President Wilson.

The bituminous coal commission having submitted a report which fails of agreement between representatives of operators and miners, both sides feel convinced that it is up to them to get together by themselves, as they did before the government intervened, and to make another effort to reach an agreement.

Leaders of the mine workers insist that the miners will quit voluntarily after April 1, when the present working agreement expires, because of their failure to get shorter hours and a greater increase than the 14 per cent granted by government decree or the 25 per cent recommended by Chairman Robinson and Rembrandt Peale of the coal commission, John P. White of the mine workers refusing to sign the agreement. Mr. White has filed a minority report with the president.

Neither of the documents, it was said at the White house, would be made public until the president determined whether the operators' representatives and the miners could reconcile their views. The only factor regarded as serious is the difference in the hour schedule. The original demand of the mine workers was for a thirty-hour weeks, a 60 per cent increase in wages and local adjustment of the differentials arising in and between districts. Officials said that John H. White, the miners' representative, had held out for a six hour day throughout the negotiations between the commissioners. The miners originally demanded a six hour day and five days a week.

MAY BAR OUIJA BOARDS.

Move to Prohibit Their Sale in California—Seven Go Insane.

El Cerrito, Cal.—State Senator Will R. Sharkey of Martinez announced here he would sponsor a bill in the next session of the California legislature to prohibit the sale of ouija boards in the state.

The investigation grew out of tests given seven El Cerrito citizens after a twenty-four-hour seance over the ouija board. Four of the women were declared insane. Three others were found to be of unsound mind after seances with the boards.

"The four women who sat around a ouija board for twenty-four hours are all insane," said Sharkey. "After the seance they offered $700 in currency as a sacrifice to the evil spirits of the board. They burned this money, together with the curls shaved from the heads of the children who had been enticed into their house. I'm convinced many people place a superstition in these boards, and we are going to have a wholesale mental test in El Cerrito."

TURKS UNCONCERNED.

Threat of Allies Has No Noticable Effect Upon the Nation.

Constantinople—Numerous dispatches from London and Paris announcing that the supreme council has decided to take drastic action at Constantinople to prevent the killing of Christians and enforce peace terms more radical than were contemplated before the trouble at Marash, have been received with apparent indifference by the Turks, the only effect being the designation of a slightly changed cabinet.

Turkish officials are watching without any evidences of concern the movement in London to force them out of Europe and the printing of a dispatch reporting that President Wilson would insist that the sultan must leave Constantinople, caused scarcely a ripple.

Blunders of Navy Costly.

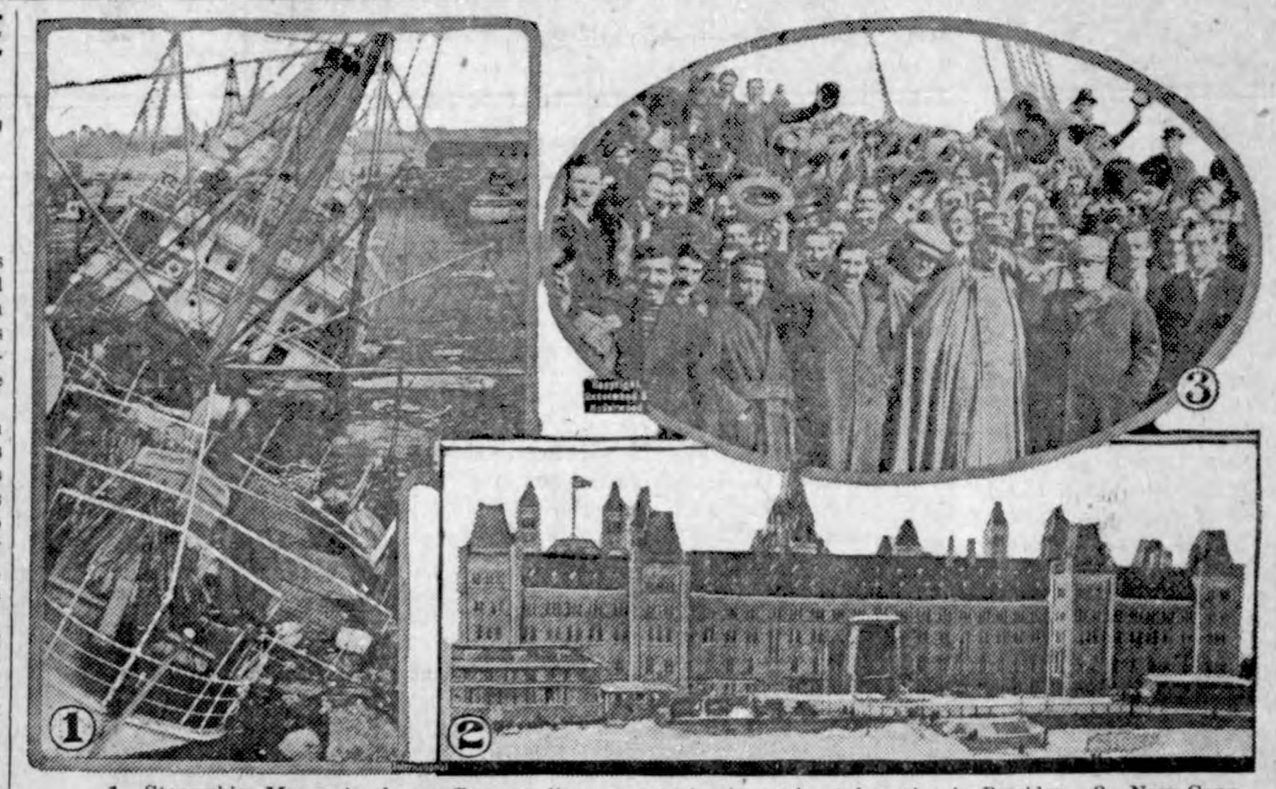
Washington, D. C.—Rear Admiral Sims gave the senate naval investigating committee what he asserts was indisputable evidence that the Navy department fell down almost completely during the first six months of the war. The lack of whole-hearted American co-operation with the allies from the start, the admiral said, resulted in prolongation of the war until November, 1918, when it could have been ended in July; needless sacrifice of 500,000 lives; expenditure of $15,000,000,000 which might have been saved, and gain of 2,500,000 tons of shipping.

New Trial for Mrs. Stokes.

St. Louis, Mo.—Mrs. Rose Pastor Stokes, millionaire New York socialist, convicted in Kansas City in June, of 1918, for violating the espionage act, was granted a new trial by the United States circuit court of appeals here.

Stuffed Olives Cause Illness.

Denver, Colo.—Poisoned olives were discovered in this city, after Mrs. H. E. Benke was made seriously ill, and a warning has been issued by W. F. Cannon, state food and drug commissioner. The bottle which Mrs. Blake used has been sent to the state chemist at Boulder, for analysis. The commissioner said that they were green, stuffed olives of a well known brand, and put on the market by a reliable house. They were purchased at one of the largest stores in this city.



1—Steamship Moccasin, former German liner, mysteriously sunk at her pier in Brooklyn. 2—New Canadian federal parliament building recently opened by the duke of Devonshire. 3—Italian reservists returned to America after fighting through the war.

NEWS REVIEW OF CURRENT EVENTS

Reactionaries Under Kapp and Luettwitz Seize Berlin and Oust Ebert.

GERMAN REPUBLIC DISSOLVED

Turkish Conditions Compel Allies to Show Force—Russia Again Seeks Peace—Supreme Council on Economic Restoration—Another Final Struggle in Senate Over the Treaty.

By EDWARD W. PICKARD.

Germany now appears to be actually in the throes of the counter-revolutionary monarchist struggle that has loomed large of late in all the news from Berlin. What has been the government has now ceased to exist. The power of the state is in the hands of the factions in favor of restoring a monarchy in Germany, with some relative of William Hohenzollern on the throne. These factions have been trying to overthrow the republic and bring about the downfall of President Ebert.

General Director Kapp is reported to be at the head of this "revolution." General Luettwitz is slated to be commander in chief of the military forces. These names indicate its reactionary character. Dr. Kapp was president of the fatherland party, which favored carying on the war to the bitter end. After the armistice the Socialists clamored for his arrest, charging that he had prolonged the war and hindered peace.

Maj. Gen. Luettwitz was military governor of Belgium in the early days of the war. He is thoroughly Prussian and has been strong in his opposition to the peace terms. He has an American wife, born Cary, of Cleveland.

The military power behind Kapp and Luettwitz is presumably troops recently returned from the Baltic states. These troops are believed to be in control of Berlin.

All sorts of possibilities are in the air. The national assembly has been dissolved. The Socialist parties have declared a general strike. Some sort of a government is being formed. In the meantime Kapp is practically a dictator.

Conditions in Turkey have been going from bad to worse until the supreme council of the allies has been driven not only to adopt drastic measures but even to plan for the temporary taking over of certain of the Turkish government activities, including the war department. If the Turks behave themselves better and cease the massacring of Armenians this control will be only temporary. Urged especially by Premier Venizelos of Greece, the council is said to have ordered the occupation of important points in Asiatic and European Turkey by allied military and naval forces in the belief that strong showing of military force would bring the Turks around to their senses. If this is not sufficient, it may be necessary to start operations against Mustapha Kemel Pasha, the Turkish commander in Asiatic Turkey, and it is believed these would be carried out by the Greek army of 90,000 men now in the Smyrna region.

Since the recent massacre in Marash similar outrages have occurred in a number of other places and it is reported that Turks, Kurds and Arabs are besieging Aintab, Urfa, Diabekr, Mardin and other towns. In all these places there are American relief workers who are in danger, and many days ago Consul J. B. Jackson at Aleppo asked our state department to send a squadron of warships to Port Alexandretta. The French garrisons, however, are the chief objects of attack and considerable French reinforcements have been sent to Cilicia.

The trouble in Turkey, which is said to be directed from Berlin and supported by the bolsheviki, is a part of the general fight being put up in Egypt, Mesopotamia, and other countries by so-called nationalists who are attacking the British rule. Dispatches from Turkey assert that Prince Feisal of the Hedjaz kingdom is implicated in it and has suggested a possible union of Turkey, Syria and the Hedjaz. The situation is becoming almost as complicated and difficult to understand as that in Russia some months ago.

What was heralded as a great drive against Poland by the Russian bolsheviki was turned into a decisive defeat of the latter when the Poles took two important railway junctions and a large number of prisoners, including an entire division staff. Immediately thereafter Tchitcherin, soviet foreign minister, sent another peace note to Warsaw, asking when and where the peace delegates of all the border nations might meet with the representatives of the bolsheviki. He asked Poland to refrain from further hostilities and explained that the soviet operations on the Lithuanian and White Ruthenian fronts, which the Poles had broken up, were inspired by fear that the Poles intended to start a drive against the Ukraine. President Pilsudski's position in Poland was greatly strengthened by the victory of his troops and the attitude of the Moscow government.

The Roumanians and the bolsheviki are in a fair way to make peace, negotiations now being under way at Dorna-Watra in Bukowina. As a preliminary the Roumanians demand that the soviet troops be withdrawn from the frontier and that commercial relations be resumed. It now appears likely that Roumania will succeed in her great purpose of annexing, or recovering, Bessarabia.

The supreme council of the allies, taking note of the distressing state of the world in general, has issued a memorandum on economic conditions that is welcomed by all serious minded persons. For the preservation of civilization it urges, as might be expected, the early and complete restoration of peace conditions, with normal economic relations, reduction of armies to a peace footing and limitation of armaments; the encouragement of larger and better output by workers everywhere; the suppression of extravagance, and deflation of credit and currency; and assistance for countries that are now unproductive for lack of raw materials. Without any suggestion of mitigating the treaty terms it is stated that Germany and especially Austria must be enabled to obtain foodstuffs and raw materials in order that they may recover enough to pay the indemnity demanded of them, and it is declared that the total of the reparation must be fixed at the earliest possible time. There is even a suggestion that Germany should be allowed to raise an international loan to meet her immediate needs. In this proposed line of conduct toward the vanquished nations the supreme council is facing the facts with business calculation, not with sentimental feelings.

At frequent intervals the opposing forces in the senate have entered on what is described by the Washington correspondents as the decisive struggle over the peace treaty of Versailles. At this writing they are engaged in another of those combats, and the prospect is that this time it really will be decisive. Early in the week President Wilson, rather than to confer with a representative of the compromisers, wrote a long letter to Senator Hitchcock in which he reasserted his old position regarding the treaty, condemned the reservations as a nullification of the League of Nations covenant and pleaded for consideration of the needs of humanity instead of "special national interests." He demanded that article 10 be accepted unchanged and asserted that to refuse to accept the moral obligation required by it would be a breach of good faith. If the United States cannot enter the league with full responsibility, he said, it should retire gracefully from the great concert of powers. Article 10, said the president, represents the renunciation by the other great powers of their old imperialistic ideas and aims, and its doctrine is the essence of Americanism. He continued:

"Militaristic ambitions and imperialistic policies are by no means dead, even in the councils of the nations whom we most trust and with whom we most desire to be associated in the tasks of peace." And then he added the surprising statement that the militaristic party of France which was prevented from getting the upper hand during the peace conference is in control there now. In evident allusion to Vincent Grey's letter, he says he is "not willing to trust to the counsel of diplomats the working out of any salvation of the world from things which it has suffered."

Quite naturally, Mr. Wilson's references to French policies annoyed the French government and enraged the French people. It was reported that Ambassador Jusserand had been instructed to ask our state department for a more explicit explanation of the president's meaning.

That the president's letter sounded the knell of the treaty was the general opinion, for while there were some further feeble efforts at compromise, the senators prepared themselves for a final fight in which it was believed enough Democrats would be rallied to the support of the president to prevent ratification with reservations, provided the "irreconcilable" Republicans voted with them.

The insurgent Democrats, most of whom are up for re-election this year, are inclined to think Bryan was right when he said the party could not afford to go before the country on the issue of article 10, yet that is the prospect that confronts the Democrats. And if that is made the issue, it is predicted that Mr. Wilson will be compelled to reconsider his reported decision not to seek a third term. Of the administration Democrats who are after the nomination Attorney General Palmer is the only one who is trying to capture instructed delegations, and of course if his chief determined to run again, Mr. Palmer would have to stand aside. The others, like McAdoo, have been contenting themselves with keeping their names before the public and advising the sending of uninstructed delegates to San Francisco.

Many of the Republicans welcomed the chance to make article 10 the issue of the campaign, the irreconcilables especially being pleased. The situation served to boost the stock of Senator Hiram Johnson considerably. Two of his colleagues, Kenyon of Iowa and Norris of Nebraska, promptly announced that they would support his candidacy. "The president has made the issue," said Kenyon. "It is article 10. Let the fight come. Let the Democrats nominate Woodrow Wilson under the white flag of internationalism and the Republicans nominate Hiram Johnson under the Stars and Stripes of Americanism."

So far, however, the main contestants for the Republican nomination remain as before, General Wood and Governor Lowden. Both have made considerable progress and also their managers have succeeded in stirring up a good deal of bitterness in some states, notably Illinois, where the Lowden men thought the Wood forces were trying to trespass on their preserves. When Frank Hitchcock became actively engaged in the Wood campaign it was believed this would assure for the general the support of all the southern states, where Hitchcock built up a smooth-working machine when he was postmaster general. But this idea received a jolt last week when the North Carolina state convention indorsed the candidacy of Judge Peter C. Pritchard.

Herbert Hoover has done something to make clear his political affiliations. In a letter to a California admirer he says it is well known that he was a progressive Republican before the war, and that he is now an independent progressive.

The president's commission for settlement of the coal mine labor troubles was unable last week to formulate a unanimous report as Mr. Wilson requested, but one was forwarded to the White House, signed by Peale, representing the owners, and Robinson, representing the public. White, representing the miners, refused to concur.

The Supreme court of the United States dealt the national treasury rather a severe blow last week when it decided that stock dividends of corporations are not taxable as income. The government will be compelled to return a huge sum—maybe as much as $100,000,000—already collected. Many corporations that have been accumulating big surpluses have been awaiting the decision to "cut melons."

The House of Whispers

By WILLIAM JOHNSTON

Copyright by Little, Brown & Co.

"I AM IN TROUBLE."

Synopsis.—Circumstances having prevented Spalding Nelson, clerk, from joining the American forces going to France, he is in a despondent mood when he receives an invitation to dinner from his great-uncle, Rufus Gaston. On the way to the house he meets, under peculiar circumstances, a young girl, apparently in trouble, to whom he has an opportunity to be of slight service. She lives in the same apartment building as Rufus Gaston, and he accompanies her to the house. Gaston and his wife are going to Maine for a trip and want to leave Nelson in charge of the apartment. He accepts. Gaston and his wife tell their great-nephew of mysterious noises—"whispers"—which they have heard in the house. On his way to the Gaston apartment the next Sunday Nelson again meets his accidental acquaintance of a few days before, Barbara Bradford. She urges him not to allow the fact of their being acquainted to be known. At the apartment Nelson meets the superintendent, Wick, and instinctively dislikes him. In a wall safe he finds a necklace of magnificent pearls, worth a small fortune. Meeting Barbara in the hallway she passes him without recognition. Dining in a restaurant he is conscious of the unpleasant scrutiny of a stranger, but a man whom he had seen before. Next day Nelson finds the pearls have disappeared from the wall safe. His first idea of informing the police is not acted upon because of peculiar circumstances. He has been discharged from his position without adequate explanation or reason, and feels himself involved in something of a mystery. He decides to conduct an investigation himself.

CHAPTER III.—Continued.

—4—

I dined in a little restaurant in one of the side streets and walked home. Immediately on entering the apartment I decided to put my money in the wall safe. There would be less temptation for me to spend it if I carried only a little in my pocket. As I opened the safe by means of the combination I made the astounding discovery that one of the jewel cases had disappeared.

And now I stood hesitating at the telephone. Self-protection bade me notify neither the superintendent nor the police. Yet I must do something. The jewels entrusted to my care had been stolen. The thief must be found and the pearls recovered.

Why should not I myself play the detective? I had abundant leisure now. My great-uncle had informed me that there was something wrong in the house and had charged me to discover what it was. Here was the opportunity for me to fulfill the trust he had imposed on me.

The thought flashed across my mind, too, that perhaps the crafty old gentleman had deliberately planned the disappearance of the gems. Perhaps he had devised an elaborate test to see if I was honest, if I was of the right caliber to be his heir. Maybe he and his wife had not gone to Maine at all. They might even be quartered in another apartment in this very house, surreptitiously entering when they knew I was absent. There really had been no necessity for them to give me the combination of the safe. They need not have told me anything about the pearls. I wondered if they themselves might not have taken away the jewel box just to see if I would discover the loss and to ascertain what I would do about it.

Another theory suggested itself. My aunt evidently prized her jewels highly. After they had started she might have repented having left them behind and have sent the old colored butler back to get them. He of course would have a key to admit him, and they would have supplied him with the safe combination, as they had me. Probably he had been told to leave some message for me and had forgotten to do so. More than likely in a day or two I would receive a letter from old Rufus that would explain everything.

I was glad now I had not notified the superintendent nor the police. My second theory surely was far more logical than the first. It seemed preposterous that they would risk hundreds of thousands of dollars' worth of gems just to test my honesty.

Still, I determined to make a thorough investigation. If they had been stolen, I would set about in a scientific way to discover the method of the theft and to bring about restoration. I would keep my investigation secret, and if it turned out that the pearls were safe, no one would know of my fright about the matter. I began outlining my work as a detective.

First, I would examine the safe knob for possible finger prints.

Second, I would interrogate Mrs. Burke. I would watch her carefully for any appearance of guilt. I would try, without arousing her suspicions, to ascertain if she had let her key out of her possession.

Third, I would insert an advertisement offering a reward for the return of the jewels, so worded that only the thief and myself would understand.

Fourth, I would try to locate the Gastons and would question the hall boys and telephone girl as to whether they had surreptitiously returned.

Fifth, I must try and discover what was in the mysterious letter that had led to my discharge. While this did not seem to have any connection with the other affairs that were troubling me, if I was to remain in New York and become better acquainted with Barbara Bradford, as I fondly hoped, I meant to have nothing hanging over me.

I was about to get into bed, had turned out the light, in fact, when I recalled the errand that had led me to open the wall safe. I had more than two hundred dollars in my trousers pocket and I purposed putting it where it would be safe. With the feeling that if the jewels had disappeared, so might my money, I pressed the light button in the sitting room and looked about for a hiding place. Recalling a custom of my mother's, I stepped over to the bookcase and taking a Macaulay's History, Volume Three, from the shelf, placed between the leaves all of my money except fifteen dollars. No burglar was likely to find it there.

I extinguished the light and in the darkness stepped back into my bedroom, and stopped stock still.

From somewhere in the room there came three distinct taps. Instinctively I crouched in an attitude of self-defense and strained my ears to listen. My first impression was that there was someone in the room, probably the burglar. I hesitated about turning on the light. If he were armed it would give him all the advantage.

Breathlessly I listened. Once more there came three distinct raps, this time apparently from somewhere outside the room. I wondered if it had been sounds like these that had so terrified the old couple.

Perhaps it was the echo of someone pounding in another apartment, the noise being carried along by a water pipe. The thought that it might be the crackling of some hidden steam or refrigerating pipe suggested itself. Both these theories I rejected. The sound, whatever it was, had originated close at hand.

It came again. This time I was certain that it was not due to footfalls as I had at first conjectured. I was able, too, to locate more closely the direction from which it came. The window at the foot of the bed stood open, and the sound seemed to float in from somewhere outside. I hurried over to the window and thrust my head out. At first I could see nothing, but even as I looked a white arm

As I Read It I Stood There Aghast.

thrust forth from an adjacent window on the same floor. It held a riding crop and reaching out as far as was possible it rapped three times on the sill of my window.

It dawned on me at once that the window next must belong to the Bradford apartment. It must be Miss Bradford trying to signal to me.

"Hello," I called out softly.

"Oh, is that you, Mr. Nelson?" a relieved voice whispered. "I thought you would never hear. I must see you."

"Why didn't you phone me?"

"I couldn't. Someone might hear me."

"What's the matter?"

"I've had another letter."

"From those men in the park?"

"I suppose so."

"Tell me about it."

"I can't now. Can you meet me somewhere tomorrow?"

"Wherever you say."

"Do you ride?"

"Yes, indeed."

"I'll be in the cross lane that leads from McGowan's Pass tavern between eight and eight-thirty."

"I'll be there."

Whether or not she heard me I did not know. She withdrew quickly from the room as if someone had entered. I waited there in the window for a full hour in case she should wish to communicate with me again.

By and by the light in her window was extinguished, but even then I sat in a jubilant mood. I had quite forgiven Miss Bradford for cutting me when she met me in company with her mother and sister. It was enough for me to know that when trouble again threatened her she had decided to trust in me and had sought my aid.

I fell asleep at last and slept for I do not know how long. Opening my eyes in the darkness I seemed to feel the presence of someone in the room. There was the sound of footfalls somewhere—muffled, seemingly some distance off. I was almost certain I could detect muttered words. In a curious detached state of mind I listened, wondering whether I was awake or asleep. The footsteps seemed to come closer, then recede. The whispering noise ceased. I sprang up, and hastily lighting up all the rooms, explored them thoroughly. There was no evidence anywhere of anyone's presence. As I lay there thinking about it, I decided that my illusion must have been a dream, due to my thought of spirit rappings when I first had heard Miss Bradford's signal.

I was still thinking about my experience when I awoke early the next morning. Springing lightly out of bed, I stopped in utter bewilderment. There, in the center of the room on the floor lay a small white folded slip of paper. It could not have been a dream, after all. I had heard footsteps and whispers. I had not imagined it. Someone had been in the room while I slept. There was the proof, the note they had dropped.

Wondering if Miss Bradford had found still another unusual way of communicating with me I hastened to pick up the folded paper that lay on the floor. On the outside it bore my name, in typewriting, "Mr. Spalding Nelson."

With eager fingers I unfolded the paper, wondering what message it contained. As I read it, I stood there, aghast. It ran:

"Why didn't you tell the police about the pearls?"

CHAPTER IV.

I had twice traversed the cross lane near McGowan's Pass tavern waiting for Barbara Bradford. Although it had been my intention to ride thither I was amazed to learn on applying at two of the stables near the park entrance to hire a horse that the few they had there either were owned privately or had been already engaged.

There was nothing for me to do but to go to my rendezvous on foot. I had almost despaired of Miss Bradford's coming when I spied her cantering slowly along the lane, followed at a decorous distance by a groom. She was looking right and left and when she saw me her face brightened but she rode a few steps past me with no sign of recognition. I was wondering what to make of this new slight when she suddenly reined in and allowed the groom to come up with her.

"James," I heard her say to the groom, "my head aches, and the riding is making it worse. Take the horses back to the stable, and I will walk the rest of the way home."

"Very well, Miss Bradford," he said, touching his cap, as he assisted her to alight.

She waited until he had vanished and then hastened to the bench where I was seated, one I had purposely selected because it was half hidden by a turn in the road and the branches of a wide-spreading tree.

She colored vividly as I rose to greet her with outstretched hand.

"Oh, Mr. Nelson," she cried, "I don't know what you will think of me, asking you to meet me here. I am in trouble. I must tell someone. I don't know what to do!"

"The only thing to do," I suggested, "is to begin at the beginning and tell me the whole story. I've sisters of my own. Just pretend you are one of my sisters and let me help you."

She looked at me thoughtfully, studying me as if questioning whether or not I was to be trusted, and apparently deciding in the affirmative, told me an amazing story.

"It's all about my sister, Claire," she began. "She's five years older than I. She's a lovely girl, but she's—that is, she used to be—impulsive, romantic, and headstrong. She and my mother never got along well together, and she was sent away to boarding school. One winter, it was six years ago, mother was in Europe and only Dad and I were at home . . ."

She sighed sadly. Evidently her words were bringing back to her moments of heartache.

"To make a long story short, Claire ran away from the school and married—married a French chauffeur employed by a family in the neighborhood. She took me into her confidence a week later, and I—well, I told dad. There was a terrible time about it all. Dad found out that her husband was already married, had a wife and child right here in this city. He had the marriage annulled and managed to keep everything out of the papers. He threatened Claire's husband with prison and made him go back to France. Dad was simply wonderful. No one knew anything about Claire's escapade except ourselves, the principal of the school, and the judge down in Nassau county, who ordered the marriage annulled. Dad kept mother abroad until after it was all over, and to this day she never has heard a word about it."

"Your father must be a wonderful man," I said enthusiastically.

"He was," she said simply. "He has been dead two years."

"Oh, I'm so sorry," I cried, "I did not know."

"If Dad were alive he would know what to do. You see, when he died, there was not much money left. We're really little better than paupers. We've been living from day to day on our tiny capital, and Mother has been working every wire to arrange a good match for Claire. I wanted to do something, to go out and earn a living for myself, but she never would consent. She insisted I'd be damaging Claire's prospects if I went into trade, as she calls it, and I promised her I'd do nothing until after Claire is safely married."

"And is she to be married?" I asked.

A troubled expression came into her face.

"She was to be, but now I don't know. She is engaged to marry young Harry D. Thayer, who is worth a lot of money, but someone has found out about her secret."

"How did they find out?" I asked eagerly. I understood now the mysterious meeting in the park that had brought me first into touch with Barbara Bradford. Some band of rascals was trying to blackmail Claire Bradford, and her sister was trying to save her.

"That's the greatest mystery of all," exclaimed Miss Bradford. "Before Dad died he turned over to me all the papers about the annulment of Claire's marriage. Somehow he seemed to rely on me far more than on either Mother or Claire. He explained to me the importance of always keeping them, in case the past should ever crop up, but he charged me to see that they always were safely put away where no one could find them."

"Where did you keep them?" I asked.

"In the wall safe in my sitting room."

"In the wall safe!" I cried, thinking in bewilderment of the coincidence that these papers should have had a similar hiding place to the Gaston jewels which had vanished so strangely.

"Yes," she answered, plainly puzzled at my bewilderment. "It was an excellent hiding place. No one but myself had the combination. I don't see now who could have taken them. I found the safe locked as it always was."

"When did you first discover the papers were missing?"

"Let me see," she pondered. "Claire's engagement was announced at a dinner three weeks ago last Thursday. The newspapers on Sunday carried a brief notice of it. Two days later the first note came."

"What note?"

She reached into the pocket of her riding habit and drew forth a folded slip of paper.

"I brought it with me to show you; here, this is the first one."

Like the mysterious note I myself had received only the preceding night, this one was not inclosed in an envelope. It was just a folded slip, addressed in typewriting to "Miss Claire Bradford." On the other side was this message:

"What if Thayer knew about your being married before? How much will you give to get those papers back?"

"Where did you get this?" I asked.

"I found it on the floor of my bedroom one morning when I got up late. I gave it to my sister without having read it, thinking she had dropped it there. She read it and screamed and fainted. Fortunately Mother was out of the house at the time. Naturally I read the note then. I went to the safe and found the documents gone. Claire has been nearly crazy ever since. She insists that it is all my fault. She says I ought to have destroyed the papers, but I couldn't, could I?"

"Of course not," I replied warmly. "You did quite right in keeping them. It was not your fault they were stolen."

"I couldn't destroy them. Dad had told me to keep them," she said simply.

"What did you do then? Did you tell your mother?"

Barbara has heard the whispers, too.

(TO BE CONTINUED.)

Compensation in Age.

It is true that a poet wrote a famous hymn, "I Would Not Live Always," yet people are interested in living as long as they can, as that is one of the great laws of nature. Even advanced age, bringing dim sight, loss of hearing and general decline, is not without its compensations, and Longfellow proved that "age is opportunity no less than youth."

HEARTBURN Caused by Acid-Stomach

That bitter heartburn, belching, food-repeating, indigestion, bloat after eating—all are caused by acid-stomach. But they are only first symptoms—danger signals to warn you of awful troubles if not stopped. Headache, biliousness, rheumatism, sciatica, that tired, listless feeling, lack of energy, dizziness, insomnia, even cancer and ulcers of the intestines and many other ailments are traceable to ACID-STOMACH.

Thousands—yes, millions—of people who ought to be well and strong are mere weaklings because of acid-stomach. They really starve in the midst of plenty because they do not get enough strength and vitality from the food they eat.

Take EATONIC and give your stomach a chance to do its work right. Make it strong, cool, sweet and comfortable. EATONIC brings quick relief for heartburn, belching, indigestion and other stomach miseries. Improves digestion—helps you get full strength from your food. Thousands say EATONIC is the most wonderful stomach remedy in the world. Brought them relief when everything else failed.

Our best testimonial is what EATONIC will do for you. So get a big 50c box of EATONIC today from your druggist, use it five days—if you're not pleased, return it and get your money back.

EATONIC (FOR YOUR ACID-STOMACH)

GOV.-GENERAL OF PHILIPPINES FOR FREEDOM

Declares It Not Right That Freedom Should Longer Be Withheld.

By FRANCIS BURTON HARRISON, Governor-General of the Philippines (First Article.)

Gov. Gen. Harrison

My six years' experience as governor-general of the Philippine Islands have convinced me that the Filipino people are ready and fit to have their independence. I have recommended to Congress, as well as to the executive administration, that independence be granted.

As to the question of the stability of government, I wish to say to the American people upon my responsibility as the governor-general that in my opinion there exists today in the Philippine Islands a stable government, which I think should answer the requirements laid down by Presidents Grant and McKinley, and as I understand it, also by Mr. Root—namely, a government elected by the suffrage of the people, which is supported by the people, which is capable of maintaining order and of fulfilling its international obligations.

I am very glad to go on record as being entirely in sympathy with the aspirations of the Filipino nation for independence.

I have recommended to Congress that in granting independence some provision be made similar to what is known as the Platt amendment in the treaty with Cuba, which restricts the ability of the new republic in borrowing of foreign governments and also permits the United States to interfere with the affairs of the new republic in case conditions of disorder should be found to prevail. Such recommendation does not come as an expression of the views of the Filipinos; it is my own view of what would be desirable to secure a feeling of confidence and satisfaction on the part of all persons who have already invested money in the Philippines or who contemplate doing so in the near future.

But it is not right that independence itself should longer be delayed.

By temperament, by experience, by financial ability, in every way, the 11,000,000 Filipinos are entitled to be free from every government except of their own choice. They are intelligent enough to decide for themselves.

I have found the native Filipino official to be honest, efficient and as capable of administering executive positions as any men I have met anywhere in the world.

These officials are today governing 1,000 municipalities and forty-two provinces, economically, efficiently and for the good of the entire people. They have a native congress, including many graduates of Yale, Princeton, Harvard and other American universities. Other members are graduates of Santo Tomas and other Philippine universities, and in education and ability they compare favorably with any I know.

They have leaders like Speaker Osmena of the House of Representatives and President Quezon of the Senate who would adorn any office.

The Philippines are away ahead of the United States in successful government ownership and operation of public utilities.

The government took hold of the steam railways and made them pay a profit of 1,000,000 pesos a year more than under private ownership.

It took hold of the highways, and we have 7,000 miles of the best macadamized roads in the world. The Manila city government is about to take over the street railways and the gas and electric plants, while the territorial government is arranging for ownership and control of the coal supply.

The movement for independence is a peaceful one. No territory was more loyal to Uncle Sam during the war. It offered an armed and equipped division to our government, gave it a submarine destroyer and oversubscribed Liberty loans and Red Cross funds.

Two million natives speak English fluently, and there are 700,000 English speaking children in the public schools.

I am more than willing to retire if the Filipinos can be granted what they deserve—a government like that of the United States.

A MISREPRESENTED RACE.

The Filipino people are a much misrepresented race. The frequent publication of pictures of semi-naked Mindanao Moros and Igorotes has caused a great many Americans to believe they are typical of the inhabitants of the Philippines. Such is far from the case, however. Of 11,000,000 inhabitants of the islands, 10,500,000 are a Christian, civilized people with a culture and refinement that will compare very favorably with that of other nations. The Filipino women are exceptionally modest. A street flirtation in Manila, so far as a Filipino woman is concerned, is something that is almost unknown, as any American that has visited Manila will testify.

DAUGHTER OF AGUINALDO IN U. S. CAPITAL

She Meets Many Wives of American Statesmen and Makes a Hit.

When General Emilio Aguinaldo was leading the Filipino army against the American forces twenty years ago he probably little dreamed that some day a daughter of his would visit the city of Washington and would be given a great reception at the famous Congressional Club! And that the wives of 120 members of the American Congress and two wives of members of the President's cabinet would call upon her to pay their respects!

But all this actually happened when Miss Carmen Aguinaldo, his nineteen-year-old daughter, visited Washington recently. And those wives of the American statesmen expressed themselves as both charmed and surprised at the refined, tactful, college educated young miss who greeted them.

"Miss Aguinaldo was simply delightful," was the expression of one congressman's wife. "She was very modest, yet she acted so natural and thoroughly at home that she captivated everybody."

MISS CARMEN AGUINALDO, Daughter of the Former Leader of the Filipino Army.

On another occasion while in Washington Miss Aguinaldo was given a real ovation by a Filipino-American audience when she recited "My Last Farewell," poem of Dr. Jose Rizal, the Filipino martyr.

Miss Aguinaldo is a student at the University of Illinois, Urbana, Ill. While in Washington she was the guest of Mrs. Jaime C. deVeyra, wife of one of the resident commissioners from the Philippines. The Capitol building and the Congressional library appealed particularly to the young Filipina, while the beautiful sights from the Washington monument thrilled her with delight. When asked how she liked America, she smiled and answered:

"It is a wonderful country. I didn't like winter at first, but since I have learned how to skate I am having fine times. All the Americans whom I have met have been very good to me. My friends in Urbana and my classmates in the university are just lovely, but I cannot help feeling homesick at times because I am missing my father. My coming here was indeed a great sacrifice for him, for we are very close. He is so good to me."

Miss Aguinaldo is intensely patriotic. She does not conceal her resentment when she hears or reads of a misrepresentation of the Filipinos. "It is unfortunate," she once exclaimed in a voice full of sadness, "that my country and my people are hardly known, much less understood, by the people of America."

Politics is tabooed in any conversation with this Filipino maid. She evades the topic by replying that she is too young to express opinions on things political. "All I can say," she declares, "is that I share with my father in the desire for independence for my native land. There is no question about our being able to govern ourselves."

Filipinos declare Miss Aguinaldo has a "genuine Filipina temperament"—that is, she does not believe in the occidental custom of "dates" between young men and women. She does not see anything wrong in it, she says, but it is such a violent departure from the custom in the Philippines that she cannot adopt it.

"You might laugh at me," she said, "but I cannot go out with one single escort unchaperoned. I simply can't. I will go back to my country with the soul of a Filipina."

A newspaper in one of the large American cities that Miss Aguinaldo visited expressed the opinion that she would no doubt be greatly impressed by the sight of street cars and some of the fine residences she would see, but the truth is the young lady was raised in Manila, where she has seen an up-to-date street car system all her life.

Farmers' Service

The First National Bank offers service especially suited to the requirements of farmers during every season of the year. This undoubtedly accounts for the large patronage we are receiving from the farmers of this community.

We would be pleased to discuss service requirements with farmers desiring a helpful banking connection or present patrons who expect to increase their farm operations during the year.

STATE NEWS

Gleaned from many fields and summered for busy readers

Twenty-nine new bridges will be built in Marion county this year. Contracts totaling $35,000 have been let.

The Iowa State bank, Fort Madison's newest banking institution, with capitalization of $50,000, has opened its doors to the public.

The Ireton High school debating team won the northwest Iowa championship by defeating the Storm Lake team in the final debate at Ireton.

A total of $11,323,611 worth of farm lands and town property, all Story county real estate, had been filed for record with the county recorder at the end of the second week of the first of March period.

Contracts have been awarded in Marion county for the construction of twenty-nine bridges for $35,000. Prices are about 60 per cent higher than last year. But is about the lowest bid in Iowa this year. Bids ran as high as $48,000 on the work.

The best thirty ears of corn at the annual Polk county corn show brought $30 to its owner. It cost Marion Coppock of Ankeny $35 to buy back the bushel of prize corn which brought him first prize at the show. I. E. Proudfit of Altoona sold his bushel of corn for $18.

Allison, the county seat of Butler county is the smallest as to population in Iowa. Butler county has another distinction. It has a jail in the basement under the court house. During the year of 1919 there were but two occupants of that jail and these were but for a few days.

Congregational churches of Iowa will launch a drive for their quota of $3,000,000 to be raised this spring by the Congregational church in connection with the Congregational world movement. This movement provides for the raising of a fund of $50,000,000 during the five years of reconstruction period.

Approximately 31,000 head of cattle are now under government supervision for tubercular tests in Iowa. The cattle, which include 1,075 herds, are being tested by eight veterinarians in accordance with federal regulations for accredited herds. Winnebago county is in the lead for tested herds for 140 are now enrolled for supervision.

East Waterloo, having 163 farmers on 18,683 acres, makes a good showing in the Iowa farm crop statistics record for 1919. On these farms are 127 automobiles, nine tractors, four farm trucks. Down the capacious throats of 58 silos were crammed 5,398 tons of ensilage. In 17 homes are bathtubs, in 37 furnaces and in 15 electric lights.

These statistics are a few showing some of the more important items in the billion and a half crop Iowa had last year. Corn, $407,000,000; Spring wheat, 13,000,000; Winter wheat, 91,000,000; Hay (tame), $91,000,000; Alfalfa, $11,000,000; Dairy products, $113,000,000; Poultry, $85,000,000; Horses $133,000,000; Milch cows, $119,000,000; Swine, $226,000,000.

Iowa is right now in need of nearly a thousand farm laborers. Iowa farmers now want 377 married farm hands and 438 single men for farm work. About one-fourth of the counties of the state are yet to be heard from. Never before have the farmers been ready so early in March to take on farm help nor has there been such a large per cent, asking for married workers.

Tearing down of the north shore of Smith's island below LeClaire to secure the requisite width for the new government ship canal between the island and the Iowa shore has been commenced. This portion of the big reclamation project will be completed by this summer. A retaining wall will be erected along the north shore of the island, running westerly to join the dam at the lower end of the island, where the big locks will be located.

A good many Iowa farmers will be interested in a report from Webster City stating that Judge H. E. Fry has declared unconstitutional that part of the drainage act which seeks to empower a judge to fix drainage district boundaries. The section is 1989-a-36. The case in which the decision was made was brought by farmers in Hardin county, Alex McCoy and F. E. Baker, who asked the establishment of a drainage district by the judge. The supervisors of Hardin and Hamilton counties had disagreed and under Section 1989-a-36 the court was empowered to make the district. This Judge Fry says a court has no constitutional authority to do.

A big jump in the price of Iowa farm lands the past year is indicated by reports of the correspondents of the Iowa co-operative crop reporting service. The average value of poor plow lands March 1, 1920, was $157, compared with $129 a year ago; average of good plow lands, $157, compared with $196 a year ago. All farm lands with improvements on March 1, 1920, averaged $255, compared with $192 a year ago, and all farm lands without improvements were estimated at $205, compared with $156 a year ago.

The Iowa 2-cent fare will again go into effect, as soon as the railroads shall have passed what might be called the probationary period. That seems to be a sensible view. That's the way the layman would decide the matter if it were left to him. And it is probably the best for the railroads. The higher the fare, the fewer the passengers. The Iowan is no longer dependent upon the railroad. The auto will transport him just as quickly and traveling by auto is not any more discomfortable than riding in stuffy cars. If the railroad can carry the passengers for less money than the auto, it is going to get the business.

Sioux City as a center within a radius of 150 miles is the greatest live stock country on earth. 159 hogs were sold at an average of $510, aggregating $80,940.00. First fall sale in August brought $19,270, for 41 head averaging $470.00. The second sale was held in October. The offering of 34 head brought $18,830, an average of $554.00. The third sale held in January totalled $17,825. The 40 head averaged $440.00. The fourth sale which was held recently was a record breaker. The offering of 44 head brought $25,015, an average of nearly $570.00. The fifth sale will put the total over the $100,000 mark.

According to the report of the Iowa co-operative crop reporting service there was 40 per cent of the 1919 corn crop on farms March 1, 1920, or 116,400,000 bushels, compared with 131,468,000 bushels a year ago. The report indicates that 28 per cent has been and will be shipped out of the state. The quality of last year's crop was good, 96 per cent being merchantable. Approximately 39 per cent, or 76,511,000 bushels, of last year's oat crop was on farms March 1, 1920, compared with 103,307,000 bushels a year ago. 17 per cent of last year's wheat crop was on farms March 1, or 4,025,000 bushels, and 67 per cent has been and will be shipped out of the state. Last year Iowa produced 8,032,000 bushels of wheat.

Iowa scored again in her first of March settlements on land when 20,000 farms changed hands and there is no report of a financial wreck or a panic anywhere. Not only that, but land advanced from $10 to $25 per acre and it will not only stay there for a short time, but it will surely go higher. The admirable federal reserve currency system had a lot to do, of course, with the ease in which such a huge financial transaction was made possible, but the stability of Iowa land values also was a great help. Those who were fortunate enough to possess good Iowa land—and there is precious little of it that is not good—have something that will never decrease in value, but will grow in value every year.

From the annual report of the county agent and farm bureau work in Iowa an idea may be had of the improvement in the poultry business brought about by proper culling and selection. Meetings to the number of 1076 were held in 63 counties and were attended by 11,h54 people. Specialists culed 967 flocks and county agents culled 259 more flocks. The total number of birds in the flocks was 132,534 and from this number 50,697 hens were discarded, Records kept in each flock two and two weeks after culling showed that very few layers were discarded. The average 100 birds in the original flocks laid 22 eggs per day while the average 100 birds left after culling was 35 eggs per day. The original flocks therefore produced 29,157 eggs per day and after 50,697 hens had been thrown out they continued to lay 28,643 eggs per day. These figures show that the culling was 99 per cent efficient and that 50,183 non-producers were eliminated.

The largest barn in Iowa, is the barn on the J. Westrope farm, a few miles from Harlan. The barn was erected in the days when building material was cheap and 33 car loads of building stone was used in the basement of this immense barn The foundation wall is 10 feet high and covers a space of 84x64. The lower part is used as a cattle and horse barn, and 96 head of cattle can be comfortably accommodated without crowding. There are eight rows of stalls and a feed and litter alley for each row. In addition to the cattle sixteen head of horses can be taken care of along one end of the barn. One of the outstanding features of the foundation work is the fact that all rock used, was hand cut. From the top of the masonry wall to the peak of the roof is 65 feet. Enclosed under this big room is the granary, hay loft, machine shed, feed grinding room and repair shop. The grain bins are exceptionally large and built with chutes to the feed alleys below. The hay mow holds 500 tons of hay The place is lighted by artificial lights has 90 feet of hay track and 500 feet of litter track. Eight carpenters worked five months on the woodwork and three stayed five months longer to finish up the job. Recently reshingling had to be done and it took just 480,000 shingles for the job.

The seed corn situation as a whole in Iowa is very satisfactory but this does not mean that there will be no trouble with seed corn or that all of the corn will give a good strong germination. If anything, there is too much of a tendancy to believe that all of the corn matured thoroughly last fall and that late gathered seed does not need testing. Many are going to find to their sorrow that all of the corn gathered late for seed purposes during the husking time needs the individual ear test. This is especially true in the northern part of the state.

We have just received a

MOLINE UNIVERSAL Tractor

It solves the farm help problem!

One man controls both tractor and implement from seat of implement, and is so easy to handle a woman or boy can operate it. This tractor can be used for plowing, discing, planting, cultivating, etc. or can be used for belt work as filling silos etc.

We have also just received three carloads of Moline Rock Island and Hayes farm machinery of all kinds.

See the 9-16 Tractor on our floor which is fully equiped with self starter and electric lights.

DOCTOR ADVISED CHANGE OF CLIMATE

Run Down and Lungs Hurt—Stayed Home and Gained 22 Pounds.

"In November, 1911, I had a severe cold and la grippe, which left me with a bad cough. My lungs and shoulder blades hurt so I couldn't sleep and I finally had to give up my job and was ordered to change climate. In April, 1912, I began taking Milks Emulsion. On the second bottle I could see a change. My appetite was better and I commenced to gain strength and weight. Now (August 23, 1912) I have used 23 bottles, have increased 22 pounds in weight and believe I am permanently cured."—W. F. Bourland, Route 5, Wolf City, Texas.

Mr. Bourland was fortunate in commencing to use Milks Emulsion when he did. A run-down system invites disease. Milks Emulsion costs nothing to try.

Milks Emulsion is a pleasant, nutritive food and a corrective medicine. It restores healthy, natural bowel action, doing away with all need of pills and physics. It promotes appetite and quickly puts the digestive organs in shape to assimilate food. As a builder of flesh and strength Milks Emulsion is strongly recommended to those whom sickness has weakened, and is a powerful aid in resisting and repairing the effects of wasting diseases. Chronic stomach trouble and constipation are promptly relieved—usually in one day.

This is the only solid emulsion made, and so palatable that it is eaten with a spoon like ice cream. Truly wonderful for weak, sickly children.

No matter how severe your case, you are urged to try Milks Emulsion under this guarantee—Take six bottles home with you, use it according to directions, and if not satisfied with the results your money will be promptly refunded. Price 60c and $1.20 per bottle. The Milks Emulsion Co., Terre Haute, Ind. Sold by druggists everywhere.—Adv.

The Wrong Disease.

A Greencastle physician was approached by a patient who was in poor health. The patient explained his illness, and also the fact that he was not able to pay for the professional services at once, but would do so within a short time. He got the medical services and was improving nicely, in fact he had recovered sufficiently to go to work. The patient met the physician, who broached the subject of his fees. The patient said: "Well, doc, don't you know I was just talking to another doctor, and he told me you doctored me for the wrong thing, and I don't want to pay you for doctoring me for the wrong disease."—Indianapolis News.

IF BACK HURTS USE SALTS FOR KIDNEYS

Eat less meat if Kidneys feel like lead or Bladder bothers.

Most folks forget that the kidneys, like the bowels, get sluggish and clogged and need a flushing occasionally, else we have backache and dull misery in the kidney region, severe headaches, rheumatic twinges, torpid liver, acid stomach, sleeplessness and all sorts of bladder disorders.

You simply must keep your kidneys active and clean, and the moment you feel an ache or pain in the kidney region, get about four ounces of Jad Salts from any good drug store here, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and is harmless to flush clogged kidneys and stimulates them to normal activity. It also neutralizes the acids in the urine so it no longer irritates, thus ending bladder disorders.

Jad Salts is harmless; inexpensive; makes a delightful effervescent lithia-water drink which everybody should take now and then to keep the kidneys clean, thus avoiding serious complications.

A well-known local druggist says he sells lots of Jad Salts to folks who believe in overcoming kidney trouble while it is only trouble.—Adv.

Water on the Knee.

A certain man of rather a waggish disposition, contends that his wife has no imagination. At dinner one night he chanced to mention a tragic circumstance, which he had read in the evening paper on his way home. A passenger on a transatlantic steamer had fallen overboard in mid-ocean, and had never been seen again.

"Was he drowned?" asked the wife.

"Oh, no," answered the husband, "but he sprained his ankle, I believe!"

CREAM FOR CATARRH OPENS UP NOSTRILS

Tells How to Get Quick Relief From Head-Colds. It's Splendid!

In one minute your clogged nostrils will open, the air passages of your head will clear and you can breathe freely. No more hawking, snuffling, blowing, headache, dryness. No struggling for breath at night; your cold or catarrh will be gone.

Get a small bottle of Ely's Cream Balm from your druggist now. Apply a little of this fragrant, antiseptic, healing cream in your nostrils. It penetrates through every air passage of the head, soothes the inflamed or swollen mucous membrane and relief comes instantly.

It's just fine. Don't stay stuffed-up with a cold or nasty catarrh—Relief comes so quickly.—Adv.

"He-Rose."

A small boy was asked by the teacher to write an essay on heroes.

The boy promptly wrote the following:

"I put a tin tack on the chair. Father sat on it and 'he-rose.'"

HOG WALLOW IS OF IMPORTANCE

Sanitary Type Advocated by the United States Department of Agriculture.

ANIMALS SUFFER IN SUMMER

Provision Should Be Made for Intake and Outlet So That It Can Be Filled and Drained Often to Keep Clean and Fresh.

(Prepared by the United States Department of Agriculture.)

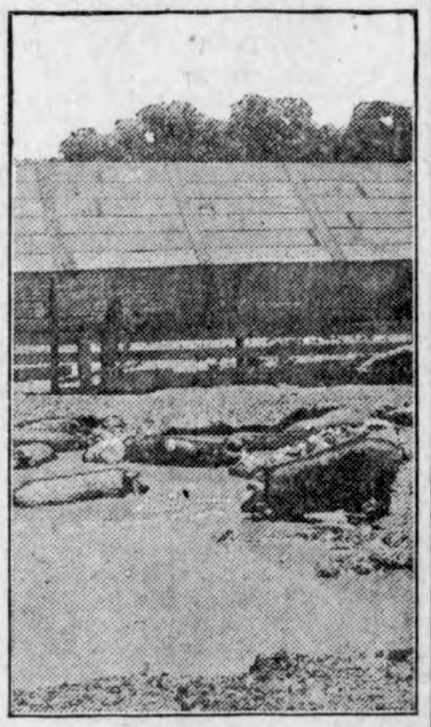
It is as natural for the hog to want to wallow as it is for the small boy to scurry to the old swimming hole with the first breath of spring. Hot weather is hard on fat animals, the portly porker included. That is why a well-made, sanitary hog wallow is like a Coney island bathing beach for the hogs. A popular and serviceable type of wallow advocated by the United States department of agriculture should be made of concrete about 12 inches in depth and large enough to accommodate the herd of hogs. The wallow should be supplied with a satisfactory intake and outlet so that it can be filled about two-thirds full of water and drained every few days, or as often as is necessary to keep the pool fresh and cleanly.

Face Two Extremes.

The hog grower in many of the leading pork producing states faces two temperature extremes during the year. During the winter, unless he provides comfortable houses and warm quarters, his hogs are likely to suffer from the cold, while in the summer season he must handle the animals under conditions of extreme heat. Any animal as fat as the average hog which is to be marketed in the late summer or early fall suffers greatly during hot weather, and unfortunately many hog farmers neglect to provide shelter and protection for their hogs from the extreme heat. During hot weather hogs need plenty of shade—natural shade such as is furnished by trees and bushes being the best.

Temporary Shelter.

Where natural shade and shelter are not available, the hog owner should put up a temporary shelter by building a framework about four feet high and thoroughly covering the top with brush, straw, grass or hay. This inexpensive sunshade should be of sufficient size to protect a herd of hogs in comfort as they lie under it. As a rule, the ordinary hog house should —not be used for shade purposes during the summer. Each year hog mortality is comparatively heavy due to "porker sunstroke" induced by maintaining the hogs in the open without sufficient protection from the ruddy glow of Old Sol's furnace.



Hog Cholera Thrives Under Such Conditions.

GROWING SOY BEANS IN CORN

Farmers Pleased With Results Obtained by Using Crops for Silage and Hogging Down.

The Iowa agricultural experiment station says that Iowa farmers who have been growing soy beans in corn for silage or hogging down, furnish almost conclusive proof of the value of the combination.

Some 800 farmers throughout the state co-operated with the experiment station in the growing of these crops. Over 700 of these men were well pleased with the results and said that they would use the combination of soy beans and corn more extensively in the future. More than half of the number of co-operators reported that the yield of corn was increased rather than decreased.

Statements such as "Didn't decrease corn yield," "Coming crop to mix with corn silage," "Very good crop," "Expect to plant beans with every hill of corn next year," were included in the farmers' reports to the experiment station.

Soy beans are high in protein content, and therefore the mixed silage is richer than corn silage. The corn yield is not decreased on soil of good fertility, and a yield of a little less than one-half a ton of soy beans per acre is received. These facts should make soy beans a popular crop.

DIFFERENT DISEASES OF SWEET POTATOES

Bulletin Just Issued Explains Fully Various Ailments.

Suggestions Are Made on Control or Prevention of Ills—Illustrations of Much Assistance in Identifying Troubles.

(Prepared by the United States Department of Agriculture.)

"Sweet Potato Diseases," a 26-page Farmers' Bulletin—No. 1059—just issued by the bureau of plant industry, and now available for distribution, explains in nontechnical language the character of various field diseases and storage rots which do much to menace the profitableness of sweet-potato crops of this country. Accompanying each description of a disease are suggestions as to how the disease may be controlled or prevented. The comments on the manner in which the various diseases are spread and the best methods of prevention are also of timely value. Supplementing the text are a number of illustrations which should be of assistance to the grower in identifying various field diseases and storage troubles. Stem rot, black rot, foot rot, Texas rot, scurf, leaf blight, and white rust are among the field diseases treated, while the list of storage rots discussed includes soft rot, ring rot, Java black rot, and charcoal rot.

Small Sweet Potato Plant With Characteristic Blackening of Underground Part of Stem.

The new bulletin is a revision of Farmers' Bulletin No. 714. It can be had by addressing the United States Department of Agriculture, Washington, D. C.

BEES LOST SEEKING POLLEN

Minnesota Expert Recommends Insects Be Not Liberated Until Food Supply Is Plentiful.

Bees sometimes get lost, says L. V. France of the beekeeping division at University farm, St. Paul. They do so on being turned out in the spring if they have to go far in search of pollen. Therefore, Mr. France urges that bees should not be given their freedom in April until there is plenty of pollen available on willows and soft maples close by.

If there is no pollen available outside the hives in April, or the weather is too bad for the bees to go out, the keeper should provide combs of pollen.

Among other things suggested by Mr. France for bees just given their freedom are these:

Clean water in a warm nook in the bee yard.

Food enough to last until May 20 in the form of sugar, sirup, or combs of honey saved from the previous year.

Protection against cold weather until May 15 or 20 by wrapping each hive with several thicknesses of heavy wrapping or building paper.

Prevention of robbing by reducing size of entrances.

OVERHAUL FARM IMPLEMENTS

Matter of Economy to Inspect Various Machines and Make All Necessary Repairs.

It will be found a matter of economy on every farm to go over the various machines and implements, making a careful inspection of the need for repairs. Incidentally, it will be found advisable to slap some good oil paint on all exposed surfaces of metal or wood. Costs of implements of all kinds are high and a little time spent in overhauling in advance of the season of use may mean extending the life of a machine for several seasons.

AMOUNT OF LAND FOR FRUIT

Acre Makes Good Garden, but Trees May Be Set About Back Yard and Along Fences.

An acre makes a good fruit garden, but if so much land cannot be devoted to the growing of fruit, trees set about the back yard and along the fences would give good returns for the time and labor expended upon them.

DAIRY

CHANGING COWS TO PASTURE

Caution Must Be Observed to Avoid Drop in Flow of Milk—Reduce Grain Gradually.

(Prepared by the United States Department of Agriculture.)

Farmers welcome the season when dairy cattle can be turned on pasture, as they feel that the heavy expense of winter feeding is over, and expect that during the late spring and early summer months the cows will reach their maximum flow of milk at a minimum cost. This is true within certain limits, but caution must be observed in making the change from dry feed to pasture conditions. The change should not be made too early in the spring, nor too abruptly, especially in the case of cows that are producing a relatively high flow of milk and that have been fed liberally during the winter. Unless the change is made gradually there will be a decided drop in the flow of milk.

Pasture grasses in the early spring are immature and contain a high percentage of water and but a small amount of dry matter. This makes it physically impossible for cows producing a large amount of milk to eat enough of such grass to supply the necessary amount of nutrients. The cows should be allowed on pasture only a few hours a day and the grain ration should be reduced gradually. After the change has been made cows which are producing only an average amount of milk and butterfat will find a sufficient supply of feed on good pasture. High producers, however, will require some grain throughout the season. While direct results may not show immediately it is the general consensus of opinion that cows are brought to a better body condition and are likely to maintain their flow of milk longer during the balance of the lactation period if they receive some grain. Three to five pounds daily of grain, such as a mixture of oats, bran, and corn or barley, may be used to supplement pasture.

GREATEST PROFIT FROM COWS

Difficult for Some Owners to Realize That Greatest Returns Come From Good Feed.

Records of cow testing associations go to show that it is the well fed cow that returns the greatest profit. "It would be advisable often for the man who is milking ten cows to sell two of them and give all the feed to the rest," says J. B. Fitch, head of the dairy department at the Kansas State Agricultural college.

"It requires a long time for some cattle owners to realize that it is profitable to feed a cow well. It is a fact, that the average cow requires one half of her ration to maintain her body and that only the part of the ration above that required for her maintenance can go into the production of milk, as the cow's share is taken out of the ration first.

The Kind of Cow That Pays.

"It is obvious that, after supplying a cow with her maintenance, not to give her all the feed she will use in producing milk would be an unprofitable practice."

DAIRY COWS RELISH SILAGE

Not a Complete Feed Because of Its Bulk, Moisture and Lack of Mineral Matter.

Silage has been found to be particularly well adapted to the feeding of dairy cattle, but it is not a complete feed because of its bulk, its high moisture content and its lack of protein and mineral matter. In combination with silage one should feed some alfalfa or clover hay and in addition a well-balanced grain ration.

THRIFTY GROWTH OF HEIFERS

Daily Average Gain of Young Animal Should Be Close to One Pound Up to Calving Time.

If fed so as to induce a thrifty growth, yet not produce fat, dairy heifers will gain on an average close to one pound daily from the age of six months up to two years or calving time.

A WELL-KNOWN INSTITUTE

Probably no institution in America is more widely known than Dr. Pierce's Invalids' Hotel in Buffalo, N. Y. Although established many years ago it is today a modern sanitarium having all the latest facilities for correct diagnosis of diseases and successful treatment through medicine or surgery.

It was Dr. Pierce, its founder, who over 50 years ago gave to the world that wonderful stomach tonic and blood purifier, "Golden Medical Discovery," and that famous non-alcoholic medicine for women, "Favorite Prescription."

In his early professional career Dr. Pierce realized that every family, especially those who live remote from a physician, should have at hand some instructive book that would teach them something about First Aid, Physiology, Anatomy, Hygiene; how to recognize different diseases, how to care for the sick, what to do in case of accident or sudden sickness, etc., etc. He published that great book, the "Medical Adviser," an up-to-date edition of which can be procured by sending 21 cents to Doctor Pierce's Invalids' Hotel in Buffalo, N. Y.

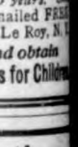
Later, Dr. Pierce added another feature to his chain of good works by establishing a bureau of correspondence to which any one can write for medical advice, without any expense whatever, and if necessary, medicines especially prepared in Doctor Pierce's Laboratory will be sent by parcel post or express for use at home, at a reasonable cost. Thus those who have symptoms of disease need not suffer mental agony, fearing that they have some serious ailment, but can have a diagnosis made free by a physician of high professional standing. Write to Dr. Pierce relating your symptoms if you want medical advice for any chronic disease. All letters regarded as confidential.

Children Who Are Sick

When your child cries at night, tosses restlessly in its sleep, is constipated, feverish or has symptoms of worms, you are worried. Mothers who value their own comfort and the welfare of their children should never be without a box of

Mother Gray's Sweet Powders for Children

for use throughout the season. They tend to Break up Colds, relieve Feverishness, Constipation, Teething Disorders, move and regulate the Bowels and destroy Worms. These powders are pleasant to take and easy for parents to give. They cleanse the stomach, act on the Liver and give healthful sleep by regulating the child's system.



Trade Mark

Used by mothers for over 30 years. Sold by all druggists. Sample mailed FREE. Address, Mother Gray Co., Le Roy, N. Y.

Benefit of Silence.

"I don't see your name in the paper quite so often as it used to be, senator."

"No," replied the senator. "I think it just as well not to inform the public of my whereabouts. When I don't actually know where I am it is natural for them to believe that I am busy working for their interests."

An Exception.

"They say Mrs. Bump's table is a weak point."

"Not if you judge it by the bill she puts on it."

BACK ACHING?

That "bad back" is probably due to weak kidneys, a trouble that often follows grip, cold, or overwork. It starts in constant, dull, throbbing backache or sharp twinges when stooping or lifting. You have headaches, too, dizzy spells, a tired, nervous feeling and irregular kidney action. Don't neglect it. Use Doan's Kidney Pills. Thousands have saved themselves serious kidney ills by timely use of Doan's. Ask *your neighbor!*

An Iowa Case

Peter Van Rees, retired, 1009 Columbus St., Pella, Iowa, says: "For three days I couldn't even walk or bend over. I had such pains in the small of my back and when I would move the least bit, sharp pains would cut through my kidneys; they felt like knife-stabs. I had heard about Doan's Kidney Pills and after using part of a box, I felt better. The pains left my back and it felt strong again. I have not been bothered since."

FAMOUS BOWERY IS NO MORE

Prohibition and General Good Things Responsible for Disappearance of Its Oldtime Characteristics.

New York's old-time Bowery is no more. No final rites have marked its passage, nor has the last requiem been sung, but of recent months the change has been progressing swiftly and noticeably.

Only old-timers can remember the "Tub of Blood" and other famous dives, but now even the modern hangouts are disappearing one by one before the advent of national prohibition.

Most potent of the changes in America's former driftway of human wreckage is the virtual disappearance of the "Bowery bum." A newspaper feature writer recently sojourned on the street for a time, and he reported that the "bums" are now almost all at least casual workers, and that "cash," or a sizable roll of the "long green," abounds.

Accommodating.

"Will you do me a favor?" asked the shabby-looking visitor.

"No, I won't," growled Mr. Grumpson. "I presume you want money."

"Well, I'd be glad to do you a favor," replied the visitor as he edged toward the door. "I'd be so tickled to get as your pallbearer that I'd even provide my own white gloves."—Birmingham Age-Herald.

NOT SO HARD TO UNDERSTAND

After Experience With Truthful Parent, Teacher Got Great Light on Johnny's Case.

A teacher who believed in co-operating with the parents of her pupils called at the house of a small boy whom she had caught in a number of falsehoods in order to take counsel with his mother.

"I can't see how you can say that," the boy's mother objected. "John never tells me lies. I'm mighty particular about it myself. He's out in the yard now. Annie," she said to his small sister, "you go out and tell him to come right in this minute!"

Annie went, but in a few minutes she returned without the small prevaricator. "He won't come," she announced proudly. "He says he won't."

"Did you tell him who was here?" inquired his mother.

Annie shook her head.

"All right," said the truthful parent. "Go back and tell him his grandmother is here and has some candy for him. That'll bring him!"—Youth's Companion.

Real Signs.

"Is that a baby squall which is coming up?" "I guess so from the way the boat is rocking."

Applause has made fools of more men than criticism.

Home Town Helps

PAYS TO BUILD BIRD HOUSES

Feathered Songsters, Through Their Destruction of Insects, Increase Yield of Farm.

Birds are desirable to have about the premises, not only on account of their beauty and song but because of their economic worth. The little feathered songsters are especially useful as insect destroyers during the breeding period, when they have to work early and late to obtain sufficient food for their nestlings. One way to increase the number making your property their summer home is to put out feathers, bits of wool and twine during the nest-building season for the birds to use in building their habitations. Another way is to build safe retreats for them in which they can rear their young comfortably. Most of the houses will be occupied year after year. In fact, no attraction for summer birds is more effectual than plenty of houses suited to the needs and habits of the various kinds of house birds. During idle hours the construction of a few of these bird dwellings is fascinating and useful work.

Farmers' Bulletin 609, prepared by the United States bureau of biological survey, gives clear working directions, with illustrations, for a large number of bird houses—both of the single and apartment house variety. This bulletin may be had free by writing the department of agriculture, Washington.

TOWN RUN ON BUSINESS LINES

Municipal Departments of Lakewood, O., Work Through Mayor's Office—Makes for Co-Operation.

From his military training in the Spanish-American war and his business training since, Mayor Louis E. Hill of Lakewood has adopted methods which he believes are novel in municipal affairs.

The idea, the mayor says, is to keep him in direct touch with all municipal problems and works and to bring about greater co-operation between heads of departments in a business administration.

Army correspondence procedure governs all communications between heads of departments. A letter between departments goes first through the hands of the mayor, who forwards it to its destination. It is answered by indorsement on the original letter and returned, again through the mayor's office, to the writer.

Every Tuesday morning at ten o'clock the mayor holds a conference with all department heads, at which every phase of each department's work is discussed.—Cleveland Plain Dealer.

MAKE WAR ON THE BARBERRY

Any Number of Substitutes for Shrub Which Is One of Farmer's Worst Enemies.

Landscape gardeners are recommending substitutes for the common barberry, a host of the black stem rust of wheat which causes enormous losses each year to the wheat crop.

Where a purple variety is desired in the shrubbery border, the purple-leaved plum may be substituted, according to P. H. Elwood, Jr., assistant professor of landscape architecture at the Ohio State university. This may also be used as a high background mass or as specimen tree groups on the lawn. The purple hazel may also be used as an accent of color in the shrubbery mass.

Many other shrubs can be used where the common barberry has or would have been planted, such as the five-leaved angelica, red-twigged dogwood, pink weigelia, winged euonymus, white kerria and high bush cranberry.

The common barberry must go, and the sooner we make up our minds to it the better. Root it out, and put something else in its place, and soon its absence will be forgotten.

Plant Memorial Trees.

While various kinds of memorials are being erected for our departed soldiers, none is more simple and more appropriate than the tree, which will be a living emblem of the remembrance of a grateful people to those who gave their lives upon the altar of their country. Statues and monuments after a few years may come to look cheap, and they may be meaningless to the next generation, but in the memorial tree nature will assist man in keeping fresh and green the memory of American heroes.

His Consideration.

"Looky yur, Gap," chided a friend. "What in thunder made you tell your wife you'd be home from the spanking dead shore by nine o'clock, when you know good and well it won't let out until half past ten or 'leven?"

"She always begins to worry about me as soon as she thinks it's about time for me to show up," replied Gap Johnson of Rumpus Ridge. "So I figgered I'd give her plenty of time to worry. My wife is like all the rest of the women; she hain't happy unless she's pestering about nuth'n."—Kansas City Star.

Garfield Tea stimulates the liver, corrects constipation, cleanses the system and rids the blood of impurities. All druggists. —Adv.

Facts for Sick Women

Reliable Information

All American women know of the great success of Lydia E. Pinkham's Vegetable Compound in restoring to health women who suffered from ailments peculiar to their sex, yet there are some who are skeptical and do not realize that all that is claimed for it is absolutely true—if they did, our laboratory would not be half large enough to supply the demand, though today it is the largest in the country used for the manufacture of one particular medicine.

The Facts contained in the following two letters should prove of benefit to many women:

Buffalo, N. Y.—"I suffered with organic inflammation and displacement. When lifting I had such pain and bearing down that I was not able to stand up, and it hurt me to walk or go up or down stairs. I was going to a doctor without any results and he said the safest thing would be to have an operation. I met a lady who told me she had three operations and was not well until she took Lydia E. Pinkham's Vegetable Compound.

I felt relief after taking two bottles of Vegetable Compound and I kept on with it until I was cured. I always use Lydia E. Pinkham's Liver Pills and they are fine. Everything used to turn sour on my stomach and the Liver Pills relieved that."—Mrs. A. Rogers, 593 Fargo Avenue, Buffalo, N. Y.

Sacramento, Calif.—"I had organic trouble and had such terrible pain and swelling in the lower part of my side that I could not stand on my feet or even let the bed clothes touch my side. I gave up my work thinking I would not be able to go back for months. My mother advised me to take Lydia E. Pinkham's Vegetable Compound as it had saved her life at one time, and it put me in a wonderful condition in a couple of weeks, so I can keep on working. I work in a department store and have to stand on my feet all day and I do not have any more pains. I surely recommend your Vegetable Compound to all my friends and you may use these facts as a testimonial."—Bertha J. Parker, 3320 M St., Sacramento, Calif.

The fact is, the Best Medicine for Women is

IS 700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of ear corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us about it.

MARNE MEMORIAL POSTER

JUST as the school children of France gave for their country's gift to the United States—the Statue of Liberty—so will American school children contribute "one cent and upward" for "America's Gift to France," a monumental statue by Frederick MacMonnies, the noted American sculptor. Mr. MacMonnies is contributing his services toward the monument which, it is estimated, will cost $250,000.

The poster shown herewith, is by Albert Sterner, noted American portrait painter. It typifies the tribute which this country will pay to the French through the Marne monument. The poster will be displayed in cities, towns, and villages, and will designate many of the places where contributions may be made during the week of March 22—a free-will offering, in which numbers of contributors, rather than size of contributions, will be sought from school children and others.

Contributions are now being received at National Headquarters, 150 Nassau street, New York, by Charles H. Sabin, president of one of New York's largest trust companies, who is treasurer of the fund.

The memorial will be erected at Meaux, on the Marne, and will rival in size and grandeur of design the Statue of Liberty.

Pretty New York School Girl Helps Spread Appeal for Pennies for "America's Gift to France."

FIRST METHODIST CHURCH

Easter services Sunday morning at 10 o'clock.

Sunday School at the close of the morning service at 11 o'clock.

Epworth League service Sunday night. The church choir will have charge of the League services and will render Easter music.

Preaching service Sunday night at 8:00 o'clock.

GRANDMA JOSTEN PASSES AWAY

Monday Grandma Josten passed away at the age of eighty-one years, she being that age on her last birthday, March 4th. Funeral services were held from the Reform Church yesterday afternoon. Obituary will be published in next week's issue of the Times.

POLITICAL ADVERTISEMENTS

1-22-tf. J. E. WICHMAN

I hereby announce myself a candidate for the office of Sheriff for Hancock County, subject to the decision of the voters at the June, 1920, primaries.

1-29-p. E. PECK HANSON

I hereby announce myself a candidate for the office of sheriff of Hancock county, subject to the decision of the Republican voters of said county, at the Primary election to be held in June.

W. C. ZIESEMER,
Garner, Iowa

1-22-tf

I hereby announce myself a candidate for re-election for Supervisor, subject to the will of the Republican voters at June Primary.

G. B. LAWHORN

I am a candidate for re-election, subject to the will of Republican voters at Primary Election next.

Very truly yours,
Chris Jacobs, Auditor

I hereby announce myself a candidate for the office of State Representative from Hancock County, subject to the decision of the Republican Voters of said County, at the June 1920, Primaries.

Dated at Britt, Iowa, this 26th day of January, 1920.

E. P. Healy

ANOTHER VITAL QUESTION WHICH MUST SOON BE SOLVED HERE

A town can only go on a few years and then must come a standstill, both in community spirit of building new homes and a limit to business possibilities unless this standstill is avoided by further improvements. The great community machinery gradually wears away until the wheels come to a standstill and the machine is stopped unless a "mechanic" comes to its assistance and makes the necessary repairs and oils up the machine for another run.

The above may be likened to any town. For instance there is Garner, our near neighbor. Their machine began to wear out and run down and needed fixing up. They saw what was coming and got right busy to mend the machine and install new parts and now they are running to beat the band. They have put in an $85,000 sewer system, they have let the contract for some ninety blocks of paving. Others have gotten the spirit and now they are putting up new buildings. They have come to a great awakening and have started a boom. We can find many other towns that are doing the same and that brings us to the question, "What is Klemme doing to keep the community machinery in motion?"

Klemme needs a sewr, we need it worse than any other town in the state, and it is time that this question be brought before the people of Klemme, the mayor and the council. Every town in the state should have sewerage and there should be a law enacted to have sewerage put in every town in the United States as a safe guard to health and cleanliness.

Sewerage will come some time and now is the time when it should come before more new buildings are erected. Cess pools, septic tanks and out door toilts are a menace to public health and should be done away with, for they are breeding places for deadly diseases no matter how clean they may be kept. Let's boost for a sewer for Klemme and put it through, for a time may come when the State Board of Health may see fit to do it for us. It is a serious proposition, but it is only a question of time before we will be compelled to put in sewerage.

Other improvements will follow, but sewerage must come first.

MESERVEY WANTS LIGHT

Will someone please throw a little beam of light on Meservey? Some time ago the town put up bonds to have an electric line run to their little city but there seems to be "a nigger in the wood pile" somewhere and they still are in the dark. The editor is putting up a good scrap with the mayor and town council to see if he can't budge them on to take some action in getting the lights into Meservey. Stick to it brother and give them h—l until they come clean.

Washington Honored While Alive.

Washington was the only American whose birthday was publicly celebrated while he still lived. February 22 was quite widely observed while he was president.

More Local

Quite a number of people were attracted by the nice weather Sunday to take a little joy ride. They soon turned back and headed for home when heavy clouds rolled up in the wset.

Fred Becker is putting up a fine set of buildings on the land one and a half miles east of town. The improvements consist of a fine large house, a big barn, and other buildings. Now when we consider that Fred is yet a single man, and this being leap year, we are beginning to thik that perhaps we will be able to add some more to this news item in the near future.

A lively contest is taking place at the M. E. church between the young people's class and the adults class in Sunday School attendance. So far we believe the young people are some in the lead but the adults are hard after them to "snow them under" if hey can. Next Sunday will see the finish of the race and both sides are working hard to capture the honor of having the largest attendance.

"Zip" McCullough, the barber, has added a Ford Coupe to his possessions and gave the car a try out Monday night when he and Clarence Bachman headed for Belmond. They struck a nice little camouflaged mud puddle which they mistook for paving with the result that the rear axle of the car broke in trying to back out of the hole. However ,"Zip" will be seen in his "sheeny show case" in a few days and we will bump him for a ride. Now "Zip" please remember this is leap year and many beautiful maidens cast longing glances on a young man with a car. Beware!

We wot mention the man's name, but we heard a peach of a joke on him the other day. A certain gentleman who moved to Klemme a few weeks ago is the owner of a dog. Now the city requires that animals with four legs, wag their tails and bark, must have a license tag. So Mr.—— was required to plunk down a dollar for Fido's guarantee of life. When the said dog owner looked at his receipt for the license he discovered that it was only good until May 1st this year and then he would have to dig up another dollar to save the dog's life for another year. Of course he (the man) pawed the air considerable and wanted the dollar back, but nothing doing. The town got the dollar, the dog the tag and the man the receipt. The city hads thank him for the donation.

Ralph Blank and family, of Dows, spent Sunday with his folks here. Ralph has been road master on this line for several months now but he says that the first of April he will have to step back a notch and take over his old job as yard foreman at Estherville. Since the railroads have gone back to private ownership they are again putting back their old men on the better jobs and so Ralph will have to await his turn again. He says it is tough luck but can't be helped. He has made good while on the job as road master and was well liked all along the line and his many friends hope that he will soon be promoted to the position again. The man who was road master before Ralph was promoted has been re-instated by the company and he will again hold the position. Ralph also holds the honor of being the youngest man who has ever held the position of road master on the Rock Island road.

GARNER RE-ELECTS OLD COUNCIL AND MAYOR

Monday a big battle was staged at Garner when the old mayor and council were up for re-election and were opposed by the "conservative gang." The old council and mayor however gave them a good trimming and Garner will still progress under their able management.

SPECIAL OFFER DES MOINES CAPITAL

When r young girl has words with her father over the frequent appearances of some one young man, and she calls dad a horrid, cross, old bear, you may be sure there is trouble a-bruin.

OBITUARY

Ella Louise Runge, daughter of M and Mrs. Henry Runge, was born N vember 15th, 1897, near Klemm Iowa, and died at the age of 22 ye and four months, at the paren home, March 21st, 1920. The cau of her death was influenza follow by pneumonia.

Ella was endowed with a stro body and no one expected that dea would so soon overtake her. All th skillful doctors and loving han could do was done to save her life b all efforts proved of no avail befo the grim messenger of Death, and Sunday night at nine o'clock sh uieqtly and peacefully closed her ey and slumbered into the Great Beyo where sorrow and pain are fore unknown. Ella was a member of th Methodist Episcopal church in Li erty township. She leaves to mou her early death her father, mothe one brother, besides many other atives and friends

Funeral services were conducted the family home on Tuesday af noon. As her pastor, Rev .A. Meyer was not able to lead the s vices on account of sickness, R Wm. Koerner conducted the servic and interment was made in Liber township cemetery.

LIVE STOCK SHIPMENTS TUR ED BACK

Saturday there were seven loads of live stock shipped from Klemme yards for Chicago. stock was all shipped by the farme as the local buyers did not ship stock out last week. On accoun the stockyard men at Chicago be on a strike, the railroads could get the stock through so they w sent back to the places from wh they were shipped from. Two spec trains came through Klemme Sund which brought back the seven cars stock that had been shipped out night before. This will be quite a l to the farmers as the shrinkage v great. The cattle are now back in hands of the farmers. Stock tra which had nearly reached Chica were forced to turn back with stock as they had no other way dispose of it. Now the question m arise, who is responsible for the l to the owners of the cattle? The o way we can figure it out is to bla he nine hundred men who caused strike.

IDLE HOUR RUNNING FINE PICTURES

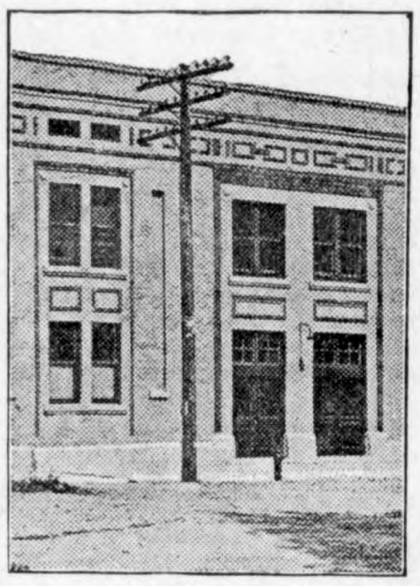
HOME TOWN HELPS

PLACE FOR THE RURAL CLUB

Comparatively New Idea in Community Life Has Proved Its Worth. and Movement Is Spreading.

American rural and village life is experiencing a new era of neighborliness. It began a score of years ago, but received its greatest impetus during and since the war. Well-housed rural clubs—something almost unheard of a few years ago—are springing up all over the country. Because they mean so much to their neighborhoods, and because this neighborhood movement contains so much of promise for the 50,000,000 Americans who live in the country or in villages of less than 2,500, the United States department of agriculture has sent representatives to learn first-hand the history of nearly 300 of these clubhouses. The results of this investigation have been published in a bulletin, "Rural Community Buildings in the United States," which can be had by addressing a request to the United States Department of Agriculture, Washington.

The majority of the structures visited were erected by popular subscription or by the sale of stock in a community organization. In some cases the projects were financed by local manufacturing concerns. Other buildings were the gifts of public-spirited



Entrance to Social Hall, Hyrum, Utah.

individuals. A few were erected by public funds raised through taxation or the sale of bonds. In all cases the structures are the centers of a great variety of wholesome activities such as communities without central meeting places cannot enjoy. One evening a building may be used for a basketball game, the next night for a neighborhood dance, later in the week for a political gathering, and on Sunday for union church services or union Sunday school. Any rural or semi-rural district interested in erecting a clubhouse—whether it is to cost $2,000 or $50,000—is expected to find helpful suggestions in this publication.

Many of the simpler structures, located in the open country, contain an auditorium with movable seats which permit it to be transformed into a dining room, an athletic room or a dance hall. Usually, also, there is a stage and a well-equipped kitchen. These features make possible banquets and entertainments which mean much in the life of rural communities. In the clubhouses in smaller towns, in addition to the rooms mentioned, there are often a library, a reading room, a women's rest room, and a

Neighborhood Hall and Post Office, Amherst, Mass.

meeting place for various organizations.

The clubhouses in the county seats and larger towns are more pretentious, some having special banquet rooms, gymnasiums, swimming pools, billiard rooms, and offices for the county agent and for local commercial club secretaries. The following is a partial list of the varied uses to which these buildings are put: Lectures, night-school classes, home-talent entertainments, dances, banquets, socials, political meetings, elections, indoor athletic games, welfare work, boys' and girls' club work, domestic science classes and demonstrations, agricultural society meetings, farmers' institues, and co-operative purchasing and marketing activities.

Funds for maintenance are secured through one or several of the following: Dues, rental fees, assessments, receipts from entertainments, from dances, from moving pictures, from pool and billiards, and, in the case of publicly constructed buildings, from the public treasury.

1. Fighting in the streets of Berlin. 2. Street scene at Freeport, Ill., where the Ohio river overflowed its banks. 3. General Von Luettwitz, commander of the forces wihch temporarily overthrew the Ebert government in Germany.

NEWS REVIEW OF CURRENT EVENTS

German Revolution a Mystery, the Undercurrents of Which Are a World Puzzle.

CHAOS SEEMS TO PREVAIL

How It Affects Treaty Status—Minnesota Primary and Presidential Race —Allies Under Milne Occupy Constantinople—Mexico and Her Presidential Timber.

By E. F. CLIPSON.

Although Germany has occupied an eminence conspicuous in the center of the stage of world events during the week and considerable light has arisen from the conflagration raging within her borders, much mystery rules as to the true state of affairs. Dark areas exist which the spotlights of anxious international interest and the telescopes of publicity cannot penetrate. One thing certain is that the revolution instigated by Kapp, Luettwitz and others with Kapp as self-appointed dictator, has been overthrown after five days of hectic, febrile existence. The active agent in bringing about this speedy demise was a general strike of workmen centered in Berlin.

Whether the offspring of militaristic designs, an effort to administer oxygen to the gasping hopes of royalty, a cunning machination of bolshevism, or a deeply laid plot involving all parties to muddy the waters of international affairs and so defeat the terms of the peace treaty as affecting Germany, is not yet evident and may not be clear for a long time. At any rate, the revolution appears to have been a feeble child. When the railroad workers quit, and also those of the public utilities including gas, water and electricity, the life-giving and distributive facilities ceased. A lustier infant could have lasted longer, but eventually would have succumbed.

Has the Ebert government been mere camouflage? Ebert seems to have known what was impending and at the first sound of alarm deserted Berlin after calling upon the proletariat to support him by the strike. Earlier advices indicated that Noske, his minister of defense, the man who has recently been proclaiming his acceptance of the principles of the treaty and his determination to help work them out, had an understanding with the revolutionaries. Time alone will demonstrate the truth or falsity of this indication. With the Russian, Turkish and eastern situations what they are, added to the complications of the Adriatic situation and the internal affairs of France and England, it would seem to be a fairly opportune time for Germany to stage a muddling and distracting demonstration. There are elements aplenty in Germany committed to such intentions. That which now seems likely is that the various groups could not work together harmoniously. Ludendorff was in Moscow intriguing with Lenine and Trotsky, a case indeed of politics making strange bedfellows. At home there was a movement, if Ebert and his followers could be rendered sufficiently complaisant, to set up Hindenburg as a candidate for president. Notwithstanding that Ludendorff, the embodiment of reactionism, was flirting with the personification of advanced radicalism, and Hindenburg's supporters were endeavoring to make friends with the socialistic adherents of Ebert, a reactionary undercurrent was prevalent throughout all the plotting. If the revolution went off half cocked, as seems fairly evident, it was due to human nature and the impossibility of combining antagonistic elements and soothing individual ambitions. Throughout the whole affair there has been deceit, subterfuge and recrimination, a heritage from the teachings of kultur; proving that German leaders cannot be honest with each other and can scarcely face their own visages in a looking glass.

Out of the whole mess has come the renewed menace of bolshevism. Harnessmaker Ebert is the one figure in Germany who carries any indications of influence and strength on the side of law and order. He ordered the strike and it remains to be seen whether or not he can control it. Just now it looks as though he might have created a Frankenstein destined to crush him and throw his nation—perhaps the whole of Europe—into chaos. Soviets have been proclaimed in certain places in Germany. It is true that these manifestations are confined largely to Saxony and other industrial centers where radicalism has been strongest. Ebert has confidence in his military resources and in the sober inclinations of the people; thoroughly sick of war, anxious to heal internal troubles and get back to work. The optimistic announcement comes from his government that the present rioting and communistic demonstrations will be controlled as easily as were the Spartacide outbreaks. Observers who have been warning that a renewal of war in Europe was imminent and that it needed but a spark, are firm in the belief that the spark has been applied.

Meanwhile the kaiser in his Holland retreat, is sawing wood literally. The erstwhile crown prince is reported running around in circles alternately buoyed and depressed by the course of events. Holland has doubled the guards surrounding the residences of the two. Firm in her determination not to abate the right of sanctuary to which she claims they are entitled, she also seems equally disposed not to permit them to escape or to become active participants in any of the affairs of the disturbed area.

What of the treaty status in America? Many there are who are contending that delay in ratifying the instrument has contributed to present conditions. Others are equally firm in the assertion that the German imbroglio shows the wisdom of the delay. Their position is that if we had not been cautious we would at this minute have been in the heart of a great world mix-up.

At any rate the situation and the discussion evoked caused a showdown and galvanized the senate into action. William J. Bryan entered the treaty fight at the eleventh hour on the side of compromise. His position was that his party could not go before the country in the next campaign on an issue on the president's view of the treaty and our obligations under it.

A startling incident in connection with the late treaty struggle was the adoption by the senate of a resolution committing the United States to sympathy for the cause of Irish independence, introduced by Senator Gerry of Rhode Island, as a reservation to the treaty, the resolution stated that the United States adheres to the principle of self-determination and sympathizes with the aspirations of the Irish people for a government of their own choice, and that when such government is attained, it should promptly be admitted as a member of the League of Nations. The action was not merely a reaffirmation of the resolution of sympathy passed last June, the difference being that in the latest resolution a specific mention is made of the principle of self-determination and the United States is placed on record by the senate as favoring the application of that principle to Ireland. Although there has been continual agitation for an expression regarding Irish independence, it was not thought that the senate in view of present relations with Great Britain would go so far and take such unequivocal action. The first vote in committee of the whole was close, being 38 to 36. Afterwards it was readopted by the senate by a vote of 45 in favor of adoption to 38 opposed.

Opposition was keen, Senator Thomas of Colorado endeavoring to secure an amendment expressing the wish of the senate that Japan should by the same token at once restore independence to Korea. Senator Townsend of Michigan and Williams of Mississippi attacked the proposition relating to Ireland and all the proposed amendments as being nothing but politics.

In the race for presidential nominations the Minnesota primary furnished a test of strength and a new basis for forming theories. Unless verified returns change the figures Wood will be shown to have carried every county in the state but two. His lead appears to be 50 per cent over his nearest competitor, Senator Johnson, with nearly four times as many votes as Lowden, although Minnesota is the native state of the Illinois governor. This disposes of a prediction that a soldier candidate would be defeated in an agricultural state, which though traditionally Republican, President Wilson almost carried in 1916, the claim being made that the "kept us out of war" issue contributed largely to his strength.

Much significance is also attached to the comparatively large vote in the primary for Herbert Hoover, whose name it was necessary to paste or write upon the ballot. It is taken as an evidence of his strength with independent Republicans. The Wood forces regard the Minnesota result as an augury of success in the South Dakota primary.

Mr. Bryan has announced himself in favor of primary instructions while Mr. McAdoo is against them. The former thinks that general opposition to instructions savors of reaction against the primary system. Incidentally, Bryan makes it clear that he is not a candidate for the Democratic nomination, neither is he running away from it. His attitude seems to be that he is not seeking it, but that the nomination may do all the seeking it wants in his direction.

In pursuance of plans to stop massacres and enforce upon Turkey fulfillment of the terms of the peace treaty, Constantinople was occupied by allied forces under Gen. Sir George F. Milne of the British army. The ancient city returns to Christian control for the first time in nearly five centuries. This long anticipated military demonstration was accomplished with but slight resistance. At the war office an exchange of shots occurred in which two British soldiers were killed and four wounded. Nine Turks were killed. The city which has withstood so many sieges and been the grave of so many expeditions sent against it, has never before in history surrendered so quietly. The allied high commission has announced that in the occupation there was no intention to permanently destroy the Sultan's authority or deprive the Turks of the city.

President Deschanel and Premier Millerand of France have united to oppose misconceptions concerning that country which they fear are forming in the United States. Deschanel hastens to combat the charge that France is either militaristic or imperialistic. He points out that having a German pistol aimed at her heart, she wishes to protect herself and must have the co-operation of England and America. Millerand says that no misunderstandings must be allowed to mar our relations. He also touches on economic conditions and states that France will pay every debt; that she is asking time, not pity; help, not alms.

Mexico continues to be a point of most absorbing interest. As a problem it will soon call for something like definite settlement. In the present condition of the world, the dearth of materials, especially minerals, oil and foodstuffs, this natural treasure house must be opened. Just how it is to be accomplished is not exactly evident. America and American interests have been listening to the claims of rival candidates for direction of affairs in that country. Obregon has put forth a statement of his qualifications, plainly implying that he is the only man who has the ability to grapple with the problems of that disturbed nation and restore it to tranquility or at least comparative safety for agricultural and industrial pursuits. There is a familiar sound to his assertions, just like those of others who have aspired to the task and failed signally.

An impasse may be reached which will prevent complete ratification of the suffrage amendment in time for women to vote in the presidential primaries this year. Suffragists pin their hopes on the action of the Vermont legislature, but even if it should be favorable delay is likely through the action of at least one state which has been not entirely favorable to the amendment. In Ohio, where it was submitted to a referendum, the actual decision is still in doubt, and the case is now awaiting dispositoin by the supreme court. Thirty-five states have ratified the amendment, and the same action by but one more is needed to make it effective. If the Ohio case is decided adversely, then it will be necessary for both Vermont and Connecticut to ratify before it can become law.

HANDS ACROSS

By GRACE R. RILEY.

(©, 1920, by McClure Newspaper Syndicate.)

The electric fan hummed monotonously; the bookkeeper's pen scratched unceasingly; even the keys under the stenographer's fingers were momentarily still, when the door suddenly opened and a voice boomed through the silence:

"Is Duncan Pratt in?"

The office force became rigid, alert.

"Your name, please," a clerk inquired.

"Norman Dodge of Dodge, Ltd., London."

A comprehensive glance flashed from one to the other. Dodge, their largest competitor!

Mr. Pratt's door opened and a striking young woman, tall and slender, with a regal carriage, whose bronze hair in sunlight turned to gold, summoned the stranger within. What occurred there no one knew; but in a short time he emerged, muttering in a testy voice:

"You'll regret your decision, Pratt!"

As he drove away from the building his brain plotted the downfall of Pratt & Co. He forgot the war had so undermined the once impregnable solidity of his house that he was driven to Duncan Pratt to reinstate his business to its former financial standing. His car halted abruptly; his chauffer leaped from the motor and lifted an unconscious girl from the pavement. Without looking at her, Mr. Dodge ordered that she be taken in his car to the hospital.

His days were crowded. His brain was constantly revolving the problem of Pratt's refusal. A week passed before he again visited the hospital, where he learned that Patient 36 was doing well and would like to see him. She sat in a chair by the window; the sun on her hair turning it to gold.

"How do you do, Mr. Dodge?"

With a great effort he managed to say something agreeable, but his mind and his speech had no connection whatsoever. For an hour they chatted pleasantly. When departing he touched lightly upon their first meeting.

"Now that I have run down his secretary, Mr. Pratt will be even more obdurate on my proposal—"

"Please don't think that. I intend you shall be friends some day."

Every day Norman Dodge spent an hour with "Miss 36," as she insisted upon being called, and finally she was able to ride with him.

"I am going home tomorrow, Mr. Dodge. Next Sunday will you dine with us?"

"Where is your home?"

He was surprised when she gave him an address in the heart of Boston's most exclusive center.

"I'll be there."

When Sunday came he was elated as a college boy. Never had he met a girl like this one, and he knew the impression was to be a lasting one. The girl's home was of solid brown stone.

"Miss 36 is an anomaly—her character and appearance belong to this beautiful house, yet she is one of the toilers of the world," he thought, as he waited for her in a room whose rich simplicity bespoke not only money, but good taste.

"Mr. Dodge," she came in with hand extended, "father will be here directly, so let's be frivolous while we may before you become immersed in business. Father lives and moves and has his being in business, and the only chance I ever have of seeing him is at his office."

"What's that, daughter?"

Norman Dodge turned at the voice.

"This man her father! It could not be!"

He found himself greeting Duncan Pratt. His daughter left them alone.

"Dodge," said Mr. Pratt, "since we last talked business, your chauffeur has accomplished that which was absolutely beyond you. In running down my daughter, he has brought us together. In business—you will pardon my frankness—you had cut my throat as often as possible. I would have retaliated, but the great Dodge, Ltd. was beyond my reach. Then the war—the great leveler—brought you within my grasp and I meant to crush you. When you had this accident, your treatment of a girl whom you supposed to be poor, made a strong appeal, and my daughter, whom I prize more than she can ever know, has made a stronger. She insists, and I agree if you do, that we must be friends."

Norman Dodge took the hand extended to him. "I gladly agree."

"Then shall we go further—let us reconsider the matter which brought you to my office. If details can be arranged, shall we clasp hands across the sea?"

"Wait a moment, you two—I am coming into this hand-holding campaign." Natalie Pratt came back into the room. "I think the combination should include me, too." She looked from one to the other, the dimples coming and going, a blush coloring her cheeks.

"Mr. Pratt, can you open your heart still further and accept me as a son? I love your daughter, and—"

"She loves you, and you mighty well know it!" interpolated Natalie.

"Dodge, since I declined to go with Natalie into society, Natalie insisted upon going with me into business. You will do well in acquiring her head as well as her heart. We will have a combine that can't be beaten!" said her father, as he clasped their hands in his own.

YOU'LL SOON LOOK OLD FROM HERE

Let "Danderine" check that dandruff and stop hair falling.

Get a small bottle of "Danderine" any drug store for a few cents, pour little into your hand and rub well the scalp with the finger tips, morning most, if not all, of this scurf will have disappeared. Two three applications often remove bit of dandruff and stop falling Every hair on scalp shortly shows life, vigor, brightness, thickness color.—Adv.

STATE NEWS

Gleaned from many fields and summered for busy readers

Fourteen spray rings, covering 270 orchards in Benton county and representing 11,000 trees have been formed in the county.

Iowa automobile owners, with half the number of cars, pay approximately as much tax as is paid in the state of New York, with four times Iowa's population.

One of the largest real estate deals that has occurred in Benton county lately, was the sale of the Frank Harmon farm southwest of Garrison. The farm consists of 240 acres and sold for $400 per acre or $96,000.

At a special election held in Webster city a proposition to bond the city in the sum of $75,000 for the purchase of the gas plant to be operated as a municipal institution, carried. The vote was 599 for the proposition and 82 against.

More than 1500 interested Iowa farmers and buyers were in attendance at the big horse sale held in Cedar Falls recently, when James Loonan & Son disposed of 55 Percheron mares at good prices. Eighteen states were represented at the sale.

Argentine buyers are after Iowa's fine stock. Hargrove & Arnold of Norwalk, have just sold four Holstein cattle to Argentine stock raisers at $5,000. The same firm has sold one animal to Pennsylvania buyers at $2,000 and one to Vermont buyers.

The Iowa is a pedigreed variety of white oats bred at the Iowa experiment station and distributed for co-operative tests throughout the state last year for the first time. In 52 tests where it was compared with Iowa 103 it averaged 5.26 bushels more to the acre than Iowa 103. This new variety grows a few inches taller and is four or five days later than Iowa 103.

The State Bank of Deep River has purchased a handsome loving cup which it will present to the Poweshiek County Declamatory association, to be used by the association as a trophy to be striven for at the contests. The cup will remain the property of the association and will be striven for each year, the school winning being honored by having its name engraved thereon.

A. J. Magnus of Muscatine was elected president of the Iowa Laundry Owners Association. Other officers are H. M. Wetlaufer, Oelwein, vice president; W. C. Martin, Des Moines, secretary; A. L. Brooks, Ft. Dodge, treasurer; H. L. Wilson, Des Moines, sergeant-at-arms. G. R. Spensley of Waterloo, the retiring preisdent, was chosen advisory member of the National Association.

How Iowa is enriching the coffers of Uncle Sam is shown by the report of the Bureau of Internal Revenue. Income and profit taxes paid in Iowa between Jan. 1 and March 20 totaled $8,804,358.05. As these payments, in most instances, constitute but one-fourth of the total to be paid, it is estimated that Iowa during the calendar year will conribute $35,217,432.20 to the national treasury.

Six district contests are to be held at Orange City, Fort Dodge, Waterloo, Iowa City, Albia and Shenandoah in the statewide Extemporaneous speaking contest which is being conducted under the auspices of the Iowa Patriotic League and the Iowa Extemporaneous Speaking League. Winners of the district contests will come to the University of Iowa sometime in April to speak for the state championship.

In order that hundreds of acres of rich agricultural land may be saved from devastation, farmers living in the extreme north part of Iowa, in Allamakee county, are interesting themselves in the straightening of the Iowa River. Each year floods have caused thousands of dollars worth of damage to crops of farmers whose land borders on the stream, and they have determined to stop this immense loss. The estimated cost of the project will be about $60,000, and about 2000 acres of rich Iowa land will be directly benefited by the change at a cost of about $27 an acre.

Fire at Norwalk, destroyed two buildings and damaged several others, resulting in an estimated loss of nearly $25,000. Two hundred citizens battled the blaze. Volunteers were called and a bucket brigade was formed. The Jacobc' Merchandise building, a brick structure, and the Methodist Parsonage, were totally destroyed. The A. Easter Dry Goods store was partially destroyed and other buildings were slightly damaged.

Several Iowa breeders have recently purchased purebred Duroc sows in Maryland and South Dakota, the animals costing $2,500. The fair association in Mahaska county will sell $100,000 worth of stock to improve and enlarge the fair.

Black Hawk county, thru an organization, is the first in the state to buy, operate and maintain one of the most modern and up-to-date movie picture outfits under the auspices of the county, Y. M. C. A.. Thus Black Hawk is given credit for another "brand new idea".

While the demand in the spring for heavy horses is always higher than in the other seasons, the past few months have shown sales beyond expectations, especially for city uses. The Sioux City market, which is one of the largest horse markets in the United States, sold nearly 24,000 horses in 1919 and since December they have surpassed the average figures.

There is plenty of good corn in Cedar county of the best feeding quality and it is selling at $1.35 a bushel. Much corn throughout the State has been moving, some going to market, while in other cases it has been bought by local feeders. The supply of corn is larger than it would be if farmers were feeding a normal amount of cattle, which has not been the case this winter.

A course in philanthropy and social service work will be added to the curriculum at Drake University next fall. Opening of the new courses are contingent on securing the entire $2,000,000 endowment fund now being solicited by the school. Drake authorities, however, think the amount will be raised by next fall in time to permit enrollment of students in these classes when school reopens.

There were 491 fires in Iowa in February this year, involving a loss of $536,031 or an average loss of $1,091, as compared to 387 fires in the same month a year ago and 370 fires in February, 1918. The February loss last year was $469,666, or an average of $1,020 per fire, and in 1918 the loss was $394,959, or an average of $1,067. In January this year there were 731 fires in the state, involving a total loss of $799,045, or an average loss of $1,106. The losses in January, 1919, totaled $760,712, from 517 fires, or an average loss of $1,471. In 1918 there were 688 fires, with a total loss of $617,324 or an average loss of $897.

Hamilton county wool growers marketed last year 23,369 pounds of wool at an average price of 35 cents per pound. Two methods of marketing wool were tried out. At Webster City and adjoining territory, the wool was shipped through the Iowa Fleece Wool Growers Association, for which an average price of 56 cents per pound was obtained for 5369 pounds. This method had the disadvantage or waiting for the returns, but had it not been for this possibility of marketing it would not have been possible for the sheep men to receive the price to which the local market finally raised and the price which was received for the wool sold to the highest bidder, delivered at Stratford.

R. O. Hazen, well known Polled Hereford breeder of Iowa, who has fed Polled Herefords for 14 years, says that the future success of the Iowa feeders of pure bred live stock will depend on how carefully the owner feeds his stock. Mr. Hazen says that he feeds alfalfa, bran, corn and oats in great quantities. "The feeding of young calves is one of the essentials of the pure bred business. A growing ration will give plenty of size in latter years. Let the calves run with their dam until close to the time of her next calf. If necessary to supply plenty of milk give the calf another nurse cow. Alfalfa, bran and oats from the bulk of the ration. Corn is fattening and is limited in the calf ration.

When Kelley's contingent of Coxey's army arrived in Iowa from the west in 1894, there was considerable apprehension lest an outbreak of lawlessness might result, and to prevent this a number of State military organizations were called out. In an article on the militia of Iowa, in the "Iowa Journal of History and Politics," Mr. Upton quotes the Adjutant General's report of 1895 to the effect that, in that connection, "the first practical use of bicycle corps for military purposes in the United States was made in the transmission of intelligence by couriers from the commanding officers at Chautauque to the Adjutant-General at the transfer depot, by means of which the Adjutant-General was fully informed at all times of the movements of the army and troops."

Fifteen years ago a baby was born in Ocheyedan, Osceola county and given the name of Carl Jess. For three years he was cared for by a mother who did the best she could for the development of the child under circumstances most cruel. The baby was permitted to grow up in ognorance and treated as a slave. Perhaps in every county in Iowa a family may be found living in such a condition as found in this incident. Why will a civilized community tolerate such a condition? If the authorities had been notified by the neighbors of this particular instance of brutality and neglect, it is possible that Carl might have been placed in a home somewhere and given proper training and develop like all children should. Claus Jess might still be alive and a boy would not be forced to look back and realize the enormity of a crime of which he is not responsible.

Truck crop irrigation projects in Iowa are on the increase. Muscatine island has 1150 acres under irrigation. This land is used for intensified truck farming which is successful.

F. W. Johnson, superintendent of the schools at Cherokee, was made president of the Northwest Iowa Teachers association at the closing session of the annual convention held in Sioux City. Other officers are: Miss Carrie Duran, Algona, secretary; J. E. Fitzgerald, Sioux City, treasurer.

We have just received a

MOLINE UNIVERSAL Tractor

It solves the farm help problem!

One man controls both tractor and implement from seat of implement, and is so easy to handle a woman or boy can operate it. This tractor can be used for plowing, discing, planting, cultivating, etc. or can be used for belt work as filling silos etc.

We have also just received three carloads of Moline Rock Island and Hayes farm machinery of all kinds.

See the 9-16 Tractor on our floor which is fully equiped with self starter and electric lights.

WESTERN CANADA Farm Lands at Low Prices in the Wheat Belt of America

MODERN YOUTH HARD TO TRAP

Little Near-Tragedy Story That Is an Example of His Quick Wit and Duplicity.

Of course, he shouldn't have done it, and all that sort of thing, but both Hazel and Betty were charming girls, and it was summertime, and he was young, and he had gone and got himself engaged to both of them. He was sitting on the beach pondering the various problems this situation presented, when two soft hands were laid lightly over his eyes and a soft voice whispered at the back of his head "Guess who?"

Now, the voices of Hazel and Betty were much alike, too much alike when heard as a whisper to make identification sure. And it didn't help any when the voice cooed—"I'll give you a hint—it's some one you told you loved."

Still he hesitated, his mind in a whirl. Should he name either girl and chance it? Already he felt a cooling of the air, as the voice continued: "Well, if that doesn't tell you who—"

"Of course I know who it is!" he exclaimed. "It is the prettiest, sweetest, dearest, smartest little girl in all the world!"

"Oh, you dear old boy!" she chirped in satisfied delight. "How did you really know for sure it was I?"

Crusty Comment.

"We all think the baby has got its mother's nose."

"I'm glad to hear it. Then she can't go around any more poking it into other people's business."

Adam must have been swift-footed, inasmuch as he was first in the human race.

Safety First.

Mrs. Smith and her daughter attended the movie. On entering they found it very dark. The daughter, taking the lead, found seats No. 2 and 3, about midway in the balcony. The man in seat No. 1 stood up to let the two pass, and when they had entered the row the mother thought she was falling and reached her hand forward to catch herself. The man, still standing, said to the mother: "Lady, you have your hand on that man's head."

Drawing her hand back with surprise, she turned to the speaker and said: "Oh, I thought it was a post, for it shone like that post up there."

After seating herself she addressed her daughter in a loud voice, and said: "I put my hand right on that man's head," pointing to a man in the row below. Much laughter followed and many lost interest in the rest of the film.

The Contrary Sex.

"How would you answer the objection to equal suffrage that every woman would think and vote just as her husband does?"

"That the user of that argument was not a married man."

California's Fruit Crops.

In the year ending August 31, 1919, California fruit growers marketed 10,904,892 boxes of oranges, 3,708,667 boxes of lemons and 203,188 boxes of grapefruit.

Alarming Symptoms.

"There is something meretricious about Maude."

"Goodness gracious! Is it ketchin'?"

Never judge the size of a woman's foot by the price she pays for shoes.

The Satisfying Sweetness of the wheat and barley food

Grape-Nuts

is a matter of economy as well as delight these days. *Grape-Nuts* pleases without the addition of sugar, as is not the case with most cereals.

Grape-Nuts is economical

BIG OBJECT IN PRUNING TREES

Assists Development of Strong Framework for Support of Wood and Fruit.

SHOOT GROWTH IS BIG HELP

Choice Given to Secure Best Possible Distribution From Viewpoint of Training—Prune Young Tree Very Severely.

One of the main objects in pruning young trees is to assist in the development of a strong framework for the later support of fruiting wood and fruit, says V. R. Gardner of the University of Missouri College of Agriculture in Circular 90. It is desirable that this framework be developed as quickly as is compatible with a proper maturing or ripening of the wood in the fall. The main scaffold limbs and their branches which go to form the framework of the tree are developed from shoots. That is, in the young apple tree the shoots of one season become the limbs of the next season. Consequently any practice which promotes a strong, vigorous shoot growth in the young tree is a direct aid in building its framework. It is a well-established fact that comparatively heavy pruning is a great stimulant to shoot growth, a stimulant in the sense of causing larger and stronger, though fewer shoots. In other words, while heavy pruning does not cause the tree to produce more total shoot growth, it reduces the number of new shoots and those which do grow are correspondingly longer and stockier. In the very young trees we expect to retain only a few shoots, enough to form the main scaffold limbs and their branches, and we want these to be as strong and vigorous as possible. Hence we desire only a few to form, perhaps twice as many as we wish to retain, thus giving us a choice in order to secure their best possible distribution from the viewpoint of training.

Three-Year-Old Peach Tree Pruned for Full Crop.

Prune Severely.

In the case of the tree a little older (three or four years), we expect to retain a larger number and also a larger proportion of the shoots because then we are developing the branches and sub-branches of the scaffold limbs; and we still want enough shoots produced so that some choice may be made between them. With these general considerations in view it becomes evident that the very young tree should be pruned severely, but as it becomes older and larger pruning decreases in severity. It is impracticable to attempt to reduce this general principle to a definite rule to be followed with all trees. Good judgment should be exercised in its interpretation. However, it may be a kind of a guide to some to state that the amount of pruning to be given after the first year's growth in the orchard should in average cases remove perhaps three-fourths of the shoot growth of the preceding year; the second pruning should remove perhaps two-thirds of the shoot growth of the second season; the third pruning should remove a half to two-thirds of the shoot growth of the third season, and the fourth pruning probably should remove something less than a half of the shoot growth of the fourth season. Pruning the fifth and sixth seasons should be somewhat less severe.

Heading Back and Thinning.

When it is suggested that the first pruning should remove approximately three-fourths of the shoot growth made by the tree during its first year in the orchard, this does not mean that three-fourths of all the shoots should be cut out of the tree. Probably a third to a half should be removed, and the remainder cut back to a half or a third, or in some cases a quarter, of their length. In other words, the pruning should consist partly in a thinning out and partly in a heading back. The same statements hold for the pruning of trees a little older, except that as the trees become older relatively more of the pruning should consist in thinning out and correspondingly less in heading back.

WINNING BATTLE ON DISEASE OF POTATO

Wart Has Been for Long Time Destructive in Europe.

Specialists of Department of Agriculture Announce That Infected Field or Garden Can Be Thoroughly Disinfected.

(Prepared by the United States Department of Agriculture.)

In the war against the potato wart the United States has done in less than two years what other countries had not succeeded in doing in decades. Wart has been for a long time a destructive disease of potatoes in Europe, and the belief always was that once a garden or field became infected there was no way of eradicating it. An infected area, even when no potatoes were planted in it for a number of years, would show the disease still virulent when again planted to potatoes. The potato wart disease was discovered last year in gardens in some small mining towns in Pennsylvania. The United States Department of Agriculture quarantined the infected areas and the specialists of the department began experiments in control. They have now announced that a field or garden infected with potato wart can be thoroughly disinfected by the use of steam and formaldehyde. The cost of the work, however, is high, and it will be used only when absolutely necessary in cleaning up the infected areas.

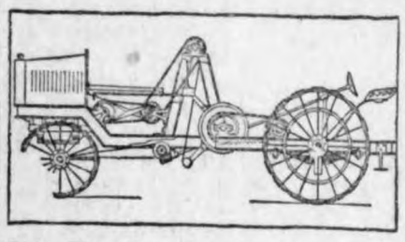
The investigators of the department, who have worked in co-operation with the state authorities of Pennsylvania and West Virginia, have also discovered varieties of potato that are immune to the wart disease, and steps are being taken to assist gardeners in the infected regions to purchase varieties of seed known to be immune. The department specialists now believe that further losses from the disease can be practically eliminated.

MECHANISM IS TRACTOR AID

Particularly Applicable Where Rear Axle Is Driven From Motor Mounted at Front.

The Scientific American in illustrating and describing a driving mechanism for tractors, the invention of L. M. Yaggy of Bowman, N. D., says:

This invention is applicable to tractors generally and more particularly to a tractor in which the rear axle is driven from a motor mounted on the tractor at the front. A specific object is to provide a drive means in which ratchet mechanism in driving connection with the driven axle is actuated from the motor by driving means including a system of belts and belt-means controlled by the movement of ratchet levers.



Side Elevation of a Tractor Embodying the Invention.

LIVE STOCK FAVORS CARROTS

Succulence and Juices Possess Dietary Value That Should Not Be Ignored in Feeding.

Carrots for horses are a splendid feed when cereals, such as corn and oats are fed. The good secured is really more than the nutrient suggests. The succulence and juices contained in carrots possess a dietary value that should not be ignored in feeding live stock.

SCRATCH-FEED FOR POULTRY

Mixture of Cracked Corn, Wheat, Oats, Speltz and Barley Gives Fowls Needed Variety.

A good scratch feed for chickens to be fed in deep litter, straw, hay or shredded corn stover, should be composed of a number of farm grains, as cracked corn, wheat, oats, speltz or barley. This mixture gives a variety and each hen can eat the grain she likes best.

MAKE CHICKEN MANURE TALK

Dry It Up Now by Scattering Plaster or Road Dust Over It to Conserve Ammonia.

If you want the chicken manure to talk crops next year, make it dry up now. Scatter plaster, road dust or sifted coal ashes over it as taken from the henhouse. This will hold the ammonia, which is the tongue of growing crops.

RAISING AND FEEDING KEATS

Young Guineas Are Much Less Worry Than Turkey Poults—They Make Rapid Growth.

Keats, or young guineas, are much less trouble to rear than turkey poults. They are so nimble that they generally get out of harm's way instead of into it. Given a clean, dry situation and suitable food, keats make rapid growth.

STOMACH TORTURE GONE FIRST SLEEP IN THREE MONTHS

Mr. Heinricks Was Ready to Give Up. Then He Found How to Regain Health.

"My first sleep in 3 months was on the second night after I began using Milks Emulsion. I had had a bad case of stomach trouble and constipation for years and was ready to give up. I was troubled with gas, dizziness, bloat after eating, gnawing sensation and cramps in the stomach. Milks Emulsion was a Godsend to me, and I want everyone to know about a medicine that will cure cases like mine."—C. E. Heinricks, 702 S. Alabama St., Indianapolis, Ind.

Thousands of sufferers from catarrh of the stomach, indigestion and bowel troubles have found that Milks Emulsion gives prompt relief and real lasting benefit.

Milks Emulsion is a pleasant, nutritive food and a corrective medicine. It restores healthy, natural bowel action, doing away with all need of pills and physics. It promotes appetite and quickly puts the digestive organs in shape to assimilate food. As a builder of flesh and strength Milks Emulsion is strongly recommended to those whom sickness has weakened, and is a powerful aid in resisting and repairing the effects of wasting diseases. Chronic stomach trouble and constipation are promptly relieved—usually in one day.

This is the only solid emulsion made, and so palatable that it is eaten with a spoon like ice cream.

No matter how severe your case, you are urged to try Milks Emulsion under this guarantee—Take six bottles home with you, use it according to directions, and if not satisfied with the results your money will be promptly refunded. Price 60c and $1.20 per bottle. The Milks Emulsion Co., Terre Haute, Ind. Sold by druggists everywhere.—Adv.

Kindness.

When the Brazen Hussy moved into the house next door, the "Uplifter" said: "Of course, I can't exactly call. But if she comes out on her veranda to sit, I shall smile at her. The only way to get a hold on people like that is to be friendly."

And the Brazen Hussy looked at the "Uplifter" next door and said to herself: "Poor fright! I suppose I might as well speak to her. Perhaps after a little she will let me show her how to do her hair."—Life.

"CALIFORNIA FIG SYRUP" IS CHILD'S LAXATIVE

Look at tongue! Remove poisons from stomach, liver and bowels.

Accept "California" Syrup of Figs only—look for the name California on the package, then you are sure your child is having the best and most harmless laxative or physic for the little stomach, liver and bowels. Children love its delicious fruity taste. Full directions for child's dose on each bottle. Give it without fear.

Mother! You must say "California."—Adv.

Too Much for Her.

Four-year-old Harold was going away on a visit. His mother had been giving him final instructions in table etiquette and the general importance of being polite.

His six-year-old sister listened with increasing disdain. Finally, unable to bear it any longer, she said:

"Now, mother, if Harold's going up there to act a d—n sissy, I'm not going."—Home Sector.

TAKE ASPIRIN RIGHT

Bayer Company, who introduced Aspirin in 1900, give proper directions.

To get quick relief follow carefully the safe and proper directions in each unbroken package of "Bayer Tablets of Aspirin." This package is plainly stamped with the safety "Bayer Cross."

The "Bayer Cross" means the genuine, world-famous Aspirin, prescribed by physicians for over eighteen years.

"Bayer Tablets of Aspirin" can be taken safely for Colds, Headache, Toothache, Earache, Neuralgia, Lumbago, Rheumatism, Joint Pains, Neuritis, and Pain generally.

Handy tin boxes of 12 tablets cost but a few cents. Druggists also sell larger "Bayer" packages. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.—Adv.

How Her Husband Felt.

"Has my husband appeared to miss me during the month I have been away, Mary?"

"Well, ma'am, at first he seemed in very high spirits, but toward the end of the time he became less cheerful, and yesterday, ma'am, he was just miserable."—New York Evening Post.

Says an amateur poultry fancier: "The only money in chickens is what they swallow."

Youth doesn't value its youth, and even a million in later years has its disappointment.

OPEN NOSTRILS! END COLD OR CATARRH

How to Get Relief When Head and Nose Are Stuffed Up.

Count fifty. Your cold in head or catarh disappears. Your clogged nostrils will open, the air passages of your head will clear and you can breathe freely. No more snuffling, hawking, mucous discharge, dryness or headache, no struggling for breath at night.

Get a small bottle of Ely's Cream Balm from your druggist and apply a little of this fragrant antiseptic cream in your nostrils. It penetrates through every air passage of the head, soothing and healing the swollen or inflamed mucous membrane, giving you instant relief. Head colds and catarrh yield like magic. Don't stay stuffed-up and miserable. Relief is sure.—Adv.

Anyhow, They Saw Action.

The untried anti-aircraft battery had gone into position for the first time in the Toul sector. Determined, like most newcomers, not to let anything get away from it, it blazed away indiscriminately and vociferously at every speck that appeared in the sky.

After one particularly active session its commander ran across an old friend, who asked him how the outfit was coming along.

"Oh, not so badly," answered the C. O. without elation. "We brought down five planes the other day."

"Five! Why, that's wonderful! Mighty few batteries have done that. Are you sure you got the figure straight?"

"Fact, no doubt about it," replied the captain, gloomily. "One Boche and four allied."—The Home Sector.

The less a man knows about politics the more angry he gets in a political argument.

AFTER 6 YEARS--STILL WELL

Now Strong and Hearty Though Case Looked Hopeless

"Six years ago I was in awful condition," says E. K. Chase, 36 E. Cross St., Ypsilanti, Mich. "My family was told I couldn't live more than two months. I was in constant pain from the uric acid and was so bad with rheumatism my legs seemed all drawn up. My back never stopped hurting. The kidney secretions were held back until only a few drops came, and I bloated until I thought my skin would burst. My legs were twice their normal size.

Mr. Chase

"The water seemed to fill my chest and press against the heart. For three months I never moved out of the chair and I choked and gasped for breath like a dying man. All the doctoring failed, and my weight went from 185 to 125 pounds. "*Doan's Kidney Pills* saved my life. Eleven boxes cured me of every complaint. I have been well six years and able to work as hard as any man."

Sworn to before me.
FLOYD E. DAGGETT, Notary Public.

The House of Whispers

By WILLIAM JOHNSTON

Copyright by Little, Brown & Co.

"YOU HEARD WHISPERS?"

Synopsis.—Circumstances having prevented Spalding Nelson, clerk, from joining the American forces going to France, he is in a despondent mood when he receives an invitation to dinner from his great-uncle, Rufus Gaston. On the way to the house he meets, under peculiar circumstances, a young girl, apparently in trouble, to whom he has an opportunity to be of slight service. She lives in the same apartment building as Rufus Gaston, and he accompanies her to the house. Gaston and his wife are going to Maine for a trip and want to leave Nelson in charge of the apartment. He accepts. Gaston and his wife tell their great-nephew of mysterious noises—"whispers"—which they have heard in the house. On his way to the Gaston apartment the next Sunday Nelson again meets his accidental acquaintance of a few days before, Barbara Bradford. She urges him not to allow the fact of their being acquainted to be known. At the apartment Nelson meets the superintendent, Wick, and instinctively dislikes him. In a wall safe he finds a necklace of magnificent pearls, worth a small fortune. Next day Nelson finds the pearls have disappeared from the wall safe. His first idea of informing the police is not acted upon because of peculiar circumstances. He has been discharged from his position without adequate explanation or reason, and feels himself involved in something of a mystery. He decides to conduct an investigation himself. That night Barbara signals from the window of her apartment, which is opposite his, and they arrange a meeting for next day. In the morning he finds a note in his room, asking him why he had not informed the police of the loss of the jewels. Barbara tells Nelson her sister Claire had some years before made a runaway marriage with an adventurer, from whom she was soon parted, and the marriage had been annulled. Claire is engaged to be married and someone knowing of her escapade has stolen documents concerning the affair from the Bradford apartment.

CHAPTER IV—Continued.

—5—

"Oh, no, she must never know. Dad did not want her ever told anything about it. We talked it over, Claire and I, and decided to put a personal advertisement in the papers. It simply said, 'Liberal reward and no questions asked for return of important papers.'"

"Were there any answers?"

"Yes and no. One morning there was a second note."

"Delivered like the first?"

"Yes, I found it, too, on the floor of my bedroom. Here it is."

More amazed and perplexed than ever by the growing ramification of the plots of the thieves that seemed to involve us both, I took the paper and read:

"Ten thousand is our price for the papers. Pay it or you'll never marry Thayer."

"Did you go then to meet the man in the park?"

"Not until after I got a third note, more threatening than the first and second. Claire and I talked it over and over, trying to think who could have taken the papers. We only keep two servants now, Sarah and Mary, and they both have been with us since we were children. It could not have been either of them. They think as much of us as our own mother does."

"Do you suppose the man that she married may have learned of your father's death and have returned from France to try to blackmail her?"

"We thought of that. The notes did not come from him. They do not read as if a Frenchman wrote them."

"Who could it be?" I said more to myself than to her.

"Then there was another note," she went on. "It demanded that Claire wear a red carnation and meet the writer in the park and bring ten thousand dollars. That was the time I first met you. Your presence must have frightened them off, for we had no more demands until night before last."

"Did you have ten thousand with you that night I first met you?"

She shook her head.

"We haven't ten thousand dollars in the world. Outside of our furniture and our jewels and our motor, we have very little. If all the bills we owe were paid, we'd have almost nothing at all."

"What did you propose doing when you met the man—or men?"

"I didn't know. I was going to try to plead with them to give me the papers. I would have promised anything to have gotten them back."

"But the man—the men—might have harmed you."

She smiled incredulously.

"Hardly. There was little danger of their attacking me there in the park so near the avenue, with people constantly passing, and besides, I carried this."

She reached again into the pocket of her habit and brought forth a vicious-looking automatic.

"It was Dad's," she said. "He taught me to shoot with it, though I don't think either of us thought then there would come a time when I might need it."

"What did the last note say?"

"Here it is."

This was written and folded as the others had been, on the most ordinary kind of writing paper. It read:

"Unless we get the money Wednesday, Thayer gets the papers Thursday. No wedding then for yours. Same bench at six-thirty."

"What can I do about it?"

"I'll go in your place," I suggested.

"Oh, no, I couldn't permit that."

"Let me explain," I hastened to say. "I'm in this mystery as deep as you are. Only last night I discovered that all the Gaston jewels which had been left in my custody are gone."

"Not stolen!" she cried. "The Gaston pearls!"

"Yes," I replied, "the pearls, too."

"Why, they are worth two hundred thousand dollars, at least. What have you done about it? Have you notified the police?"

"No, as yet I have told no one of the robbery but yourself."

"Why not? You must notify the police at once."

I hesitated. It was hard to explain my actions without telling her the whole miserable story, without admitting to this girl on whom I was most eager to make the best of impressions that I was a young man out of a position, discharged in disgrace. Yet she had given me her confidence. It was only fair to her and to myself that there should be no secrets between us. I began at the beginning. I told her of my coming to New York and how I had seen my great-uncle Rufus only once or twice. I related the departure of Roller and Birge for the war front and told her how eager I had been to go with them. I even went into detail as to the reason I had not gone with them, my debt to the mother.

She did not seem greatly interested in the first part of my narrative but when I began telling of the proposition the Gastons had made to me and of the mysterious warnings each of them had separately given me, I could see her interest kindling.

"There is something wrong in that apartment house," she explained. "We have had nothing but trouble ever since we lived there. I wonder if there is anything in the theory that evil deeds make bad karma, which spreads its effects all about. I know I feel there is a sinister atmosphere about the whole place."

"I'm beginning to feel it, too," I said bitterly.

I told her then of my unexpected and unwarranted discharge without explanation the day before.

"How do you account for it?" she asked perplexedly.

"You must have some enemy, some malicious person, who has spread some terrible tale about you."

"I haven't any enemy in the world," I replied, yet even as I spoke there flashed across my mind the malevolent glance the scar-faced man had given me in the restaurant a few evenings before.

"I wonder," said Miss Bradford thoughtfully, "if the same people who are trying to blackmail us are not trying to involve you with us in some way?"

"Why should they?"

"They may have been watching and have seen you enter the house with

"But the Man—the Men—Might Have Harmed You."

me twice. They may think that you and I are friends and that you were there in the park purposely that first time."

"Even so," I replied, "that doesn't explain this."

I pulled from my pocket the note I had found on the floor of my bedroom and showed it to her.

"Where did you get that?" she gasped in astonishment.

"Last night I heard footsteps and whispers. I thought at the time I was dreaming. This morning I found this note on the floor."

"You heard whispers," she cried excitedly. "whispers that seemed to come from up near the ceiling?"

"I thought I heard them. I wasn't sure."

"I know, she said, shuddering. "I've heard them—twice."

We looked at each other despairingly. We both of us realized that we must be surrounded with some potent evil forces working to accomplish our ruin. The motive in the anonymous letters that Miss Bradford had been receiving had plainly been blackmail. But what was the motive in my own case? Why had someone stolen the Gaston pearls and then in an anonymous letter to me spoken of the theft? I wondered, too, if the successful attempt to discredit me at my place of business had not originated from the same mysterious source.

Was my great-uncle Rufus to blame? The suspicion of him rose in my mind and would not be downed. I recalled the unusual pretext on which he had sent for me after having paid no attention to my existence for nearly a year. I recalled his curious warning and that of his aged wife. I remembered that they had insisted on leaving the jewels behind against my urgings, and that they had been insistent on my having the combination of the safe. Could it be possible that they also had some grudge against the Bradfords, their neighbors, and in some way had got hold of Claire Bradford's secret?

"I think you said," I asked Miss Bradford, "that your family and the Gastons were not acquainted in any way."

"No," she replied, "we don't know them at all. Why do you ask that?"

"I was wondering if it could be possible that my great-uncle Rufus could have had any hand in all this. He's a queer, secretive old chap."

"It's probable that he and my father might have known each other. Both were in business here in the city for many years. I never remember, though, of hearing Dad speak of him—wait, yes, I did once."

"When was that?"

"It must have been six or eight years ago. There was something in the papers about Mr. Gaston retiring from business."

"What was it he said?" I asked eagerly, wondering if some old feud between the two men might not give us a clue to unravel the web of mystery.

"As nearly as I can recall his words were, 'I see that old pirate Gaston has retired with his ill-gotten gains.'"

"To whom was he talking?"

"I don't remember that, probably some man who was visiting at the house. Dad always used to have a lot of men about."

"Did he say anything else?"

"That's all I remember, but I don't think the Gastons could have anything to do with it. This threatening my sister is more the sort of thing a discharged servant would do."

"Yes," I admitted, "but find the discharged servant. Yours have been with you for years."

"Oh, what are we going to do?" she cried in desperation. "If I don't get those papers back, we'll all be ruined. They'll give them to my sister's fiance. Her engagement will be broken. My mother will die of disgrace and shame."

"Don't be discouraged," I cried, trying to inspire in her a confidence I was far from feeling myself. "This is only Sunday. We have until Wednesday evening. I'll find some way of trapping those rascals and making them surrender those papers. Leave it to me."

In spite of my reassuring words, distress was still written on her countenance. As I debated how best to comfort her, she glanced at her wrist watch and exclaimed:

"I must be going. They'll be alarmed about me if I stay longer."

"When am I to see you again?"

"I don't know. That's hard to arrange. My sister and I are so much together."

"Can't I telephone you?"

"No, that wouldn't do at all. Mother and Claire would both want to know all about it and besides—"

"Besides what?"

"I don't trust that girl at the switchboard. I think she listens to everything that is said."

"They are a prying lot," I admitted, "including Mr. Wick, the superintendent."

"I don't like him a bit."

"Nor I, but we must communicate with each other somehow. If you find out anything more you must let me know at once. If I learn anything, I'll let you know, and I'm going to discover a lot."

"There's always our windows," she suggested, "they are close together. I can signal you when I'm alone, and we can talk."

"I'll be there in my room every evening from ten o'clock on," I said, "waiting to hear from you. I'll put a handkerchief on the sill when I'm there."

"And I'll do the same."

Having reached this understanding, I walked with her to the park entrance within sight of the house. All the way we had been talking over the puzzling circumstances of the anonymous notes and of the strange way in which they had been found on the floor. Miss Bradford had spoken again of the whispers she had heard.

"The voices were vague—just like a ghost's might be," she said.

"Yes," I admitted, "that's what they sounded like. But there aren't any ghosts. If those whispers were real, some human being was making them. I'm going to find out who it was, and when we've learned that, we'll have learned a lot about—"

I hesitated.

"About whom?" she questioned.

"I don't know yet," I answered.

I was wondering about my great-uncle Rufus.

CHAPTER V.

I was determined to let the disappearance of the jewels alone until I had found some way of getting the Bradfords out of their troubles. The key to the mystery surely lay in the notes that had been found on the floor in both apartments. If I could discover how the notes had been put there and who put them there, I would be on the trail of the miscreants.

The placing of the notes indicated the necessity of a confederate in the apartment house. Could it be that one of the employees was in league with the plotters? Was one of the Bradford servants betraying them?

Under Ordinary Circumstances I Would Have Hesitated to Examine Them, but Now I Felt No Scruples.

Was my aged great-uncle in hiding somewhere, playing malevolent pranks on us? How had that note gotten into my own apartment? Nobody had access to the place but myself—yes, and Mrs. Burke, my great-aunt's trusted old laundress. I determined to return to the apartment and lie in wait for her until she came in to do up my room. In the week that I had lived there I had not even laid eyes on her, although each evening when I came in I found my bed neatly made.

While I awaited her arrival I busied myself with studying anew the different rooms in the apartment, hoping ever to find some new clue to the methods by which the anonymous notes had been delivered. I went to the back of the house and looked out of the rear windows. An ornamental ledge of stone, perhaps eighteen inches wide ran along apparently on the level of the flooring. Any agile person might easily have crept along it if they dared risk falling six stories to the ground, but there was no means of access to it save from either my bedroom or the sitting room or from the corresponding rooms in the Bradford apartment. Certainly no one from my apartment had been flipping mysterious notes into the other apartment. Could the converse be true? Was there some unbalanced person in the Bradford family who was doing it? Could it be one of the servants, or possibly Claire Bradford? She always had been flighty, according to her sister's description. Had her troubles unbalanced her to such an extent that she was playing mysterious hysterical pranks on all of us?

I sat down at my uncle's desk. The pigeonholes crammed full of papers caught my eye. Under ordinary circumstances I would have hesitated to examine them, but now I felt no scruples. Old Rufus had warned me that there was some mystery about the place. The pearls had strangely disappeared. I faced the accusation of having stolen them. Surely I was entitled to examine anything and everything in my efforts at solving the mystery.

Pigeonhole after pigeonhole I examined without result until at last I came to a little leather-covered diary. I read it with interest, noting that it was for the present year and that the last entry had been made only the day before he had departed for Maine. About six weeks previous to the present date I found this amazing entry:

"Heard whispers last night."

A week later there was another entry, "Whispers again." There could be no question as to what he meant. The ghostly noises that had been heard by both Miss Bradford and myself had been heard by him, too. No wonder the old man had been so terrified. Other entries in the book recorded hearing the whispers at intervals of about one week.

Nelson and Barbara agree to meet frequently.

Never anger made good guard for itself.—Shakespeare.

Mother and Daughters ALL TESTIFY TO RELIEF

Mankato, Minn. — "I have three daughters who are all strong and healthy today, due, I am sure, to the use of Dr. Pierce's Favorite Prescription. When they were in their teens they were all very delicate. I always gave them this medicine and it never failed to give relief.

"I have had, in years past, three operations for wens, my blood was in bad condition. I also would suffer with pains all through my flesh at different times. Could not seem to get anything to help this condition until I began using Dr. Pierce's Golden Medical Discovery and the 'Pleasant Pellets' and they gave me wonderful relief. I know of no better medicines than Dr. Pierce's."—Mrs. Mary Goodrich, 218 W. Rock St.

AFTER MOTHERHOOD

Des Moines, Iowa.—"I was ailing and dragged out. It was after motherhood and I did not get my strength back. My husband got Dr. Pierce's Favorite Prescription at the drug store and I used two bottles. It brought back my strength and helped me overcome my troubles. I have been well ever since."—Mrs. Ambrose Stein, 922 W. 3rd St.

BELCHING
Caused by
Acid-Stomach

Let EATONIC, the wonderful modern stomach remedy, give you quick relief from disgusting belching, food-repeating, indigestion, bloated, gassy stomach, dyspepsia, heartburn and other stomach miseries. They are all caused by Acid-Stomach from which about nine people out of ten suffer in one way or another. One writes as follows: "Before I used EATONIC, I could not eat a bite without belching it right up, sour and bitter. I have not had a bit of trouble since the first tablet."

Millions are victims of Acid-Stomach without knowing it. They are weak and ailing, have poor digestion, bodies improperly nourished although they may eat heartily. Grave disorders are likely to follow if an acid-stomach is neglected. Cirrhosis of the liver, intestinal congestion, gastritis, catarrh of the stomach—these are only a few of the many ailments often caused by Acid-Stomach.

A sufferer from Catarrh of the Stomach of 11 years' standing writes: "I had catarrh of the stomach for 11 long years and I never found anything to do me any good—just temporary relief—until I used EATONIC. It is a wonderful remedy and I do not want to be without it."

If you are not feeling quite right—lack energy and enthusiasm and don't know just where to locate the trouble—try EATONIC and see how much better you will feel in every way.

At all drug stores—a big box for 50c and your money back if you are not satisfied.

IS 700 Bushels of Corn Worth Saving?

Wouldn't you like to save 700 bushels of corn each time you fill your silo? In filling a 100-ton silo you put in about 700 bushels of corn when the ears are run in with the stalks.

With a JENNEY SILO-FILLER-HUSKER you can take the ears off, put them in the crib and still have silage with just as much food value and give you just as good feeding results.

Figure out how much 700 bushels of ear corn is worth at present market price—that's your saving.

Let us tell you all about this money-saving, money-making way of making silage. It is opening the eyes of farmers, Experiment Stations and stockmen everywhere.

You don't have to fill your silo at just a certain time—you can fill it and re-fill it from fall to spring. The saving pays for the JENNEY SILO-FILLER-HUSKER in a shortime. (4-D)

Now is the time to look into this money-saving, corn-saving plan. Come in and see us about it.

2,000 UNIVERSITY AND COLLEGE PRESIDENTS ACT AS SPEAKERS

Addresses will Outline Plans for Work of Women's and Laymen's Organizations.

Approximately 3,000 conferences in as many counties in all of the states of this country will be held between April 6 and 16 at which pastors and laymen of churches will face the opportunities and obligations of Christian service in the United States and the world survey made by the Interchurch World Movement.

The conferences in the counties will consider practically the same subjects presented to the pastors of the country at the Pastors' Conferences held in February and March at fifty strategic centers under the auspices of the movement.

The tentative program at each conference, as arranged by the national leaders, will open with a devotional period followed by a statement of the cooperative nature of the Interchurch World Movement in its service of, by and for the cooperating communions. The plans for raising the sum of $336,777,572, which is the aggregate amount of the budgets of the churches for missionary, educational and benevolent causes, will be explained in detail.

For several hours during the one day session of the conference the denominational groups will meet to consider the plans for the financial campaign as they relate to the denominations involved.

After the denominational rallies, the results of the foreign and home surveys made by the Interchurch World Movement will be presented by charts and stereopticon views. This will be followed by the presentation of the evangelistic campaign to be constructed between Easter Sunday and Pentecost. Then will follow a composite address covering the plans of the movement to develop the spiritual resources of the churches; to enlist men and women for whole time service propagating the Gospel; to promote the acknowledgment of the stewardship of life and resources; and to promote the program of missionary education.

During the supper hour a conference of members of the Christian Endeavor societies, Epworth League, Baptist Young Peoples' Union and Bible Classes will be held to enlist them to serve as effective units in the financial ingatherings.

Addresses outlining plans for the work of the women's and laymen's organizations will be other features of the conference. A lecture showing some of the results of the surveys will close the program.

The speakers' bureau of the Interchurch World Movement has prepared a list of about 2,000 names of preachers, college and university presidents and professors and prominent laymen who have indicated their willingness to speak on different occasions. The state secretaries have been advised that the men and women whose names are listed have received the literature of the movement and that they are believed to be qualified to present the plans and purposes of the movement intelligently.

INTERCHURCH NOTES

Part of the fund that is to be collected by the Interchurch World Movement will be apportioned among the denominational schools and colleges supported by the churches which are taking part in the campaign.

Members of the Y. M. C. A. and Y. W. C. A. in this city who were members of churches in their home towns and who have not transferred their membership to churches in this city will be urged to join some local church on Easter which is "Join the church Sunday" as termed by the Interchurch World Movement.

Meetings which this subject will be stressed are being arranged for in all associations throughout the country in response to letters which have been sent to the general secretaries of local associations by Dr. John Mott, general secretary of the International committee of the Y. M. C. A. and by Miss Mabel Cratty, the general secretary of the National Board of the Y. W. C. A.

Voodoo rites, with all the gruesome features that are part of the original African ceremony, are being performed in Haiti, five days by boat from New York. The existence of Voodoo worship there has been established by the Haitian. Survey of the Interchurch World Movement. Interchurch Investigators report, that the attempt of Americans and Europeans in Haiti to break up this practice has not yet been successful.

The rites are administered by a native priest or what would be called in Africa a "Witch doctor." A ceremony which in form closely resembles the mass is used at the beginning. Afterward, the child that is to be sacrificed is brought in and at a certain stage of the ceremony is killed, its heart being taken out and the participants drinking of its blood.

At All Drug Stores

If You Need a Medicine You Should Have the Best

Have you ever stopped to reason why it is that so many products that are extensively advertised, all at once drop out of sight and are soon forgotten? The reason is plain—the article did not fulfill the promises of the manufacturer. This applies more particularly to a medicine. A medicinal preparation that has real curative value almost sells itself, as like an endless chain system the remedy is recommended by those who have been benefited, to those who are in need of it.

A prominent druggist says "Take for example Dr. Kilmer's Swamp-Root, a preparation I have sold for many years and never hesitate to recommend, for in almost every case it shows excellent results, as many of my customers testify. No other kidney remedy has so large a sale."

According to sworn statements and verified testimony of thousands who have used the preparation, the success of Dr. Kilmer's Swamp-Root is due to the fact, so many people claim, that it fulfills almost every wish in overcoming kidney, liver and bladder ailments; corrects urinary troubles and neutralizes the uric acid which causes rheumatism.

You may receive a sample bottle of Swamp-Root by Parcels Post. Address Dr. Kilmer & Co., Binghamton, N. Y., and enclose ten cents; also mention this paper. Large and medium size bottles for sale at all drug stores.—Adv.

Danger All Around.

"Here is a rum go!"

"For heaven's sake, don't let the prohibitionists find you in such a predicament.

FRECKLES

Now Is the Time to Get Rid of These Ugly Spots.

There's no longer the slightest need of feeling ashamed of your freckles, as Othine—double strength—is guaranteed to remove these homely spots.

Simply get an ounce of Othine—double strength—from your druggist, and apply a little of it night and morning and you should soon see that even the worst freckles have begun to disappear, while the lighter ones have vanished entirely. It is seldom that more than one ounce is needed to completely clear the skin and gain a beautiful clear complexion.

Be sure to ask for the double strength Othine, as this is sold under guarantee of money back if it fails to remove freckles.

On Even Terms.

An old codger, disliking the remarks of the chairman at a political meeting, shouted: "Young man, I was a Republican before you were born."

"What of that?" came back the chairman. "I will be a Republican after you are dead. Sit down!"—Exchange.

Cuticura for Pimply Faces.

To remove pimples and blackheads smear them with Cuticura Ointment. Wash off in five minutes with Cuticura Soap and hot water. Once clear keep your skin clear by using them for daily toilet purposes. Don't fail to include Cuticura Talcum.—Adv.

No Time to Lose.

Timothy approached his lady love timidly, bearing a big fish, which announced its presence subtly, but unmistakably.

"Oh, what a fine cod!" exclaimed Maria. "Wherever did you get it?"

"A man at the market gave it to me last week for helping him," replied Tim. "I've been keepin' it for your birthday."

"But my birthday ain't till tomorrow," the girl told him coyly.

"—I know, Maria, but I sort o' wondered if you'd mind keepin' it today, as—well, me and—and the fish is gettin' kind of impatient."

RUB RHEUMATISM OR SORE, ACHING JOINTS

Rub Pain Right Out With Small Trial Bottle of Old "St. Jacobs Oil."

Rheumatism is "pain" only. Not one case in fifty requires internal treatment. Stop drugging. Rub soothing, penetrating "St. Jacobs Oil" right into your sore, stiff, aching joints and muscles, and relief comes instantly. "St. Jacobs Oil" is a harmless rheumatism cure which never disappoints and cannot burn the skin.

Limber up! Quit complaining! Get a small trial bottle of old, honest "St. Jacobs Oil" at any drug store, and in just a moment you'll be free from rheumatic pain, soreness, stiffness and swelling. Don't suffer! Relief awaits you. "St. Jacobs Oil" has cured millions of rheumatism sufferers in the last half century, and is just as good for sciatica, neuralgia, lumbago, backache, sprains.—Adv.

Teacher's Splendid Record.

Miss Jennie Fish, placed on the pension list at the age of seventy by the New York board of education after 52 years' continuous service as a teacher in one school in the Bronx, has taught 40,000 children, including three generations of at least one family. In all the 52 years she was never late in reporting for duty and has been absent only once, when there was a death in the family.

This is of Interest to Mothers

You doubtless have read many, many times about

MOTHER GRAY'S SWEET POWDERS FOR CHILDREN,

TRADE MARK

and resolved that you would purchase a package the next time you were at your Druggists. But you perhaps have forgotten or neglected to do so, and as a result have never tried this most superior preparation, which for over thirty years has given entire satisfaction to Mothers in correcting the little ills to which children are subject. We are confident that a trial in your family will convince you that these Powders are deserving of the highest praise, and we now offer you the opportunity of having a regular 30c. box delivered to your door absolutely FREE.

Simply cut from this paper the above Trademark Head and mail to us together with name and address of five or more of your friends who have children, and by return mail you will receive a full-sized package of MOTHER GRAY'S SWEET POWDERS. Address, Mother Gray Co., LeRoy, N.Y.

IMPORTANCE OF GRADING LARGER NUMBER OF FARM PRODUCTS PROVEN BY SUMMARY

Grading Apples for the Market; Growers of Many Kinds of Fruits and Vegetables Are Required to Accept Relatively Low Prices Because Their Products Are Not Sold According to Standard Grades.

(Prepared by the United States Department of Agriculture.)

Farming by rule of thumb is becoming obsolete. But many farmers still "want to be shown" the value of grading fruits and vegetables and certain other farm products. Without commonly accepted standards for many products a considerable part of the profits due to a systematic agriculture is lost.

Benefits of Standard Grades.

The bureau of markets, United States department of agriculture, in pointing out the importance of grading a larger number of farm products, summarizes the benefits as follows:

It would encourage better methods of production and handling.

It would provide a standard trading basis.

It would enable the buyer to procure a stock of any size and quality desired.

It would aid in eliminating fraud, thereby promoting confidence among producers, dealers, and consumers.

The federal grain and cotton standards have come to be generally recognized as desirable, and the war-time potato grades, though no longer compulsory, are still widely adhered to—a fact that is good evidence of their value. Several states, including Pennsylvania, New Jersey, California, Texas, Wisconsin, and North Carolina, through their own marketing bureaus, are establishing or have established standard grades for one or more products. The federal bureau of markets has been glad to aid these agencies in various ways, having made an extensive study of the problem and accumulated much valuable data. It is prepared to offer helpful suggestions to any state or trade organization interested in establishing standard grades for the following products: Irish potatoes, onions, sweet potatoes, apples, fresh tomatoes, and cabbages. It also has investigations under way dealing with several other products.

Grades a Universal Language.

Students of present-day complex methods of distribution assert that it is impossible to have adequate market quotations until farm products are sold according to commonly accepted standards. Terms used in standard grades are in effect a universal language. They permit each agent in touch with the market to speak and be spoken to with clear and full understanding of the sort of products under discussion.

The total value, for the United States, of such representative items as eggs and poultry indicate the magnitude of the interests now suffering from lack of adequate grading practices. These products for 1919 were estimated to be worth more than $1,000,000,000.

Various attempts have been made to establish egg and poultry standard grades, but the various exchanges are not in agreement regarding grades, and the trade has been handicapped because of resulting diversities.

The difficulties constantly arising because of the lack of common standards are illustrated by the experience of a New York broker who made a bid to a western shipper for a carload of eggs classed as "refrigerator firsts." The offer was accepted, and when the car arrived it could not be discovered that these eggs fitted any known grade of "refrigerated firsts." In the rather heated discussion that followed the western shipper finally announced that he had graded the eggs according to a standard of his own!

These are days when American producers are looking to foreign markets. Abroad, even more than at home, recognized grades are an asset. Again eggs may be used as an illustration. Prior to 1914 the largest amount of eggs exported to the United Kingdom by this country was less than 100,000 dozen in a year. Since 1914 it has varied from 4,900,000 dozen to 7,700,000 dozen. The way has been opened for the development of this immense trade because there have been small imports from continental Europe. But, in spite of the lead given us by the war, Canadian eggs have been bringing from 2 to 4 cents more in the British market than American eggs. Nor was it a question of sentiment with the Englishmen. The Canadian shippers, anxious to continue merchandizing connections established during the war, have been grading their eggs, and that fact has appealed to the discriminating British public.

Standardizing Is Fundamental.

The lesson to America is obvious. It applies not only to eggs, but to many other farm products. A representative of the bureau of markets has stated the case thus: "Standardization is fundamental to progress in every field of effort—in the arts and sciences, and in industry and commerce as well."

Coal is sold on grade. Grades of lumber have been known to the trade for years. Grades of cotton and wheat, though recently established, are now recognized as absolutely necessary to the marketing of these products. Eventually we must adopt grades for a larger number of farm products. If eventually, why not soon? The expert services of the bureau of markets are available to any state or trade organization desiring to promote this needed improvement.

JUDGING LIVE STOCK PROPERLY IS AN ART

Relatively Few Persons Ever Attain Highest Standing.

Various Features on Subject Discussed in Popular Language by Circular Issued by the Department of Agriculture.

A real need in agricultural regions today is more widespread knowledge of how to judge live stock properly. While the judging of the finest animals is likely to remain an art in which relatively few persons can attain the highest standing, nevertheless farmers as a whole should be thoroughly familiar with the general principles of judging stock. Knowledge of this sort is a real asset.

The art of judging beef cattle is the foundation of all beef-cattle shows, and also is largely the means of determining the value of cattle offered in public sales. It serves as a basis for every man who buys and raises cattle to seek improvement along well-recognized lines.

Sample score cards for fat and feeder beef cattle and for breeding beef cattle, together with a model card for comparative judging by class or team, constitute part of the material contained in a recent Farmers' Bulletin issued by the Department of Agriculture, entitled "Judging Beef Cattle." The 21 pages of text discuss in popular language the various features of judging beef cattle, and it contains suggestions regarding their scoring. The bulletin may be had free upon request.

BEST TIME TO WEAN CALVES

Allow Them Some Time on Grass in Autumn if Winter Pasture Cannot Be Provided.

Spring calves should be weaned before the end of the pasture season in the fall to allow them some time on grass, says the U. S. Department of Agriculture. If they are to be finished as baby beef they should go into dry lot at the end of the pasture season and be ready for market the following June or July.

CAN MAKE FOREIGN CHEESES

Circular Issued by Department of Agriculture Gives Full Information on Subject.

With proper methods and equipment many of the so-called foreign cheeses can be made in the United States and elsewhere, says the United States department of agriculture. Department circular 71, "Trend of the Cheese Industry in the United States," will give you full information on the subject.

GENERAL FARM NOTES

Cut up the dead timber in the wood lot for fuel.

* * *

Hotbeds and cold frames give a chance to start vegetables earlier and gain on the weather and insects.

* * *

Cheap vegetable and flower seeds are expensive at any price. It pays to buy good seeds from reliable firms of established reputation.

Lift Off Corns!

Doesn't hurt! Lift touchy corns and calluses right off with fingers

Apply a few drops of "Freezone" upon that old, bothersome corn. Instantly that corn stops hurting. Then shortly you lift it right off, root and all, without pain or soreness.

Hard corns, soft corns, corns between the toes, and the hard skin calluses on bottom of feet lift right off—no humbug!

Tiny bottles of "Freezone" cost but a few cents at drug stores

HORSES COUGHING? USE
Spohn's Distemper Compound

to break it up and get them back in condition. Twenty-six years' use has made "Spohn's" indispensable in treating Coughs and Colds, Influenza and Distemper, with their resulting complications, and all diseases of the throat, nose and lungs. Acts marvelously as a preventive, acts equally well as a cure. 60 cents and $1.15 per bottle at drug stores.
SPOHN MEDICAL COMPANY, Goshen, Ind.

Do Not Get Careless With Your Blood Supply

Impurities Invite Disease.

You should pay particular heed to any indication that your blood supply is becoming sluggish, or that there is a lessening in its strong and vital force.

By keeping your blood purified, your system more easily wards off disease that is ever present, waiting to attack wherever there is an opening. A few bottles of S. S. S., the great vegetable blood medicine, will revitalize your blood and give you new strength and a healthy, vigorous vitality. Everyone needs it just now to keep the system in perfect condition. Go to your drug store and get a bottle to-day, and if you need any medical advice, you can obtain it without cost by writing to Medical Director, Swift Specific Co., 109 Swift Laboratory, Atlanta, Ga.

FASCINATED THE FAIR SEX

Marat, Repulsive in Person and Manners, Was Noted for His Attractiveness to Women.

Jean Paul Marat, one of the leading and most infamous figures of the French revolution, was described by a contemporary as "beyond any question the ugliest man in the whole of France—and not merely ugly, but positively repulsive in person, habits and manners." And yet, in his early years, he was the most popular physician in Paris, not because of supposed professional skill, but on account of his attractiveness to women, the most wealthy and beautiful women of France daily crowding his consultation rooms, pushing, almost fighting, to get a word or perhaps a single from him. That he turned a cold shoulder to their allurements seemed only to inflame their ardor, and at one time he contemplated flight, so embarrassing became their attentions. Even when he contracted a loathsome skin disease while hiding in the sewers of Paris, fair women continued to adore him.

Took Him Literally.

Henpeck—"That woman is unspeakable." Henpeck—"Then she's just the woman for me."

The fool politician fights friction; the wise one uses soft soap.

KING HAD SOME IMAGINATION

Wonderful Story of "Waterless Sea" Would Have Done Credit to Baron Munchausen.

Prester John as a title was like the Egyptian Pharaoh and belonged to whole lines of king who reigned in the East and in Ethiopia in particular. One writer of long ago sets Abyssinia as the kingdom of Prester John. Abyssinia used to be called "Middle India."

It is related that before the year 1241 a letter was addressed by Prester John to Manuel Commenus, emperor of Constantinople, saying that in Prester John's country there is a "waterless sea," which none have ever crossed. It consists of tumbling billows of sand, never at rest, and contains fish of most excellent flavor.

Three days' journey from the coast of the sand sea is a mountain whence rolls down a "waterless river," consisting of small stones, which crumble into sand when they reach the sea.

Whoever Prester John may have been, if he invented that story, he certainly possessed a vivid imagination and considerable originality.

Dire Consequences.

She—You liked my cooking well enough just after we were married.
He—I didn't have dyspepsia then.

One ton of water may be colored by a single grain of indigo.

OBITUARY, MRS. EMMA JANE KERSHNER

Mrs. Emma Jane Kershner passed way at her residence in Klemme, owa, April 5, 1920,. aged sixty-five ears, five months. She was born in Princeton, Illinois, September 24th, 1874, she was married to J. C. Kersh- er. Of this union two children were born: a son, deceased, and a daughter Mrs. J. B. Spitler, of Klemme.

Mrs. Kershner was left alone one ear ago by the death of her husband. She leaves to mourn her loss her daughter, Mrs. J. B. Spitler, and fam- ily, and her granddaughter Vivian.

Funeral services were held in the Methodist Episcopal church of Klem- m, on Wednesday, April 7th, at 9:30 a. m., and the body taken to Clarion, Iowa(for interment.

—By A. E. Buriff

Admission Free.

Jack had a little party on his birth- day. His mother had told one of the little boys not to buy a present. When this little boy arrived at the party Jack said: "What did you bring?" but quickly added, "that's all right if you didn't bring anything 'cause this par- ty's for nothing."

Serious Injury

M. O. BARR'S FATHER SERIOUSLY INJURED

Last Tuesday Agent M. O. Barr received a telegram stating that his father was run over by a motor car and that he was being brought to the hospital at Fort Madison, Iowa. Mr. Barr's father is superintendent of a railroad telegraph gang and while at work in some manner or other the motor car which they were using ran over him crushing his ankle. His injuries were so serious that it was necessary to amputate below the knee Mr. and Mrs. Barr left Wednesday vening for Fort Madison, to see his father and word from them says that he is getting along as well as can be expected. Mr. Barr's father is about fifty years old and the accident no doubt will be rather hard for him to endure.

AN ACCIDENTAL SHOOTING

Benny Hull, the twelve-year-old son of Mr. and Mrs. Bud Hull accidentally shot himself Tuesday afternoon about 2:30 o'clock with a 22-calibre rifle. Benny had possessed himself of the shooting-iron in some manner and sallied forth in search of gophers we presume. He traveled east, follow- ig the Milwaukee road and when in the vicinity of the cut about one-half mile east of town, the accident oc- curred. How it happened we are not sure, but Benny says that he was looking down the barrel. The bullet entered his body at a point between the first two ribs, well above the heart,and there it still remains. The youngster's condition appears to be normal in all ways, has recovered from the shock, and in case blood- poisoning does not set in, he will get along all right. It appears that about every so often, some youngster must be the victim of an accidental shoot- ing in order to warn parents of the real danger of allowing kids to handle fire arms.—Democrat.

CHURCHES

KLEMME MAN, ONE OF THE SIX IN THE STATE TO TAKE COURSE AT FORD FACTORY

Chris Gram left Tuesday night for Detroit, Michigan, where he will take a six weeks' mechanics course at the Henry Ford factory. Three are but five other men in the state who will take the course as Iowa was allowed to send only six men for the course. The other five men are three men from the Herring Motor Co., of Des Moines, one man from Marshalltown and one from Cedar Rapids. The men will be given a thorough instruction in repairing cars, wiring and electric- al work ad in fact everything con- nected with the working part of a Ford car.

SPECIAL OFFER DES MOINES CAPITAL

The Des Moines Capital from now until Jan. 1, 1921, for only $3.50. Call at the Times Office now as this offer will not hold good only for a short time.

MAPS ARE TO BE SENT TO PASTORS ALL OVER THE U. S.

Country Church Not Reaching Community and Ministering Only to a Percentage.

Washington.—Convinced that the surveys of the Interchurch World Movement in rural America are of such accuracy as to constitute a defi- nite scientific contribution to present day information on the country church, the United States Govern- ment, through Charles Josiah Galpin of the Office of Farm Management of the Department of Agriculture, has contracted to buy a copy of the sur- vey map of each of the 2,968 counties to be surveyed by the Town and coun- try Division of the Inter church Movement.

This county map is a concrete ex- pression in graphics of the first thorough-going and wholly compre- hensive church and community sur- vey ever attempted in this country.

Each graph when completed, shows the location of every church, the residences of the ministers, the cir- cuits on which they travel in reach- ing their charges, the parish lines of every church and the community boundaries. By the graph, areas of denominational competition are dis- covered as well as the areas which are untouched by any religious minis- tration.

The survey to date has revealed the fact that the average country church is in no sense reaching the commun- ity and is ministering only to a per- centage of a certain creed of sect, and also that there are very few buildings in which provision has been made for the social and recreational needs of the young people. The survey has disclosed that more than one-half of the rural pastors are receiving less than a living wage.

The plan of presenting church con- ditions on a county map began with the establishment of the Country Life Commission by President Roose- velt. It was developed by Gifford Pinchot and the Rev. C. O. Gill, as Congregational clergymen of New England, who intensified the idea of obtaining specific information on the churches in a community. Dr. War- ren H. Wilson, known as the dean of specialists on the rural church in America and the Rev. H. N. Morse, both of the rural life work depart- ment of the Presbyterian Board of Home Missions, together with Dr. Edmund des Brunner, head of the town and country survey department of the Interchurch World Movement, brought the graphs to their present perfection in presentation of com- munity matters. This graph is a vi- vid picture, intelligible on first glance to the lay mind, of how the church is or is not reaching a community.

The maps ordered by Mr. Galpin are made in the field by an Inter- church surveyor, checked up in the national office and traced by expert draftsmen. To date surveys on 182 counties have been completed and more than 150 finished maps are available. In more than 2,000 of the 2,968 counties the survey is actually underway.

Mr. Galpin, who decided that the Government should have the maps, was formerly a professor in the Wis- consin State school of Agriculture and is the author of many books and pamphlets and a pioneer in the study of farm life and farm communities. He was particularly attracted by the maps in that the manner of dividing up a county into normal communities instead of townships or other arbi- trary and fixed lines shaped into the kind of work he is doing for the Gov- ernment.

Aside from their use by the Govern- ment, the rural maps will be distri- buted among pastors all over the United States in the areas concerned as the basis of programs to recon- struct the rural church in America.

Cooperation with the local church- es in carrying out the community plans in the promotion of the Lenten Evangelistic campaign urged in the letters sent from the national Head- quarters.

More than 100,000 workers will be needed during the next five years in the world campaign planned by America's Protestant churches affili- ated with the Interchurch World Movement. More than 9,000 new mis- sionaries are to be recruited for the foreign fields alone, and thousands of other workers, lay and clerical, are to be [illegible] for churches in the affil- iated [illegible] of this country. Wher[illegible] from?

It only a pe life th w d

highly specialized training. As much executive equipment is required, it is commented, to direct a congrega- tion as to direct a business, for the successful clergyman must know mo- dern life in all its many sided phases quite as well as Biblical History. The Missionary nowadays must often teach agriculture, carpentry, hygiene or sanitation to pave the way to the gospel.

Convention

The Republican State Convention will be held in Des Moines on the 22nd day of April, 1920.

Precinct Caucuses are to be held on the 14th day of April, 1920, at which time delegates are to be elected to the County Convention to be held in Garne on the 17 day of April, 1920, commen- cing at 11 o'clock A. M. at the Court House, to elect delegates to State Con- vention.
